Mourners attend the funeral of one of the victims killed in the terrorist attacks in Mumbai that turned India's financial capital into a war zone for nearly three days in late November.

Gurinder Osan/AP

Dates of 2008

During the opening ceremonies of the 2008 Olympic Games in Beijing, performers dance around a giant globe illuminated with images of Olympic athletes.

Fabrice Coffrini—AFP/Getty Images

January

“ *As we meet tonight, our economy is undergoing a period of uncertainty. . . . At kitchen tables across our country, there is a concern about our economic future.* ”

U.S. Pres. George W. Bush,
in his final state of the union address, January 28

1 With the beginning of the new year, Prime Minister Janez Jansa of Slovenia assumes the presidency of the European Union.

The Kenya Assemblies of God church in the village of Kiambaa, where hundreds of Kikuyu people are taking refuge from the violence that broke out after the disputed election of Dec. 27, 2007, is attacked by a mob and set on fire; some 50 people are burned to death.

The government of Pakistan chooses to postpone until February the national and provincial elections scheduled for January 8.

At a house in Baghdad where people are gathered to commemorate a man who had died in a car bombing three days earlier, a suicide bomber detonates his weapon, killing 30 of those present.

The euro replaces the Cypriot pound as Cyprus's currency and the Maltese lira as Malta's currency as the euro zone expands.

2 The military government of Myanmar (Burma) orders the tax on satellite television to be increased by a factor of 160, which brings it to about three times the average annual income; the action effectively cuts off any outside source of news.

The government of Sri Lanka formally annuls a cease-fire with the Liberation Tigers of Tamil Eelam that had been agreed to six years earlier; for practical purposes the agreement had not been observed since early 2006.

The price of a barrel of light sweet crude oil for the first time reaches \$100 on the New York Mercantile Exchange, though it closes at \$99.62.

3 A bomb goes off near a shopping mall in Diyarbakir, Tur., killing 5 people and injuring more than 60.

James H. Billington, the U.S. librarian of Congress, announces the appointment of Jon Scieszka, author of *The Stinky Cheese Man and*

Other Fairly Stupid Tales, to the newly created position of ambassador for young people's literature.

4 The movie studio Warner Brothers announces that in future it will release its movies on Sony's Blu-ray discs rather than Toshiba's HD DVDs; industry insiders feel that this has decided which high-definition format will become the industry standard.

The British utility Scottish and Southern Energy agrees to buy Airtricity, Ireland's biggest wind-farm operator, for €1.83 billion (about \$2.7 billion).

The 30th annual Dakar Rally, which was to begin January 5 in Lisbon with some 550 competitors and to end January 20 in Dakar, Senegal, is canceled; organizers say that terrorist organizations had made threats to disrupt the race.

5 Presidential elections called by Pres. Mikheil Saakashvili

after a brief state of emergency in November 2007 are held in Georgia; Saakashvili wins narrowly.

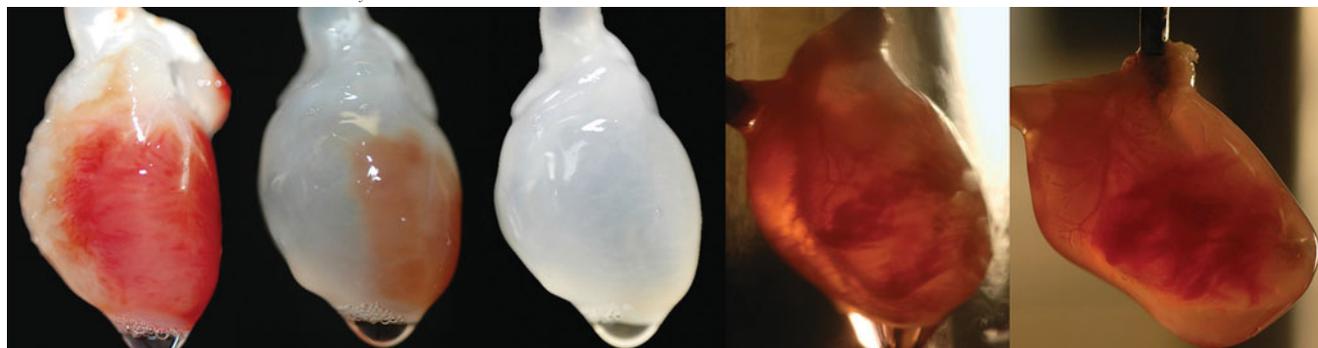

6 The Arab League approves of a plan for a new government in Lebanon, which has been without a president since Nov. 23, 2007.

Near Mexican Hat, Utah, a bus carrying people to Phoenix from a ski trip in Telluride, Colo., goes off the road in the midst of a widespread and heavy storm and rolls down an embankment; at least nine passengers are killed.

7 Italian government troops begin clearing garbage from the streets of Naples, where it has been piling up since municipal dumps began overflowing on Dec. 21, 2007.

The legislature of the Marshall Islands elects Litokwa Tomeing president of the country; he replaces Kessai Note and, unlike Note, opposes the Compact of Free Association with the U.S.

Thomas Matthesen—The Canadian Press/University of Minnesota/AP

Howard D. Schultz, the chairman of Starbucks Coffee, announces that he is taking over as CEO in place of James L. Donald, saying the company needs to regain focus.

Louisiana State University defeats Ohio State University 38–24 in college football's Bowl Championship Series title game in New Orleans to win the NCAA Football Bowl Subdivision (formerly Division I-A) championship.

8 Pres. Mwai Kibaki of Kenya announces his choices for half of the cabinet, and violence breaks out anew in several cities; some 500 people have been killed since violence erupted following the disputed election in 2007.

U.S. troops in Iraq begin a major offensive against Sunni insurgents in Diyala province.

Philippe de Montebello, who has been director of the Metropolitan Museum of Art in New York City for 30 years, announces his intention to retire at the end of the year.

9 The legislature of the UN-administered Serbian province of Kosovo chooses the former leader of the Kosovo Liberation Army, Hashim Thaci, to be prime minister.

The World Health Organization publishes a study that estimates the number of Iraqi civilians killed in the war from its inception in 2003 until June 2006 at about 151,000; previously the nongovernmental organization the Iraqi Body Count had estimated the number of deaths during that period at 47,668.

10 Plans to replace older nuclear plants are approved by the government of the U.K.

Shortly before a planned rally outside a courthouse in Lahore to protest the dismissal of Pakistani Chief Justice Iftikhar Mohammed Chaudhry, a suicide bomber sets off an explosion that kills at least 23 people, nearly all police officers.

Members of the Revolutionary Armed Forces of Colombia (FARC) release to emissaries of Venezuelan Pres. Hugo Chávez two Colombian women: Consuelo González de Perdomo, who was a member of the legislature when she was kidnapped in 2001, and Clara Rojas, who was an aide to presidential candidate Ingrid Betancourt (herself still a captive) when she was kidnapped in 2002.

11 The government of Nepal sets the election for a con-

stitutional assembly for April 10.

For the first time, the price of gold futures rises above \$900 an ounce before closing at \$898.70 an ounce; it reaches \$914 on January 14 before falling to \$881.25 on January 16.

The Bank of America announces its planned purchase of troubled mortgage company Countrywide Financial Corp.

U.S. Secretary of Homeland Security Michael Chertoff announces the standards that state identity cards must meet to qualify as identification at airports and federal buildings under the Real ID act; several states refuse to comply with the legislation, for a variety of reasons.

12 Iraq's legislature passes a law to allow former Ba'athist officials to apply for positions in the government; this is the first small step toward meeting the political benchmarks set by the U.S. government for Iraq.

Legislative elections in Taiwan are won by the Nationalist Party, which takes 81 of the 113 seats; Pres. Chen Shui-bian resigns as head of the Democratic Progressive Party.

The legislature of Croatia approves a new centre-right

government under Prime Minister Ivo Sanader.

13 Jackie Selebi resigns as president of Interpol the day after he was put on leave as head of South Africa's police because of the possibility that he will be charged with corruption.

Doris A. Taylor, head of a team of scientists at the University of Minnesota, reports that her team has successfully created new beating hearts by growing heart cells from newborn rats in the heart structure taken from dead rats. *(Photo above.)*

14 The spacecraft MESSENGER passes within 200 km (124 mi) of Mercury's surface, taking photographs and measurements, in the first of its three passes of the planet, which was last visited by NASA's Mariner 10 in 1975.

A suicide bomber attack at the luxury Serena Hotel in Kabul kills at least six people, mostly staff but also a Norwegian journalist and an American.

Malawi ends its diplomatic ties with Taiwan in favour of establishing them with China.

In the field of children's literature, the Newbery Medal

is awarded to Laura Amy Schlitz for *Good Masters! Sweet Ladies! Voices from a Medieval Village*, a series of monologues and dialogues set in the Middle Ages, and Brian Selznick wins the Caldecott Medal for illustration for his long illustrated novel *The Invention of Hugo Cabret*.

15 Hundreds of Islamic militants attack a well-stocked government para-military fort in Sararogha in Pakistan's South Waziristan province, killing 22 soldiers and stripping the fort of arms and ammunition.

At the Macworld Expo trade show in San Francisco, Apple CEO Steven P. Jobs introduces the ultralight MacBook Air laptop computer and the ability to rent movies by downloading them through iTunes.

The opposition Democratic Labour Party wins 20 of 30 legislative seats in elections in Barbados; the following day David Thompson replaces Owen Arthur as prime minister.

16 Clemente Mastella resigns as Italy's minister of justice because of allegations of widespread corruption.

The Proceedings of the Royal Society B reports the discovery in Uruguay of fossil evidence of the existence two million to four million years ago of a rodent, named *Josephoartigasia monesi*, which was some 3 m (10 ft) long and weighed up to 1,100 kg (2,200 lb).

17 A three-hour gun battle between drug cartel members and government forces takes place in Tijuana, Mex.,

where two days earlier a police commander and his family had been killed.

Geoscientists report that a natural gas black shale reservoir in the northern Appalachians could hold as much as 15 trillion cu m (516 trillion cu ft) of gas; it would be a huge addition to U.S. reserves.

18 On the first day of the religious festival of 'Ashura', fighting between a millennial militia, the Soldiers of Heaven, and Iraqi government forces in several places in southern Iraq leaves at least 66 dead; nevertheless, millions of pilgrims make their journey to Karbala' unmolested.

Israel closes all border crossings between itself and the Gaza Strip, blocking, among other things, aid shipments, saying the step is intended to discourage rocket attacks from Gaza on Israel.

Élie Doté resigns as prime minister of the Central African Republic; on January 22 Faustin Archange Touadéra is named to replace him.

19 Spanish Interior Minister Alfredo Pérez Rubalcaba announces the arrest in Barcelona of 14 people of Pakistani and Indian origin who are believed to have been planning a terrorist attack on the city.

20 Presidential elections in Serbia result in the need for a runoff between Pres. Boris Tadic and Tomislav Nikolic of the Serbian Radical Party.

It is reported that David D. Hiller, publisher of the *Los Angeles Times*, has removed

James E. O'Shea as editor for refusing to make requested job cuts in the newsroom.

21 On a visit to Turkey, Sudanese Pres. Omar al-Bashir defends his recent appointment of Musa Hilal as a senior government adviser; Hilal is generally believed to be a leader of the Janjawid militia forces.

Stock markets in cities around the world fall steeply; fear of a U.S. recession is believed to explain the sell-off.

Israel announces that it will offer generous tax incentives as part of a program to support the use of electric cars in conjunction with entrepreneur Shai Agassi and the car company Renault; it is expected that the program will have 100,000 electric cars on the road by the end of 2010.

At Thoroughbred horse racing's 2007 Eclipse Awards, Curlin is named Horse of the Year.

22 Thailand's military junta disbands the day after the first meeting of the country's legislature since the 2006 military coup.

After an emergency meeting the U.S. Federal Reserve lowers its benchmark lending rate three-quarters of a percentage point, to 3.5%, the largest single-day reduction it has ever made; stocks initially plummet but rally robustly.

Serbia announces that the Russian state-owned gas company Gazprom has bought a 51% interest in NIS, the Serbian oil monopoly.

Iraq's legislature adopts a new flag, the same as the

previous one except that the three stars that represent Ba'thist ideals have been removed.

23 Prime Minister Kostas Karamanlis of Greece begins a three-day visit to Turkey; it is the first official visit to Turkey by a Greek prime minister since May 1959.

At the divided town of Rafah, members of Hamas break down a portion of the wall closing off Egypt from the Gaza Strip, and thousands of Palestinians pour across the broken partition to purchase supplies. *(Photo right.)*

In Mosul, Iraq, a house used by insurgents, possibly as a bomb factory, explodes as police approach; at least 34 people are killed, most of them crushed to death in neighbouring buildings that collapse from the force of the explosion.

24 The French banking giant Société Générale announces that a midlevel employee, Jérôme Kerviel, for the past year was a rogue trader and caused the bank to lose €4.9 billion (\$7.2 billion).

The government of Italian Prime Minister Romano Prodi falls after a no-confidence vote.

Researchers at the J. Craig Venter Institute report that they have synthesized the genome of a small bacterium (*Mycoplasma genitalium*) by assembling about 100 DNA fragments in a major step toward creating a complete artificial organism.

25 A dusk-to-dawn curfew is imposed in

Mohammed Saber—epa/Corbis

Nakuru, Kenya, in an attempt to contain ethnic violence that has broken out, contributing to a death toll of more than 650 people throughout the country since the disputed election.

26 Members of a criminal gang led by Rondell Rawlins attack the village of Lusignan, Guyana, massacring 11 people, at least 5 of whom are children.

Russian Mariya Sharapova defeats Ana Ivanovic of Serbia to win her first Australian Open women's tennis championship; the following day Novak Djokovic of Serbia defeats Frenchman Jo-Wilfried Tsonga to win his first men's title.

Top film awards at the annual Sundance Film Festival in Park City, Utah, go to *Frozen River*, *Trouble the Water*, *The Wackness*, and *Fields of Fuel*.

27 Paddy Ashdown of the U.K. withdraws from

consideration for the post of UN special envoy to Afghanistan in the face of opposition from Afghan Pres. Hamid Karzai; Afghanistan objected to the enlarged mandate planned for Ashdown.

Russia's Central Election Commission denies leading opposition presidential candidate Mikhail Kasyanov a place on the ballot.

Indonesia's former president Suharto dies; a week of official mourning is declared.

Yokozuna Hakuho defeats *yokozuna* Asashoryu to win the Emperor's Cup at the New Year Grand Sumo Tournament in Tokyo; the contestants had even records going into the final match.

28 The ruling party in Turkey reaches an agreement on an amendment to the constitution that will allow women who wear head scarves for religious reasons to attend university; the measure must be approved by the legislature.

Officials in the Galapagos Islands report that authorities in Ecuador are investigating the killing of 53 sea lions that have been found with crushed skulls on the island of Pinta in the nature reserve.

U.S. Pres. George W. Bush delivers his final state of the union address; he asks for patience on the Iraq War, addresses economic worries, and presents a modest domestic agenda.

29 King Bhumibol Adulyadej of Thailand ratifies the legislature's selection of Samak Sundaravej as the country's new prime minister.

Hundreds of women rally in Kandahar, Afg., to protest the January 26 kidnapping of American women's aid worker Cyd Mizell and her Afghan driver.

30 Italian Pres. Giorgio Napolitano asks Fran-

co Marini, president of the Senate, to form a temporary government.

The U.S. Federal Reserve Board cuts its benchmark interest rate a further half of a percentage point, to 3%.

31 David Kimutai Too, an opposition lawmaker, is shot to death by a policeman in Eldoret, Kenya; though government officials say the killing was not politically motivated, violence throughout the country intensifies in response to the murder.

The European Union says that if Italy fails to solve the garbage crisis in Naples within a month, it will be in violation of the organization's law and will face legal action.

The World Health Organization reports that programs in which mosquito nets and artemisinin, a new anti-malarial medicine, were widely distributed in several African countries generally cut the number of deaths from malaria in half.

February

“ *For the pain, suffering, and hurt of these Stolen Generations, their descendants, and for their families left behind, we say sorry. . . . And for the indignity and degradation thus inflicted on a proud people and a proud culture, we say sorry.* ”

Australian Prime Minister Kevin Rudd,
in his historic apology to the country's Aborigines, February 13

1 Two women suicide bombers, who are possibly mentally disabled, detonate their weapons in the Ghazil animal market in Baghdad, killing some 98 people.

The American oil company Exxon Mobil Corp. reports that it earned \$40.6 billion last year, a new record for the highest profit ever recorded; the previous record high profit was also reported by Exxon Mobil.

Government officials in Japan say that at least 175 people have become ill after eating dumplings imported from China that were tainted with insecticide.

Microsoft makes an unolicited bid to buy the online search engine company Yahoo! for \$44.6 billion.

2 Rebel troops attempting to overthrow Pres. Idriss Déby enter N'Djamena, the capital of Chad, and surround the presidential palace as Chad's armed forces resist.

Pres. Nicolas Sarkozy of France and the model and pop singer Carla Bruni are married in Paris.

3 Pres. Boris Tadic wins reelection in a runoff presidential election in Serbia; Tadic favours bringing Serbia into the European Union.

In Glendale, Ariz., the New York Giants defeat the New England Patriots 17-14 to win the National Football League's Super Bowl XLII; the Patriots had an undefeated record going into the game.

Hannah Montana & Miley Cyrus: Best of Both Worlds, a concert film shown only in I-Max and other 3-D theatres, tops the North American box office.

4 A suicide bomber kills one person in Dimona, Israel; it is the first attack there and the first suicide attack in Israel since January 2007.

As Sri Lanka celebrates the 60th anniversary of its independence, a roadside bomb in the Welioya region blows up a bus, killing 12 people; the previous day a suicide bomber killed 11 people in Colombo's main railway station, and the day before that a bomb on a bus traveling with Buddhist pilgrims in Dambulla killed 18 people.

The \$250,000 A.M. Turing Award for excellence in computer science is granted to Edmund M. Clarke, E. Allen Emerson, and Joseph Sifakis for their development of model checking, an automated method to discover errors in the design of computer hardware and software.

NASA transmits the Beatles song "Across the Universe" toward Polaris, the North Star, in celebration of the 50th anniversary of the agency and of its first satellite, Explorer I; the occasion also marks the 45th anniversary of the Deep Space Network of communication and the 40th anniversary of the recording of the song.

5 The death toll from violence in Kenya since the presidential election in December 2007 passes 1,000 people as officials from the ruling and opposition parties begin negotiations on how to end the crisis.

Fighting in N'Djamena, Chad, abates, which indicates that rebel fighters have retreated from the city.

The Australian company Geodynamics Ltd. completes a production well for deep, dry geothermal energy in the Cooper Basin region of South Australia; the well is intended to be the first hot fractured-rock source of commercial electricity generation.

6 The vice president of Pakistan's Awami National Party is assassinated in Karachi, and rioting erupts.

A large U.S. study of middle-aged and older people with Type II diabetes who are at high risk for heart attack and stroke is halted when it

is found that aggressively lowering their blood sugar levels has clearly increased the number of deaths due to heart disease, a result diametrically opposed to what had been expected.

7 Edward Lowassa resigns as prime minister of Tanzania because of suspicion of his involvement with a failed energy deal with an American company; the following day Pres. Jakaya Kikwete names Mizengo Pinda to replace him.

France becomes the fifth country to ratify the Lisbon Treaty, a governing package designed to reform the European Union following its recent expansion.

Two studies are published in the journal *Science* showing that the use of biofuels is leading to the clearing of rainforest and scrublands for crops and that in sum the production of biofuels is causing more greenhouse gas emissions than the use of fossil fuels.

Combustible sugar dust causes an enormous explosion at the Dixie Crystal sugar refinery in Port Wentworth, Ga.; at least 13 employees are killed, with dozens seriously injured.

The Licey Tigers (Tigres) defeat the defending champions, the Cibao Eagles (Águilas), 8–2 in the final game of the round-robin tournament in Santiago, Dom.Rep., to win baseball's Caribbean Series with a tournament record of 5–1; for the first time in the history of the event, both teams are from the host country.

8 Dean Barrow is sworn in as the first black prime minister of Belize the day after his United Democratic Party

won 81% of seats in a legislative election.

9 In Abu Dhabi, U.A.E., ground is broken on Masdar, a city that is being built by using renewable energy and that is designed to function without producing carbon emissions; it is expected to be completed in about 10 years and to have a population of 100,000.

A tentative agreement between the Writers Guild of America and movie and television production companies is reached, which indicates a likely end to the writers' strike that began on Nov. 5, 2007, and has stopped production of 63 TV shows; the strike formally ends on February 12.

10 A car bomb kills at least 23 people at a checkpoint outside Balad, Iraq.

The Namdaemun Gate in Seoul, built in 1398 and regarded as South Korea's most important national treasure, is destroyed by fire, in spite of the efforts of hundreds of firefighters. (Photo below.)

Lee Jin-man/AP

Armed thieves enter the Emil Buerhle Collection art museum in Zürich and steal the paintings *Poppies near Vétheuil* by Claude Monet, *Count Lepic and His Daughters* by Edgar Degas, *Chestnut in Bloom* by Vincent van Gogh, and *Boy in a Red Jacket* by Paul Cézanne in the biggest art robbery ever to take place in Switzerland; the Monet and van Gogh paintings are recovered eight days later.

At the Grammy Awards in Los Angeles, the top winner is British vocalist Amy Winehouse, who wins five awards, including both record of the year and song of the year for "Rehab" and the award for best new artist; the surprise choice for album of the year is *River: The Joni Letters* by jazz artist Herbie Hancock.

In Ghana, Egypt defeats Cameroon 1–0 to win the African Cup of Nations in association football (soccer) for a record sixth time.

11 Pres. José Ramos Horta of East Timor is critically injured in an apparent assassination attempt; the coun-

try's prime minister, Xanana Gusmão, is also attacked, but he escapes injury.

The drug company Baxter International announces its suspension of production of heparin, a blood thinner, because some 350 people have reacted badly to it, in some cases fatally.

The Columbus science module, created by the European Space Agency, is successfully attached to the International Space Station, greatly increasing the station's size and doubling its research capability.

12 Pakistan's army chief, Gen. Ashfaq Parvez Kayani, orders all military officers in government civil positions to resign from those posts.

A report from a census of tigers in India is released; it finds that the number of tigers since the last census, in 2002, has fallen from 3,642 to only 1,411.

K-Run's Park Me in First wins Best in Show at the Westminster Kennel Club's 132nd dog show; the popu-

lar beagle, known as Uno, is the first of its breed to win the top award at the premier American dog show.

13 Iraq's legislature passes a package bill that includes an outline for defining provincial powers and an amnesty for detainees; the amnesty is one of the benchmarks that the U.S. government has expected from Iraq.

For the first time in the country's history, Prime Minister Kevin Rudd formally apologizes to Australia's Aborigines for the government's past mistreatment of them.

Malaysian Prime Minister Abdullah Ahmad Badawi dissolves the legislature, making it necessary to hold elections within the next two months.

14 A gunman enters a lecture hall at Northern Illinois University and begins shooting from the stage; he kills 5 students and wounds 16 others before killing himself.

Kiribati declares a marine protected area that, at 425,300 sq km (164,200 sq mi), is the largest in the world; it preserves a rare oceanic coral archipelago ecosystem.

A U.S. government report shows that the country's trade deficit in December 2007 dropped to \$58.8 billion and that the overall figure for 2007 also dropped by 6.2%; it is the first decrease in the figure since 2001.

15 After several inconclusive elections in the legislature, Vaclav Klaus is narrowly reelected president of the Czech Republic.

Klaus Zumwinkel resigns as the head of Germany's

postal service after he is suspected of having evaded \$1.46 million in taxes in a widespread tax scandal.

Paraguay declares a state of emergency in response to an outbreak of yellow fever in the area of Asunción; the last yellow fever outbreak was in 1974.

Scottish cyclist Mark Beaumont breaks the world record for riding a bicycle around the world when he crosses the finish line in Paris 195 days after he began the 29,000-km (18,000-mi) journey; the previous record of 276 days 19 hr 15 min was set in 2005 by British cyclist Steve Strange.

16 A suicide bomber drives an explosives-laden car into a crowd at a campaign rally in Parachinar, Pak., and detonates it; at least 37 people are killed.

The Brazilian film *Tropa de elite*, directed by José Padilha, wins the Golden Bear at the Berlin International Film Festival.

17 The UN-administered Serbian province of Kosovo unilaterally declares its independence; the following day the U.S., France, and Germany, among others, recognize its sovereignty, but Russia, Spain, and Serbia are among those that refuse recognition.

A suicide bomber detonates his weapon at a dogfighting match outside Kandahar, Afg., killing at least 80 people, including a prominent anti-Taliban police chief.

The U.S. Department of Agriculture announces the recall of 65 million kg (143 million lb) of ground beef from a Westland/Hallmark Meat Co. slaughterhouse in California

where operations have been suspended owing to inhumane handling of its animals; a video made by the Humane Society and released on January 30 showed downer cattle—those that cannot walk—being forcibly taken to slaughter, though downer cattle are forbidden in the food supply.

The first round of presidential elections in the Republic of Cyprus produces the need for a runoff between Dimitris Christofias of the Communist Party and Ioannis Kasoulides of the Democratic Rally party; the incumbent, Tassos Papadopoulos, loses.

In Daytona Beach, Fla., Ryan Newman wins the 50th running of the Daytona 500, the premier NASCAR race, by 0.092 second in an upset victory.

18 Legislative elections in Pakistan result in a pronounced victory for the Pakistan People's Party (once led by Benazir Bhutto), with 120 seats, and the Pakistan Muslim League-N of Nawaz Sharif, with 90, and an equally pronounced defeat for Pres. Pervez Musharraf's party, which wins only 51 seats.

British Prime Minister Gordon Brown holds a news conference to explain and defend the government's decision to nationalize the failing mortgage lender Northern Rock.

The BBC transmits its final English-language shortwave radio broadcast in Europe; the service began 75 years earlier with an inaugural transmission by King George V.

19 Prime Minister Serzh Sarkisyan handily wins election as president of Arme-

nia; the following day thousands of people demonstrate in Yerevan against the election results, which they believe to have been rigged.

Fidel Castro announces his official retirement, saying he does not want another term as president of Cuba.

Toshiba announces that it will phase out the production of HD DVD players and other products, leaving Sony's Blu-ray the sole new optical media format.

The 111-year-old Dow Jones industrial average replaces the Altria Group and Honeywell International with the Bank of America Corp. and the Chevron Corp. on its listing; it is the first change to the 30-stock index since April 2004.

20 Zimbabwe's statistics office reports that the official rate of inflation in January reached 100,580%.

A U.S. missile interceptor successfully strikes a falling spy satellite, destroying its fuel tank as planned.

Both the high-end unique gadgetry store Sharper Image and the catalog housewares retailer Lillian Vernon file for bankruptcy protection.

21 Thousands of demonstrators angry about Kosovo's declaration of independence attack and set fire to the U.S. embassy in Belgrade, Serbia.

U.S. Pres. George W. Bush arrives in Liberia at the end of a six-day, five-country tour of Africa; he is the first sitting president since Jimmy Carter to visit the country, and he is greeted warmly.

Brazil's central bank reveals that in January Brazil for

the first time became a net creditor country.

22 Japanese Prime Minister Yasuo Fukuda orders a review of the structure of the Ministry of Defense because of criticism arising from its handling of an incident on February 19 in which its most advanced destroyer rammed into and destroyed a small fishing boat in spite of having spotted it.

In Iraq the Shi'ite cleric Muqtada al-Sadr extends the cease-fire being observed by his Mahdi Army militia a further six months.

Officials of the open-wheel automobile Indy Racing League announce an agreement with the rival Champ Car World Series to merge the two into a single series; it will extend the IndyCar Series from 16 to 19 events.

23 The Ugandan government reaches a formal cease-fire agreement with the rebel group the Lord's Resistance Army.

A team of scientists and engineers composed entirely of women guides the Mars exploration rover Spirit; the event, the first time an all-women team has guided a major NASA mission, is organized in recognition of the coming Women's History Month celebration in March.

24 Dimitris Christofias wins the runoff election for president of Cyprus; he immediately agrees to meet the Turkish Cypriot leader, Mehmet Ali Talat, to renew efforts at reunification of the island.

The U.S. National Endowment for the Arts announces that the winners of its first annual Opera Honors awards are directors James Levine and Richard Geddes, composer Carlisle Floyd, and soprano Leontyne Price; each will receive \$25,000.

Carlos Ghosn, CEO of the car manufacturer Nissan Motor Co., announces that the company intends to bring an electric car to the American market by 2010.

The respected French encyclopaedia *Larousse* is offered in an online version to which users are invited to contribute.

The 1995 portrait *Benefits Supervisor Sleeping* by Lucian Freud is sold at auction by Christie's in New York City for \$33.6 million, a record price for a work by a living artist.

14 Lebanon's government reverses its decisions to act against Hezbollah's private telephone network and to fire a Hezbollah ally from a government position.

China mobilizes soldiers to shore up dams in the region that was damaged by the Sichuan earthquake; the death toll is raised to 14,866, with 26,000 people believed

Mario Tama/Getty Images

to still be buried and 40,000 people missing.

The International Committee of the Red Cross estimates that the death toll from Cyclone Nargis in Myanmar (Burma) is between 68,833 and 127,990.

U.S. Secretary of the Interior Dirk Kempthorne announces that the polar bear will be listed as an endangered species because the growing melting of sea ice threatens the species' survival.

U.S. Pres. George W. Bush arrives in Israel for a gala celebration of the country's 60th anniversary.

The Russian association football (soccer) club FC Zenit St. Petersburg defeats FC Rangers of Glasgow, Scot., 2-0 to win the Union des Associations Européennes de Football (UEFA) Cup in Manchester, Eng.

15 The Lebanese government and the Hezbollah-led opposition agree to engage in renewed negotiations over a new government.

The California Supreme Court rules that state laws that limit marriage to opposite-sex couples are unconstitutional and that same-sex couples also have the right to marry.

16 Zimbabwe's election commission schedules a runoff election between Pres. Robert Mugabe and opposition leader Morgan Tsvangirai for June 27.

Leonel Fernández wins reelection as president of the Dominican Republic; some observers attribute his victory to the recent opening of a 14.5-km (9-mi) subway in Santo Domingo.

The central banks of Denmark, Norway, and Sweden announce a plan of emergency credit of up to €1.5 billion (\$2.3 billion) for the central bank in Iceland; the value of the Icelandic currency, the króna, has been dropping precipitously.

Portugal's legislature adopts a spelling standardization agreement that will change the spelling of many words to match the Brazilian spelling.

The government of Myanmar (Burma) raises the official death toll from Cyclone Nargis to 78,000, with a further 55,917 listed as missing.

17 In legislative elections in Kuwait, Islamist candidates win 24 of the body's 50 seats, independents take 19 seats, and liberals garner 7.

Trucks carrying men firing assault rifles roll into Villa Ahumada, Mex.; 6 people are killed, including the chief of police, and 10 others are kidnapped, prompting the entire surviving police force to flee and leaving the rest of the town terrorized.

Kentucky Derby winner Big Brown decisively wins the Preakness Stakes, the second event in U.S. Thoroughbred horse racing's Triple Crown.

18 After a week of increasing and spreading anti-immigrant violence in and around Johannesburg in which at least 12 people were killed, South African Pres. Thabo Mbeki promises a commission to study the causes of the violence.

19 Nelly Avila Moreno (nom de guerre Karina), a top commander in FARC (Revolutionary Armed

Forces of Colombia), surrenders to the Colombian army.

The Sukhoi Superjet 100, designed to replace the Tupelov 134 of the 1960s and the Yakovlev 42 of 1980 as a commercial airliner, makes its maiden flight; its Russian manufacturer hopes to sell more than 800 Superjets.

20 Pres. Lansana Conté of Guinea replaces Prime Minister Lansana Kouyaté with Ahmed Tidiane Souare; rioting occurs in Conakry in response.

For the first time in about 15 months, the foreign ministers of India and Pakistan engage in peace negotiations.

Ma Ying-jeou is inaugurated as president of Taiwan.

A U.S. federal Court of Appeals rules that the country's paper currency must be redesigned because the various denominations cannot be distinguished by the visually impaired.

21 The ruling United National Movement party wins legislative elections in Georgia by a wide margin.

Astronomers report that for the first time they have seen a star just before it became a supernova; by means of the Swift satellite telescope, the star, in the constellation Lynx, was seen emitting a burst of X-rays, which alerted scientists to its imminent explosion.

In association football (soccer), Manchester United defeats another English team, Chelsea, on penalty kicks to win the UEFA Champions League championship in Moscow.

22 The price of oil briefly reaches a record \$135.09 a barrel before closing at \$133.17.

An appellate court in Texas rules that the state was wrong in removing more than 450 children from the custody of their parents in the polygamist Yearning for Zion ranch in April.

Odchazeni ("Leaving"), an absurdist comedy that is playwright and former Czech president Vaclav Havel's first new play in 20 years, opens in the Archa Theatre in Prague.

23 Mozambique declares a state of emergency to make money available to assist thousands of Mozambicans fleeing anti-immigrant violence in South Africa.

Twelve countries in South America sign a treaty creating Unasur, a union intended to be similar to the European Union; the member countries are unable to agree on a nationwide defense strategy.

UN Secretary-General Ban Ki-moon announces that the rulers of Myanmar (Burma) have now agreed to allow aid workers from anywhere to enter the country in response to the Cyclone Nargis disaster.

24 UN Secretary-General Ban Ki-moon meets Chinese Premier Wen Jiabao in earthquake-ravaged Yingxiu and praises China's response to the disaster; China puts the death toll at 60,560, with a further 26,221 counted as missing.

In Belgrade, Serbia, the Russian pop star Dima Bilan wins the Eurovision Song Contest with his English-lan-

gauge rendition of "Believe," produced by American rap impresario Timbaland.

25 Former army chief Michel Suleiman is elected president of Lebanon and takes office immediately; the country had been without a president since Nov. 24, 2007.

NASA's Phoenix Mars Lander, launched on Aug. 4, 2007, successfully makes a soft landing in the northern polar region of Mars, where it will analyze soil samples and search for proof of water.

FARC (Revolutionary Armed Forces of Colombia) confirms that its founder and chief, Pedro Antonio Marín, died on March 26.

The Sutong Bridge, between the Chinese cities of Suzhou and Nantong in Jiangsu province, opens to traffic; with a main span of 1,088 m (3,570 ft), it is the world's longest cable-stayed bridge.

Ozeki Kotooshu defeats ozeki Chiyotaikai to win sumo's Natsu Basho; Kotooshu, who is Bulgarian, is the first European to win an Emperor's Cup. (Photo above.)

The 92nd Indianapolis 500 automobile race is won by Scott Dixon of New Zealand.

26 The International Atomic Energy Agency releases a report saying that Iran has failed to be forthcoming about its nuclear programs and that its nuclear capabilities are advancing.

The Fédération Internationale de Football Association (FIFA), the governing body of world association football (soccer), suspends the Iraq Football Association,

Kyodo/AP Images

tion, winner of the 2007 Asian Cup, because the government of Iraq earlier disbanded the Iraqi Olympic Committee and all other national sporting federations; the suspension is provisionally lifted on May 29.

27 In the face of a military mutiny, Pres. Lansana Conté of Guinea fires Minister of Defense Mamadou Bailo Diallo.

At the American Geophysical Union meeting in Fort Lauderdale, Fla., scientists report having observed a coronal mass ejection in which gas spun in two directions at once; it is believed that this is the result of a twisted flux tube of solar magnetism unwinding.

28 Nepal's newly elected constituent assembly votes to transform the country from a monarchy to a republic, giving the royal family, which ruled the

country for 240 years, 15 days to vacate the palace in Kathmandu.

In Ilulissat, Greenland, the U.S., Russia, Canada, Denmark, and Norway sign an agreement to abide by the 1982 UN Convention on the Law of the Sea regarding territorial claims on the Arctic and to work cooperatively to limit environmental and other risks in any increased shipping and commerce in the Arctic.

New York Gov. David Paterson directs all state agencies to recognize as valid all same-sex marriages that were legally entered into in other jurisdictions.

Fouad Siniora is reappointed to his position as prime minister of Lebanon.

The winners of the first biennial Kavli Prizes are announced by the Norwegian Academy of Science and Letters: Maarten Schmidt and Donald Lynden-Bell in astrophysics, Louis Brus and Sumio Iijima in

nanoscience, and Sten Grillner, Thomas M. Jessell, and Pasko Rakic in neuroscience.

29 The confirmed death toll in China's Sichuan earthquake is reported as 68,500 people, with a further 19,000 missing and presumed dead.

It is announced in Myanmar (Burma) that the new constitution has gone into effect.

The Ruth Lilly Poetry Prize is presented in Chicago to Gary Snyder.

30 Silverjet, a business-class-only airline based in London, ceases operations; it is the third airline of that type to shut down in six months.

The much-anticipated movie *Sex and the City*, a sequel to the widely loved HBO television series (1998–2004), opens in movie theatres throughout the U.S.; its world premiere was in London on May 12.

31 Zimbabwe's army chief of staff says that it is the duty of members of the country's armed forces to vote for Pres. Robert Mugabe in the upcoming runoff presidential election.

The space shuttle *Discovery* lifts off from Cape Canaveral in Florida on a mission to take the Kibo science laboratory to the International Space Station; it also carries parts to repair the station's zero-gravity toilet, which broke several days earlier.

The Indian air force reopens an air base near the Karakoram Pass in the state of Ladakh; the base was closed 43 years earlier.

June

“ *We will no longer participate in the violent illegitimate sham of an election process.* ”

Morgan Tsvangirai, announcing his withdrawal as a candidate in Zimbabwe's upcoming runoff presidential election, June 22

1 Legislative elections in Macedonia are attended by violence in which at least one person dies in gunfire and by accusations of fraud; the majority of seats go to the ruling coalition.

Parents in several cities in China's Sichuan province protest the shoddy construction of schools that collapsed in the earthquake three weeks earlier, crushing children, and China raises the official toll of the quake to 69,000 dead and 18,800 missing and presumed dead.

The final of the new Indian Premier League takes place in Mumbai (Bombay); Jaipur's Rajasthan Royals, led by Australian bowler Shane Warne, defeat the Chennai (Madras) Super Kings by three wickets to win the cricket series.

2 Relief groups report that although the rulers of Myanmar (Burma) have increased openness somewhat, they are still severely limiting the access of foreign aid workers to the victims of Cyclone Nargis in the Irrawaddy delta.

3 A powerful car bomb explodes outside the Danish embassy in Islamabad, Pak.; at least eight people are killed.

3 A three-day conference on food security convened by the UN Food and Agriculture Organization and attended by top officials from some 150 countries opens in Rome.

4 Police in Bangladesh say that they have arrested more than 11,700 people in recent days in a new anticrime drive.

In Baghdad a car carrying rockets for an attack explodes in a residential area, killing at least 18 people; elsewhere in the city a car bomb kills four people, and in a nearby village three U.S. soldiers are slain.

Rose Tremain wins the Orange Broadband Prize, an award for fiction written by women and published in the U.K., for her novel *The Road Home*.

The Detroit Red Wings defeat the Pittsburgh Penguins 3-2 to win the Stan-

ley Cup, the National Hockey League championship trophy.

5 It is learned that the government of Zimbabwe has ordered all humanitarian aid groups to cease operating in the country.

The Constitutional Court of Turkey strikes down a new law that would allow women who cover their heads with scarves for religious reasons to attend public universities.

6 In Seoul some 65,000 people demonstrate their opposition to a South Korean government plan to allow beef imports from the United States; such imports were banned in 2003.

Japan's Diet (legislature) passes a resolution recognizing the Ainu people as indigenous to the northernmost region of Japan.

A roadside bomb in a suburb of Colombo, Sri Lanka, blows up a passenger bus, killing 21 people; later a bomb explodes on a bus in central Sri Lanka, killing 2 more people.

7 U.S. cases of salmonella that have been tentatively linked to the consumption of certain raw tomatoes are reported by health officials to have spread to 16 states; consumers are warned to avoid red plum, red Roma, and red round tomatoes.

Ana Ivanovic of Serbia defeats Dinara Safina of Russia to win the women's French Open tennis title; the following day Rafael Nadal of Spain defeats Roger Federer of Switzerland to capture the men's championship for the fourth year in a row.

The Derby, in its 229th year at Epsom Downs in Surrey, Eng., is won by New Approach, ridden by Kevin Manning.

Long shot Da' Tara, with odds of 38-1, wins the Belmont Stakes, the last event in Thoroughbred horse racing's U.S. Triple Crown, by five and a quarter lengths; Big Brown, winner of the Kentucky Derby and the Preakness Stakes, comes in last.

8 A man in Tokyo's popular Akihabara district drives a truck through a crowd of people

in a deliberate killing spree after which he exits the truck and begins stabbing passers-by with a survival knife; at least seven people die in the rampage.

A double bombing kills 12 people, one of them a French engineer, near Beni Amrane, Alg.

The i-LIMB, a commercially available bionic prosthetic hand that mimics both the form and the function of the human hand, wins the MacRobert Award for engineering excellence from the Royal Academy of Engineering in London. (Photo right.)

Yani Tseng of Taiwan wins the Ladies Professional Golf Association championship in a sudden-death play-off over Maria Hjorth of Sweden.

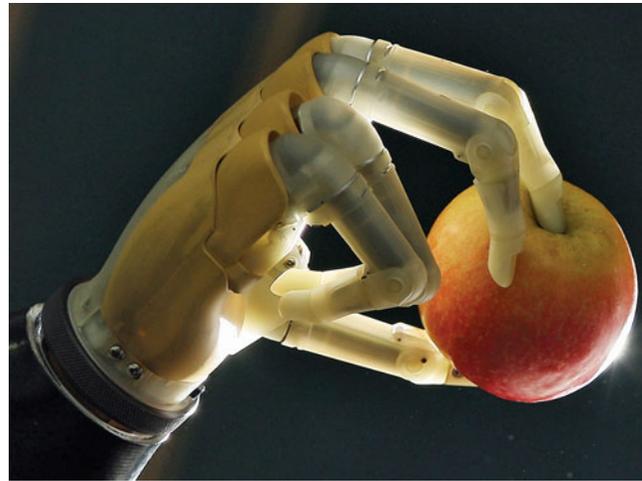

9 In Spain tens of thousands of truckers go on strike, blockading highways leading to France and surrounding Madrid in a protest against the skyrocketing price of diesel fuel.

A cache of cylinder seals dating from 3000–2000 BC that were looted from the National Museum of Iraq during the 2003 U.S.-led invasion of the country are ceremonially returned to Iraq's Ministry of Antiquities in Baghdad; the seals were found by customs officials in Philadelphia in May 2008.

Lake Delton, a centerpiece of the Wisconsin Dells resort area, breaches the highway after massive rainfalls and in less than two hours drains completely into the Wisconsin River.

10 After a firefight against insurgents in Afghanistan just over the border from Pakistan, U.S. forces make air and artillery strikes

David Cheskin—PA Photos/Landov

inside Pakistan that kill 11 Pakistani paramilitary soldiers, outraging Pakistan's government.

As tens of thousands of people demonstrate in downtown Seoul against the planned resumption of beef imports from the U.S., Prime Minister Han Seung-soo and the rest of the cabinet offer their resignations.

Armed battles break out on the border between Djibouti and Eritrea for the first time in 10 years.

11 King Gyanendra of Nepal, bowing to the desires of the country's new government, gives up his crown and leaves the royal palace to take up life as an ordinary citizen.

Norway's legislature passes a law giving same-sex couples the same rights to marriage and the adoption of children enjoyed by opposite-sex couples; the upper house approves the law on June 17.

NASA launches the Gamma-ray Large Area Space Telescope (GLAST); the space telescope, which can detect an immense range of light, will examine gamma-ray bursts and, it is hoped, give scientists new information about the nature of the universe.

The Lenfest Ocean Program publishes online a study of five species of sharks in the Mediterranean Sea; the scientists found that the numbers of all five species had declined by more than 96% over two centuries and that there was a dearth of breeding-age females.

The Belgian brewing giant InBev makes an unsolicited bid to buy American brewer Anheuser-Busch, headquartered in St. Louis, Mo.

12 A referendum is held in Ireland on whether to accept the Lisbon Treaty on governing the European Union; the treaty is rejected.

The U.S. Supreme Court rules that in spite of the Military Commissions Act of 2006, prisoners at the U.S. naval base at Guantánamo Bay, Cuba, have the right to challenge their detention in federal courts.

China and Taiwan agree to establish offices in one another's capitals to facilitate discussions about closer relationships.

As floodwaters roll down the Cedar River in Iowa, raising it 5 m (17 ft) above flood stage, torrential rains pound

the area, and much of the town of Cedar Rapids is washed away.

13 Taliban insurgents stage an attack on the main prison in Kandahar, Afg., breaking down walls and killing 15 guards; some 1,200 inmates, among them at least 350 Taliban members, escape.

Iraqi Prime Minister Nuri Kamal al-Maliki declares that talks on a security agreement with the United States that is to define how the U.S. may act in Iraq after the expiration of the UN mandate have reached an impasse.

Thousands of people converge in Islamabad, Pak., to demand the reinstatement of judges dismissed in November 2007 by Pres. Pervez Musharraf.

14 Pres. Robert Mugabe of Zimbabwe declares that he has no intention of ceding power; even if he should lose the runoff presidential election scheduled for June 27.

Iraqi troops begin an operation in Al-'Amarah, a city that is politically dominated by Shi'ite cleric Muqtada al-Sadr.

15 Kosovo's constitution officially goes into effect.

The board of American International Group (AIG) removes Martin J. Sullivan as CEO and replaces him with chairman Robert B. Willumstad.

The 62nd annual Tony Awards are presented in New York City; winners include the productions *August: Osage County*, *In the*

Heights, Boeing-Boeing, and South Pacific and the actors Mark Rylance, Deanna Dunagan, Paulo Szot, and Patti LuPone.

In the 76th running of the 24 Hours of Le Mans endurance automobile race, the Audi team led by Tom Kristensen of Denmark takes the victory; it is Kristensen's record eighth victory in the classic automobile race.

16 Rebel forces briefly occupy the towns of Goz Beida, Am Dam, and Biltine in Chad and exchange gunfire with European Union peacekeeping forces.

A ceremony is held in Takanezawa, Japan, as the first Honda FCX Clarity rolls off the assembly line; the vehicle is the first hydrogen-powered fuel-cell car that is capable of being mass-produced.

Tiger Woods defeats Rocco Mediate in a thrilling sudden-death play-off to win the U.S. Open golf tournament in San Diego, Calif.

17 Pres. Felipe Calderón of Mexico signs into law a constitutional amendment requiring for the first time that trials be openly argued before a judge with a presumption of innocence; the enormous changes entailed must be completed by 2016.

A car bomb explodes at a crowded bus terminal at a marketplace in Baghdad; at least 63 people die.

The Boston Celtics defeat the Los Angeles Lakers 131-92 in game six of the best-of-seven tournament to secure the team's 17th National Basketball Association championship.

18 Israel proposes holding peace talks with Lebanon, indicating that it is even willing to discuss the disposition of the disputed Shebaa Farms area on the border between the countries.

China and Japan both announce that the countries have reached an agreement to jointly develop gas fields in the East China Sea that lie in territory that both countries claim.

A report published in the journal *Nature* says that a review of sea-level measurements indicates a computational error that resulted in an underestimation of sea-level increase; in fact, sea levels rose five centimeters (two inches) from 1961 to 2003, some 50% higher than earlier estimates.

19 A truce negotiated between Israel and the militant group Hamas, which controls the Gaza Strip, officially goes into effect.

China announces a sudden and high increase in the

prices for diesel fuel, gasoline, and electricity.

20 China unveils a plan to halve the number of cars on the road in and around Beijing from July 20 to September 20 and to prevent high-emission vehicles, such as trucks, from entering the city during the same period; the intent is to reduce both traffic and air pollution during the Olympics.

Pres. Ellen Johnson-Sirleaf of Liberia releases the preliminary results of the country's first census in 24 years; the census, taken in late March, records the country's population as 3,489,072, an increase of 1,387,444 people since 1984.

The 2008 winners of the Kyoto Prize are announced: Richard M. Karp (advanced technology), Anthony J. Pawson (basic sciences), and Charles M. Taylor (arts and philosophy).

21 At the 113th British Amateur Championship

tournament in golf, Reinier Saxton of The Netherlands emerges victorious.

Typhoon Fengshen roars through the Philippines, leaving at least 498 people dead, and the MV *Princess of the Stars*, a large ferry, capsizes and sinks in the storm off the Philippine island of Sibuyan; after Coast Guard operations begin more than 24 hours later, it is believed that some 800 people lost their lives. (Photo below.)

22 Morgan Tsvangirai withdraws his candidacy in the presidential runoff election in Zimbabwe, citing the violence of the campaign being waged against his followers.

At the end of a well-attended emergency energy summit meeting convened by Saudi Arabia, little agreement has been reached, though Saudi Arabia announces a planned increase in oil production.

Iconic American comedian George Carlin dies in Santa Monica, Calif.

Romeo Gacad—AFP/Getty Images

23 Coalition troops patrolling in eastern

Afghanistan are ambushed by Taliban militants, about 55 of whom are killed in the ensuing battle.

Fighting in Tripoli, Leb., between supporters of the government and partisans of Hezbollah continues for a second day; at least eight people have been killed.

The large waste-disposal companies Republic Services and Allied Waste Industries announce an agreement for the American companies to merge.

Tina Ramirez announces her retirement as artistic director of Ballet Hispanico, which she founded in 1970.

24 The legislature of Belarus approves a draconian new law requiring all Internet sites in the country to register with the government.

Carlos Minc, Brazil's minister of the environment, announces that the government seized 3,100 cattle that were grazing on illegally deforested land in an ecological reserve in Pará state and intends to continue the course of action; the seizure took place on June 7.

The retail giant Home Depot announces that all of its stores will accept old compact fluorescent light bulbs for recycling; because the bulbs contain mercury, they cannot be disposed of in the conventional way.

25 The bodies of 28 members of a peace committee headed by a tribal leader and backed by the Pakistani government are found in South Waziristan; the victims had been kid-

napped by the Taliban two days earlier.

The U.S. Supreme Court rules that the punitive damages awarded in a lawsuit related to the 1989 *Exxon Valdez* oil disaster must be reduced to \$500 million, the amount that the Exxon Mobil Corp. has already paid out; in another ruling, the court bans the sentence of execution for the crime of child rape.

26 In a landmark ruling, the U.S. Supreme Court unprecedentedly holds that the Second Amendment to the Constitution confers an individual rather than a collective right to gun ownership and that state and city governments may not forbid the owning of handguns.

Girija Prasad Koirala resigns as prime minister of Nepal and asks the Maoist party to form a government.

A suicide bomber detonates his weapon at a meeting of an Awakening Council in Garma, Iraq, killing 20 people, and in Mosul a bombing that targeted the provincial governor kills at least 18 others instead.

At its meeting in Paris, the Internet Corporation for Assigned Names and Numbers (ICANN) issues new guidelines allowing users to apply to use any domain name of their devising and permitting domain names to be registered in scripts other than the Roman alphabet.

The price of a barrel of light sweet crude oil briefly reaches a new record of \$140.39 a barrel before closing at a record \$139.64.

In the face of growing questions of corruption surrounding the 2006 presidential election in Colombia,

Pres. Álvaro Uribe calls for that election to be rerun.

A public art project by Danish Icelandic artist Olafur Eliasson goes on view in New York City; the installation, which consists of four man-made waterfalls ranging in height from 27 to 37 m (90 to 120 ft), will flow until October 13.

27 In a runoff election in which he is unopposed, Pres. Robert Mugabe of Zimbabwe officially garners 85% of the vote; turnout is cited as 42.4%.

28 Massive and violent protests take place in Weng'an county in China's Guizhou province in response to the death of a teenage girl; the family of the girl maintains that there was an official cover-up involved.

Pakistani security forces shell Taliban positions outside Peshawar, which has been increasingly threatened by the Taliban; it is the first military action taken against militants by the Pakistani government that took office in March.

For the sixth consecutive day, crowds march in Srinagar in the Indian state of Jammu and Kashmir in protest against a rumoured plan to settle Hindus in the majority-Muslim state.

29 Israel agrees to trade the notorious Lebanese

terrorist Samir Kuntar and four other Lebanese prisoners to the Lebanese militia Hezbollah in return for the bodies of the Israeli soldiers Ehud Goldwasser and Eldad Regev, whose July 12, 2006, kidnapping by Hezbollah led to Israel's war with Hezbollah that year.

As protests against possible South Korean imports of U.S. beef continue, they begin to turn violent, and police in Seoul block off areas where demonstrations most frequently take place.

Park Inbee of South Korea wins a four-stroke victory over Helen Alfredsson of Sweden to win the U.S. Women's Open golf tournament in Edina, Minn.; at 19, Park is the youngest player to have won the tournament.

Spain defeats Germany 1-0 in the final match to win Euro 2008; it is Spain's first major association football (soccer) title since it won the European championship in 1964.

30 Officials in Lithuania report that over the weekend some 300 Web sites were defaced with Soviet symbols and anti-Lithuanian slogans by hackers; two weeks earlier Lithuania had banned the display of Soviet symbols.

Iraq announces plans to open bidding on six major oil fields in the country to 35 foreign companies.

The 11th summit meeting of the African Union convenes in Ra's Nasrani (Sharm al-Shaykh), Egypt.

Eurostat reports that inflation in the euro zone for the 12 months ended in June has reached a record 4%; the European Central Bank strives to keep the rate under 2%.

July

“

We've now finally touched it and tasted it.

And I'd like to say,

from my standpoint, it tastes very fine.”

”

William V. Boynton,
designer of the Phoenix Mars lander's Thermal and Evolved Gas Analyzer,
on the proof that water exists on Mars, July 31

1 Mongolian Pres. Nambaryn Enkhbayar declares a state of emergency in response to riots over allegations of fraud in recent legislative elections; the disturbances cause great destruction in the Mongolian National Modern Art Gallery in Ulaanbaatar.

•
The Dow Jones Industrial Average falls 0.8%, crossing the official threshold from a bull stock market to a bear market.

•
The presidency of the European Union rotates to the president of France, Nicolas Sarkozy.

2 In a meticulously planned and daring operation, Colombian forces rescue 15 hostages from the Revolutionary Armed Forces of Colombia (FARC), among them Ingrid Betancourt, a former presidential candidate kidnapped in 2002, and three American contractors seized in 2003.

•
The American trade union United Steelworkers allies itself with the largest British union, Unite; the alliance, which will operate under an umbrella government led by the heads of each union, will be known as Workers Uniting.

3 Roman A. Abramovich, a billionaire investor and association football (soccer) club owner, resigns as governor of Russia's autonomous district of Chukchi.

A yearlong celebration of the 400th anniversary of the founding of Canada's Quebec City comes to a climax. (Photo left.)

4 Shots are exchanged between Georgian troops and militia members of the country's separatist province of South Ossetia; at least two people are killed.

•
The first weekend charter flight from China carries tourists across the Taiwan

Jacques Boissinot—The Canadian Press/AP

Strait to Taiwan; the flights are expected to expand to carry some 3,000 travelers a day.

A special issue of the journal *Science* is devoted to the new information learned about the planet Mercury from the January 14 flyby of the Messenger space probe; it includes the geologic history of the Caloris impact basin and the fact that Mercury's core may be actively generating the planet's magnetic field.

5 An altercation takes place in a prison outside Damascus in which military police kill at least nine Islamist inmates and other military police and prison officials are taken hostage.

American Venus Williams defeats her sister Serena Williams to take her fifth All-England (Wimbledon) women's tennis championship; the following day Rafael Nadal of Spain wins the men's title for the first time when he defeats five-time champion Roger Federer of Switzerland.

6 A suicide bomber detonates his weapon next to a group of police officers in a crowd at the Lal Masjid (Red Mosque) in Islamabad, Pak.; at least 18 people are killed.

A bomb goes off in a café in Gali, in the separatist region of Abkhazia in Georgia; four people are killed.

In Mogadishu, Som., gunmen kill Osman Ali Ahmed, leader of the United Nations Development Programme for Somalia.

7 A suicide car bomb kills at least 41 people outside the Indian embassy in Kabul.

In York, Eng., the General Synod of the Church of England votes to allow the appointment of women as bishops; though some other branches of the Anglican Communion had taken the step several years earlier, the move is controversial.

Mirko Cvetkovic takes office as prime minister of Serbia after his government is approved by the National Assembly.

The computer software company Microsoft announces its renewed interest in purchasing the search engine company Yahoo!, provided that Yahoo! replaces its board of directors; the investor Carl Icahn is simultaneously fighting a proxy battle against the board.

8 The leaders of the Group of Eight industrialized countries, meeting in Japan, release a document agreeing to cut greenhouse gas emissions in half by 2050; environmentalists complain that the agreement fails to include targets for the nearer future.

The chief of police in Mexico City resigns after a police raid on a disco resulted in the smothering deaths of nine patrons and three officers.

American oil billionaire T. Boone Pickens unveils a plan to significantly decrease U.S. dependence on foreign oil, beginning with a \$2 billion investment in a planned enormous wind farm in Pampa, Texas.

9 The U.S. Senate gives final approval to a bill that affirms the authority of the Foreign Intelligence Surveillance Act (FISA) court but grants the government latitude in conducting wiretaps outside the court's authority and pro-

vides legal immunity to telecommunication companies that complied with earlier wiretapping efforts.

Gunmen attack the U.S. consulate in Istanbul; three of the police officers guarding the diplomatic mission are killed, as are three attackers.

Tillman Thomas is sworn in as prime minister of Grenada the day after his National Democratic Congress decisively won legislative elections; the defeated New National Party had held power for 13 years.

10 After a Russian military jet flies over Georgia's separatist province of South Ossetia, Georgia recalls its ambassador to Russia.

Six-country talks over North Korea's nuclear program resume after a nine-month hiatus.

Thailand's foreign minister, Noppadon Pattama, resigns after being censured for reaching an agreement with Cambodia over a 900-year-old Hindu temple sitting on the border between the two countries.

The Japanese automaker Toyota announces that it will scale back on the production of trucks and SUVs in the U.S. and, beginning in 2010, will make Prius hybrid cars in a new plant in Mississippi.

11 South Korean Pres. Lee Myung-bak suggests a resumption of bilateral talks with North Korea and offers humanitarian aid; on the same day, a South Korean tourist who entered a forbidden military zone in North Korea is shot dead.

Lebanese Prime Minister Fouad Siniora introduces a new 30-member cabinet; it is

the country's first full government since November 2006.

After the announcement of massive layoffs by IndyMac Bancorp prompts a run on the bank by its customers, federal bank regulators seize the California-based bank.

Rep. of the Congo, protesters attack the compound of UN peacekeepers in anger that they have not stopped the insurgents, and the newly appointed head of the UN force quits in frustration over its lack of strategy and resources.

Pres. Mikheil Saakashvili of Georgia dismisses Prime Minister Lado Gurgенidze and names Grigol Mgaloblishvili as his replacement.

South Korea's central bank holds an emergency meeting and lowers its key interest rate by three-quarters of a percentage point; elsewhere, the Bank of Israel lowers its rate by one-quarter point, and Australia's central bank buys Australian dollars to improve the exchange rate.

The Community Court of Justice, a regional court established by the Economic Community of West African States, rules that Niger failed to enforce its laws against slavery in allowing a 12-year-old girl to be sold into slavery and kept in that state for more than 10 years and awards her \$19,000.

Sen. Ted Stevens of Alaska is convicted in the District of Columbia on seven felony counts for having failed to report some \$250,000 in gifts and services he had received; Stevens is running for his seventh term of office.

28 In runoff presidential elections in Maldives, Mohamed Nasheed defeats Maumoon Abdul Gayoom, who had been president since 1978.

Iran announces that it has opened a new naval base in the port of Jask on the Gulf of Oman.

29 Ukraine's legislature gives initial approval to financial changes required by the IMF before it releases a \$16.5 billion loan to the country; the Ukrainian currency, the hryvnia, loses some 14% of its value.

Suicide car bombers attack the presidential palace in Hargeysa, the capital of Somalia's semi-independent and peaceful region of Somaliland, killing at least 20 people; other car bombs

explode in Bosasso in the semiautonomous region of Puntland.

The U.S. Federal Reserve cuts its benchmark interest rate half a point, to 1%.

Pakistan formally protests U.S. attacks against Taliban and al-Qaeda militants on its soil and demands a stop to the incursions.

In the World Series, the Philadelphia Phillies defeat the Tampa Bay Rays 4-3 in the final three and a half innings of the fifth game, which began on October 27 and was suspended for two days, owing to the weather, to win the Major League Baseball championship.

30 In India's Assam state, bombs go off in four towns, including the state capital; at least 64 people are killed all told.

The first copies of *Bhutan Today*, the first daily newspaper published in Bhutan, roll off the presses in Thimphu.

Rupiah Banda wins the presidential election in Zambia; he had been acting president since the death of Pres. Levy Mwanawasa.

The oil company Exxon Mobil reports a record \$14.8 billion in profit in its most recent fiscal quarter.

31 A missile attack believed to have been launched by a U.S. drone hits two villages in Pakistan, killing 27 people, one of them said to be an al-Qaeda operative.

U.S. Gen. David Petraeus takes over the Central Command, which oversees military operations in Iraq, Afghanistan, and much of the Middle East, Central Asia, and South Asia.

November

“ *I ran into the hotel kitchen, and then we were shunted into a restaurant in the basement. We are now in the dark in this room, and we have barricaded all the doors. It's really bad.* ”

European Parliament member Sajjad Karim describing his ordeal during the terrorist siege of his hotel in Mumbai (Bombay), November 26

1 A group of 6,400 dissident members of the African National Congress (ANC) party meet in Johannesburg to discuss the formation of a new political party.

2 With a fifth-place finish at the Brazilian Grand Prix, which is won by Felipe Massa of Brazil, British driver Lewis Hamilton at 23 years of age becomes the youngest person to have won the Formula 1 automobile racing drivers' championship.

Sébastien Loeb of France secures a record fifth successive world rally championship automobile racing drivers' title with a third-place finish in the Rally of Japan.

Marilson Gomes dos Santos of Brazil wins the New York City Marathon with a time of 2 hr 8 min 43 sec, while Britain's Paula Radcliffe is the fastest woman, with a time of 2 hr 23 min 56 sec.

3 The U.S. Department of Commerce releases figures showing that the sales of new cars and trucks in October had fallen to levels not seen since the early 1980s, with figures down almost 32% compared with sales in October 2007.

A \$10.9 billion fiscal stimulus package is announced by the government of South Korea, while Spain declares a program that will allow unemployed homeowners to defer mortgage payments.

In a complicated spy and bribery case known as “Suitcasegate”—for the suitcase full of cash found in the airport in Buenos Aires in August 2007 that began the scandal—Venezuelan businessman Franklin Durán is convicted by a court in Miami of having acted as a foreign “unregistered agent” in the U.S.

4 Gen. Mario Montoya resigns as head of Colombia's army in a

spreading scandal about the apparently pervasive practice of the armed forces' killing of civilians in an attempt to inflate the figures of insurgents killed by security forces.

China and Taiwan sign an agreement that will greatly increase transportation connections as well as trade opportunities between the two entities.

A Mexican government jet crashes into a business district in Mexico City; all nine people aboard, including Minister of the Interior Juan Camilo Mouriño, and at least five people on the ground are killed.

For the third day in a row, rioting over the high price of fuel takes place in Conakry, Guinea, as armed forces use violence against the demonstrators.

It is reported that beginning in January 2009, the weekly newsmagazine *U.S. News & World Report* will publish only once a month.

In a historic presidential election in the U.S., Democratic candidate Barack Obama wins with 52.9% of the popular vote and 365 electoral votes, against Republican candidate John McCain's 45.7% and 173 electoral votes; Obama celebrates his victory with a rally in Grant Park in Chicago. (Photo right.)

5 Officials in Afghanistan complain that a U.S. air strike two days earlier killed at least 40 civilians at a wedding party in Kandahar province.

6 The heads of the automobile companies General Motors, Ford, and Chrysler and the leader of the United Automobile Workers union travel to Washington, D.C., to ask for a second time for government help to prevent the collapse of their industry.

In northwestern Pakistan, at a gathering of tribesmen

opposed to the Taliban, a suicide bomber kills at least 17 people.

7 U.S. government figures show that 240,000 jobs were lost in October as the unemployment rate rose to 6.5%, its highest level in 14 years.

In Pétionville, outside Port-au-Prince, Haiti, a church-run school that is adding a third story collapses into rubble; at least 91 schoolchildren and teachers are killed.

A court in Malaysia orders the release of Raja Petra Kamarudin, a popular blogger who has been held without trial since September 12 under the Internal Security Act; his blog is frequently critical of the government.

8 Iraq's executive council ratifies a law setting the composition of provincial councils; the law allots only six seats on the councils to members of religious minorities, just half of what the United Nations recommended.

In legislative elections in New Zealand, the opposition National Party wins 45.5% of the vote, against the ruling Labour Party's 33.8%.

Latvia assumes control of Parex Banka AS, the country's second largest bank, to prevent its collapse.

9 At an emergency summit meeting of the Southern African Development Community in Johannesburg, participants call for a cease-fire in the eastern region of the Democratic Republic of the Congo and agree to send military advisers to assist the government.

At an American Heart Association convention, researchers present a large study that found that people who did not have high cholesterol or a history of heart disease but did have high levels of C-reactive protein were far less likely to suffer strokes or heart disease if treated with statins.

10 A coordinated triple bombing involving two car bombs and a suicide bomber kills at least 28 people in Baghdad.

The European Union member countries agree to resume negotiations on forging a partnership with Russia; the talks were stopped

on September 1 after Russian troops refused to withdraw from Georgia.

The credit card company American Express Co. receives approval from the U.S. Federal Reserve to become a bank holding company.

The American electronics retailer Circuit City files for bankruptcy protection.

Deutsche Post, the parent of the shipping company DHL, announces plans to eliminate domestic delivery in the U.S., cutting 9,500 jobs.

The 11th annual Mark Twain Prize for American Humor is awarded posthumously to comic George Carlin in a ceremony at the John F. Kennedy Center for the Performing Arts in Washington, D.C.

11 Police in India announce the arrest of nine people whom they believe to be members of a radical Hindu terrorist cell that was responsible for a bomb attack in the city of Malegaon in September.

Former Taiwanese president Chen Shui-bian is arrested on charges of corruption and money laundering.

Food inspectors in Hong Kong report finding high levels of the toxic chemical melamine in fish feed from China.

Peter Eastgate of Denmark wins the World Series of Poker; at 22, he is the youngest winner of the card game tournament.

12 Algeria's legislature overwhelmingly agrees to overturn the constitutional provision that presidents may serve no more than two consecutive terms; Pres. Abdelaziz Bouteflika is serving his second term of office.

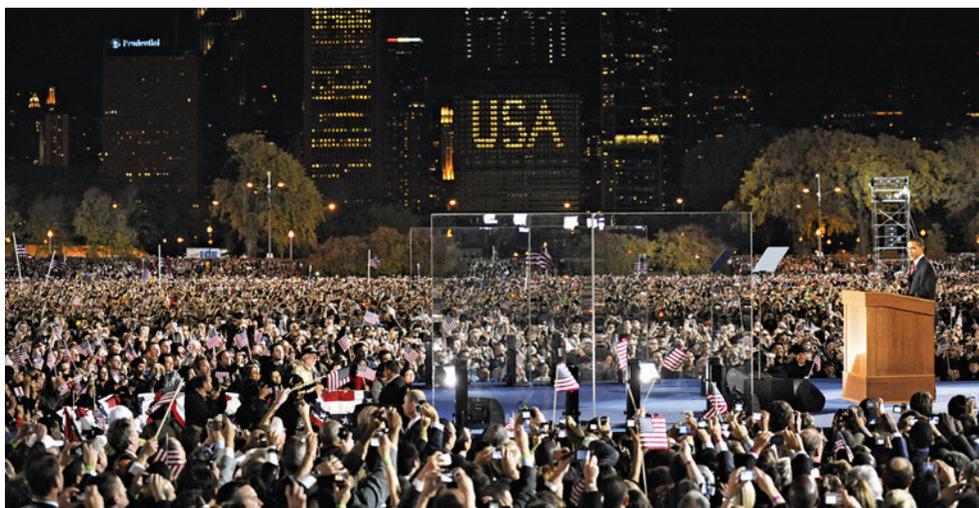

U.S. Secretary of the Treasury Henry Paulson announces that the government no longer plans to use the \$700 billion bailout package to buy bad assets but will rather try to use the money to capitalize banks and to help companies make loans.

Islamist militants in Somalia easily take control of the port city of Marca and the following day seize the town of Elasha Biyaha, 18 km (11 mi) from Mogadishu.

The 2008 Dorothy and Lillian Gish Prize is awarded to film actor and director Robert Redford.

13 The United Nations Environment Programme releases a report on noxious "brown clouds" of pollution, composed of soot, smog, and chemicals from the burning of coal, wood, and fossil fuels; they occur most frequently in Asia and cause, among other things, reduced crop yields, health problems, and altered weather patterns.

At the Latin Grammy Awards in Houston, Colombian rock musician Juanes wins five awards, including

Pat Benic—UPI Photo/Landov

album of the year for *La vida . . . es un ratico* and both song and record of the year for "Me enamora."

14 With a European Union report showing that the economy of the 15-country euro zone shrank 0.2% in the third quarter, the euro zone is officially in recession.

Hamas militants in the Gaza Strip fire a barrage of rockets into Israel; 18 people are hurt.

The enlarged Art Gallery of Ontario, renovated by architect Frank Gehry, reopens in Toronto.

15 Leaders of the Group of 20 countries meet in Washington, D.C., to discuss the global financial crisis.

California Gov. Arnold Schwarzenegger declares a state of emergency in Los Angeles county as several wildfires, driven by Santa Ana winds, burn hundreds of houses and compel the evacuation of more than 10,000 residents.

16 Iraq's cabinet approves a status-of-forces agreement negotiated with the U.S.; the pact, which must also be approved by the legislature, begins restricting the scope of U.S. combat operations starting on Jan. 1, 2009, and calls for a complete U.S. withdrawal by the end of 2011.

After the final auto race of the season, Jimmie Johnson is crowned winner of the NASCAR drivers' championship for the third year in a row.

The final episode of *TRL*, the once-important pop-music video-countdown tele-

vision show on MTV, is aired in a three-hour celebration; the show debuted in 1998.

17 The Taliban responds to an offer of peace talks with Afghan Pres. Hamid Karzai by setting the condition that all foreign troops must leave Afghanistan for such negotiations to take place.

New figures in Japan reveal that the country's economy shrank for the second consecutive quarter, putting Japan officially in recession.

The banking corporation Citigroup announces that it will eliminate 52,000 jobs worldwide, reducing its workforce by 14%.

The Saudi-owned supertanker *Sirius Star* is seized by pirates some 450 nautical miles southeast of Mombasa, Kenya, far from the usual area menaced by pirates.

Jerry Yang discloses his intention to resign as CEO of the computer company Yahoo!

18 A court in Egypt rules that a contract to provide natural gas to Israel signed in 2005 should have been approved by the legislature and because it was not should not be honoured.

Iraq's cabinet sets provincial elections for Jan. 31, 2009, in all provinces except four in and around Kurdistan.

19 For the second straight day, fighting takes place in Managua, Nic., between supporters of the government and opposition allies who believe that municipal elections on November 9 were rigged.

John Key is sworn in as prime minister of New Zealand.

The U.S. Department of Labor reports that the consumer price index for October dropped by 1%, the biggest one-month drop ever measured, and the Dow Jones Industrial Average falls below 8,000 for the first time since 2003.

The heads of the three major American automobile manufacturers leave Washington, D.C., having failed to persuade Congress to grant the industry a financial bailout.

The U.S. Food and Drug Administration opens a branch in Beijing to screen food and drugs that will be exported to the U.S.; it is intended to be the first of several overseas offices.

In an act of mass reforestation, thousands of people in Macedonia undertake to plant six million new trees in a single day.

Detroit Lions become the first National Football League team ever to lose every game of a 16-game regular season.

29 Abdullahi Yusuf Ahmed resigns as president of the transitional government of Somalia.

In legislative elections in Bangladesh, the Awami League, led by former prime minister Sheikh Hasina Wazed, and its allies win a large majority of seats.

Supporters of ousted Thai prime minister Thaksin Shinawatra take to the streets of Bangkok and prevent the legislature from holding its opening session by surrounding the parliament building.

Israel continues its air assault against Hamas targets in the Gaza Strip; as the death toll passes 350 and Hamas rockets kill three Israelis, Israeli Defense Minister Ehud Barak declares that Israel is engaged in an "all-out war" with Hamas.

30 Ghana's election commission says that the results of the presidential runoff are too close to

call and that one district that was unable to hold voting on election day will vote on Jan. 2, 2009; the results there will determine the winner.

31 As an emergency meeting of the Arab League convenes, Israel rejects a proposed 48-hour cease-fire and continues its bombardment of Gaza.

At the last bell of the year at the New York Stock Exchange, the Dow Jones Industrial Average has lost 33.8% of its value from the beginning of the year, its worst annual loss since 1931; the Standard & Poor's 500-stock index has lost 39.5% of its value.

Executives at Russia's natural-gas monopoly Gazprom announce that they will cut off gas supplies to Ukraine on Jan. 1, 2009.

China and Vietnam announce that they have completed the demarcation of the 1,350-km (840-mi) border between the countries.

Consumers Union, the publisher of the magazine *Consumer Reports*, announces that it has bought the popular blog Consumerist.com from Gawker Media.

Disasters

Listed here are **MAJOR** disasters that occurred in 2008. The list includes **NATURAL** and **NONMILITARY** mechanical disasters that claimed more than 15 lives and/or resulted in significant damage to **PROPERTY**.

Aviation

January 23, Poland. A Spanish-built CASA transport plane carrying members of the Polish air force home from a conference on flight safety in Warsaw crashes near the town of Miroslawiec; all 20 aboard are killed.

February 21, Venezuela. A Santa Barbara Airlines ATR 42-300 turboprop crashes into a mountainside in Sierra La Culata National Park shortly after takeoff from Mérida; all 46 aboard are killed.

April 3, Suriname. A Blue Wings Airlines Antonov An-28 airliner crashes on its approach to the airport in Benzdorp; all 19 aboard lose their lives.

April 15, Democratic Republic of the Congo. An airliner taking off from the airport in Goma crashes into a busy market neighbourhood and bursts into flames; more than 40 people, most of them on the ground, are killed.

April 28, Black Sea. A Ukrainian Mi-8 helicopter plummets into the Black

Sea after its tail hits an offshore drilling platform; 19 of the 20 aboard die in the crash.

May 2, The Sudan. A Beechcraft 1900 airplane crashes near Rumbek, killing at least 23 people, including the southern Sudan's minister of defense, Dominic Dim.

May 29, Panama. A helicopter carrying Chilean police officials from Colón to Panama City, where they had been attending a meeting of Latin American antiterrorism leaders, crashes on top of a building; at least 15 people, including the head of Chile's national police force and at least 4 people on the ground, are killed.

June 10, Khartoum, The Sudan. A Sudanese airliner bursts into flames after landing; at least 30 of the 214 people aboard are incinerated.

August 20, Spain. An MD-82 airliner operated by the low-cost carrier Spanair and bound for the Canary Islands goes off the end of the runway at

Madrid Barajas International Airport on takeoff and bursts into flames; at least 154 of those aboard perish.

August 24, Kyrgyzstan. A passenger jet bound for Iran crashes shortly after takeoff from Manas International Airport in Bishkek, killing at least 64 passengers; 22 survive.

September 1, Democratic Republic of the Congo. A small plane crashes into a mountainside during a thunderstorm; all 17 aboard, most of them aid workers, are feared dead.

September 14, Russia. While traveling from Moscow to Perm, a Boeing 737 passenger jet operated by an Aeroflot subsidiary crashes when preparing to land; all 88 aboard die.

October 8, Nepal. A Yeti Airlines Twin Otter airplane attempting to land at tiny Lukla Airport in the Himalayan Mountains catches its wheels on a security fence and crashes; 18 of the 19 people aboard, including 12 Germans and 2 Australians, are killed.

Authorities inspect the wreckage of a Sudanese airliner that exploded after landing at the airport in Khartoum on June 10, killing at least 30 people.

Adb Raouf/AP

Fires and Explosions

January 7, Inch'on, S.Kor. Fire breaks out at a newly built cold storage facility; some 40 people are believed to have lost their lives.

January 31, Istanbul. An explosion, likely caused by fireworks ignited by an earlier fire, destroys a building; at least 22 people die in the blast.

March 15, Near Tirana, Alb. A series of strong explosions at a munitions depot kills 26 people and injures more than 300.

March 26, Xinjiang province, China. As authorities attempt to destroy illegal fireworks outside the city of Turpan, an unplanned explosion occurs; 22 people are reported killed.

April 7, Uganda. A fire in a dormitory for a girls' elementary school outside Kampala kills 19 schoolgirls and 2 adults; the cause is unclear, and reports indicate that the doors may have been locked from the outside.

AP

Nigerian firefighters attempt to extinguish flames in a village near Lagos on May 15; the fire, which began after a fuel pipeline was ruptured, killed more than 100 people.

April 26, Casablanca, Mor. A four-story mattress factory goes up in flames; at least 55 people succumb.

May 15, Nigeria. A fuel pipeline in a village near Lagos is ruptured by road construction equipment, causing much of the area to be engulfed in flames; some 100 people are killed.

August 1, Balcilar, Tur. A gas explosion causes the collapse of a three-story girls' dormitory; at least 17 students are crushed to death.

August 26, Guangxi autonomous region, China. A series of explosions in the Guangxi Guangwei Chemical Co. factory that last for seven hours leave at least 20 workers dead in Yizhou.

August 28, Limani, Cameroon. After an oil tanker overturns, residents rush to salvage the leaking gasoline, but a spark from a passing bus causes an explosion and fire; dozens of people, including passengers on the bus, are incinerated.

September 20, Guangdong province, China. In Shenzhen ignited fireworks cause a fire in a nightclub that leaves at least 43 people dead.

October 23, Rajasthan state, India. A powerful explosion demolishes an illegal fireworks factory in the village of Deeg; at least 26 people lose their lives in the blast.

December 24, Yevpatoria, Ukraine. An explosion destroys an apartment building, and at least 19 people are killed; it is thought that oxygen tanks stored in the basement may have been the cause of the blast.

Marine

February 21, Near Itacoatiara, Braz. The *Almirante Monteiro*, a ferry, collides with a barge in the Amazon River and sinks to the bottom; some 20 people are feared lost.

February 28, Near Dhaka, Bangladesh. A ferry collides with another vessel in the Buriganga River; at least 39 passengers are killed.

March 3, Bay of Bengal. A wooden trawler carrying would-be migrants to

Malaysia from Bangladesh and Myanmar (Burma) is found drifting by the Sri Lankan navy; 20 of the more than 90 passengers have died of starvation and dehydration.

March 6, Albania. A boat that is used to carry customers to and from a restaurant on Lake Farka near Tirana sinks; 16 people, most of whom had attended a birthday party at the restaurant, are drowned.

March 22, Off Hong Kong's Lantau Island. A Ukrainian tugboat collides with a Chinese freighter and sinks; 18 crew members are feared lost.

April 1, Nigeria. In Kano state, a dugout canoe carrying a wedding party capsizes; at least 40 people, including the bride, drown.

April 20, Off the Bahamas. Rescue workers find the bodies of 20 drowned Haitians in the sea as well as three survivors; the vessel that had been carrying them is not found.

May 4, Brazil. The wooden ferry *Comandante Sales*, carrying a group of some 80 partygoers, capsizes and sinks in the Solimões River; at least 41 people drown.

May 12, Bangladesh. A ferry on the Ghorautra River goes down quickly in bad weather; at least 44 people die.

May 19, Democratic Republic of the Congo. An overloaded passenger boat sinks in a storm on Lake Tanganyika; dozens of people are lost.

June 7, Libya. A boat carrying would-be migrants to Italy capsizes shortly af-

Rescue workers in Brazil search the capsized ferry Comandante Sales, which sank in the Solimões River on May 4; at least 41 passengers died in the tragedy.

Alberto Cesar Araujo—Agencia Estado/AP

ter departing from Zuwarah; at least 40 people are drowned, with a further 100 missing.

June 21, Philippines. The MV *Princess of Stars*, a large ferry, capsizes and sinks in a typhoon off the island of Sibuyan; some 800 people perish.

July 22, Democratic Republic of the Congo. A motorboat carrying passengers from Mobayi Bongo to the Central African Republic sinks in the Ubangi River; at least 47 people drown, with a further 100 missing.

August 27, South of Malta. An overloaded boat that left Zuwarah, Libya, carrying would-be migrants from The Sudan and Eritrea takes on water and sinks; 71 people are feared lost.

August 29, Bihar state, India. An Indian army boat rescuing victims of the flooding disaster that caused the Kosi River to change course capsizes; some 20 flood victims and soldiers drown.

November 3, Yemen. The international group Doctors Without Borders reports that 60 bodies have washed up onto the shores over the past two days; the dead had put out from Boosaaso, Som., in boats, and some had been forced overboard by smugglers, while one boat capsized.

November 4, Philippines. An inter-island ferry bound for Sorsogon goes down in bad weather; at least 40 people perish.

November 8, Sea of Japan. A Russian nuclear submarine undergoing testing suffers an accident with its fire-extinguishing system that fills two compartments with Freon gas, asphyxiating at least 20 workers.

December 14, Philippines. A ferry just entering the mouth of the Cagayan River capsizes; at least 23 passengers drown, with 33 others missing.

Mining and Construction

January 11, Kazakhstan. An Arcelor-Mittal-owned coal mine suffers a gas explosion; at least 30 miners are killed.

January 16, Morocco. An apartment building under construction in Kenitra collapses, killing at least 16 workers.

January 21, Shanxi province, China. As miners attempt to reopen a shaft in a closed mine, an explosion takes place that kills at least 20 people.

August 9, Boussoukoula, Burkina Faso. At an illegal gold mine, rain causes a mine collapse and mud slide in which at least 34 workers are buried, with dozens more reported missing.

September 20, Hegang, Heilongjiang province, China. A coal mine fire leaves 19 miners dead and 12 missing.

A survivor of a school collapse in Pétionville, Haiti, emerges from the rubble of the building on November 7; at least 91 students and teachers were crushed to death.

September 21, Henan province, China. A gas explosion in a coal mine kills at least 37 miners; 9 are missing.

November 7, Pétionville, Haiti. A third floor is being added to a church-run school when the building collapses, crushing to death at least 91 schoolchildren and teachers.

November 15, Hangzhou, Zhejiang province, China. A section of a subway tunnel that is being constructed collapses; at least 21 people are killed.

December 27, Hunan province, China. A construction crane collapses in downtown Changsha, killing at least 17 workers.

Natural

January 9, Iran. Authorities in Iran say that a disastrous blizzard in the Tehran area has resulted in the deaths of at least 28 people; Tehran declares a two-day national holiday so that people will stay home.

January 17, Afghanistan. Officials report that an unusually hard winter has left at least 200 people dead; huge numbers of livestock have also perished.

January 28, China. The government issues a severe weather warning for eastern and central China, areas that have already received record-setting amounts of snow, causing a transportation crisis and leaving at least 24 people dead.

February 3, Africa. A series of earthquakes takes place in the Great Lakes region, killing some 40 people (34 in Rwanda and 6 in the Democratic Re-

public of the Congo) and injuring more than 400.

February 5, U.S. A fierce outbreak of tornadoes leaves a path of destruction in several southern states, particularly in Tennessee, where at least 30 people are killed, and Arkansas, which suffers a death toll of at least 13; a further 7 people are reported killed in Kentucky and 4 in Alabama.

February 8, Indian-administered Kashmir. Heavy snowfall in the region triggers avalanches that result in the deaths of at least 20 people.

February 10, China. Officials say that power and transportation are beginning to be restored in some areas where the worst winter storms in 50 years have led to at least 60 deaths.

February 12, Northern Bolivia. Pres. Evo Morales declares a national disaster because of flooding following heavy rains that has left at least 60 people dead.

February 16, Afghanistan. Authorities say the harshest winter in 30 years has left 926 people dead so far, 462 of them in Herat province, and hundreds of thousands of cattle have also succumbed to the cold.

February 17, Madagascar. A particularly ferocious storm, Cyclone Ivan, makes landfall on the east coast, all but destroying the village of Ambodihazina, leaving more than 80 people dead, and devastating the ripening rice crops.

February 21, Eastern Philippines. After two weeks of torrential rains, at least 20 people have died in flooding

Nasser Nuri—Reuters/Landov

and landslides, tens of thousands of people have been displaced, and great damage has been caused to infrastructure and to rice fields.

April 7, Democratic Republic of the Congo. Humanitarian officials report to the UN that torrential rains in the Kasai-Occidental and Bandundu provinces have left at least 15 people dead and hundreds homeless.

May 2–3, Myanmar (Burma). Cyclone Nargis, an extraordinarily strong tropical cyclone that formed in the Bay of Bengal and quickly strengthened to a category 4 storm, makes landfall in Myanmar (Burma) and throughout the night churns up the densely populated rice-growing region of the Irrawaddy River delta, cutting a wide path of destruction augmented by a 4-m (12-ft) storm surge that obliterates coastal villages; some 138,000 people perish.

May 10, United States. A violent storm system spawns tornadoes that lay waste to portions of Oklahoma, Missouri, and Georgia, leaving more than 23 people dead, at least 15 of them in Missouri and most of those near Racine.

May 12, Sichuan province, China. A magnitude-7.9 earthquake devastates the area; at the epicentre, in Wenchuan, some 80% of the structures are flattened. At least 69,000 people lose their lives, 18,000 more are missing, and hundreds of thousands are made homeless.

May 14, Uttar Pradesh state, India. A violent storm leaves at least 128 people dead and all but destroys the important mango crop.

June 17, Southern China. The death toll from flooding caused by incessant heavy rains rises to 171; more than a million people have been evacuated.

June 20, India. Authorities say that the death toll from flooding resulting from heavy rain in eastern and northeastern areas of the country has risen past 50; thousands of villages are reportedly submerged.

June 21, Philippines. Typhoon Fengshen smashes into the Philippines; at least 498 residents perish.

July 27, Ukraine and Romania. Officials report that five days of heavy storms have left a total of 13 people dead in Ukraine and 5 others dead in Romania; some 8,000 people in the region have been evacuated.

August 10, Southern India. Officials report that monsoon rains caused the deaths of at least 59 people, not including the 40 people who are swept away when a truck in which they are riding fails to negotiate a flooded bridge in Andhra Pradesh state.

An observer gazes at the site where a rockslide crushed a shantytown outside Cairo on September 6, killing dozens.

August 18, Southeast Asia. It is reported that over the past week, record flooding has caused devastation throughout much of the region, with thousands of residents forced from their homes and at least 160 people dead in Vietnam alone.

August 18, Bihar state, India. As a result of heavy rains that cause the breach of a dam in Nepal, the Kosi River breaks its embankments and changes course to flow in an old channel some 120 km (75 mi) east, inundating villages in Nepal and Bangladesh as well as in India; a minimum of two million people are left homeless and at least 90 dead.

August 26, Hispaniola. Hurricane Gustav makes landfall in Haiti and the Dominican Republic; at least 84 people are killed, and thousands of homes are ruined.

August 30, Sichuan province, China. A magnitude-5.7 earthquake with its epicentre some 35 km (22 mi) southeast of Panzhihua causes houses to collapse in several villages and leads to the deaths of at least 28 people.

September 6, Egypt. The Muqattam cliffs outside Cairo begin to collapse, loosing hundreds of pounds of rocks and boulders that crush a shantytown in the shadow of the cliffs; dozens of people are killed; the cause of the collapse is unclear.

September 6, Haiti. After a week of flooding caused by Tropical Storm Hanna, at least 529 people have perished, most of them in Gonaïves.

September 8, Haiti. Hurricane Ike sweeps through Haiti, leaving at least 58 people dead.

September 13, Texas. Hurricane Ike spreads heavy flooding throughout Galveston and Orange and causes extensive damage in Houston; some 51 people in the region succumb, 20 of them in Texas.

September 22, India. The death toll from three days of heavy monsoon rains is reported to have reached 119.

September 28, Vietnam. Authorities report that Typhoon Hagupit has caused flooding that has left at least 41 people dead; the storm had earlier killed some 8 people in the Philippines and 17 people in China.

October 2, Algeria. Torrential rains cause a flash flood in a normally dry river in the Sahara; the town of Ghardaia is inundated, with some 600 homes destroyed and at least 33 people killed.

October 3, Haiti. The civil protection agency reports that the total death toll in the country from Hurricanes Gustav and Ike and Tropical Storms Hanna and Fay in August and September is 793.

October 5, Kyrgyzstan. A magnitude-6.6 earthquake strikes, killing at least 72 people and flattening the village of Nura.

October 25, Yemen. After two days of heavy rain from a tropical storm, massive flooding along the Wadi Hadramawt leaves at least 180 people dead and some 20,000 people displaced.

October 29, Balochistan province, Pakistan. A shallow magnitude-6.4 earthquake strikes, killing at least 215 people and leaving some 15,000 homeless at the beginning of winter.

November 7, Vietnam. Authorities report that unseasonal flooding in recent weeks has left at least 82 people dead and led to an outbreak of dengue fever.

November 24, Southern Brazil. Officials report that flooding and landslides have left at least 59 people dead and displaced some 43,000 others; by December 1 the death toll has risen to a minimum of 116.

Railroad

April 28, Shandong province, China. Outside the city of Zibo, a high-speed passenger train traveling from Beijing to Qingdao derails and hits another passenger train en route from Yantai to Xuzhou; at least 70 people are killed.

July 16, Northern Egypt. A truck rear-ends a car waiting at a railroad crossing, pushing three vehicles onto the tracks, where they are crushed by a train; at least 40 people are killed.

August 1, Andhra Pradesh state, India. Five of the 13 cars of the Secunderabad-Kakinada Gautami Express train become engulfed in flames; at least 30 passengers expire.

September 12, Los Angeles. A commuter train crashes head-on into a freight train, killing at least 25 people, when the engineer fails to stop at a red signal; it is thought that he may have

Workers in China's Shandong province repair the damaged railway at the site of a passenger train collision that claimed the lives of at least 70 persons on April 28.

Xinhua/Landov

Onlookers in the western Indian state of Gujarat watch as a crane lifts a bus from a canal of the Narmada River; the bus plunged into the canal on April 16, killing at least 45 people.

been distracted by text messaging on his cell phone.

Traffic

January 12, Port Harcourt, Nigeria. A fuel tanker truck blows a tire and overturns; the fuel spills and ignites, incinerating at least 30 people.

January 20, India. Near the town of Nashik, an overloaded bus carrying pilgrims from a visit to Hindu shrines

fails to negotiate a hairpin turn and plunges over a mountainside; at least 37 of the passengers are killed.

January 26, Near Jerash, Jordan. A passenger bus traveling from Irbid to Al-Aqabah collides with a water truck, and both vehicles fall off the road into the valley below; at least 20 people are killed.

January 29, China. In the province of Guizhou, which is among those suffering prolonged severe winter storms, a bus goes off an ice-coated road; at least 25 passengers perish.

February 7, Egypt. Some 100 km (60 mi) south of Cairo, a bus collides with a minibus in heavy fog, and some six more vehicles crash into them; at least 29 people are killed in the pileup.

February 29, Southern Guatemala. A greatly overloaded bus crashes while taking a dangerous corner near Jutiapa; at least 45 passengers perish.

March 25, Western Honduras. A passenger bus goes off a highway in the mountains and rolls down a hillside; at least 26 of those aboard are killed.

April 16, Gujarat state, India. In Vadodara a state bus carrying schoolchildren goes off a bridge and falls some 18 m (60 ft) into a canal of the Narmada River; at least 44 children and 3 adults perish.

April 23, Rajasthan state, India. Northwest of Jodhpur, late at night, a truck and a crowded van collide; at least 24 of the van passengers lose their lives.

May 27, KwaZulu-Natal province, South Africa. A bus goes over a cliff and falls some 80 m (260 ft), landing upside-down in the river below; at least 30 people die.

May 29, Southern India. A truck carrying at least 70 people to a wedding celebration falls off a bridge after the driver swerves to avoid electrical wires on the road; at least 39 of the passengers perish.

July 8, Southern Bolivia. A truck carrying some 60 people as well as goods goes off a mountain road, plunging 200 m (650 ft) into a ravine; at least 47 people, among them 12 children, die.

August 2, Bihar state, India. A truck loaded with food grain sacks and people goes off a road into a nearly dry culvert below; at least 40 people die, most of them crushed to death.

August 8, Near Sherman, Texas. An illegally operated chartered bus carrying Vietnamese Roman Catholics to a religious gathering in Carthage, Mo., goes over a guardrail in a crash, killing 17 passengers.

August 15, Dominican Republic. On the highway between La Romana and Higüey, a passenger bus attempting to go around a parked vehicle hits another passenger bus head-on; at least 20 people are killed.

September 8, Eastern Turkey. A bus carrying Iranian tourists in Agri province goes off the road and crashes; at least 16 passengers die.

October 10, Eastern Thailand. On an overnight trip to the coast from a technology university in Khon Kaen province, a bus carrying students crashes into a hillside; at least 22 people are killed, and 50 are badly hurt.

November 4, Near Hannover, Ger. A tour bus carrying elderly passengers home after a day trip to a farm catches fire, possibly because a passenger smoked a cigarette in the bus's restroom; at least 20 people die.

November 15, Near Boromo, Burkina Faso. A collision occurs between a passenger bus carrying workers to Côte d'Ivoire and a commercial truck loaded with sugar, and both vehicles burst into flames, trapping the bus passengers; at least 66 of them perish.

December 16, Israel. A bus transporting Russian tour guides to the resort town of Eilat from a nearby airport goes off the road and rolls down a mountain slope; at least 24 of the passengers are killed.

December 27, Tangail, Bangladesh. A truck leaves the road in thick fog and goes into a ditch; at least 24 of the passengers, most of whom were heading

home from Dhaka to vote in legislative elections, die.

Miscellaneous

March 29, Luanda, Angola. Dozens of people are crushed to death when a seven-story building housing the headquarters of the police criminal investigation department collapses; the structure had been deteriorating and recently had a large electrical generator installed on its roof.

April 9, Southern Thailand. In a truck carrying illegal Myanmarese (Burmese) migrant workers, 54 of the 121 crammed inside suffocate.

May 20, India. It is reported that at least 110 people in the Bengaluru (Bangalore) area have died in the past few days after drinking illicit alcohol; by May 22 the death toll has risen to 180.

August 3, Himachal Pradesh state, India. Near the Naina Devi temple, fears

of a landslide lead to a stampede in which more than 150 pilgrims, most of them women and children, lose their lives.

September 15, Pasuruan, Indon. A Ramadan tradition in which wealthy families give money to the poor results in tragedy when pushing in a crowd awaiting such handouts causes at least 23 people to be crushed to death.

September 30, Jodhpur, Rajasthan state, India. On the first day of a nine-day festival devoted to the Hindu goddess Durga, a stampede possibly caused by pilgrims slipping on coconut milk offerings causes at least 224 people to be trampled to death.

October 1, Tabora, Tanz. At an event in a disco hall to celebrate 'Id al-Fitr, overcrowding among the young people attending engenders panic, and 19 children are crushed in the ensuing stampede.

Bodies of victims killed in a stampede on August 3 near the Naina Devi temple in the Indian state of Himachal Pradesh lie along a narrow thoroughfare; more than 150 religious pilgrims were killed in the stampede.

Nobel Prizes

Nobels in 2008 were **AWARDED** to 11 men and one woman from five countries for work in settling **INTERNATIONAL DISPUTES**, understanding **INTERNATIONAL TRADE**, creating **SEDUCTIVE** fiction and **DISTINCTIVE** nonfiction, analyzing and developing **GREEN FLUORESCENT PROTEIN**, describing **BROKEN SYMMETRY** in the interactions of **FUNDAMENTAL PARTICLES**, and discovering **VIRUSES** that cause **CERVICAL CANCER** and **AIDS**.

PRIZE FOR PEACE

The 2008 Nobel Prize for Peace was awarded to Martti Ahtisaari, former president (1994–2000) of Finland, for his work over more than 30 years in settling international disputes, many involving ethnic, religious, and racial differences. The Norwegian Nobel Committee said that his efforts had “contributed to a more peaceful world and to ‘fraternity between nations’ in Alfred Nobel’s spirit.” The committee added that “he has shown what role mediation of various kinds can play in the resolution of international conflicts.”

Ahtisaari was born on June 23, 1937, in Viipuri, Fin. (now Vyborg, Russia). When the city of his birth was ceded to the Soviet Union in 1940 after the Russo-Finnish War, the boy and his family remained in Finland, moving first to Kuopio and then to Oulu. He studied at the University of Oulu, receiving a diploma in 1959, and then worked as a primary-school teacher. Beginning in the early 1960s he trained teachers in Pakistan and then in Finland. After joining (1965) the Finnish Ministry for Foreign Affairs, Ahtisaari held a number of positions. He served (1973–76) as ambassador to Tanzania and was (1975–76) an envoy to Zambia, Somalia, and Mozambique. He functioned (1977–81) as the United Nations commissioner for Namibia and twice (1978 and 1989–90) served as a UN special representative to that country. In his earliest major success in diplomacy, he helped guide Namibia’s path to independence

in 1990 after it had endured years of conflict with South Africa.

As the candidate of the Social Democratic Party, Ahtisaari was elected president of Finland in 1994. Upon leaving the presidency in 2000, he formed the Crisis Management Initiative (CMI), serving as its chairman. Under the auspices of the CMI, the UN, and other organizations, he undertook a number of peace missions around the world, including, in 2000, an appointment as a weapons inspector in Northern Ireland in support of the decommissioning of the Irish Republican Army. In 2005 Ahtisaari helped settle the conflict in Aceh province in Indonesia, with Indonesian government forces agreeing to withdraw after 30 years of fighting in return for the province’s dropping its demands for independence. For the next two years he served as a UN spe-

Paul Krugman

Jeff Zelvansky/Getty Images

cial envoy in Kosovo, attempting to mediate between Kosovo’s push for independence and the Serbian government, and in 2008 he undertook mediation between Sunni and Shi’ite Muslims in Iraq. Over the years he also worked in other parts of the world, including Central Asia and the Horn of Africa.

Ahtisaari was known for his charm and sense of humour but was also recognized as a man who could be blunt and tough in negotiations between adversaries. He received many honorary degrees and a number of international awards, including the J. William Fulbright Prize for International Understanding in 2000 and the UNESCO Félix Houphouët-Boigny Peace Prize in 2008. (ROBERT RAUCH)

PRIZE FOR ECONOMICS

The Nobel Memorial Prize in Economic Sciences in 2008 was awarded to American Paul Robin Krugman for his development of a new theory of international trade and of economic geography. Through the integration of economies of scale into general equilibrium models, Krugman furthered understanding of both the determinants of trade and the location of production in an increasingly globalized post-World War II economy. His research findings explained how the consumer’s desire for variety and choice enabled countries to achieve the economies of scale required to trade profitably in similar products. This led to later research on the “new economic geography,” which explained the location of jobs and businesses and why there was acceleration in the pace of urbanization and a population decline in rural areas.

Through his new theory of trade, Krugman demonstrated why rich countries trade with each other in similar goods (such as the trading of cars between Japan and Germany) when there is no apparent comparative advantage. His analysis was based on the assumption of economies of scale, where mass production leads to a fall in unit cost, but more crucially on the principle that consumers want diversity in the products available to them.

Olivier Laban-Mattei—AFP/Getty Images

Jean-Marie Gustave Le Clézio

Traditional trade theories, from the early 1800s (notably British economist David Ricardo's laissez-faire Iron Law of Wages) to the 1920s and '30s (in particular the Heckscher-Ohlin theory established by Swedish economists Eli Filip Heckscher and Bertil Ohlin), suggested that trading partnerships were based on national differences, as countries specialized in producing what they did best and imported the rest. In general, these theories provided an adequate explanation of most international trade until the 1950s, when like-for-like trade began to increase and new international trade patterns emerged. Krugman's trade model, which he detailed in an article in the *Journal of International Economics* in 1979, showed that when trade barriers are removed, larger markets are created. While the increased global competition may reduce the number of foreign firms, the ensuing trade benefits not from specialization but rather from economies of scale, competition, and the wider choice and variety of goods available to consumers (as in the global automobile industry).

In his 1991 paper "Increasing Returns and Economic Geography," Krugman developed a comprehensive theory of location of labour and firms in which he examined the proximity factor that drives urbanization. Large firms might cluster near a large market in order to exploit economies of scale and to minimize transport costs to their customers. Previous theories had assumed that firms clustered geographically in order to benefit from any spin-off in terms of expertise that they might glean from each other.

Krugman was born in New York City on Feb. 28, 1953, and was educated at Yale University (B.A., 1974) and the Massachusetts Institute of Technology (Ph.D., 1977), where he then was a member of the economics faculty from 1979 to 2000. He left MIT for a year (1982–83) to work as the chief staffer for international economics on Pres. Ronald Reagan's Council of Economic Advisers and again for a hiatus (1994–96) to teach at Stanford University. From 1979 he also worked as a research associate at the National Bureau of Economic Research. In 2000 he became a professor of economics and international affairs at the Woodrow Wilson School of Public and International Affairs at Princeton University.

Krugman was a prolific and sometimes controversial writer, with more than 20 books and 200 papers in professional journals to his credit. His no-

table books include scholarly works such as *The Risks Facing the World Economy* (1991), *Currencies and Crises* (1992), and *World Savings Shortage* (1994); economics textbooks such as *Microeconomics* (2004) and *Macroeconomics* (2005); and nonacademic best sellers such as *The Return of Depression Economics* (1999), *The Great Unravelling* (2003), and *The Conscience of a Liberal* (2007). He gained a broader readership through his regular magazine columns in *Slate* (1996–99) and *Fortune* (1997–99) and especially through his politically partisan and frequently humorous Op-Ed column in the *New York Times* (from 2000). Prior to the Nobel, Krugman received (1991) the John Bates Clark medal, given every two years to an economist under age 40 who was judged to have made the most significant contribution to economic knowledge. (JANET H. CLARK)

PRIZE FOR LITERATURE

The 2008 Nobel Prize for Literature was awarded to French writer J.-M.G. Le Clézio, one of the preeminent literary figures of his generation. He was known for his intricate, seductive fiction and distinctive works of nonfiction that mediated between the past and the present, juxtaposing the modern world with a primordial landscape of ambiguity and mystery. Le Clézio—the 14th French-language writer to be honoured as the laureate in literature and the first since Claude Simon received the prize in 1985—was cited by the Swedish Academy as an "author of new departures, poetic adventure and sensual ecstasy, explorer of a humanity beyond and below the reigning civilization." Le Clézio acknowledged an expansive range of literary influences, including Homer, Milton, Boccaccio, Rabelais, Juan Rulfo, Robert Louis Stevenson, and James Joyce, and was prolific in a variety of genres, often merging narrative forms and techniques. Accomplished as a novelist, children's author, and essayist, Le Clézio forged a literature of universal themes, from life and death, rebirth, and redemption to immigration and displacement, alienation, and the loss of innocence.

Jean-Marie Gustave Le Clézio was born on April 13, 1940, in Nice, France; he was descended from a Breton family that had immigrated to the formerly French and subsequently British colony of Mauritius. Bilingual in French and English, he spent part of his childhood in Nigeria before completing his sec-

ondary education in France. After studying for a time in England, he returned to France, where he earned an undergraduate degree (1963) from the Institut d'Études Littéraires (now the University of Nice) and a master's degree (1964) from the University of Aix-en-Provence. In 1983 he completed a doctorate of letters at the University of Perpignan, France. Le Clézio traveled extensively and immersed himself in the study of other cultures, particularly the indigenous peoples of Mexico and Central America, which he wrote about in *Trois villes saintes* (1980), *Le Rêve mexicain ou la pensée interrompue* (1988), *The Mexican Dream: Or, The Interrupted Thought of Amerindian Civilizations*, 1993), and *La Fête chantée* (1997).

Although he emerged within the French literary milieu dominated by writers of the *nouveau roman* (new novel) such as Simon, Alain Robbe-Grillet, and Marguerite Duras, Le Clézio developed independently from his contemporaries and established himself early in his career as an author of singular achievement and temperament. He made his debut as a novelist with the publication in 1963 of *Le Procès-verbal* (*The Interrogation*, 1964) and gained widespread acclaim as a young author when the book—which had been sent as an unsolicited manuscript to the prestigious Gallimard publishing house—was awarded the Prix Renaudot. Other publications that further enhanced Le Clézio's reputation in France and abroad included the short-story collection *La Fièvre* (1965; *Fever*, 1966) and the novels *Le Déluge* (1966; *The Flood*, 1967), *Terra*

amata (1967; *Terra Amata*, 1969), *La Guerre* (1970; *War*, 1973), and *Les Géants* (1973; *The Giants*, 1975). Le Clézio was drawn to the marginalized of society and offered a compassionate and evocative portrayal of the disenfranchised and displaced in search of meaning, identity, and reintegration. For example, Lalla, the protagonist of his acclaimed novel *Désert* (1980), is a North African Berber separated from her past and her cultural inheritance when she was forced to flee her desert homeland; she returns pregnant and resolved both to perpetuate her tribal inheritance and to embrace her legacy of memory and transcendence.

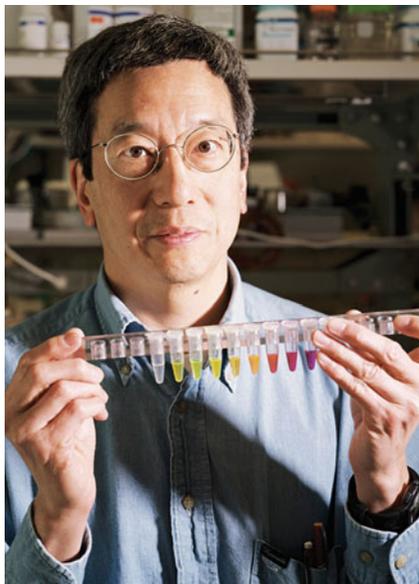

Beginning with the publication in 1991 of *Onitsha* (*Onitsha*, 1997), Le Clézio turned increasingly to semiautobiographical works such as the novels *La Quarantaine* (1995) and *Révolutions* (2003). In *L'Africain* (2004), Le Clézio recounted the childhood experience of being reunited with his father in the aftermath of World War II. Later works include *Ballaciner* (2007), a personal tribute to the art of filmmaking and its relationship to literature, and the novel *Ritournelle de la faim* (2008). As a writer Le Clézio was primarily a storyteller and craftsman for whom the act of writing was one of the “greatest pleasures in life.” He said, “I feel that the writer is just a kind of witness of what is happening. A writer is not a prophet, is not a philosopher, he’s just someone who is witness to what is around him.” (STEVEN R. SERAFIN)

PRIZE FOR CHEMISTRY

The 2008 Nobel Prize for Chemistry was awarded to a Japanese and two American chemists for the discovery and development of a protein called the green fluorescent protein (GFP). Sharing the prize equally were Osamu Shimomura of the Marine Biological Laboratory, Woods Hole, Mass., Martin Chalfie of Columbia University, New York City, and Roger Y. Tsien of the University of California, San Diego. Their work with GFP opened a vast set of pathways and opportunities for studying biological processes at the molecular level. The protein provided a visual signal that scientists learned to use in many ingenious ways to probe protein activity, such as when and where proteins are produced and how different proteins or parts of proteins move and approach each other within a cell.

GFP, a naturally occurring substance in the jellyfish *Aequorea victoria*, consists of 238 amino acids. Three were of

Joe Toreno—Reuters/Landov

Roger Tsien

particular interest: serine at position 65, tyrosine at the next position, 66, and glycine at position 67. Together with oxygen, these amino acids undergo a chemical reaction in which they lose their initial identities and form a light-sensitive unit called a chromophore. The chromophore is fluorescent—that is, it absorbs light of one wavelength (blue or ultraviolet) and emits light of a different wavelength (green). One of the most important characteristics of GFP is its ability to be joined to other proteins without affecting their function. In this way GFP could be used as a “signal flag” on virtually any protein almost anywhere it might be found. Moreover, investigators determined how to modify GFP and make similar substances fluoresce in colours that ranged through the spectrum from blue to deep red.

A simple, powerful way of using GFP and GFP-like markers was to use them in pairs in which the specific wavelengths of light emitted by one of the markers would excite the other to fluoresce, a process called fluorescence resonance energy transfer (FRET). The two markers had to be relatively near each other for the energy transfer to occur, which could then be verified by detecting the coloured light emitted by the second marker. This method and other, more complex variants could be used, for example, to study how specific proteins moved within a cell. A sophisticated variant for studying the interaction between proteins had one part of the GFP attached to one of the proteins of interest and the rest of the

GFP attached to the other. When the two proteins came together, they formed a fully functioning GFP that then showed itself by fluorescing.

The green fluorescence of *Aequorea victoria* was discovered in 1955. In the 1960s Shimomura showed that the fluorescence is produced by the protein that was later named GFP. American biochemist Douglas Prasher analyzed the chromophore in GFP in the 1980s and subsequently found and cloned the gene responsible for making GFP. In 1993 Chalfie showed that the gene that instructs the cell to make GFP could be embedded in the nucleic acids of other organisms, first in the bacterium *Escherichia coli* and then in the transparent nematode *Caenorhabditis elegans*, so that they would make their own GFP. This discovery opened the possibility of using GFP in virtually any organism. Tsien then showed, beginning in 1994, that oxygen is required for GFP fluorescence and that point mutations in the gene could shift the wavelength and intensity of the fluorescence. Tsien also helped to determine the structure of GFP and described how to use GFP and its variants to study the role and behaviour of calcium ions in living systems.

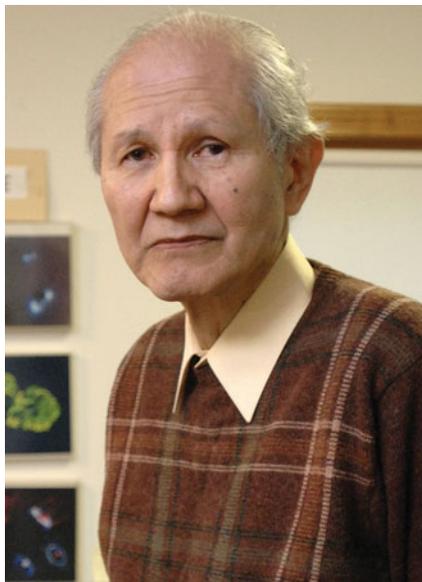

Osamu Shimomura was born on Aug. 27, 1928, in Fukuchiyama, Japan. In 1960, after receiving a Ph.D. in organic chemistry from Nagoya (Japan) University, he became a researcher at Princeton University. He moved to the Marine Biological Laboratory in 1982. Shimomura also worked at Boston University Medical School. Martin Chalfie was born on Jan. 15, 1947, in

Martin Chalfie

Diane Bondareff/AP

Josh Reynolds/AP

Osamu Shimomura

Chicago. In 1977 he received a Ph.D. in neurobiology from Harvard University. He joined the faculty at Columbia University, where he became a professor in 1982. Chalfie was a member (from 2004) of the U.S. National Academy of Sciences. Roger Tsien was born on Feb. 1, 1928, in New York City. In 1977 he received a Ph.D. in physiology from the University of Cambridge. He moved to the University of California, Berkeley, in 1981, and in 1989 he became a professor at the University of California, San Diego, and a Howard Hughes Medical Institute investigator. Tsien also was a member (from 1998) of the U.S. National Academy of Sciences.

(R. STEPHEN BERRY)

PRIZE FOR PHYSICS

The 2008 Nobel Prize for Physics was awarded to a Japanese-born American physicist, Yoichiro Nambu, and two Japanese physicists, Makoto Kobayashi and Toshihide Maskawa, for their theoretical work in particle physics that described broken symmetry in particle interactions. Nambu, of the Enrico Fermi Institute at the University of Chicago, was awarded one-half of the \$1.4 million prize for his discovery and description of a mechanism called spontaneous broken symmetry. Kobayashi, of the High Energy Accelerator Research Organization (KEK) in Japan, and Maskawa, of the Yukawa Institute for Theoretical Physics at Kyoto University, each received one-fourth of the prize for their work on symmetry violation that predicted the existence of a previously

unknown family of quarks (a group of fundamental subatomic particles).

The apparent symmetry of the basic building blocks of the universe was a subject of intense interest to fundamental particle physicists. As the construction of large particle accelerators in the mid-20th century made possible the study of a greater variety of fundamental particles, it appeared that each particle was paired with an antiparticle. The negatively charged electron, for example, had an antiparticle (the positron) of the same mass but opposite charge. In terms of its properties, each antiparticle looked like the mirror image of its corresponding particle, and when particles and their antiparticles met, mutual annihilation occurred. If particles and antiparticles were symmetrical, however, physicists were presented with the problem of accounting for the universe's huge preponderance of particles over antiparticles, which was an indication of a lack of symmetry in the universe as a whole. Also, as fundamental particles and their interactions were observed in physics experiments, it appeared for a time that all such interactions were symmetrical. For example, interactions of particles and the mirror image of the interactions appeared to be the same, and this property, named mirror symmetry, gave rise to a conservation law called parity conservation. Interactions of electrically charged particles also appeared to be symmetrical, and the combination of symmetry in the charge and parity between particle and antiparticle was called CP symmetry. Investigations into the decay of certain particles revealed, however, that there were exceptions to mirror symmetry (1956) and to CP symmetry (1964).

From theoretical research on superconductivity that he conducted in the late 1950s, Nambu produced a theory—the theory of spontaneous symmetry breaking—that demonstrated how asymmetries could appear in elementary particle physics. The theory was therefore important in the development of the so-called standard model used to describe the fundamental particles that make up matter.

By 1970 it had been suggested that massive particles such as protons and neutrons could be built up from fractionally charged constituents named quarks and that quarks came in three flavours, or types, which were referred to as up, down, and strange. Strong evidence for a fourth flavour—charm—was put forward in 1970, which im-

plied the existence of two families of quarks. In 1972 Kobayashi and Maskawa expanded upon the work of the Italian physicist Nicola Cabibbo and investigated the theory of how quarks interact (the so-called strong interaction) in terms of the CP violation. This led them to postulate that there must be three families of quarks. This extension of the standard model was eventually verified experimentally with the discoveries of the bottom quark (1977) and the top quark (1995).

Yoichiro Nambu was born on Jan. 18, 1921, in Tokyo. He received a B.S. (1942) and a doctorate in science (1952) from the University of Tokyo. After serving as an associate professor at Osaka City University (1949–52), he spent two years at the Institute for Advanced Study in Princeton, N.J., before moving to the University of Chicago in 1954. He served on the faculty at the university until retiring as professor emeritus in 1991. Nambu became an American citizen in 1970. He received many awards, including the U.S. National Medal of Science (1982), the Dirac Medal (1986), and the Wolf Prize in physics (1994/1995). He was a member of both the U.S. National Academy of Sciences and the American Academy of Arts and Sciences and an honorary member of the Japan Academy.

Makoto Kobayashi was born on April 7, 1944, in Nagoya, Japan. He received a Ph.D. in 1972 from Nagoya University, and in 1979 he became an assistant professor at KEK in Tsukuba Science City. In 1989 he was appointed professor and designated as the head of Physics Division II. He became the director of the Institute of Particle and Nuclear Studies at KEK in 2003, and he was named professor emeritus in 2006. Among the awards he received were the J.J. Sakurai Prize (1985) for theoretical particle physics (shared with Maskawa), the Japan Academy Prize (1985), and the Japanese Person of Cultural Merit Award (2001).

Toshihide Maskawa (also spelled Masukawa) was born Feb. 7, 1940, in Nagoya, Japan. In 1967 he received a Ph.D. from Nagoya University. He taught at the University of Tokyo's Institute of Nuclear Study and at Kyoto Sangyo University. Maskawa was director of the Yukawa Institute for Theoretical Physics at Kyoto University from 1997 to 2003, when he became professor emeritus. In 1985 Maskawa and Kobayashi were the first recipients awarded the J.J. Sakurai Prize.

(DAVID G.C. JONES)

Harald zur Hausen; Luc Montagnier; Françoise Barré-Sinoussi

PRIZE FOR PHYSIOLOGY OR MEDICINE

The 2008 Nobel Prize for Physiology or Medicine was awarded to three scientists—one German and two French—for their discoveries of viruses that seriously harm human health. Harald zur Hausen, professor emeritus and former chairman and science director at the German Cancer Research Centre, Heidelberg, was awarded one-half of the prize for the discovery of human papillomaviruses (HPVs) that cause cervical cancer. Luc Montagnier, director at the World Foundation for AIDS Research and Prevention, Paris, and Françoise Barré-Sinoussi, professor and director of the retroviral infections unit at the Pasteur Institute in Paris, shared the other half of the award for their discovery of human immunodeficiency virus (HIV), the cause of the immune-system disorder AIDS.

In the early 1970s zur Hausen argued that HPV caused cervical cancer, the second most common cancer in women, but few scientists agreed with him. What was widely known at the time was that there were many strains of HPV, and although some strains targeted the genitals, they did not appear to induce anything beyond benign warts. Assuming that tumour cells would contain viral DNA, zur Hausen spent more than 10 years in efforts to isolate and identify an HPV agent for cervical cancer. His findings demonstrated that HPV comprised a diverse family of many harmless strains and at least two oncogenic, or cancer-causing, strains—HPV 16 and HPV 18. Zur

Hausen discovered HPV 16 in 1983; the following year he cloned both strains from cervical cancer patients. Subsequent studies documented the two strains in more than 70% of all cervical cancer cases worldwide. His discoveries enabled researchers to develop successful vaccines that afforded more than 95% protection from infection by HPV 16 and HPV 18.

In the early 1980s Montagnier, heading a team that included Barré-Sinoussi, began looking for a viral cause for AIDS. The investigation of viral particles from infected lymph nodes of AIDS patients revealed that the infectious agent was a retrovirus that replicated in immune-system cells called helper T lymphocytes. Further study helped characterize it as a lentivirus, or “slow” virus—the first known to infect humans. The gradual but massive replication of the virus after infection extensively destroyed lymphocytes and thereby severely impaired an individual’s immune system. The findings of Montagnier and Barré-Sinoussi were a crucial factor that sped development of new antiviral drugs and diagnostics.

During the same period, American scientist Robert Gallo also studied the virus that became known as HIV, and he published his findings a short time after Montagnier’s team. Over the ensuing years there was considerable controversy over who first isolated the virus. Montagnier’s team, however, was eventually acknowledged as having discovered the virus.

Zur Hausen was born on March 11, 1936, in Gelsenkirchen, Ger. After earning an M.D. from the University of

Düsseldorf in 1960, he conducted post-doctoral research at the university’s Institute of Microbiology (1962–65) and at the Children’s Hospital of Philadelphia (1966–69). Returning to Germany from the U.S., zur Hausen continued his research on viruses at several German universities. He joined the German Cancer Research Center in 1983 as scientific director and chairman, and he remained there until retiring as professor emeritus in 2003.

Montagnier was born on Aug. 18, 1932, in Chabris, France. He received a degree in science (1953) from the University of Poitiers, France, and an M.D. (1960) from the University of Paris. He worked on RNA viruses at laboratories in France and England before he joined (1972) the Pasteur Institute in Paris. After establishing (1993) the World Foundation for AIDS Research and Prevention, Montagnier accepted an endowed chair at Queens College, New York City, where he headed (1998–2001) the Center for Molecular and Cellular Biology. He returned to the Pasteur Institute in 2001 as professor emeritus.

Barré-Sinoussi was born on July 30, 1947, in Paris. After receiving a Ph.D. (1975) from the Pasteur Institute in Garches, France, she undertook post-doctoral research on retroviruses at the National Cancer Institute, Bethesda, Md. Barré-Sinoussi returned to Europe in 1975 to join the Pasteur Institute. In 1996 she became head of the institute’s Retrovirus Biology Unit, which was later renamed the Regulation of Retroviral Infections Unit.

(LINDA BERRIS)

Biographies

The **SUBJECTS** of these biographies are the people who in the editors' opinions captured the **IMAGINATION** of the world in 2008—the most **INTERESTING** and/or **IMPORTANT PERSONALITIES** of the year.

Aso, Taro

(b. Sept. 20, 1940, Iizuka, Fukuoka, Japan) On Sept. 22, 2008, after three previous attempts, former Japanese foreign minister Taro Aso claimed the leadership of the country's ruling Liberal Democratic Party (LDP), winning 351 votes (more than two-thirds of the 527 ballots cast), while his four challengers divided the remaining 176 votes. Two days later Aso was sworn in as Japan's first Roman Catholic prime minister, succeeding Yasuo Fukuda, who had unexpectedly resigned as LDP leader (and, thus, as prime minister) amid political infighting and a troubled economy. It was the LDP's third change of leadership in two years and the fourth bid for the position by Aso, who lost to Junichiro Koizumi in 2001, Shinzo Abe in 2006, and Fukuda in 2007.

It seemed clear to outside observers that the election of the brash Aso—a charismatic speaker with a cheerful demeanour and a tendency to verbal gaffes—was an attempt by the LDP to regain voter confidence after having

lost the 2007 elections to the upper house of the Diet (parliament). He was expected to call early elections to the lower house, but it was still uncertain whether he could bring the LDP the support it sought at the ballot box.

Aso, the son of a business tycoon, was closely linked to both political and imperial dynasties and seemed destined for a political career. He was a grandson of two-time prime minister Shigeru Yoshida (1946–47, 1948–54); his father-in-law was former prime minister Zenko Suzuki (1980–82); and one of his sisters was married to a cousin of Emperor Akihito. Aso graduated (1963) from Gakushuin University's faculty of politics and economics and later studied at Stanford University and the University of London. He joined Aso Industry in 1967 and within six years had advanced to president and CEO of the Aso Cement Co., Ltd. Aso left the family business in 1979 when he was first elected to the Diet. He rose through the ranks of the LDP, eventually becoming secretary-general, and held a variety of cabinet posts, including minister of state for the economic planning agency (1996–97), minister of state for economic and fiscal policy (2001), and minister for internal affairs and communications (2003–05).

In October 2005 Prime Minister Koizumi appointed Aso to head the Foreign Ministry, a role he briefly retained under Prime Minister Abe until he was replaced in August 2007. As foreign minister, Aso built a reputation as a strong conservative and hawkish nationalist who endorsed the U.S.-Japan alliance and took a hard line with North Korea and China. He was known to support labour reforms, regional decentralization that would give greater autonomy to Japan's prefectures, and increased taxes to fund the national pension scheme.

Aso also nurtured a populist image, especially among young Japanese. A champion marksman, he represented

Japan in skeet shooting at the 1976 Montreal Olympic Games. Of special significance, however, was his love for manga, and he worked to spread appreciation for the graphic literary form. In 2007 Aso organized the International Manga Awards, a “Nobel Prize for manga,” to be awarded annually to young foreign manga artists based outside Japan.

(EDITOR)

Bale, Christian

(b. Jan. 30, 1974, Haverfordwest, Pembrokeshire, Wales) Welsh film actor Christian Bale had a mixed year in 2008. He drew international acclaim for his role as Batman/Bruce Wayne in *The Dark Knight*, which, upon its July release, immediately set box-office records amid the intense publicity surrounding the sudden, unexpected death in January of his costar, Heath Ledger. Bale also began filming the fourth futuristic *Terminator* movie, in which he played rebel leader John Connor as an adult. The film, due to be released in 2009, was the first of three projected sequels to Arnold Schwarzenegger's *Terminator* trilogy (1984, 1991, 2003). Playing a fantasy action hero might seem like a big leap for an actor who first gained notice for his riveting turn as serial killer Patrick Bateman in *American Psycho* (2000), but Bale had never taken the obvious, or easy, route in his career.

Christian Charles Philip Bale made his big-screen debut, with little formal training as an actor, at age 13 in *Empire of the Sun* (1987). He received an overwhelming amount of attention for his role, and thereafter he became intensely private, striving to keep his personal life out of the media limelight. Bale appeared in such popular youth-oriented films as *Newsies* (1992), *Swing Kids* (1993), and *Little Women* (1994), for which actress Winona Ryder hand-picked him to play Laurie. Bale also provided the voice of Thomas for the Dis-

Japanese Prime Minister Taro Aso

Yoshikazu Tsuno/AP

Matt Sayles/AP

Welsh-born actor Christian Bale

ney animated movie *Pocahontas* (1995) and played Jesus of Nazareth in the made-for-television movie *Mary, Mother of Jesus* (1999). Then came *American Psycho*, and his career took a new path.

Bale was especially noted for his ability to disappear into a role, his talent for imitating accents, and his penchant for taking on complex, psychologically tormented characters. He lost some 29 kg (63 lb) for the grim psychological thriller *El maquinista* (2004; *The Machinist*), in which he played an insomniac factory worker who has not slept in a year and may be losing his mind. Bale then managed to gain back the weight in time to begin filming *Batman Begins* (2005), the forerunner to *The Dark Knight*. Other recent roles included pilgrim John Rolfe in the historical drama *The New World* (2005), an obsessive magician intent on revenge in *The Prestige* (2006), a struggling rancher in the tense American western *3:10 to Yuma* (2007), and U.S. federal agent Melvin Purvis in *Public Enemies* (due out in 2009). Bale's desire for personal privacy was put to the test when, one day before *The Dark Knight's* European premiere, he was arrested and questioned by British police about allegedly having assaulted his mother and one of his three sisters; he denied the allegations and was not formally charged. (ANNE SISKA)

Bardem, Javier

(b. March 1, 1969, Las Palmas de Gran Canaria, Gran Canaria, Canary Islands, Spain) In 2008 charismatic and versatile Spanish actor Javier Bardem, long admired and much honoured in his home country, won his first Academy

Award, for best supporting actor, for his chilling performance as a sociopathic killer in *No Country for Old Men* (2007). The violent and bleak film—based on the best seller by Cormac McCarthy and directed by Joel and Ethan Coen—followed assassin Anton Chigurh as he hunted a down-on-his-luck welder who had stolen a suitcase of drug money. Carrying an air gun, Chigurh cut a bloody path across Texas as he relentlessly chased his target. Later in the year, Bardem was again on the hunt as he portrayed a lusty painter pursuing women in Woody Allen's comedy *Vicky Cristina Barcelona*.

Javier Ángel Encinas Bardem, who was born into a family of actors and filmmakers, appeared in his first professional role at age five. After briefly studying painting in Madrid, he concentrated on an acting career. In 1992 he received much attention—especially from women—for *Jamón, jamón*, in which he played an underwear model hired to romance a factory worker. Three years later he proved he was more than a sex symbol by winning a Goya Award for best supporting actor for his performance as a drug addict in *Días contados* (1994; *Running Out of Time*). In *Boca a boca* (1995; *Mouth to Mouth*), he garnered laughs and another Goya Award as an aspiring actor who falls in love with a customer while working for a telephone sex company. Bardem later appeared as a wheelchair-bound policeman in Pedro Almodóvar's *Carne trémula* (1997; *Live Flesh*).

Although a major star in Spain, Bardem remained relatively unknown to international audiences until 2000, when he starred as Reinaldo Arenas in the biopic *Before Night Falls*, his first English-language film. Bardem immersed himself in the role—losing 30 pounds and downplaying his rugged good looks—to play Arenas, a homosexual Cuban writer who was imprisoned by the Fidel Castro regime in the 1970s. Bardem became the first Spaniard to be nominated for an Academy Award for best actor. Although inundated with Hollywood offers, he sought out more challenging roles. In 2002 he starred in both the thriller *The Dancer Upstairs*, the directorial debut of actor John Malkovich, and the drama *Los lunes al sol* (*Mondays in the Sun*), as a laid-off shipyard worker; the role earned him another Goya. For his moving performance as quadriplegic Ramón Sampedro in *Mar adentro* (2004; *The Sea Inside*), Bardem collected his fourth Goya. (AMY TIKKANEN)

Bashir, Omar Hassan Ahmad al-

(b. Jan. 7, 1944, Hosh, Bannaga, Sudan) Career soldier Omar Hassan Ahmad al-Bashir, who in 1989 led a military revolt that overthrew The Sudan's elected government, found himself in 2008 the target of international scrutiny after the chief prosecutor of the International Criminal Court (ICC) called on July 14 for an arrest warrant to be issued against him. Bashir was cited for crimes committed against humanity in Darfur, a region of The Sudan. The Sudanese government, which had not ratified the Rome Statute, refused to acknowledge the jurisdiction of the ICC. Bashir's indictment remained pending at year's end.

Bashir was born into a peasant family that later moved to Khartoum, where he received his secondary education; he then joined the army. He studied at a military college in Cairo and fought in 1973 with the Egyptian army against Israel. Returning to The Sudan, he achieved rapid promotion, and in the mid-1980s he took the leading role in the Sudanese army's campaign against the rebels of the southern Sudan Peoples' Liberation Army (SPLA).

After the 1989 mutiny, Bashir became chairman of the Revolutionary Command Council for National Salvation; he dissolved the parliament, banned political parties, and strictly controlled the press. He was supported by Hassan al-Turabi, a Muslim extremist and leader of the National Islamic Front (NIF). Together they began to Islamize the country, and in March 1991 Islamic law (Shari'ah) was introduced. This move further emphasized the division between the north and the mainly animist and Christian south.

In October 1993 the Revolutionary Council was disbanded, and Bashir was appointed president of The Sudan; he retained military rule, however. He was confirmed as president by an election held in 1996. Bashir's ally Turabi was unanimously elected president of the National Assembly.

Bashir signed (June 30, 1998) a new constitution, which lifted the ban on political parties. In December of that year, however, he used military force to oust Turabi, who he believed was plotting against him. On March 12, 2000, Bashir declared a three-month state of emergency, which, by stages, he thereafter extended indefinitely. After December 2000 elections in which he was confirmed as president, he dismissed the cabinet.

Osman Orsal—Reuters/Landov

Sudanese Pres. Omar Hassan Ahmad al-Bashir

Throughout this period, war with the SPLA continued, displacing millions of southerners. From time to time Bashir made tentative cease-fire agreements with fringe elements of the rebel force, but when oil production started on a large scale in the border area between north and south in 1998, the dispute grew fiercer. Under international pressure Bashir agreed in 2005 to form a peace pact with the SPLA, but delays in the implementation of the agreement led to the withdrawal of southern members from the government on Oct. 11, 2007.

Meanwhile, in August 2003 rebel black African groups in Darfur had launched an attack on Bashir's government, claiming unfair treatment. The president enlisted the aid of Arab militia whose brutal methods displaced more than two million people and earned harsh criticism from international commentators. As the Darfur conflict raged on, Bashir reluctantly accepted the arrival of a very small African Union peacekeeping force but resisted UN attempts to send a much larger international force.

(KENNETH INGHAM)

Betancourt, Ingrid

(b. Dec. 25, 1961, Bogotá, Colom.) More than six years after she was kidnapped by Revolutionary Armed Forces of Colombia (FARC) guerrillas, Ingrid Betancourt, a former Colombian senator and presidential candidate, was freed along with 14 other hostages on July 2, 2008, in a daring helicopter rescue operation carried out by the Colom-

bian military. The meticulously planned operation, which followed the successful infiltration of the FARC by military intelligence agents, represented a stunning setback for the rebels, who lost their highest-profile captives in Betancourt and three American defense contractors whom they had held since 2003. Aside from raising further questions over the continued viability of the FARC—a number of whose top leaders had been killed in the preceding months and whose ranks were reportedly declining at a steady pace—the rescue prompted much speculation over Betancourt's future involvement in Colombian politics, including whether she would run for president again in the upcoming 2010 elections.

Betancourt, who held dual French and Colombian citizenship, spent her formative years in Paris, where her father served for a time as Colombia's ambassador to UNESCO. She studied there at the Institut d'Études Politiques and in 1983 married Fabrice Delloye, a French diplomat. She returned to Colombia in 1989 and ran for Congress five years later, winning a seat in the lower house. Fiercely outspoken against corruption, Betancourt soon became the target of death threats, and she eventually sent her two children to live in New Zealand with Delloye (whom she divorced in 1990). She later formed her own political party—the Green Oxygen Party—and was overwhelmingly elected to the Senate in 1998.

While campaigning for the presidency in 2002, Betancourt traveled into rebel-held territory in southern Colombia, where she had planned to hold a rally in the town of San Vicente del Caguán. She and her campaign manager, Clara Rojas, were taken hostage at a FARC roadblock on February 23. The FARC released Rojas in early 2008 following negotiations brokered by Venezuela, but despite a subsequent offer by Colombian Pres. Álvaro Uribe to free hundreds of rebel prisoners in exchange for Betancourt's release, she remained in captivity. As fears mounted that Betancourt's health might be failing, the rescue mission was launched. Posing as international aid workers, army soldiers duped the rebels into allowing the 15 hostages to board a helicopter that supposedly was to transfer them to another FARC location. Instead, the aircraft whisked the hostages to freedom.

News of Betancourt's liberation was greeted jubilantly around the globe. After an emotional reunion with her family at the airport in Bogotá, Betancourt

flew to France, where Pres. Nicolas Sarkozy hailed her as “a symbol of hope” and named her a knight of the Legion of Honour at a ceremony held at Élysée Palace. In interviews given after her rescue, Betancourt indicated that while she might resume her political career at some point in the future, the idea of running for the presidency again seemed “very distant” to her and it was “too early to talk of such things.” Of more immediate concern to her, she said, was gaining the freedom of the estimated 750 hostages who remained in FARC captivity. (SHERMAN HOLLAR)

Biden, Joe

(b. Nov. 20, 1942, Scranton, Pa.)

On Aug. 23, 2008, U.S. presidential candidate Barack Obama (*q.v.*) officially announced his selection of Joe Biden, a longtime Democratic senator from Delaware, as his vice presidential running mate. On November 4 the Obama-Biden ticket defeated Republican John McCain (*q.v.*) and his running mate, Sarah Palin (*q.v.*), winning 365 of the 538 electoral college votes and nearly 53% of the nationwide popular vote.

Joseph Robinette Biden grew up in Scranton and in New Castle county, Del. He received a bachelor's degree (1965) from the University of Delaware and a law degree (1968) from Syracuse (N.Y.) University. After graduating from law school, he returned to Delaware to work as an attorney before quickly turning to politics, serving (1970–72) on the New Castle county council. Biden was elected (1972) to the U.S. Senate at the age of 29, becoming the fifth youngest senator in history. He went on to win reelection six times and became Delaware's longest-serving senator. In addition to his role as U.S. senator, Biden also taught (1991) as an adjunct professor at the Wilmington, Del., branch of the Widener University School of Law.

As a senator, Biden focused on foreign relations, criminal justice, and drug policy. He served on the Senate's Foreign Relations Committee, twice as its chair (2001–03; 2007–09), and on the Committee on the Judiciary, presiding (1987–95) as its chair. He was particularly outspoken on issues related to the Kosovo conflict of the late 1990s, urging U.S. action against Serbian forces to protect Kosovars against an offensive by Serbian Pres. Slobodan Milosevic. On the Iraq War, Biden proposed a partition plan as a way to maintain a united, peaceful Iraq. Biden also was a member of the International Narcotics Control

Caucus and was the lead senator in writing the law that established the office of “drug czar,” a position that oversaw the national drug-control policy.

Biden pursued the 1988 Democratic presidential nomination but withdrew after it was revealed that parts of his campaign stump speech had been plagiarized from a speech by British Labour Party leader Neil Kinnock without appropriate attribution. His 2008 presidential campaign never gained momentum, and he withdrew from the race after placing fifth in the Iowa Democratic caucus in January. Despite concerns raised about his reputation as a gaffe-prone politician, Biden emerged as Obama’s vice presidential pick, and on August 27 Obama and Biden secured the Democratic Party’s nomination. In the debate between the two vice presidential candidates on October 2, Biden turned in what was generally viewed as a solid performance, but he drew criticism later that month with his statement that if Obama was elected, he would be tested with an “international crisis” within six months of taking office—an assertion that Obama dismissed as an example of Biden’s tendency toward “rhetorical flourishes.” As the two swept to victory in the presidential contest in November, Biden also easily won reelection to his U.S. Senate seat, though he would have to resign the post before taking the oath of office as vice president on Jan. 20, 2009. (EDITOR)

Bolt, Usain

(b. Aug. 21, 1986, Montego Bay, Jam.) Jamaican sprinter Usain Bolt, a track and field barrier breaker since his mid-teens, smashed records as never before in 2008. At the Olympic Games in Beijing, Bolt became the first man since American Carl Lewis in 1984 to win the 100-m, 200-m, and 4 × 100-m relay in a single Olympics and the first ever to set world records (9.69 sec, 19.30 sec, and 37.10 sec, respectively) in all three as he did so. His 0.66-sec winning margin in the 200-m was the largest in Olympic history, and his 0.20-sec edge over the second-place finisher in the 100-m, despite beginning his victory celebration about 80 m into the race, was the largest since Lewis won by the same margin.

The performances of the 1.96-m (6-ft 5-in), 88-kg (194-lb) Jamaican, nicknamed “Lightning Bolt,” stunned many casual followers of the sport. Seasoned observers, however, harkened back to the world junior championships of

2002, when Bolt first marked himself as a prodigy. In that meet, racing before a crowd of 36,000 in Jamaica’s National Stadium in Kingston, Bolt, just 15 at the time, won gold in the 200 m, becoming the youngest-ever male world junior champion in any event. At 16 Bolt cut the junior (age 19 and under) world record to 20.13 sec. In April 2004 a 19.93-sec clocking made Bolt, at 17, the first teen to break 20 seconds for 200 m.

Bolt, the son of grocers in Jamaica’s rural Trewlany parish, excelled as a cricket fast bowler in his preteen years. He developed a deep affection for the European association football (soccer) teams Real Madrid and Manchester United, but his school coaches steered him toward track and field. He was fond of practical jokes, fast food, and nightclubbing, however, and often failed to match his record-setting résumé with equivalent dedication to training. Hampered by a hamstring injury, he failed to advance beyond the 200-m heats at the 2004 Athens Olympics and placed last in the 2005 world championships final.

In 2007 Bolt appeared newly serious and earned a silver medal in the 200 m at the world championships. He also persuaded his coach to let him try the 100 m and ran 10.03 sec in his first professional race at the distance. In 2008 he defied conventional wisdom that very tall sprinters are disadvantaged as fast starters and on May 3 lowered his best time to 9.76 sec, then history’s second fastest mark. Four weeks later in New York City, Bolt broke the world record, running 9.72 sec to defeat world champion Tyson Gay and provoke media speculation that multiple Olympic golds might lie in his future, as subsequent events in Beijing confirmed. (SIEG LINDSTROM)

Cai Guo-Qiang

(b. Dec. 8, 1957, Quanzhou City, Fujian province, China) Propelled into a premiere position with his 2008 one-man retrospective at New York City’s Guggenheim Museum, pyrotechnical artist Cai Guo-Qiang was the first Chinese artist ever to be so honoured. His show, “I Want to Believe,” immediately confronted the viewer with a dramatic installation piece entitled *Inopportune: Stage One* (2004). For the work, Cai used nine actual cars suspended at various angles to evoke a sort of stop-action image of a car bombing, complete with timed sprays of lights. Calling Cai “one of the most powerful artists oper-

ating anywhere in the world,” Guggenheim Foundation director Thomas Krens opined that the cars suspended in the rotunda “may be the best artistic transformation of the Frank Lloyd Wright space that we’ve ever seen.” The show’s other pieces included several of Cai’s signature gunpowder drawings and paintings and a re-creation of his agitprop reference to similar pieces he had seen in his boyhood years. Even so, “I Want to Believe” barely held a candle to Cai’s other major performance of the year: he was appointed to the post of director of visual and special effects for the ceremonial events bracketing the 2008 Beijing Olympics.

Cai’s father—a painter, historian, and bookstore owner—was somewhat ambivalent toward Mao Zedong and the new Chinese society. He encouraged his son to read the forbidden Western classics despite his support of Marxist thinking. The father continued to practice the traditional art of calligraphy but used it to reproduce Mao’s epigrams. The younger Cai honed his sense of the dramatic at the Shanghai Institute of Drama, which he attended from 1981 to 1985. After graduating with a degree in stage design, he made plans to leave China.

From 1986 to 1995 he lived in Japan, learning Japanese and refining his control over his chosen artistic medium, gunpowder. It was in this choice that the ambivalence he had absorbed at his father’s side seemed most clearly to sur-

Chinese artist Cai Guo-Qiang at his show “I Want to Believe.”

Keith Bedford—Reuters/Landov

face. Gunpowder was an ancient Chinese invention and a thoroughly traditional substance. Yet it was not a traditional medium for art and thus was a perfect material for expressing both respect and frustration, for embodying both the violence and the beauty that became his trademark.

In 1995 Cai moved to New York City. There he continued to make a kind of performance art that *New York Times* critic Roberta Smith labeled “gunpowder land art,” events recorded on videotape. He also created drawings made from gunpowder residue, some of which he altered by painting on them. In addition, he began, like a surprising number of other contemporary Chinese artists, to reveal a gift for creating large-scale installations. Cai’s works of this sort included groupings of stuffed animals, sometimes tigers pierced with arrows or packs of snarling wolves hurtling toward an invisible barrier. Though some critics found his work somewhat hollow and less than original, others were riveted by his contradictory vision and his unquestioned instinct for the dramatic.

(KATHLEEN KUIPER)

Christofias, Dimitris

(b. Aug. 29, 1946, Kato Dhikomo, Cyprus) On Feb. 28, 2008, Dimitris Christofias was sworn in as president of the Republic of Cyprus, the Greek portion of the divided island. The victory received worldwide attention because the new leader was Greek Cyprus’s first president from AKEL, the Marxist-Leninist-oriented Progressive Party of the Working People. Speculation was rife as to what path his leadership would take. In the years before the election, Christofias was seen as something of a euroskeptic, and his party had urged delay in converting the country’s currency from the Cyprus pound to the euro (a conversion that occurred on Jan. 1, 2008). He was also a critic of the U.S.-led Iraq war and of the British military bases on Cyprus. In his inaugural address, however, Christofias stressed his commitment to previous agreements, including those with the EU and the UN. He declared that his two main priorities would be finding a solution to the problem of a divided Cyprus and building a fairer society.

Christofias became politically active at an early age, joining the Pancyprian United Students Organization in 1960 at age 14. At 18 he was a member of AKEL and the United Democratic Youth Organization (EDON), AKEL’s youth

arm. In 1969 he was elected a member of the EDON Central Council. That same year he went to the Soviet Union to further his education. After obtaining (1974) a Ph.D. in history from the Academy of Social Sciences in Moscow, he returned to Cyprus to embark on a career in politics. He became an official of EDON and was elected (1977) the youth organization’s general secretary, a position he held for 10 years.

In the meantime, Christofias rose through the AKEL ranks. He was elected to a district committee and then joined (1986) the party’s political bureau. In 1987 he exchanged his position with EDON for membership in the AKEL central committee, and in the following year he became the party’s leader. Christofias entered national politics in 1991 when he was elected to the House of Representatives, and in 2001 he became president of the House.

In 2008 he was chosen as the AKEL candidate for president. In the first round of balloting, held on February 17, he took second place (with 33.29% of the vote) among the three contenders, ahead of incumbent Pres. Tassos Papadopoulos. Christofias defeated Foreign Minister Ioannis Kasoulides in the runoff election on February 24, garnering 53.4% of the votes cast.

Christofias’s initiative toward solving the Cyprus question began soon after his inauguration. In March he held meetings with Turkish Cyprus Pres. Mehmet Ali Talat, which activated the moribund joint technical committees (agreed on in 2006 but never implemented), and they examined a range of other possible actions. The president-to-president and official-to-official dialogue continued throughout the year.

(GEORGE H. KELLING)

Clegg, Nick

(b. Jan. 7, 1967, Chalfont St. Giles, Buckinghamshire, Eng.) In 2008 Nick Clegg, the newly elected leader of the Liberal Democrat Party (LDP), faced the task of reviving the flagging fortunes of the smallest of the U.K.’s three main political parties. At age 41, however, he knew that unless the political climate changed drastically for the worse, he would have at least two general elections in which to make an impact and “establish three-party politics for good.”

Nicholas Peter William Clegg and his wife, attorney Miriam González Durán-tez (the daughter of a conservative senator in Spain), were possibly the most nationally diverse couple to have

reached prominence in British politics. He had a Dutch mother and a half-Russian father (whose aristocratic mother fled to Britain after the 1917 Bolshevik Revolution); he grew up bilingual, speaking English and Dutch, and later became fluent in French, German, and Spanish. Clegg was educated at Westminster School, London, and he studied anthropology (M.A., 1989) at the University of Cambridge, political philosophy (1989–90) at the University of Minnesota, and European affairs (M.A., 1992) at the College of Europe in Bruges, Belg. He traveled extensively and worked at various jobs in Germany, Austria, Finland, the U.S., Belgium, and Hungary.

In 1994, after having briefly tried his hand at journalism, Clegg became an official at the European Commission in Brussels, where he progressed to become adviser to Sir Leon Brittan, an EU commissioner and former Conservative Party cabinet minister. Clegg helped to negotiate the admission of China and Russia to the World Trade Organization. Brittan regarded his young adviser as one of the brightest future politicians of his generation and urged him to pursue a career as a Conservative MP. Clegg, however, felt that the Liberal Democrats reflected far better his own internationalist outlook. In 1999 he was elected as an LDP member of the European Parliament.

Clegg was widely tipped as a future party leader. He paved the way by leaving the European Parliament in 2004 and winning a seat in the 2005 British general election as MP for Hallam, a suburb of Sheffield. In January 2006, when Charles Kennedy resigned as LDP leader, Clegg felt that he was too new to Parliament to stand for leader and backed 63-year-old Sir Menzies Campbell, who appointed Clegg as the party spokesman on home affairs. He quickly made his mark as an eloquent critic of the Labour government’s curbs on civil liberties. Less than two years later, amid harsh media criticism of his elderly appearance, Campbell was forced to resign. This time Clegg did decide to stand. On Dec. 18, 2007, he defeated 53-year-old Chris Huhne by a margin of just 511 votes in the balloting of more than 41,000 party members. After becoming LDP leader, Clegg sought to streamline the party’s process of decision making and policy formulation; previous leaders had expressed frustration because they were required to consult members more widely than leaders of other major U.K. parties.

(PETER KELLNER)

Correa, Rafael

(b. April 6, 1963, Guayaquil, Ecuador) When leftist economist Rafael Correa scored a decisive election triumph over banana magnate Álvaro Noboa in the 2006 presidential election, many predicted that political instability and social chaos would ensue, but toward the end of 2008 Correa's popularity at home remained well above 60%. Though commentators made much of the new Ecuadoran leader's friendship and affinity with Venezuelan Pres. Hugo Chávez, Correa brushed the criticism aside, vowing to carry out an "economic revolution" that put Ecuadorans before debt payment and oil profits. "Markets should be subject to societies, not the other way around," he said. After taking office in 2007, Correa launched a deeply reformist agenda that antagonized some business and media groups, but he proved more capable of diplomacy, alliance-building, and pragmatism than many in Ecuador's notoriously fractious political elite.

Concern for social and economic problems tinged the life of Rafael Correa Delgado from an early age. Though his maternal grandfather was a great-nephew of former president José Eloy Alfaro Delgado, he grew up in straitened circumstances. Correa said that his father, during a period of unemployment, agreed to carry illegal drugs aboard a flight to the U.S. His father was arrested and served several years in jail, and Correa recalled that his mother made ends meet by selling food that she prepared at home.

Friends and acquaintances remembered Correa as a bright, intense young man who tolerated opposing views with difficulty. He attended the prestigious San José La Salle high school on a scholarship and was active in the Boy Scout movement. Correa spent a year as a church-sponsored volunteer with Quechua-speaking Indians in Cotopaxi province. He received a master's degree from the Catholic University of Leuven in Belgium and a doctorate from the University of Illinois; his thesis examined the effects of economic globalization on living standards in the less-developed world.

Correa served briefly as Ecuador's finance minister in 2005, and the following year he defeated Noboa in a runoff vote for the presidency after proving himself to be a skilled, charismatic political campaigner. After becoming president, Correa promoted sweeping constitutional changes, increased agricultural subsidies, and

seized companies owned by members of a powerful family implicated in a banking scandal in the 1990s. In early 2008 he broke off diplomatic relations with Colombia after that country's forces raided a guerrilla camp inside Ecuador; Correa later installed a new defense chief, the country's fourth since his inauguration. The popular Correa secured the majority he needed to win a September 28 referendum on a new constitution that would extend his power. (PAUL KNOX)

Cotillard, Marion

(b. Sept. 30, 1975, Paris, France) In 2008 French actress Marion Cotillard won an armload of best actress awards for her portrayal of legendary French chanteuse Edith Piaf in *La Môme* (2007; U.S. title, *La Vie en Rose*). Cotillard, who stunningly captured the gauche grace of the diminutive singer, was widely and effusively praised for her mercurial, often tortured, performance. It came as no surprise, then, when she took home an Academy Award and a César, France's most esteemed film award, as well as a BAFTA, a Golden Globe, and other honours. Although Cotillard did not sing on camera, her performance captured Piaf in a way rarely seen on-screen, and, after years of fame in France, Cotillard finally became a household name around the world.

Cotillard grew up in Orleans in an artistic household—her father, Jean-Claude Cotillard, was an actor and director, and her mother, Niseema Theilaud, was an actress. Her parents performed together in a theatre troupe, and Cotillard got her first taste of acting when she appeared onstage in a play written by her father. She did not pursue a professional acting career, however, until the age of 16, when she moved to Paris.

In her first prominent film role, in the Luc Besson-penned *Taxi* (1998), she played the girlfriend of a pizza delivery man turned vigilante taxi driver. The movie spawned two sequels over the next five years, and the *Taxi* franchise became one of France's most successful. In 2005 she earned the César Award for best supporting actress for her performance as a vengeful prostitute in *Un Long Dimanche de fiançailles* (2004; *A Very Long Engagement*). While that film and the *Taxi* series cemented Cotillard's star status in her own country, she became known to American audiences with her turn in American director Tim Burton's *Big Fish* (2003), in which she had a small but memorable role. Her next foray into

Hollywood was less successful; she appeared in the poorly received *A Good Year* (2006), which starred Australia's Russell Crowe. The following year she was chosen out of hundreds of hopefuls for the lead in *La Môme*. By mid-2008 Cotillard had returned to work on her next project, the Hollywood film *Public Enemies* with Johnny Depp, and was preparing to appear in the screen adaptation of the Tony Award-winning Broadway musical *Nine*.

In addition to her film work, Cotillard used her high public profile to bring attention to the aims of Greenpeace, working for the organization as a spokesperson and offering her apartment as a testing ground for product safety. She also contributed to *Dessins pour le climat*, a book of drawings published by Greenpeace in 2005 to raise funds for the environmental group. (MELISSA ALBERT)

Cowen, Brian

(b. Jan. 10, 1960, Tullamore, County Offaly, Ire.) In April 2008 Brian Cowen—then serving as Ireland's finance minister, deputy prime minister, and deputy head of the ruling Fianna Fail party—was thrust into the international spotlight when Prime Minister Bertie Ahern, amid an investigation into possible past financial misconduct, announced that he would resign as prime minister and leader of Fianna Fail the following month. Cowen, who had remained supportive of Ahern throughout, was elected head of Fianna Fail, and on May 7 he was sworn in as prime minister.

Cowen was exposed to politics at a young age. His grandfather was a coun-

Irish Prime Minister Brian Cowen

PRNewsFoto—Starz Entertainment/AP

Miley Cyrus performing at the American Music Awards

cillor in the Fianna Fail party, and his father held a seat in the Dail (lower house of parliament). He was an exemplary debater in school and often spoke at his father's election rallies. Cowen studied at University College, Dublin, and the Incorporated Law Society of Ireland, where he was trained as a solicitor. His father's death in 1984 prompted a by-election for his seat, and Cowen, then age 24, captured it, becoming one of the youngest members ever to sit in the Dail.

Cowen's political mentor was Albert Reynolds, who became prime minister in 1992, at which point Fianna Fail was in a coalition government with the Progressive Democrats. Cowen was an outspoken critic of the coalition, famously stating about the Progressive Democrats, "When in doubt, leave them out!" He served as minister of labour (1992–93), and in 1993, after the breakup of the Fianna Fail–Progressive Democrats government, he helped to negotiate the short-lived coalition of Fianna Fail and the Labour Party. Cowen then served in such posts as minister for transport, energy, and communications (1993–94), leaving office after Fianna Fail was forced into opposition by the formation of a Fine Gael–Labour–Democratic Left coalition.

During Fianna Fail's years out of government, Cowen served successively as an opposition spokesperson for agriculture, food, and forestry (1994–97) and health (1997). Following elections in 1997, Ahern formed a Fianna Fail coalition government with the Progressive Democrats, and the party once again returned to power. Cowen served as minister for health and children (1997–2000), foreign affairs (2000–04), and finance (2004–08). In June 2007 he was appointed to the post of deputy prime minister.

Cowen was known for his sharp tongue and sometimes rough-hewn manner, but he was also recognized for fierce intelligence, wit, and jovial demeanour among constituents. A combative politician and loyal party member, Cowen was for many years seen as an obvious successor to Ahern. His first months in office were not easy, however. In June, Irish voters rejected the EU's Lisbon Treaty, placing Cowen, who had supported the referendum, in a potentially embarrassing position. In the autumn Cowen acknowledged that Ireland's "Celtic Tiger" economy had slipped into recession, and he joined with other world leaders to tackle the international financial crisis. (EDITOR)

Cyrus, Miley

(b. Nov. 23, 1992, Franklin, Tenn.)

Fifteen-year-old actress and singer Miley Cyrus spent much of 2008 dealing with the pressures of megafame. Though already well known to the pre-teen demographic for her wildly successful cable TV show *Hannah Montana* and its related sound track albums, she gained wider exposure as her song "See You Again" crossed over to the pop charts early in the year. She also found herself embroiled in controversy as several sets of photos of her, including one taken by Annie Leibovitz and published in *Vanity Fair* magazine, were denounced as risqué and inappropriate. She managed to deflect some of the unwanted attention, however, with the summer release of another album, *Breakout*.

Destiny Hope Cyrus was born to country singer and actor Billy Ray Cyrus and his wife, Tish, and she grew up on her family's farm outside Nashville. Her sunny disposition as a child earned her the nickname "Smiley Miley." (She had her name legally changed to Miley Ray Cyrus in May 2008.) Though her father was initially reluctant to let her follow in his show business footsteps, at the age of nine she landed a role in an episode of his TV series *Doc* and another role in the film *Big Fish*.

In 2005 Cyrus auditioned for the lead role in *Hannah Montana*, a Disney Channel series about a girl who leads a double life as a normal middle-school student and, with the help of a blonde wig, a glamorous pop singer. Though initially deemed by executives to be too small and young for the character, she persisted and won the part. The show debuted the following year (featuring Billy Ray as her TV dad) and became an immediate sensation, scoring record ratings for cable television and turning the 13-year-old into a bona fide star. Aiming to capitalize on the show's obvious youth-market appeal, a sound track album featuring the music of *Hannah Montana* was released in 2006 and eventually sold more than three million copies. It was followed by the equally successful *Hannah Montana 2: Meet Miley Cyrus* (2007), which was packaged as a double CD with half of the material under Cyrus's own name.

In late 2007 Cyrus embarked on a national tour called Best of Both Worlds in support of her latest album. Two concerts from the tour were filmed and presented as a 3-D movie, which made more than \$30 million in its opening weekend despite having been released only to se-

lect theatres. Among Cyrus's plans for 2009 were a feature-length *Hannah Montana* movie and an autobiography to be published by Disney-Hyperion Books. According to *People* magazine, the Miley Cyrus franchise was projected to be worth \$1 billion in the 2007–08 fiscal year. (JOHN M. CUNNINGHAM)

de Niese, Danielle

(b. 1980, Melbourne, Australia)

In April 2008 the first solo CD by the Australian-born American soprano Danielle de Niese, *Handel Arias* (2007), won the Orphée d'Or from the Académie du Disque Lyrique in Paris as the debut recording of the year. It was another in a series of triumphs for the talented young singer, and with her youth and glamorous good looks, as well as her talents as an actress and a dancer, de Niese was hailed as just what opera needed.

De Niese's father, of Sri Lankan and Dutch ancestry, and her mother, of Sri Lankan and Scottish ancestry, emigrated from Sri Lanka to Australia, where their daughter was born. She studied music as a child, and when she was 10, the family moved to Los Angeles. There she continued studies in music as well as dance, and as a teenager she was the host of a television program that featured young per-

Charles Rex Arbogast/AP

Australian-born American opera singer
Danielle de Niese

formers, for which she won (1996) an Emmy Award. She made her opera debut in Los Angeles at the age of 15, becoming the third generation in her family to perform professionally. After high school she entered (1997) the Mannes music school in New York City, and the following year she became the youngest person ever to be admitted to the Lindemann Young Artist Development Program of the Metropolitan Opera. When de Niese was only 19, she made her Metropolitan debut as Barbarina in Wolfgang Amadeus Mozart's *Le nozze di Figaro*; this was quickly followed by appearances there in Maurice Ravel's *L'Enfant et les sortilèges*.

After engagements with other American companies, de Niese made her European debut in 2001, singing in The Netherlands and then in Paris and Naples. It was at the Glyndebourne (Eng.) Festival Opera in 2005, however, when she was called upon at the last minute to sing (and dance) the role of Cleopatra in a new production of George Frideric Handel's *Giulio Cesare*, that she won international acclaim. (A DVD of the production was released in 2006.) Subsequent engagements in major opera houses and with prominent orchestras in Europe and the U.S. followed. In addition, de Niese made appearances in *Les Misérables* on Broadway and in the 2001 motion picture *Hannibal*.

De Niese's small voice was especially suited to works of the Baroque and Classical periods, and at a time when early music performances had a newfound popularity, she was in great demand. In addition to several works of

Handel, she also had success in Jean-Philippe Rameau's *Les Indes galantes*, Christoph Gluck's *Orfeo ed Euridice*, and as Poppea in Claudio Monteverdi's *L'incoronazione di Poppea*, a role that took her back to Glyndebourne in 2008. Other Mozart roles included Susanna in *Le nozze di Figaro* and Despina in *Così fan tutte*. Venturing into later periods, de Niese sang the roles of Laurretta in Giacomo Puccini's *Gianni Schicchi* and Nannetta in Giuseppe Verdi's *Falstaff*, as well as Tytania in Benjamin Britten's *A Midsummer Night's Dream*. (ROBERT RAUCH)

Downey, Robert, Jr.

(b. April 4, 1965, New York, N.Y.)

Though Robert Downey, Jr., had long been considered one of Hollywood's most gifted and versatile actors, it was not until 2008 that he became a box-office juggernaut, with starring roles in two summer blockbusters. In *Iron Man* he won acclaim for his charismatic portrayal of the eponymous comic-book superhero. In the satiric comedy *Tropic Thunder* he turned heads as a self-important movie star who dons blackface to land the role of an African American soldier in the Vietnam War. Both films garnered more than \$100 million in domestic receipts.

Robert John Downey, Jr., was raised in an artistic household in New York City's Greenwich Village; his father was a noted underground filmmaker who gave the five-year-old Downey his first part. After dropping out of high school in California, Downey returned to New York City to pursue an acting career. Supporting roles in several movies, including the cult hit *Weird Science* (1985), led to a stint (1985–86) on the television comedy skit show *Saturday Night Live*. With his boyish looks and raffish charm, Downey then scored the lead in the romantic comedy *The Pickup Artist* (1987) and broke out further with his visceral performance as a cocaine addict in *Less than Zero* (1987).

Steady work followed, but much of it went unnoticed until his appearance in 1992 as the title character in Richard Attenborough's *Chaplin* biopic, which earned him numerous plaudits and an Academy Award nomination for best actor. By this time, however, Downey had developed a substance-abuse problem, and, despite impressive turns in films ranging from the violent media satire *Natural Born Killers* (1994) to the costume drama *Restoration* (1995), his frequent skirmishes with the law and his public struggle with drug addiction

often overshadowed his on-screen successes. He reached a low point in 1999, when he was sentenced to three years in prison for having violated parole from an earlier arrest.

The following year, after being granted an early release, Downey was cast in a recurring role on the TV series *Ally McBeal*, and the Golden Globe Award he subsequently won for the performance seemed to mark the start of a comeback. In 2003, following a series of relapses that threatened to derail his career for good, he turned sober. He thrust himself into his work thereafter, appearing in 13 feature films over the next five years, including *The Singing Detective* (2003), *Good Night, and Good Luck* (2005), *A Scanner Darkly* (2006), and *Zodiac* (2007). Among Downey's most anticipated upcoming projects was the portrayal of real-life Los Angeles journalist Steve Lopez in *The Soloist*, a film based on Lopez's book describing his efforts to help a schizophrenic homeless man realize his musical dreams. Downey was also cast as the lead in a new Sherlock Holmes movie. Given Downey's talent for reinvention, few doubted that he would rise to such challenges. (JOHN M. CUNNINGHAM)

Dudamel, Gustavo

(b. Jan. 26, 1981, Barquisimeto, Venez.) In 2008 Gustavo Dudamel, the exciting young Venezuelan conductor, became music director designate of the Los Angeles Philharmonic Orchestra. He had been named to head the orchestra a year earlier; this after only a single appearance in 2005 at the Hollywood Bowl, and was scheduled to become music director in the 2009–10 season. He conducted his first subscription concerts in Los Angeles in 2007.

By the age of five, Dudamel had begun studies with the National System of Youth and Children's Orchestras of Venezuela (popularly known as El Sistema), the country's acclaimed training program in music. He first took up the violin and then studied composition and conducting. In 1999 José Antonio Abreu, who had founded El Sistema in the 1970s, gave Dudamel additional instruction in conducting and appointed him music director of the Simón Bolívar Youth Orchestra of Venezuela (SBYOV), the chief performing group. The next year Dudamel and the orchestra toured Germany, and in following years they made further trips to Europe, all to ecstatic reviews. They played their first concerts in the U.S. in 2007 and in Japan in 2008. Meanwhile,

Urs Flueeler—Keystone/AP

Venezuelan conductor Gustavo Dudamel

Dudamel had come to the notice of major orchestras in Europe and the U.S. and was receiving invitations to appear as a guest conductor; in 2006 he was named principal conductor of the Göteborg Symphony, the national orchestra of Sweden. His first appearances in the opera house took place in 2006 in two prestigious venues, the Staatsoper in Berlin and La Scala in Milan, and he returned to both houses in 2008 to conduct Giacomo Puccini's *La Bohème*.

From the beginning musicians, audiences, and critics alike were astonished by Dudamel's ability, despite his young age, to draw fresh, dynamic performances from orchestras. In 2004 he won the first Gustav Mahler Conducting Competition, sponsored by the Bamberg (Ger.) Symphony, which brought him to the attention of such leading conductors as Claudio Abbado and Simon Rattle, who served as coaches and mentors. In 2007 Dudamel received the Premio de la Latinidad, given by the Unión Latina for contributions to culture, and in 2006 he was awarded the Pegasus Prize from the Festival of Two Worlds, in Spoleto, Italy. For his first recording, of Ludwig van Beethoven's Symphonies 5 and 7 with the SBYOV, released in 2006, he won the ECHO Award from the German recording industry as the new artist of the year. With the SBYOV he subsequently recorded Mahler's *Symphony No. 5* (2007) and *Fiesta* (2008), a compilation of Latin American works. His 2007 performance of Béla Bartók's *Concerto for Orchestra* with the Los Angeles Philharmonic was available by digital download, and a documentary film on Dudamel and the SBYOV, *The Promise of Music*, was released in 2008. (ROBERT RAUCH)

Eliasson, Olafur

(b. 1967, Copenhagen, Den.)

On June 26, 2008, in an astounding merger of art, engineering, and natural phenomena, Olafur Eliasson's four man-made waterfalls were turned on along New York City's waterfront. For three and a half months, the waterfalls' scaffolding structures, which ranged from 27 to 36 m (90 to 120 ft) high and up to 14 m (45 ft) across, pumped cascades of water into the East River in lower Manhattan. This spectacular installation coincided with the exhibition *Take Your Time: Olafur Eliasson* at the Museum of Modern Art and P.S. 1 Contemporary Art Center in New York City, the first comprehensive U.S. survey of his work, which began its tour in 2007 at the San Francisco Museum of Modern Art. The exhibition highlighted Eliasson's exploration of man-made and natural forces through his multifaceted artistic oeuvre of sculpture, photography, and immersive architectural installations.

Eliasson spent his childhood in Denmark and Iceland, where the unique terrain informed his use of elemental materials such as light, water, and temperature. From 1989 to 1995 he studied at the Royal Danish Academy of Fine Arts in Copenhagen. He began gaining international attention in the early 1990s with groundbreaking sculptures and installations that employed illusory tools along with intentionally simple mechanics. Later in his career, he divided his time between Copenhagen and his studio in Berlin, where projects were conceptualized and constructed by a team of architects, engineers, and assistants. Eliasson's early interest in natural phenomena and perception led him to create works that si-

multaneously sparked and challenged the senses. In *Your Strange Certainty Still Kept* (1996), droplets of water were frozen in midair through the use of a perforated hose and strobe lights. *Ventilator* (1997) incorporated a menacing electric fan swinging from a ceiling. In *Room for One Colour* (1997), he flooded a room with saturated yellow light, causing all other colours to be perceived as black. Conversely, in *360° Room for all Colours* (2002), a circular space changed colours almost imperceptibly.

Eliasson increasingly focused on built environments and site-specific works. In 2003 he represented Denmark in the 50th Venice Biennale with *The Blind Pavilion*, an architectural structure made of alternating black opaque and transparent glass panels that created disorienting reflections for visitors walking through. That same year he exhibited *The Weather Project* at Tate Modern in London, a 15-m (50-ft)-diameter orb resembling a dark afternoon sun made of 200 yellow lamps, diffusing screen, fog, and mirrors. During its five-month installation, more than two million visitors basked in the sun's artificial glow, interacting with the constructed environment as if it were the product of nature. With these projects and others, Eliasson kept a consistent emphasis on the critical role of the viewer in the materialization of the artwork such that the experience remained transformative, varied, and ultimately dependent on its audience.

(MICHAL RAZ-RUSSO)

Etheridge, Melissa

(b. May 29, 1961, Leavenworth, Kan.)

Following the release of her album *The Awakening* (2007), an audio autobiography of her career in music, singer-songwriter Melissa Etheridge staged a concert tour in 2008 that was similarly designed to tell the story of her life through a progression of highly personal songs. That sort of forthrightness was not unusual for the veteran raspy-voiced rock and roller. She had come to be known for her willingness to lead a very public life, baring her soul through music, while her private affairs sometimes made headlines.

Melissa Lou Etheridge began playing the guitar at age 8, and by age 11 she was writing songs. She honed her skills playing in local bands throughout her teens (emulating influences such as Bruce Springsteen and Pete Townshend of the Who) and briefly attended the Berklee College of Music in Boston before returning to Kansas. On her 21st

Lucas Jackson—Reuters/Landov

birthday, Etheridge left home for Los Angeles, where she played in clubs and bars until 1986, when Chris Blackwell, founder of Island Records, signed her to a recording contract. Her first album, *Melissa Etheridge* (1988), with its hit single “Bring Me Some Water,” earned her a Grammy Award nomination. Success continued with the release of *Brave and Crazy* (1989) and *Never Enough* (1992), which garnered a Grammy for the single “Ain’t It Heavy.”

In early 1993, at the gay-and-lesbian Triangle Ball during the celebration of the inauguration of Pres. Bill Clinton, Etheridge announced to the crowd what many of her most devoted fans had assumed: she was a lesbian. The album *Yes I Am* followed later that year, with the hit singles “Come to My Window” (another Grammy winner) and “I’m the Only One.” Soon Etheridge’s relationship with director Julie Cypher became a matter of public record. The couple, who had been together since 1990, appeared on the cover of *Newsweek* magazine in 1996, and in 2000 they revealed in an article in *Rolling Stone* that musician David Crosby had supplied the sperm for the two children Cypher had borne. When she separated from Cypher later that same year, Etheridge chronicled the details of their relationship and breakup in her memoir, *The Truth Is... My Life in Love and Music*, and on her album *Skin*, both released in 2001. (Two years later Etheridge exchanged vows with actress Tammy Lynn Michaels, who gave birth to twins in 2006.)

In 2004 Etheridge was diagnosed with breast cancer, and after undergoing treatment, she made a memorable appearance during the 2005 Grammy Awards ceremonies. Still bald from chemotherapy treatments, Etheridge sang a characteristically heartfelt rendition of Janis Joplin’s “Piece of My Heart,” bringing many in the audience to tears. Etheridge returned to touring the following year. She also wrote and performed the Academy Award-winning song “I Need to Wake Up” for the 2006 Oscar-winning documentary *An Inconvenient Truth*. (ANTHONY G. CRAINE)

Fey, Tina

(b. May 18, 1970, Upper Darby, Pa.) In April 2008 American writer-actress Tina Fey added to her already impressive résumé when the motion picture *Baby Mama*, which she starred in, was the top box-office hit in the U.S. and Canada in its opening weekend. The female buddy movie—a rarity among Hol-

American actress and comedy writer Tina Fey

lywood films—gave Universal Studios its first box-office winner of the year. Fey was named the Associated Press Entertainer of the Year in December.

Elizabeth Stamatina Fey was educated at the University of Virginia, where she studied drama, and following graduation in 1992 she moved to Chicago to take classes at The Second City, a training ground for comedians. After about two years of instruction in improvisational comedy, she joined the Second City cast, first as a touring company understudy and later as a performer on the company’s main stage. In 1997 Fey submitted samples of her sketch writing to the *Saturday Night Live* television show staff. The show’s executive producer, Lorne Michaels, interviewed her, and within a week she was hired, one of the show’s few female writers. In 1999 Fey became the first woman to be named *Saturday Night Live*’s head writer, and during the 2000–01 season, she debuted onscreen as coanchor of the show’s “Weekend Update” feature. She went on to join the cast as a regular. In 2002, with the rest of the show’s writing staff, she shared the Emmy Award for outstanding writing for a variety, music, or comedy program.

In 2004 Fey extended her reach into motion pictures with *Mean Girls*, writing the screenplay and appearing as one of the supporting characters. In 2006 she returned to TV to produce, write, and star in *30 Rock*, a comedy based on her *Saturday Night Live* experiences. For *30 Rock* she, with the other producers, shared the 2007 and 2008 Emmys for outstanding comedy series, and in 2008 she won Golden Globe, Screen Actors Guild, and Emmy awards for her

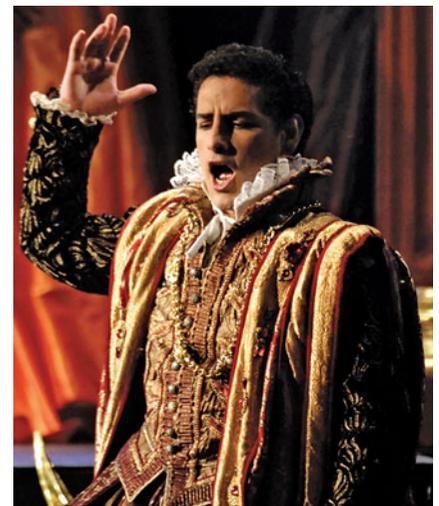

performances in that show. In addition to continuing her work on *30 Rock*, Fey returned as a guest on *Saturday Night Live*, satirizing Republican vice presidential nominee Sarah Palin, whose facial resemblance to Fey seemed to provide too good an opportunity for the comic actress to pass up. Fey also was scheduled for a role in the big-screen comedy *This Side of the Truth* and screenwriting duties for *Curly Oxide* and *Vic Thrill*, both planned for release in 2009. (BARBARA WHITNEY)

Flórez, Juan Diego

(b. Jan. 13, 1973, Lima, Peru) Singing in Gaetano Donizetti’s *La Fille du régiment* at the Metropolitan Opera in New York City in April 2008, the Peruvian tenor Juan Diego Flórez, by prior arrangement with management, broke a long-standing policy against encores when he repeated the aria “Ah! mes amis,” with its nine spectacular high Cs. The repetition of arias had been common until the practice was banned in the 20th century as performances became more serious, formal affairs, and this episode was a sign that opera might be loosening up once again. In fact, a year earlier, in performing the same music, Flórez had broken a similar 74-year ban at La Scala in Milan.

Flórez entered Peru’s National Conservatory of Music at the age of 17. He was originally interested in pop music himself, but his focus shifted to the development of his classical voice. He received a scholarship to the Curtis Institute of Music in Philadelphia, which he attended from 1993 to 1996, and he then studied with the Peruvian tenor

Peruvian opera singer Juan Diego Flórez

Karel Navarro/AP

Ernesto Palacio, who subsequently became his manager. Flórez's first break came in 1996 when he replaced a singer on short notice in *Matilde di Shabran* at the Rossini Opera Festival in Pesaro, Italy. He made his debut at La Scala later that year and at Covent Garden in London the next year. Within a few years he was singing in other major opera houses across Europe and the U.S. and was giving recitals on concert stages throughout Europe and the Americas.

Flórez had a light and agile voice that could be especially expressive. Given his impeccable technique and his high range, he was being called the new king of the high Cs. He specialized in the bel canto repertoire of Donizetti and Vincenzo Bellini, and he came to be considered the best Gioachino Rossini singer of his generation. Some of his performances in opera were issued on DVDs, including his roles as Count Almaviva in Rossini's *Il barbiere di Siviglia* (2005) and as Tonio in *La Fille du régiment* (2008), in a production with soprano Natalie Dessay as Marie. Operas on CD included Wolfgang Amadeus Mozart's rarely performed early work *Mitridate, rè di Ponto* (1999) and Rossini's *Le Comte Ory* (2004), and Flórez also sang on recordings of Rossini sacred works, including *Stabat Mater* (1998). In addition, Flórez made several solo recordings, including *Una furtiva lagrima* (2003), works of Bellini and Donizetti; *Sentimiento Latino* (2006), a compilation of South American and Spanish songs; and *Arias for Rubini* (2007), works of Donizetti, Bellini, and Rossini, honouring the great 19th-century tenor Giovanni Rubini. *Juan Diego Flórez: Bel Canto Spectacular* (2008) included both solo performances and collaborations with such singers as soprano Anna Netrebko and tenor Plácido Domingo. Flórez's recordings won a number of awards, and in 2007 he was awarded the Order of the Grand Cross of the Sun of Peru, the country's highest honour.

(ROBERT RAUCH)

Gelman, Juan

(b. May 3, 1930, Buenos Aires, Arg.)
At a ceremony in Spain in 2008 during which the Argentine poet Juan Gelman received the Cervantes Prize—the highest literary honour in the Spanish-speaking world—King Juan Carlos praised Gelman's poetry for its "strength, sincerity, and spontaneity." For Gelman the moment must have seemed an ironic one: the activist and poet who had been driven out of Ar-

Alfredo Estrella—AFP/Getty Images

Argentine poet Juan Gelman

gentina in the 1970s because of his fiercely leftist politics was now being lauded by a Spanish monarch.

Gelman was jailed in the early 1960s during the Peronists' struggle for control of the federal government. From the late 1960s to the mid-1970s, he wrote for the magazines *Panorama* and *Crisis* in Buenos Aires. His political activism and his involvement with the Montoneros, a left-wing Peronist group that used violence in its efforts to overthrow the military government, resulted in his being forced into exile in Italy in 1975. He returned to Argentina briefly in 1988 before moving to Mexico.

Gelman released his first collection of poetry, *Violín y otras cuestiones* ("Violin and Other Issues"), in 1956. He published prolifically for the next five decades, with his poetry registering the waxing and waning of his prominence as a political activist during the second half of the 20th century. The poems in *Anunciaciones* (1988; "Annunciations"), for instance, show Gelman withdraw from the public sphere; through them he reflects on his political life and returns to some of his early interests in language and creativity. Among the most notable themes in Gelman's wide-ranging poetry are his experiences in Argentina during the 1960s and '70s, his exile, and his Jewish heritage, as well as the nature of poetry itself. A selection of his poems appear in English translation in *Unthinkable Tenderness* (1997).

In the late 1990s Gelman returned to public prominence as he tried to locate the child of his son and daughter-in-law, who were among those "disappeared" by the military government during Argentina's Dirty War of the late 1970s and early 1980s. In 2000 the president of Uruguay, Jorge Batlle, acknowledged that Gelman's daughter-in-

law had been transported to Uruguay, where she gave birth to a daughter; Gelman and his granddaughter were subsequently reunited.

Beginning in 2000, Gelman received a number of major literary awards, both for new collections of poetry and for his lifetime's work. The most prominent was the Cervantes Prize, which was announced in 2007 and which confirmed his place as Argentina's most prominent poet at the turn of the 21st century. He remained politically active in 2008 through commentary posted on his blog.

(J.E. LUEBERING)

Giannini, Frida

(b. 1972, Rome, Italy)

As the creative director since 2006 of the fashion house Gucci, Frida Giannini was credited with having made the name the world's most coveted luxury brand, a status that was confirmed in February 2008 by a Nielsen ratings survey. In addition, her efforts increased sales at Gucci by more than 10% in two years.

After studying at Rome's Accademia di Costume e Moda, Giannini went to work in 1997 at Fendi, where she rose to become a designer of leather goods; there she was responsible for the Baguette, Fendi's opulent handbag that ignited the hugely profitable accessories craze. Tom Ford, then artistic director of Gucci, hired her in 2002 as director of handbag design, and Giannini took on more responsibilities (creative director of Gucci accessories from 2004 and creative director of women's ready-to-wear and accessories from 2005) until she was named creative director in 2006.

Though critics doubted that Giannini had the experience and vision to reinvigorate Gucci, the company's management reasoned that as a young, female European, Giannini could identify with the customer. In addition, she had performed brilliantly as creative director of accessories, overseeing the merchandise that generated 80% of the company's revenue. In 2004, for example, she introduced the Flora collection—handbags, ribbon-embellished sandals, scarves, and limited-edition watches—which incorporated a perky floral print created originally in 1966 for Princess Grace of Monaco; the line was an unqualified triumph for the firm.

The classic spirit of Flora epitomized Giannini's new direction for the brand. According to Gucci's CEO Mark Lee, her contribution was a "warmer, reinvented, richer, more joyful and sensual Gucci" as she moved the company

Vittorio Zunino Celotto/Getty Images

Italian fashionista Frida Giannini

away from Ford's "minimalist, sometimes cold, hard glamour."

For inspiration, Giannini mined Gucci's archive. Critics branded her ideas as too safe and revisionist. For example, Gucci's autumn-winter 2008 collection was defined by a decadent, dark bohemian look incorporating slim-fit velvet trousers tucked into fringed leather boots as well as drop-waist dresses enhanced with epaulets and lavish embroidery. Nevertheless, customers consistently embraced Giannini's approach, and Gucci's revenues rose dramatically under her creative leadership.

Following Ford's departure, Giannini lured back to Gucci prominent celebrities, including Gwyneth Paltrow and Madonna, who had defected when he was let go. For the opening in New York City of Gucci's Fifth Avenue flagship boutique in February 2008, Giannini and Madonna cochaired a blockbuster fashion event that raised money for orphans and children in sub-Saharan Africa affected by HIV/AIDS.

(BRONWYN COSGRAVE)

Glass, Ira

(b. March 3, 1959, Baltimore, Md.) On May 4, 2008, on-screen host Ira Glass launched the premiere episode of the second season of *This American Life*, the cable television adaptation of his long-running public radio program of the same name. When the TV show debuted in 2007, many critics initially doubted that the radio show's idiosyn-

cratic format—a series of thematically related stories narrated by various reporters, writers, and artists—would translate to the small screen. The one facet of the television program that they apparently took for granted, however, was Glass, whose ingratiating TV presence and expert framing of the stories were singled out for praise by reviewers after the first installments aired.

Glass acknowledged that as a boy he knew nothing about public radio, but in 1978, after having failed to find a summer job at any of Baltimore's commercial radio and TV stations, he talked his way into an internship at National Public Radio (NPR) in Washington, D.C. He quickly became enamoured with the medium, and he started working for NPR soon after graduating (1982) from Brown University, Providence, R.I., with a degree in semiotics. Glass was a jack-of-all-trades at NPR, holding positions as wide-ranging as tape cutter, copy writer, and producer and occasionally serving as a guest host on *Talk of the Nation* and *All Things Considered*.

He moved to Chicago in 1989 to become a reporter for NPR's Chicago bureau. His yearlong accounts of local attempts at school restructuring won awards from both the National Education Association and the Education Writers Association and further burnished his public radio star. Glass's prominence led to an offer from the MacArthur Foundation to produce and host a new radio show that would focus on Chicago-area writers and performers. Originally titled *Your Radio Playhouse*, Glass's show first aired on WBEZ in Chicago in November 1995. It was an instant hit and was nationally syndicated the following year as *This American Life*. The program received the prestigious Peabody Award in 1996 and again in 2006. The show also drew critical acclaim and developed a strong cult following, which led to unheard-of—by public radio standards—touring shows, CD collections, and a movie adaptation (*Unaccompanied Minors* [2006]), on which Glass served as an executive producer. While some of the often-insular public radio fan base blanched at the idea of Glass's taking *This American Life* to television—he was called "Judas" at one speaking engagement soon after the deal was announced—the radio program (along with its associated podcast) continued to thrive alongside its televised sister show and reached an estimated 1.7 million weekly listeners on more than 500 radio stations in 2008.

(ADAM AUGUSTYN)

Groban, Josh

(b. Feb. 27, 1981, Los Angeles, Calif.) Just eight years after putting his dream of a college theatre degree on hold so that he could try his hand at a recording career, American singer Josh Groban began 2008 on a professional high. His 2007 release of Christmas songs, *Noël*, was the top-selling album of 2007 in the U.S., with almost 3.7 million copies sold, and had received a nomination for the international album of the year award at Canada's 2008 Juno Awards. Shortly afterward, during the annual Grammy Awards television broadcast on February 10, Groban sang a duet with Italian opera-pop superstar Andrea Bocelli in a tribute to the late Luciano Pavarotti. The performance was particularly noteworthy because in 1999 Groban—then an unknown teenaged stand-in hired by the Grammy-winning producer David Foster—had taken the ailing Bocelli's place in rehearsing the same duet with Canadian pop diva Céline Dion for the Grammy ceremony. In May 2008 Groban's CD/DVD *Awake Live* debuted in the top 10 on *Billboard's* album chart, the fifth of his seven albums to make the top 10. The same month, the rising superstar headlined a star-studded revival of the 1980s musical *Chess* at London's Royal Albert Hall.

Joshua Winslow Groban did not study voice seriously until his teens, when he became active in musical theatre at the Los Angeles County High School for the Arts. In late 1998 his voice instructor introduced him to Foster, who hired Groban to sing at a number of events, including the January 1999 inaugura-

American singer Josh Groban

Dave Hogan/Getty Images

tion of California Gov. Gray Davis. Groban's work with Foster soon led to a recording contract offer from Warner Brothers. Concerned that radio stations and retail stores might overlook Groban because his singing—often in Italian—defied easy categorization, his promoters organized a series of performances on TV news and talk shows, as well as two guest spots on the popular series *Ally McBeal*. The appearances, which capitalized on the singer's unaffected onstage magnetism, fueled sales of two million copies of his first album, *Josh Groban* (2001). Produced by Foster, the album blended contemporary pop with classic songs that showcased Groban's rich baritone voice and romantic sensibility. Performances at high-profile media events, including the closing ceremony of the 2002 Winter Olympics in Salt Lake City, Utah, extended his international appeal and added to the legions of fans known as Grobanites. The CD/DVD *Josh Groban in Concert* (2002) was recorded live during an appearance on the public TV series *Great Performances*. *Closer* (2003) featured more original compositions, as well as performances by such guest artists as classical violinist Joshua Bell. Despite mixed reviews, the album sold two million copies within eight weeks of its release. *Awake* (2006), which also went double-platinum, included collaborations with the South African group Ladysmith Black Mambazo and jazz pianist Herbie Hancock. (JANET MOREDOCK)

Guo Jingjing

(b. Oct. 15, 1981, Baoding, Hebei province, China) As the 2008 Olympic Games opened in Beijing, one of the top favourites to win gold was diver Guo Jingjing. The 26-year-old Guo, already a veteran of three Olympic Games, had not lost a major international event, either individual or synchronized, on the 3-m springboard since 2001 and was widely recognized as the greatest female diver in history. She did not disappoint. Standing 1.63 m (5 ft 4 in) and weighing just 49 kg (108 lb), Guo exploded off the springboard, twisting and tumbling in the air in a way that seemingly defied gravity; then, with her body perfectly aligned, she cut through the water's surface, producing barely a sound or a ripple as she entered. In the end she again walked away with the gold in both the 3-m springboard and the 3-m synchro (with partner Wu Minxia).

Guo grew up in Baoding, a medium-sized city located about 140 km (90 mi)

south of Beijing. At age seven she was "discovered" at her elementary school by diving coach Yu Fen, who had risen to prominence coaching Olympic champion Fu Mingxia. Guo, who lived at the sports school where Yu coached, progressed rapidly under her mentor's guidance and was selected for China's 1996 Olympic team, making her international debut at age 13 in Atlanta. She finished fifth, but it was clear that the teenager had the talent, the willingness to work hard, and a certain, undefinable flair for her sport that made her something special.

Yu retired after the Atlanta Games, and Guo transferred to Coach Zhou Jihong, who had become China's first Olympic diving champion in 1984. Under Zhou, she won silver in both the 3-m springboard and 3-m synchro events at the 2000 Games in Sydney. Training for five to seven hours a day, she won double golds at the world championships in 2001, 2003, 2005, and 2007. It was double gold again at the 2004 Olympic Games in Athens.

A megacelebrity in her native land, Guo appeared in commercial advertisements and gossip magazines and was often pursued by Chinese paparazzi. The attention grew ever more intrusive when she began dating another top Chinese diver, Tian Liang, a gold medalist in Athens. The couple became known as "the prince and princess of diving." The scrutiny seemed even more intense after the pair broke up in 2007 and she began dating Kenneth Fok, the grandson of a Hong Kong business tycoon. Naturally outgoing and friendly, Guo was fiercely protective of her privacy, which, on occasion, led to clashes with the press.

Guo announced her retirement from diving following her triumph in Beijing. With four Olympic gold medals, along with two silver, and a world championship medal collection that included eight gold and one silver medal, she departed the scene as the most decorated diver in history—male or female. (PHILLIP WHITTEN)

Heigl, Katherine Marie

(b. Nov. 24, 1978, Washington, D.C.) In 2008 Emmy Award-winning American actress Katherine Heigl, who portrayed Dr. Isobel (Izzie) Stevens on the hit television series *Grey's Anatomy*, seemed to be on the precipice of being crowned the new queen of romantic comedies on the big screen. Following up on the huge success of *Knocked Up* (2007), she starred as a serial brides-

maid looking for Mr. Right in *27 Dresses*. The lighthearted film grossed about \$160 million worldwide. Off-screen, however, the candid Heigl found herself at the centre of a drama. In June she angered writers and producers of *Grey's Anatomy* when she announced that she had removed herself from consideration for an Emmy, claiming that she had not been given material to warrant a nomination. This followed her earlier remarks that the story line concerning her character—who had an affair with a married co-worker—was a "ratings ploy." Though rumours quickly spread that Heigl was planning to leave the show to concentrate on her film career, she began filming its fifth season later that month.

Heigl started modeling while a child and eventually appeared in TV commercials. In 1992 she made her movie debut in *That Night*, and minor roles in a series of films followed. After graduating from high school, she moved to Los Angeles to pursue an acting career. She quickly found regular work, including the comic fantasy *Wish upon a Star* (1996) and the horror film *Bride of Chucky* (1998). In 1999 she landed a role in the science-fiction TV series *Roswell*, which became a cult hit, and Heigl garnered much attention as the alien Isabel. After *Roswell* ended in 2002, she starred in several television movies, including *Love Comes Softly* (2003) and a sequel, *Love's Enduring Promise* (2004). In 2005 Heigl got her big break when she was cast in *Grey's Anatomy*, a dramedy about hospital doctors. The show was an immediate hit and made Heigl a star. In 2007 she received her first Emmy, for best supporting actress. She also made news that year when she publicly denounced costar Isaiah Washington, who had allegedly referred to cast mate T.R. Knight by a homophobic slur; Washington was later dropped from the show.

While appearing on *Grey's Anatomy*, Heigl continued to enjoy a feature film career, but it was not until her role in *Knocked Up* that she scored a major hit. The unconventional romantic comedy centred on an entertainment reporter (played by Heigl) who has a drunken one-night stand with a stoner. When Heigl's character becomes pregnant and decides to keep the baby, the unlikely couple attempt to form a lasting relationship. Despite her later claim that the film was a "little sexist," it was a critical and commercial success, grossing about \$220 million worldwide. Heigl

looked to earn more laughs in 2009, when *The Ugly Truth* was scheduled to be released. (AMY TIKKANEN)

Heller, Michael

(b. March 12, 1936, Tarnow, Pol.) In 2008 the Templeton Prize, with an award of £820,000 (more than \$1.6 million), was conferred on Michael Heller of Poland, an ordained Roman Catholic priest and world-respected mathematical cosmologist. As had been the case frequently in recent years, the focus of the annual prize was intended to honour a person who had dedicated his life to understanding and explaining the interaction of science and religion, and Heller was singled out as a scholar “who for more than 40 years has developed sharply focused and strikingly original concepts on the origin and cause of the universe, often under intense governmental repression.” Heller, who had published more than 800 works, including 30 books in Polish and 5 in English, often wrote of the need for an understanding of the natural sciences as a basis for constructing philosophies of nature and man. The disciplines of mathematical physics, theology, and philosophy—most often viewed as incompatible—to Heller were interdependent and indivisible.

Michał Kazimierz Heller was born in southern Poland. When he was four years old, his father helped sabotage the chemical plant in which he worked, and the family fled to the U.S.S.R. to escape the advancing Nazi invaders. During a roundup of Polish refugees, the Hellers were sent to a labour camp in Sakha (Yakutia) in Siberia, where they withstood the attendant hardships chiefly through fortitude and their strong Roman Catholic faith. After World War II they were sent back to Poland, where in 1953 Heller completed his secondary schooling and entered the seminary in Tarnow. Having received a master’s degree in theology and taken ordination in 1959, he was given a parish near his hometown. The following year he began courses in science and mathematics at the Catholic University of Lublin, which was at the time virtually the only institution in communist Poland where a priest could pursue advanced studies. He received a master’s degree in philosophy (1965), a doctorate (1966), and a habilitation degree (1969) with a thesis titled *Mach’s Principle in Relativistic Cosmology*. In 1972 Heller began his association with the Pontifical Faculty (later Academy) of Theology in Krakow. He was given the rank of associate pro-

fessor in 1985 and professor in 1990, while also serving as rector of the Institute of Theology in Tarnow (from 1991) and dean of its faculty of theology (from 2000). The government allowed Heller to travel outside Poland only from the mid-1970s, but he subsequently visited or held positions at the Catholic University of Louvain (1977 and 1982) and the University of Liège (1996) in Belgium, the Universities of Oxford and Leicester in England (1982), the Catholic University of America in Washington, D.C., and the Vatican Observatory in Castel Gandolfo, Italy (1986). Heller was made a member of the Pontifical Academy of Sciences in 1991. (CHARLES TRUMBULL)

Hillier, Rick

(b. 1955, Campbellton, Nfd.) In April 2008 charismatic Chief of the Defence Staff (CDS) Gen. Rick Hillier announced his intention to retire as Canada’s highest-ranking military officer, effective July 1. Known for his folksy Newfoundland mannerisms, Hillier had attracted considerable public and media attention for speaking out with a candour that was rare among senior Canadian leaders. While addressing a group of reporters in July 2005, shortly after he became CDS, he described Islamist terrorists as “detestable murderers and scumbags.” Credited with restoring the domestic reputation of Canada’s armed forces, Hillier consistently emphasized the strategic importance of ground troops and openly criticized people who were inclined to think of the Canadian military as nothing more than a peacekeep-

Canadian General Rick Hillier

Larry MacDougal—The Canadian Press/AP

ing force: “We’re not the public service of Canada. We’re not just another department. We are the Canadian Forces, and our job is to be able to kill people.”

Richard J. Hillier joined (1973) the army through the Regular Officer Training Plan and completed a Bachelor of Science degree at Memorial University of Newfoundland in 1975. After finishing his armour officer training, he joined the 8th Canadian Hussars (Princess Louise’s) regiment in Petawawa, Ont. He then attended the U.S. Army Armour Officer Advanced Course at Fort Knox, Kentucky, and the Combat Training Centre’s Armour School in Gagetown, N.B. Later he served with the Royal Canadian Dragoons regiment in Germany, becoming a squadron commander in 1985. Hillier attended the Canadian Forces Command and Staff College in Toronto in 1988. Upon promotion to lieutenant colonel in 1989, he was posted to Land Forces Command Headquarters in Ottawa before taking command of the Dragoons in Petawawa in 1990. The next year Hillier was posted to National Defence Headquarters in Ottawa, where he served in several administrative positions, becoming a colonel in 1994. He was chief of operations with UN forces in the former Yugoslavia in 1995. Upon his promotion to brigadier general (July 1996), he was put in command of the 2nd Canadian Mechanised Brigade Group in Petawawa.

Hillier first gained widespread public recognition in January 1998 when he took charge of Operation Recuperation. This effort involved more than 15,000 military personnel assigned to help New Brunswick, Ontario, and Quebec recover from a devastating ice storm that had destroyed infrastructure and killed 25 civilians. As an exchange officer, he was appointed the first-ever Canadian deputy commander of the U.S. Army’s III Corps in July 1998, and he was promoted to major general in March 1999. In 2000 he commanded the NATO Stabilization Force’s Multinational Division (Southwest) in Bosnia and Herzegovina. As a lieutenant general, Hillier became commander of the Canadian army in May 2003, and in February 2004 he was given a six-month assignment to lead NATO’s International Security Assistance Force in Afghanistan. He was promoted to full general and assumed his duties as CDS in February 2005. Hillier’s honours include Commander of the Order of Military Merit, the Meritorious Service Cross, the Canadian Forces’ Decoration, and the U.S. Legion of Merit. (PETER SARACINO)

Hoy, Christopher

(b. March 23, 1976, Edinburgh, Scot.) In winning three gold medals at the 2008 Olympic Games, Chris Hoy became the most successful male Olympic cyclist of all time. Hoy's victories in the team sprint, keirin, and individual sprint in Beijing also made him Scotland's most successful Olympian, as well as the first Briton to win three gold medals in a single Olympics since swimmer Henry Taylor in 1908. In December Hoy was named the BBC Sports Personality of the Year, and at year's end it was revealed that he would receive a knighthood in the 2009 New Year's Honours List.

Hoy was inspired to take up cycling as a seven-year-old by the 1982 film *ET: The Extra-Terrestrial*. He competed in BMX until 1991, when he turned briefly to mountain biking. He also rowed for Scotland at the junior championship level. Hoy changed disciplines to track cycling in 1992, and in 1994 he won his first British championship track medal, a silver in the junior sprint.

A pivotal point in his career came in 1997 when the British Cycling Federation launched its World Class Performance Plan, which provided funding for Hoy while he completed his studies. He graduated from the University of Edinburgh in 1999 with a bachelor's degree in sports science. That same year he also won his first senior world championship medal, a team sprint silver.

Hoy won a team sprint silver medal at the 2000 Sydney Olympic Games. In 2002 he became a double world champion in the kilometre time trial and team sprint. Though he was less successful in 2003, he regained the world kilometre title in 2004 and won gold in the kilometre time trial in Athens while setting an Olympic and world sea-level record with his time of 1 min 0.711 sec.

The International Olympic Committee's decision in 2005 to drop the kilometre event from the program for Beijing prompted Hoy to rethink his strategy and focus on pure sprinting. His final ride at the kilometre distance was on May 12, 2007, in La Paz, Bol., where he tackled the absolute world record at altitude (58.85 sec) set in 2001. Hoy fell short by just five one-thousandths of a second on his second attempt. He left Bolivia with the consolation of having taken more than a second off the world record for a flying-start 500-m time trial, clocking 24.758 sec, the following day.

Between 2005 and 2007 Hoy won four more world titles, and at the 2008 world

Jamie Squire/Getty Images

Scottish cyclist Chris Hoy

championships, in Manchester, Eng., he laid the foundation for his Olympic success by winning the keirin and individual sprint titles. France won the team sprint, but the Great Britain trio of Hoy, Jamie Staff, and Jason Kenny avenged that defeat in Beijing, setting a world record of 42.950 sec to give Hoy the first of his three gold medals.

Hoy was named an ambassador for the 2012 Olympic Games, to be held in London. The velodrome being built in Glasgow for the 2014 Commonwealth Games was to be named in his honour.

(JOHN R. WILKINSON)

Ibrahim, Anwar bin

(b. Aug. 10, 1947, Cherok Tok Kun, Penang, Malay.) In August 2008 veteran Malaysian politician and moderate Islamist Anwar bin Ibrahim, the main opposition leader, won election to Malaysia's parliament, a major step in the rehabilitation of his political career, which had been sullied by unsubstantiated charges of sodomy. Immediately following the landslide victory in his home district of Permatang Pauh, Penang, he launched a strenuous campaign to bring down the government of Prime Minister Abdullah Badawi, whose party, the United Malays National Organization (UMNO), had expelled Anwar in 1998 after he was fired as deputy prime minister. With Abdul-

lah's government stagnating amid scandal and social and economic turmoil, the country's historically disparate opposition rallied around the reformist Anwar in 2007. Early in 2008 he assumed de facto leadership of a three-party opposition coalition, the People's Alliance, made up of the People's Justice Party (PKR), the Pan-Malaysian Islamic Party (Pas), and the Democratic Action Party (DAP).

Prior to general elections in March, Anwar, though banned from seeking political office himself until April, campaigned actively on behalf of the People's Alliance. The coalition's message of ethnic equality, religious tolerance, and open markets—reformist ideals long espoused by Anwar—garnered enough support to break the ruling National Front's (BN's) two-thirds majority in the parliament, which previously had been broken only once since Malaysia gained independence. In mid-September the newly elected Anwar called on Abdullah to convene an emergency session of the parliament, then in recess for the Ramadan fast, asserting that he had enough support to carry a no-confidence vote against the government. The prime minister refused and threatened action against Anwar, whom he declared a threat to the country's security.

The son of politicians, Anwar embarked on his political career in the late 1960s while studying at the University of Malaya in Kuala Lumpur, where he became known as an Islamist student leader. In 1971 he founded the Muslim Youth Movement of Malaysia, serving as its president until 1982. Despite his criticism of the BN and its most powerful component, UMNO, in 1982 Anwar accepted an invitation from Prime Minister Mahathir Mohamad to join UMNO and his government. Anwar advanced swiftly, serving as minister of culture, youth, and sports (1983), agriculture (1984), and education (1986–91) before being appointed minister of finance (1991–98) and deputy prime minister (1993–98). At the helm of Malaysia's remarkable economic prosperity during the 1990s, Anwar gained the respect of colleagues worldwide. During the Asian financial crisis of 1997, however, he clashed with Mahathir over the implementation of economic recovery measures. Anwar was dismissed in 1998, and in 1999 he was jailed on charges of corruption, to which a charge of sodomy—a criminal offense under Malaysian law—was later added. In 2004 Malaysia's High Court overturned the sodomy conviction, citing a lack of evi-

dence, and freed Anwar. Following his release, Anwar held lecturing positions at the University of Oxford; Johns Hopkins University, Baltimore, Md.; and Georgetown University, Washington, D.C. (JANET MOREDOCK)

Johnson, Boris

(b. June 19, 1964, New York, N.Y.) On May 1, 2008, Boris Johnson, an American-born British journalist and conservative Party politician, narrowly defeated incumbent London mayor Ken Livingstone of the Labour Party to become the city's second elected mayor. Many saw Johnson's slim victory as a repudiation of the national Labour government led by Prime Minister Gordon Brown.

As a child, Alexander Boris de Pfeffel Johnson lived in New York City, London, and Brussels before attending boarding school in England. He won a scholarship to Eton College and later studied classics at Balliol College, Oxford, where he was president of the Oxford Union. After briefly working as a management consultant, Johnson embarked on a career in journalism. He started as a newspaper reporter for *The Times* in 1987 but was fired for fabricating a quotation. He then began working for *The Daily Telegraph*, where he served as a correspondent covering the European Community (1989-94) and as an assistant editor (1994-99). Johnson became a political columnist for *The Spectator* in 1994 and later presided (1999-2005) as the magazine's editor.

In 1997 Johnson was selected as the Conservative candidate for Clwyd South to the House of Commons, but he lost decisively to the Labour Party

Mayor of London Boris Johnson

Paula Bronstein/Getty Images

incumbent, Martyn Jones. Soon after, Johnson began appearing on television, beginning in 1998 with the BBC talk program *Have I Got News for You*, and his bumbling demeanour and occasionally irreverent remarks made him a perennial favourite on British interview shows. He again stood for Parliament in 2001, this time winning the contest in the Henley-on-Thames constituency. Johnson's frequent appearances on TV programs made him one of Britain's most recognized politicians, but his political rise was threatened on a number of occasions. He was forced to apologize to the city of Liverpool in October 2004 after the publication of an insensitive editorial in *The Spectator*, and a month later he was dismissed from his position as shadow arts minister after rumours surfaced that he had lied about an alleged affair with a fellow journalist. Despite such public rebukes, Johnson was reelected to his parliamentary seat in 2005.

He entered into the London mayoral campaign in July 2007, challenging Livingstone, who was first elected as an independent in 2000. During the tightly contested election, Johnson overcame perceptions that he was a gaffe-prone and insubstantial politician by focusing on issues of crime and transportation. A month after his somewhat unexpected victory, Johnson fulfilled a campaign promise by stepping down as an MP.

Johnson also wrote numerous books, including *Lend Me Your Ears* (2003), a collection of essays; *Seventy-Two Virgins* (2004), a novel; and *The Dream of Rome* (2006), a historical survey of the Roman Empire. (EDITOR)

Johnson, Jimmie

(b. Sept. 17, 1975, El Cajon, Calif.) In November 2008 race-car driver Jimmie Johnson won his record-tying third consecutive National Association for Stock Car Auto Racing (NASCAR) driver's championship—matching fellow American Cale Yarborough's 30-year-old mark. With just seven seasons of racing in the top series (called the Nextel Cup until 2008, when it became the Sprint Cup), Johnson had already established himself as one of the best drivers in the history of NASCAR.

Early in his career Jimmie Kenneth Johnson showed that he had what it took to one day be called a champion. He began racing at the age of five on 50 cc motorcycles, and at eight years old he won the 60 cc class championship. Eventually he moved on to

four-wheel vehicles and began racing in off-road leagues, including Short-Course Off-Road Drivers Association, SCORE International, and Mickey Thompson Entertainment Group.

He won six championships and was named Rookie of the Year in each of those leagues before moving on to the American Speed Association, where he took Rookie of the Year honours in 1998. He began to race in NASCAR's Busch Series in 1998 and by 2000 was a member of Herzog Motorsports' Busch team, finishing third in that season's Rookie of the Year standings. When Herzog Motorsports lost its sponsor in 2000, Johnson was recommended to Hendrick Motorsports by NASCAR driver Jeff Gordon.

Johnson made his first appearance in NASCAR's top series on Oct. 7, 2001, finishing 39th at Lowe's Motor Speedway in a Nextel Cup race. He also earned his first Busch Series win at Chicagoland Speedway, winding up eighth in the Busch Series point standings. He began his rookie campaign in the 2002 Nextel Cup, winning three races and ending the season ranked fifth. Two of those victories came at Dover (Del.) International Speedway, making him the first rookie in series history to sweep both races at a track and the first to lead the point standings (for one week). He finished second in the standings in 2003, with three victories, and won a series-best eight times in 2004 to end up second in the inaugural Chase for the Championship. He finished fifth in the Chase in 2005 before starting his dominant run the following season.

In the 2006 Nextel Cup, Johnson registered five victories, including the Daytona 500, and had 13 top-5 and 24 top-10 finishes. In 2007 he earned his second straight title, becoming the first driver to have 10 victories in a season (including 4 in a row) since his teammate Gordon won 13 races in 1998. In the renamed Sprint Cup in 2008, Johnson won seven races—three during the Chase—and built up enough overall points to secure his third consecutive driver's title with a 15th-place finish in the season-ending Ford 400 in Homestead, Fla., on November 16.

Jonas Brothers

(b. Nov. 5, 1987, Teaneck, N.J.), (b. Aug. 15, 1989, Casa Grande, Ariz.), and (b. Sept. 16, 1992, Dallas, Texas) Propelled by the marketing muscle of the Disney organization, the Jonas Brothers, a trio

Peter Kramer/AP

The pop-singing Jonas Brothers: (from left) Nick, Joe, and Kevin Jonas

of soft-rocking siblings, went from the darlings of “tweenage” consumers to pop culture phenomenon in 2008. Their combination of optimism, catchy tunes, and coverboy good looks—coupled with their ubiquitous presence on Radio Disney and the cable television Disney Channel—made Kevin, Joe, and Nick Jonas among the year’s most familiar faces and helped their album *A Little Bit Longer* debut at number one on the *Billboard* 200 chart.

Paul Kevin Jonas II, Joseph Adam Jonas, and Nicholas Jerry Jonas were raised in a musical family and imbued with a strong sense of Christian values, notably by their father, an Assembly of God minister. Family sing-alongs in their New Jersey home set the stage for Nick’s precocious performances on Broadway, beginning at age six. In 2004 he released a Christian-themed solo album. The pleasure of making music together prompted the brothers to form a band, with Kevin and Nick on guitar (with keyboard work mixed in) while Nick and Joe shared the lead vocal chores. Their first album, *It’s About Time* (2006), featured songs co-written by Desmond Child and pop star Adam Schlesinger of the band Fountains of Wayne. Although it was given only a limited marketing push, the album sold 62,000 copies.

Early in 2007, the Jonas Brothers signed with Disney’s Hollywood Records, releasing an eponymous album that entered the chart at number five and, riding hits such as “S.O.S.,” went platinum. The brothers also began appearing regularly on the Disney Channel, most notably in a highly watched 2007 episode of the show *Hannah Montana*, starring Miley Cyrus (*q.v.*). The Jonases then opened for Cyrus on her “Best of Both Worlds”

tour, and it was rumoured that she and Nick Jonas were dating for a time. Jonas Brothers music videos became Disney Channel staples, and they starred in a reality program, *Jonas Brothers: Living the Dream*, but their real breakthrough followed their appearance in the Disney movie musical *Camp Rock*, in which Joe played the romantic lead. Ever more popular, the brothers released *A Little Bit Longer*, with many songs written by Nick; undertook their own tour; and prepared to star in another TV show. In July 2008 they appeared on the cover of *Rolling Stone* magazine as rock critics began acknowledging that the brothers’ brand of romantic pop rock was more treat than treacle.

(JEFF WALLENFELDT)

Kaká

(b. April 22, 1982, Brasília, Braz.)

In January 2008 Brazilian-born association football (soccer) player Kaká, AC Milan’s spectacular playmaking midfielder, was voted Player of the Year by the Italian players’ association. It crowned an amazing year for Kaká, who earned a Union des Associations Européennes de Football (UEFA) Champions League title when AC Milan defeated Liverpool, Eng., in the final on May 23, 2007, and secured more than a dozen personal awards, including being selected 2007 European Player of the Year and Fédération Internationale de Football Association (FIFA) World Player of the Year.

Ricardo Izecon dos Santos Leite owed his universally accepted nickname to his younger brother Rodrigo, who as a child could not pronounce Ricardo and could manage only “Caca.” Kaká was seven when the family moved from Cuiabá to São Paulo. A keen foot-

ball enthusiast, he was taken on by the São Paulo Football Club the following year. At age 15 he was given a contract, but his progress was interrupted three years later by a serious spinal injury (sustained in a swimming accident), which threatened his career. He recovered, however, and made his first-team debut in January 2001. That year he scored 12 goals in 27 matches as an attacking midfielder player. Within a year he had made his bow for the Brazilian national team against Bolivia and had been named to Brazil’s 2002 World Cup squad.

Kaká’s growing exposure on the world stage prompted interest from leading European clubs, and in August 2003 AC Milan paid \$8.5 million for his signature. He made his first appearance in Italy the next month in a 2–0 win over Ancona. Kaká was equally adept at initiating and finishing attacks, and his forceful all-around skills developed with Milan, where his teammates gave him another nickname—Ricky. (In 2004 his brother Rodrigo joined him at AC Milan.) Kaká finished eighth and seventh, respectively, in balloting for FIFA Player of the Year in 2005 and 2006 before winning almost every available honour in 2007.

With 59 international appearances and 22 goals for Brazil, in addition to 109 goals in 309 domestic games in Brazil and Italy, Kaká was the highest-paid footballer in the world, with an annual income from the game alone amounting to €8 million (about \$12 million) and extensive corporate sponsorship deals. Although his contract with AC Milan lasted until 2011, he remained one of the most sought-after talents in football. In addition to his unselfish performances on the field, Kaká was known as a very private man, a devoted husband, and a devout evangelical Christian with strong moral beliefs. In November 2007, shortly before being named FIFA Player of the Year, he acknowledged that he had considered quitting amid the violence and corruption scandals surrounding the sport in Italy. He became an Italian citizen in February 2008 but would have to wait until 2009 to make his debut for Italy’s national team. (JACK ROLLIN)

Kapoor, Anish

(b. 1954, Bombay [now Mumbai], India) In 2008 the first American museum survey of Anish Kapoor’s work in more than 15 years was featured at the Institute of Contemporary Art in Boston. *Anish Kapoor: Past, Present,*

Frantzesco Kangaris—Bloomberg News/Landov

Indian-born British artist Anish Kapoor with his proposed Sky Plinth for London's Trafalgar Square.

Future highlighted the Indian-born London-based artist's dazzling use of rich colours, polished surfaces, and sensuous forms. Kapoor emerged as part of a generation of British sculptors who gained recognition in the 1980s for their use of abstract and organic forms. He came to prominence for his biomorphic sculptures and installations made in materials as varied as stone, aluminum, and resin that appeared to challenge gravity, depth, and perception. Throughout his career Kapoor explored dualities such as presence and absence, solid and void, and reflection and absorption.

Kapoor made London his home in 1973, and he studied at the Hornsey College of Art until 1977 and at the Chelsea School of Art from 1977 to 1978. A visit to India in 1979 sparked new perspectives on his homeland. These were reflected through his use of saturated pigments and striking architectural forms in bodies of work such as *1000 Names*. Created between 1979 and 1980, this series consisted of arrangements of abstract geometric forms coated with loose powdered pigments that spilled beyond the object itself and onto the floor or wall. Kapoor went on to represent Great Britain at the 1990 Venice Biennale and was awarded the Premio Duemila for his installation *Void Field*, a grid of rough sandstone blocks each with a mysterious black hole penetrating its top surface. In 1991 he was honoured with the prestigious Turner Prize. Kapoor continued to explore the idea of the void

through the 1990s, creating series of works that incorporated human-scale constructions that receded into walls, disappeared into floors, or dramatically changed depth with a simple change in perspective. He received an honorary fellowship from the London Institute in 1997 and another in 2001 from the Royal Institute of British Architecture.

Kapoor's interest in addressing site and architecture led him to create projects that became increasingly ambitious in scale and construction. For his 2002 installation *Marsyas* at the Tate Modern in London, Kapoor created a trumpetlike form by erecting three massive steel rings joined by a span of fleshy-red PVC membrane that stretched across the museum's 155-m (550-ft)-long Turbine Hall. In 2004 Kapoor unveiled *Cloud Gate* in Chicago's Millennium Park; the 110-ton highly polished stainless steel elliptical archway, nicknamed "the bean," was his first permanent site-specific installation in the United States. For just over a month in 2006, Kapoor installed *Sky Mirror*, an 11-m (35-ft)-diameter concave stainless-steel mirror in New York City's Rockefeller Center. Both *Cloud Gate* and *Sky Mirror* reflected and transformed their surroundings and demonstrated Kapoor's ongoing experimental investigation of material, form, and space. (MICHAL RAZ-RUSSO)

Kernaghan, Lee

(b. April 15, 1964, Corryong, Vic., Australia) On Jan. 25, 2008, Australian country music star Lee Kernaghan was

named Australian of the Year by Prime Minister Kevin Rudd. Kernaghan was honoured for his contributions to Australian music and for his series of fundraising performances, which had brought in more than a million dollars to benefit struggling farmers and communities in drought-stricken areas of the Australian bush. On the following day Kernaghan received multiple honours at the Country Music Association of Australia's (CMAAs) annual awards ceremony, where his hit single "Spirit of the Bush" (2007), recorded with fellow country music luminaries Adam Brand and Steve Forde, won the best single, best vocal collaboration, and best video awards. A native of the bush who was often described as the embodiment of rural values, Kernaghan reinvigorated Australian country music in the 1990s, synthesizing traditional themes, the energy of contemporary rock, and images from an evolving bush culture. His 27 CMAA career awards were second in number only to those won by Slim Dusty, widely considered the father of Australian country music.

Lee Raymond Kernaghan was the eldest child of Ray Kernaghan, who rose to great popularity as a country music singer during Lee's teen years. In the mid-1970s Lee formed his first band with his brother, Greg, and sister Tania, who also went on to become a successful country singer, and he wrote two songs recorded on their father's album *Jet Set Country* (1979). In 1982 the younger Kernaghan received a Star Maker Award at the Tamworth Country Music Festival. He released his first single in 1983, and in 1986 he and his father represented Australia at the International Country Music Fan Fair in Nashville.

Unable to find work, Kernaghan abandoned his musical career in 1990, but in 1991 he recorded several demos with Australian producer Garth Porter. These soon led to a contract with ABC Records. Porter produced Kernaghan's debut album, *The Outback Club* (1992), and co-wrote some of the songs. The record took the honours for best album, best song ("Boys from the Bush"), best male vocalist, and best producer at the 1993 CMAA Awards. The Australian Recording Industry Association also named it the best country album of 1993. Kernaghan's second release, *Three Chain Road* (1993), featured collaborations with Slim Dusty, including "Leave Him in the Longyard," which was named best group vocal at the 1994 CMAA Awards. Each of Ker-

Gayle Gerard/Getty Images

Australian of the Year Lee Kernaghan

naghan's subsequent albums—*1959* (1995), *Hat Town* (1998), *Rules of the Road* (2001), *Electric Rodeo* (2002), and *The New Bush* (2006)—earned numerous honours and enthusiastic praise from critics, fans, and the music industry. In 2004 Kernaghan was awarded a medal of the Order of Australia in recognition of his fund-raising efforts on behalf of farmers and rural communities. (JANET MOREDOCK)

Key, John Phillip

(b. Aug. 9, 1961, Auckland, N.Z.) When John Phillip Key took the oath of office as New Zealand prime minister on Nov. 19, 2008, he was fulfilling the second of two childhood ambitions. The first was to become a millionaire, a goal he achieved as an international investment banker between 1985 and his entry into politics in 2002 as a National Party backbench MP. At that time he had undisputed personal wealth exceeding \$NZ 50 million (about U.S.\$25 million).

Key was the son of an English father and a Jewish mother who fled Austria for the U.K. in 1939; the couple married in 1948 and immigrated to New Zealand, eventually settling in Auckland. When Key's father died in 1969, the family moved to Christchurch, where they lived in a state rental house and Key's mother worked as a night porter and cleaner to repay accumulated debt. At age eight or nine, Key told his two older sisters that he intended to make a million dollars and

become prime minister. He did well at Burnside High School, where he shone in public speaking, debating, and economics, and studied accountancy at the University of Canterbury, from which he graduated with a B.Comm in 1983, the year before his marriage to fellow student Bronough Irene Dougan.

After Prime Minister David Lange's 1984–87 Labour government floated the New Zealand dollar, Key quit his job with a sportswear clothing manufacturer and took a position as a foreign-exchange trader in Wellington for Australia-based Elders Merchant Finance. In 1988 he was lured to the newly established Bankers Trust in Auckland, famously telling the chief executive that "I want your job" and sleeping with a Reuters screen beside his bed.

Beginning in 1995, Key worked in Singapore, London, and Sydney for American investment bankers Merrill Lynch, assuming responsibility for various business units, notably international foreign-exchange and European bond and derivative trading. He developed a reputation as a smart risk taker, and in 1999 he joined the foreign-exchange committee of the Federal Reserve Bank of New York. He also took management studies courses at Harvard University.

Key returned to New Zealand in 2001 to stand for Parliament for the National Party. He won the Helensville (Auckland) seat the following year with a narrow majority of 1,589 votes; three years later he retained his seat with a majority of 12,778. In November 2006 Key, then party spokesman for finance, was elected to succeed departing National leader Don Brash. Key reinvigorated the party, with a renewed emphasis on education, reduced taxes, and an end to the "growing government-funded culture of dependency." In the Nov. 8, 2008, general election, the National Party took 58 of the 122 seats contested, and 11 days later Key achieved his boyhood ambition of becoming prime minister. (NEALE MCMILLAN)

Lange, André

(b. June 28, 1973, Ilmenau, E.Ger.) By collecting gold medals throughout the 2007–08 season, German bobsleigh driver André Lange confirmed that he was a dominant force in the world of international bobsleigh racing and arguably one of the greatest drivers ever. Lange earned a podium finish at each venue on the World Cup circuit, including four gold medals, three of those during the last three World Cup races.

His consistency earned him the World Cup overall titles in both two-man (his first) and four-man (his third) bobsleigh. At the 2008 world championships, held in Altenberg, Ger., less than two weeks later, Lange drove to a double gold-medal performance, securing his third straight (and fourth career) two-man title (all with his longtime brakeman Kevin Kuske) and his seventh career four-man title.

Lange switched at age 19 to bobsleigh from another sliding sport, luge. After winning his World Cup bobsleigh debut, in 1998 at the four-man event in Calgary, Alta., he finished his premier season 13th and 24th in the overall World Cup rankings in four-man and two-man, respectively. He continued to climb in the World Cup overall driver rankings, and since 1998 he had not finished below the top 10 in either two-man or four-man racing.

During his Olympic debut at the 2002 Winter Games in Salt Lake City, Utah, Lange competed only in the four-man event. In the first heat, he finished behind American pilot Todd Hays. The second heat did not prove better, with Lange slipping to third overall. During the third heat, his sled overtook the lead. He drove well in the fourth heat and held on to win the gold medal by 0.30 second.

At the 2006 Winter Olympics in Turin, Italy, Lange swept the two-man and four-man events. In both races Lange was in the lead after the first heat. Sliding with Kuske in the two-man, the duo's split time slipped to fourth overall in the second heat, but the pair rallied, overtook the lead in the third heat, and did well enough in the fourth heat to win. The four-man race proved no different. Lange, with teammates Kuske, Rene Hoppe, and Martin Putze, finished the first heat in first place and collected the fastest split times in each of the first three heats. Lange was awarded his second consecutive gold medal in four-man bobsleigh, the first time that feat had been achieved since East German pilot Meinhard Nehmer won the four-man event at the 1976 and 1980 Olympic Winter Games. Lange's double-gold-medal performance in Turin had last been accomplished by another East German, Wolfgang Hoppe, at the 1984 Winter Olympics in Sarajevo, Yugos. (JULIE PARRY)

Leno, Jay

(b. April 28, 1950, New Rochelle, N.Y.) In 2008 American comedian Jay Leno continued to rule as the king of late-

night television comedy when *The Tonight Show with Jay Leno* topped the ratings charts with more than five million viewers, nearly one and a half times that of his nearest rival. Despite the Writers Guild strike early in the year, Leno produced humorous content for the show—including a nightly monologue filled with dozens of jokes—by writing it himself. Ever since he took over the coveted job as host of *The Tonight Show* from the legendary Johnny Carson in 1992, Leno, with his cordial, easy-going manner, had demonstrated a strong work ethic and a knack for connecting with his audience. In July it was announced that Leno would host his last episode of *The Tonight Show* on May 29, 2009; thereafter, the show was to be hosted by Leno's NBC colleague Conan O'Brien, while Leno was to host a new prime-time talk show that was set to debut in the fall.

James Douglas Muir Leno was raised in Andover, Mass., and displayed his talent for comedy at an early age. While attending Emerson College in Boston, where he graduated (1972) with a degree in speech therapy, Leno worked as a stand-up comic in nightclubs. After moving to Los Angeles, he served as the opening act for such entertainers as Johnny Mathis and Tom Jones. Early in his career, Leno worked as a writer (1974) for the television situation comedy *Good Times* and occasionally took acting jobs on sitcoms, such as *Laverne & Shirley*, *Friends*, and *Seinfeld*, and in films, including *Wayne's World 2* (1993), *The Flintstones* (1994), and *Wag the Dog* (1997). Leno also provided the voice for characters based on him in animated TV shows, such as *The Simpsons*, *South Park*, and *Family Guy*, and movies, notably *Cars* (2006).

Leno debuted on *The Tonight Show Starring Johnny Carson* in 1977 and became Carson's permanent guest host 10 years later. When Leno succeeded Carson as host of the show, he gave it a more trendy, laid-back image, with edgier musical acts and new comedy segments, including "Jaywalking," "Headlines," and "Police Blotter." Under Leno's leadership, the program garnered four Emmy Awards (1995–97; 1999), and Leno was awarded numerous accolades, including a star on Hollywood's Walk of Fame in 2000. His anecdotal memoir, *Leading with My Chin*, appeared in 1996.

In addition to his comic fame, Leno was recognized as an automotive authority. He wrote a column, "Jay Leno's Garage," for *Popular Mechanics* maga-

zine and contributed to several books, including *Velocity: Supercar Revolution* (2006), *Legendary Motorcycles* (2007), and *The Hemi in the Barn: More Great Stories of Automotive Archaeology* (2007). (BARBARA A. SCHREIBER)

Letts, Tracy

(b. July 4, 1965, Tulsa, Okla.)

The 2008 Pulitzer Prize for drama—as well as the 2008 Tony Award for best play—was awarded to Tracy Letts for *August: Osage County*, a dark comedy depicting a wildly dysfunctional Oklahoma family coping with the death of its patriarch. The show premiered at Chicago's Steppenwolf Theatre in the summer of 2007 and opened on Broadway just a few months later. At the Tonys the play dominated the awards, winning a total of five.

Tracy Shane Letts was raised in Durant, Okla., home of Southeastern Oklahoma State University, where his father, Dennis, taught English and his mother, Billie, taught journalism. (She later wrote a best-selling novel, *Where the Heart Is*.) Letts's father was also an aspiring actor (and would go on to appear in some 40 films and to play the father in the Steppenwolf and Broadway productions of *August: Osage County* before his death in February 2008), and his work in community theatre led Tracy to pursue acting as a teenager. Letts attended Southeastern Oklahoma State briefly before moving to Dallas for two years and then, at age 20, to Chicago, where he eventually began landing acting jobs.

In 1991 Letts wrote a play, *Killer Joe*, that was so graphic and violent that no theatre company would agree to produce it. Two years later Letts and a few other actors produced the play themselves. Mixed reviews did not prevent it from being a hit. A later successful staging at the Edinburgh Festival Fringe resulted in well-received productions in New York City and London. Next came *Bug*, a love story about a woman who is a cocaine addict and a man who thinks his body is infested with insects, which Letts wrote in 1996. It premiered in London, and later the New York production caught the eye of director William Friedkin, who in 2006 turned it into a film, with Letts writing the screenplay. Meanwhile, Letts continued to act. He moved to Los Angeles for a brief period, finding bits of work on television shows such as *Seinfeld* and *Judging Amy*. He appeared onstage in several Steppenwolf productions before being invited to join the ensemble in 2002.

Joe Corrigan/Getty Images

American playwright Tracy Letts

In 2003 Steppenwolf staged Letts's next play, *The Man from Nebraska*, the story of an insurance agent's loss of religious faith, which represented a departure from the writer's previous shocking blood-and-guts material. The play was a finalist for the Pulitzer Prize. While *August: Osage County* was also seen in some ways as more tame than Letts's earlier fare, the playwright saw more similarities than differences across his body of work. Where most plays tended to involve characters every bit as literate as the writers who authored them, Letts said that he wrote plays with real-life characters who did not necessarily express themselves poetically. (ANTHONY G. CRAINE)

Libi, Abu Yahya al-

(b. c. 1963, Libya)

Al-Qaeda strategist Abu Yahya al-Libi emerged during 2008 as one of the top leaders in the new generation of the Islamic militant organization; he was also one of those "most wanted" by the United States. Libi was considered one of al-Qaeda's main theologians, because the top two al-Qaeda leaders—Osama bin Laden (an engineer) and Ayman al-Zawahiri (a physician)—had not undertaken Islamic studies.

Little was known about Libi's origins, but it was believed that his birth name was Muhammad Hassan Qa'id and that he assumed the alias Abu Yahya al-Libi in the 1990s when he joined al-Qaeda. He was also known under several other names, including Abu Yahya al-Sahrawi. Libi's education was entirely religious; during the 1980s he received five years of training in Mauritania in Shari'ah, Islamic law. After returning to Libya, he became a member of the

Libyan Islamic Fighting Group, a now-defunct network that in the 1980s attempted to topple Libyan ruler Col. Muammar al-Qaddafi.

As a youth, Libi was influenced by the activities of his older brother 'Abd al-Wahhab, who became a noted personality among extreme Islamists in Libya and who in the 1980s fought in Afghanistan against the Soviet Union's takeover of that country. Libi also joined the Islamic Jihadi fighters in Afghanistan in the early 1990s. He then went to Africa but returned to Afghanistan during the period that the Taliban controlled the country after the Soviets had withdrawn.

After the U.S. declared war on the Taliban and invaded Afghanistan following the Sept. 11, 2001, terrorist attacks in the U.S., Libi was arrested by the Pakistani authorities in the summer of 2002 in the border region between Afghanistan and Pakistan. U.S. forces imprisoned him in a maximum-security facility in Bagram, Afg., but on July 11, 2005, he staged a daring escape with three other al-Qaeda prisoners and found instant fame. He appeared (2006) in a 54-minute videotape chronicling his capture in 2002, his time spent in prison, and his prison breakout.

Libi climbed the ladder rapidly in al-Qaeda's hierarchy and was named a field commander. The charismatic militant preacher and ideologue helped recruit al-Qaeda members. He appeared in more than 12 videotapes giving "lessons" on Islam and jihad and rousing Muslims to fight the infidels of the West as well as Muslim and Arab rulers (whom he threatened constantly). Libi urged Muslims to help al-Qaeda fighters in hot spots such as Pakistan, Iraq, Palestine, Somalia, and Afghanistan. His videotapes, in Arabic, were placed on extremist Sunni Muslim Web sites, sometimes with English and Urdu subtitles to reach the broadest-possible audience. Although Libi was sometimes called "Sheikh," a title reserved for distinguished religious scholars, he lacked the legal authority to issue a fatwa, a legal and authoritative religious decree. He was believed to be living in the mountainous region between Pakistan and Afghanistan. (LOUAY BAHRY)

Lidstrom, Nicklas

(b. April 28, 1970, Västerås, Swed.)

In his 16th season in the National Hockey League (NHL), Swedish-born Nicklas Lidstrom of the Detroit Red Wings again demonstrated why many ice hockey fans considered him one of

the greatest defensemen in the history of the game, and on June 4, 2008, he completed the season by leading his team to victory in defeating the Pittsburgh Penguins to win the Stanley Cup. Lidstrom's poise and skill were credited as key to Detroit's success, and this latest championship—his fourth on the Wings' roster—made him the first player born and trained in Europe to captain a Cup-winning team. Soon after, the 10-time NHL All-Star was awarded his sixth Norris Trophy for best defenseman—his third in as many years—which placed him just two shy of the record set by the legendary Canadian Bobby Orr.

Lidstrom played on several Swedish ice hockey clubs before being selected by Detroit as the 53rd overall pick in the 1989 NHL draft. After winning a gold medal with Sweden at the 1991 International Ice Hockey Federation world championships, Lidstrom made his NHL debut on Oct. 3, 1991. He finished the 1991–92 season as runner-up for the Calder Trophy for best rookie player. A scoring defenseman, Lidstrom earned notice for his consistency and durability—he typically logged the most ice time on the team and was rarely injured. In the 1994–95 season, he appeared in his first Stanley Cup, but Detroit was defeated by the New Jersey Devils.

In 1997 the Red Wings swept the Philadelphia Flyers to win the franchise's first Stanley Cup in 42 years. Lidstrom led all defensemen in points as the Wings repeated as champions in 1998. He won his first Norris Trophy in 2001. The next season he helped Detroit defeat the Carolina Hurricanes for a third Stanley Cup; for his dominating performance in the postseason—he scored 5 goals, including 2 game winners, and had 11 assists—Lidstrom became the first European to receive the Conn Smythe Trophy for most valuable player in the play-offs. He capped the 2002–03 season with his third consecutive Norris Trophy. He recorded his 800th career point in 2006, and after Steve Yzerman retired as captain following the 2005–06 season, Lidstrom was named to succeed him. In Lidstrom's first season as team leader, the Wings reached the conference finals but lost to the eventual champions, the Anaheim Ducks. Detroit responded in 2007–08 by posting the best record in the league en route to the franchise's 11th Stanley Cup.

In addition to his NHL play, Lidstrom continued to compete on the Swedish national team. At the 2006 Winter Olympics in Turin, Italy, he scored the

game-winning goal in the final against Finland to win the gold medal for Sweden. (AMY TIKKANEN)

Liukin, Nastia

(b. Oct. 30, 1989, Moscow, Russia, U.S.S.R.) At the 2008 Olympic Games in Beijing, American gymnast Anastasia (Nastia) Liukin, age 18, won five medals, including the individual all-around gold. She also earned the silver medal on balance beam and the bronze on floor exercise and led her team to the silver, the U.S. women's second consecutive Olympic team silver medal. On Liukin's signature event, the uneven bars, she and Chinese gymnast He Kexin tied for the top score. After the tie-breaking procedure was put into place, He was awarded the gold medal, and Liukin received the silver. Although Liukin was disappointed not to win bars, her five medals made her the most successful gymnast in Beijing. In October the Women's Sports Foundation named her Individual Sports-woman of the Year.

Liukin was born Anastasiya Valeryevna Lyukina into a family with extraordinary gymnastics genes. Her Kazakh-born father and coach, Valery Lyukin, won four medals for the Soviet Union at the 1988 Olympic Games and two more at the 1991 world championships, and in 1987 he became the first gymnast to complete a triple back somersault on floor exercise. Her mother, Anna Kochneva, also competed for the Soviet Union and was the 1987 rhythmic gymnastics world champion in clubs. After the dissolution (1991) of the Soviet Union, Lyukin moved his family to the U.S., where he cofounded the World Olympic Gymnastics Academy (WOGA) in Plano, Texas. (The family anglicized their name to Liukin when they became American citizens.) Liukin's parents initially objected to her early interest in gymnastics, but she soon became known for her stylish grace and the long lines in her gymnastics moves, making all her moves look effortless.

Liukin was not age-eligible to qualify for the 2004 U.S. Olympic team, so she watched as Carly Patterson, her teammate from WOGA, won the all-around title. In 2005 Liukin won her first U.S. senior national title, and at the world championships that year, she took gold on the uneven bars and balance beam and earned the silver medal on floor exercise. In the all-around competition, she finished second to her teammate Chellsie Memmel by the slenderest of margins: 0.001 point. Liukin again won

the U.S. title in 2006, but she sprained her ankle at training camp just before the 2006 world championships. Although she was able to compete only on the uneven bars, she made the best of her one-event appearance, winning the silver medal, along with the team silver.

After ankle surgery Liukin was back on form at the 2007 world championships, claiming gold on balance beam and in the team competition and silver on bars. She was also fifth all-around, showing the world that the title was within reach. Liukin, whose nine world medals tied the U.S. record with Shannon Miller, followed in her parents' footsteps, but she left her own mark in the sport of gymnastics.

(LUAN PESZEK)

Livni, Tzipi

(b. July 8, 1958, Tel Aviv, Israel) Israeli Foreign Minister Tzipi Livni, who became Kadima ("Forward") party leader in September 2008, was tapped soon after to form a coalition government following the resignation of party chairman and Prime Minister Ehud Olmert. Livni spent much of the next few weeks trying to form a coalition government, but her efforts proved unsuccessful. Instead, she petitioned Israeli Pres. Shimon Peres to call early elections, which were set for Feb. 10, 2009.

Tziporah Malka Livni was the daughter of Polish-born parents who were both active in Irgun Zvai Leumi, a militant Jewish group that fought for the

foundation of Israel and was the precursor of the hawkish Herut and Likud parties. After serving as a lieutenant in the Israel Defense Forces, Livni began a law degree in 1979 at Bar-Ilan University, Ramat Gan. The following year she was recruited by the Israeli intelligence agency Mossad, and her studies were interrupted in 1983 when she was sent on a mission to Paris. She left the agency shortly thereafter and married accountant Naftali Shpitzer. In 1984 she completed her degree, and during 1984–96 she practiced law, specializing in real-estate and corporate law.

Livni entered politics following the 1995 assassination of Labour Party Prime Minister Yitzhak Rabin by a right-wing Jewish extremist. She believed that Israel's political right had been unfairly discredited by the assassination and was determined to reverse the Oslo process Rabin had led. When she failed to win a Knesset (parliament) seat in the 1996 election, newly elected Prime Minister Benjamin Netanyahu of the Likud party appointed her head of the Government Companies Authority, where she oversaw a large privatization program.

In 1999 Livni narrowly won a seat in the Knesset in an election swept by the Israel Labour Party. Her rapid political ascent began two years later when Likud's Ariel Sharon replaced Labour's Ehud Barak as prime minister, and after holding a number of junior portfolios and cultivating a highly principled image, she became minister of justice in early 2005. During this time her views on the Arab-Israeli conflict underwent a dramatic change; whereas she had previously supported an Israeli state that encompassed all of the West Bank and Gaza Strip, she became a supporter of the policy of land for peace, with the belief that a Palestinian state was necessary to maintain Israel as a democratic, Jewish-majority state. To that end, as a member of Sharon's inner circle, she helped plan Israel's unilateral withdrawal from the Gaza Strip in 2005.

In November 2005 she left Likud, with Sharon and other party moderates, to found Kadima. When Sharon was incapacitated by a stroke in January 2006, Olmert took over as party leader, winning a general election in March and appointing Livni minister of foreign affairs. Livni later called on Olmert to resign in the wake of Israel's 34-day war against the Shi'ite militia Hezbollah in Lebanon in summer 2006, and the two became bitter rivals. Amid allegations of corruption, Olmert announced in

July 2008 that he would step down as prime minister, and Livni narrowly won a September 2008 party election to replace him.

(LESLIE D. SUSSER)

Louboutin, Christian

(b. 1963, Paris, France)

In 2008 French shoe designer Christian Louboutin maintained his high profile on the international fashion scene. In April he opened a European flagship boutique on London's Mount Street; in 2008 he also added stores in Jakarta, Las Vegas, Paris, Tokyo, and Singapore. The new boutiques raised his total to 20, and it was estimated that his company sold 340,000 pairs of shoes annually. Louboutin also made a series of personal appearances at upscale American department stores where his collection was sold, including Barneys New York. These visits were timed to coincide with the first exhibition to be devoted to his creations, *Sole Desire: The Shoes of Christian Louboutin* (March 13–April 19), at the Fashion Institute of Technology in New York City.

At age 17 Louboutin came to the realization that footwear was his calling. He was an apprentice in the dressing rooms of the Folies-Bergère, the famed Parisian music hall, where he was impressed with the ability of showgirls to remain surefooted while wearing huge headdresses. Louboutin gained experience through work at the venerable Paris shoe brand Charles Jourdan, with the master shoe designer Roger Vivier—who became Louboutin's mentor—and as a designer for Chanel, Maud Frizon, and Yves Saint Laurent.

In 1992 Louboutin launched his own business in Paris, and he continued to use the boutique and design atelier there as his headquarters. He developed an unmistakable signature by giving all of his shoes bright red soles. A typical pair of his luxury shoes might also have a stiletto heel and coloured leather or exotic reptile uppers; prices averaged about \$800 a pair.

The influential industry journal *Footwear News* noted that Louboutin's trademark red soles were a "subtle status symbol" and were far more alluring than the overt branding of the big-name luxury brands. Differing stories had been offered for the origin of the coloured soles, but Louboutin said that the hue was inspired by an assistant's red nail polish. He decided to use red on all his soles, reasoning that "red is more than a colour. It is a symbol of love, of blood, of passion," as he told *The Times* (London).

Guillaume Bureau—Israeli Embassy/Getty Images

Louboutin developed a huge celebrity following, and his own lifestyle placed him in the jet set. When he was not traveling for business or pleasure, he divided his time between a Paris apartment, a château in the French countryside, and a retreat in Egypt. (BRONWYN COSGRAVE)

Lugo, Fernando

(b. May 30, 1951, San Pedro del Paraná, Itapúa province, Para.) On Aug. 15, 2008, former Roman Catholic bishop Fernando Lugo was inaugurated president of Paraguay after having led an opposition coalition (the Patriotic Alliance for Change [APC]) that broke the Colorado Party's 62-year hold on power. Lugo won the April 20 election with 41% of the vote, while Colorado candidate Blanca Ovelar de Duarte earned 31%.

Lugo rose to prominence in Paraguay as the "bishop of the poor," leading landless peasants in his poor rural diocese of San Pedro Apóstol de Ycuamandiyú in a campaign for agrarian reform against wealthy landowners backed by the Colorado Party. After 11 years Lugo resigned his bishopric in January 2005 to step more directly into politics. In a country that was infamous for corruption and in which a third of the population of 6.7 million live in poverty, his reputation for honesty and his work for the poor made the priest, who invariably campaigned in sandals and open-necked shirts, enormously popular. Unions, agrarian groups, and others opposing Colorado Party rule united behind him, as did the APC. After Lugo defied a December 2006 canonical admonition against becoming a presidential candidate, the Vatican suspended him *a divinis* in January 2007, barring him from practicing as a priest.

Lugo promised to push for land redistribution, political and economic transparency, and new social programs to help the poor. He called for renegotiating Paraguay's share of revenues from Brazil for power from the huge Itaipú hydroelectric dam. While cast in the media as part of a leftist "revolution" sweeping Latin America, Lugo described himself as a moderate compared with his left-leaning presidential counterparts in Bolivia, Brazil, Argentina, Ecuador, Uruguay, and Venezuela. "I am not Hugo Chávez, I am Fernando Lugo. I am not Evo Morales,

Eleanor Bentall—Bloomberg News/Landov

French shoe designer Christian Louboutin

I am not [Rafael] Correa, and I am not Fidel [Castro]," he told the BBC.

Fernando Armindo Lugo Méndez was the nephew of Epifanio Méndez Fleitas, a Colorado Party leader who was forced into exile in 1956, during Gen. Alfredo Stroessner's 35-year dictatorship (1954–89). After briefly working as a primary-school teacher, Lugo began (1970) a novitiate with the Divine Word Missionaries. In 1977 he gained a degree in religious studies from the Universidad Católica in Asunción and was ordained a priest. He worked the following five years in Ecuador's Andean region under the bishop of Riobamba, Leonidas Proano, a leading South American liberation theologian. After a brief return to Paraguay, Lugo was sent to Rome in 1983 for further studies. He returned to Paraguay in 1987, and in 1992 he was appointed the provincial superior, or head, of the Divine Word community in Paraguay. He was consecrated bishop of San Pedro in 1994.

(ROBERT ORTEGA)

Ma Ying-jeou

(b. July 13, 1950, Hong Kong) On March 22, 2008, Ma Ying-jeou, a Harvard-educated former mayor of Taipei, won a landslide victory in Taiwan's presidential election, defeating Frank Hsieh of the pro-independence Democratic Progressive Party (DPP) by a 58% to 42% margin. Ma was the candidate and former chairman of the

Kuomintang (KMT), or Nationalist Party, which supported closer relations with Beijing and eventual reunification with China. His triumph followed a similarly resounding win for the KMT in Taiwan's legislative elections on January 12, when the Nationalists secured 81 of the 113 seats in the Legislative Yuan (parliament). The decisive poll results ensured that Ma would take office on May 20 with a solid mandate, and he vowed to restore the island's rapid economic growth of the 1980s and '90s, in part by boosting trade and investment ties with China.

Ma was born in British-occupied Hong Kong to parents who had fled mainland China after the communist victory in 1949. The family settled in Taiwan in 1951. Ma grew up in Taipei and studied law at National Taiwan University. He won a scholarship to continue his studies in the United States, where he earned

a Master of Laws degree (1976) from New York University and a Doctor of Juridical Science degree (1981) from Harvard University. Returning to Taiwan, he entered public service. One of his early assignments was as an English interpreter for then president Chiang Ching-kuo. Ma later served (1984–88) as deputy secretary-general of the KMT.

In 1991 Ma was elected a representative to Taiwan's National Assembly and appointed vice-chairman of the Mainland Affairs Council. He served as the country's minister of justice from 1993 to 1996. Two years later he scored an impressive political victory by defeating future president Chen Shui-bian in the Taipei mayoral race. Though Ma was reelected in 2002 and was elevated to the KMT chairmanship in 2005, his political career was imperiled after allegations surfaced in late 2006 that he had misused public funds while serving as Taipei's mayor. He was formally indicted on corruption charges in February 2007. Ma resigned the KMT chair but nevertheless forged ahead with his presidential campaign. The Taipei District Court acquitted him of all charges the following August, and the Taiwanese High Court upheld the acquittal in December.

Among Ma's first priorities as president were to open direct air and shipping links with China and to lift restrictions on Taiwanese investments in

the mainland. He also planned to pursue “confidence-building measures” aimed at easing military tensions across the Taiwan Strait. While promising to work toward a formal peace agreement with China, he favoured an approach that emphasized “pragmatism and incrementalism” and conceded that “it will take some time” to thaw frosty bilateral relations.

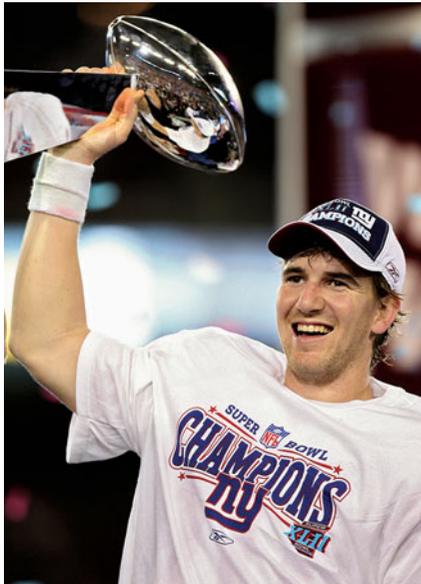

(SHERMAN HOLLAR)

Manning, Eli

(b. Jan. 3, 1981, New Orleans, La.) Coming from the first family of U.S. football quarterbacks, Eli Manning had great expectations bestowed upon him before he even threw a pass in the National Football League (NFL), but in 2008 he fulfilled those lofty demands. In Super Bowl XLII, held on February 3, in Glendale, Ariz., Manning led the New York Giants to a 17–14 victory over the previously unbeaten New England Patriots, taking the lead on a touchdown pass with 35 seconds left in the game. Eli was named Super Bowl Most Valuable Player (MVP) just one year after his older brother Peyton accomplished the feat with the Indianapolis Colts. In only his fourth season as New York’s quarterback, Eli was a Super Bowl champion, something it took his brother nine seasons to achieve.

Elisha Nelson Manning was the youngest of NFL quarterback Archie Manning’s three sons and was born right after his father completed his 10th season with the New Orleans

U.S. football quarterback Eli Manning

Gabriel Bouys—AFP/Getty Images

Saints. He followed in his father’s footsteps and played college football at the University of Mississippi, where he passed for 10,119 yd and 81 touchdowns in four seasons. As a senior, he finished third in the Heisman Trophy voting and won the Maxwell Award as the nation’s best all-around player.

Eli Manning was selected by the San Diego Chargers with the number one overall pick in the 2004 NFL draft, but he did not want to play for the Chargers, so they traded him to the Giants. Peyton was already one of the NFL’s premier quarterbacks, and the inevitable comparisons with his brother may have played a role in Eli’s early struggles. As New York’s starting quarterback during 2004–06, he went 20–21—including 0–2 in play-off games. In February 2007 Eli watched Peyton execute his MVP-winning performance in the Colts’ Super Bowl XLI victory over the Chicago Bears. Critics began to say that Eli would never be able to match his brother’s success.

Eli struggled in the 2007 regular season, tying for the league lead in interceptions with 20, but the Giants finished 10–6 and clinched a spot in the play-offs. He then led the Giants to road wins over the Tampa Bay Buccaneers, Dallas Cowboys, and Green Bay Packers to earn a trip to Super Bowl XLII and the NFL title.

Eli’s strong play continued in the 2008 season. He led the Giants to a 12–4 record, the National Football Conference (NFC) East Division title, and the top play-off seed in the NFC. Eli was also chosen for the first time to play in the Pro Bowl, joining Peyton—an American Football Conference team selection for the ninth time—in an unprecedented showdown between sibling quarterbacks in the NFL’s annual all-star game. May-Treanor, Misty, and Walsh, Kerri

(b. July 30, 1977, Los Angeles, Calif.) and (b. Aug. 15, 1978, Santa Clara, Calif.) For American duo Misty May-Treanor and Kerri Walsh in 2008, not even water falling from the Beijing sky could rain on their parade as they became the first beach volleyball team to win back-to-back Olympic gold medals. In the final match on August 21, May-Treanor and Walsh ignored a steady downpour and drenched bathing suits to beat Wang Jie and Tian Jia of China 21–18, 21–18 to continue their four-year reign over women’s beach volleyball. The match was the American

pair’s 108th consecutive victory and their 14th straight Olympics win (they did not lose a set either in Beijing or in Athens at the 2004 Olympics). In their first post-Olympic tournament, May-Treanor and Walsh extended their winning streak to 112 matches, but it came to an end on August 31 with a 21–19, 10–21, 25–23 loss to Olympic teammates Elaine Youngs and Nicole Branagh in the AVP (Association of Volleyball Professionals) Crocs Cup Shootout in Mason, Ohio. The defeat also ended the pair’s streak of 19 straight titles—quite an accomplishment for a team that had started playing together only in 2001.

Misty May grew up in California and played indoor volleyball at Long Beach State, where she led her team to the 1998 National Collegiate Athletic Association (NCAA) title in her senior year. She then played for the U.S. national indoor team at the Pan Am Games, after which she decided to try her hand at beach volleyball instead. She teamed with Holly McPeak at the 2000 Sydney Olympic Games, finishing fifth after they lost in the quarterfinals.

Meanwhile, 1.9-m (6-ft 2-in) Kerri Lee Walsh helped Stanford University win consecutive NCAA indoor volleyball titles in 1996 and 1997; she was named national co-player of the year in 1999. She moved on to play for the U.S. indoor team at the Sydney Games, finishing fourth.

May and Walsh teamed up on the sand in 2001 to finish with the number five ranking in the world before reaching number one in 2002. They got even better in 2003, winning a then-record 90 straight matches and all eight tournaments in which they played, including the world championships, where they upset the defending Brazilian champions in the final. That success carried over to the 2004 Olympics, in which they became the first American female tandem to win gold in beach volleyball. Following the Athens Games, they captured two more world titles, in 2005 and 2007.

In November 2004 May wed Major League Baseball player Matt Treanor, and Walsh married volleyball player Casey Jennings in December 2005. After the Beijing Olympics both women said that they would like to start families and take time off from competing in 2009, but first May-Treanor took on a different challenge as a contestant on the television show *Dancing with the Stars*. An injury she incurred while re-

Georgios Kefalas—KEYSTONE/AP

American beach volleyball champions Misty May-Treanor (left) and Kerri Walsh

hearing, however, required surgery on her Achilles tendon. Neither May-Treanor nor Walsh ruled out the possibility of making a run at a third straight gold medal at the 2012 Olympics in London. "I'm not done. I hope Misty's not done," Walsh said. "I can't imagine playing beach volleyball without her."

(PAUL DIGIACOMO)

McCain, John

(b. Aug. 29, 1936, Panama Canal Zone) U.S. Sen. John McCain of Arizona was the Republican Party's nominee for president in 2008. On November 4 he was defeated by Barack Obama (*q.v.*), the Democratic candidate. A self-described conservative "foot soldier in the Reagan revolution," McCain was known for clashing with his party's right wing on a wide range of issues. He was long a favourite of reporters, who admired what they saw as his directness and helped him gain a reputation as a political maverick.

The son and grandson of U.S. Navy admirals, John Sidney McCain III graduated (1958) from the U.S. Naval Academy near the bottom of his class. He then served in the navy as a ground-attack pilot. In 1967, during the Vietnam War, his plane was shot down over Hanoi, and, badly injured, he was captured by the North Vietnamese. In captivity he endured torture and years of solitary confinement. Finally released in 1973, he received a hero's welcome home as well as numerous service awards, including the Silver Star and the Legion of Merit.

McCain retired from the navy in 1981. He relocated to Arizona and was elected to the House of Representatives in 1982. After serving two terms, he successfully ran for a seat in the U.S. Senate in 1986; he was reelected in 1992, 1998, and 2004. The war hero senator gained national visibility by delivering a well-received address to the 1988 Republican national convention. In the most spectacular case to arise out of the savings and loan scandals of the 1980s, however, McCain became embroiled as a result of his connections with financier and developer Charles Keating, Jr., who had engaged in fraud. Although cleared by the Senate in 1991 of illegalities, McCain was rebuked for having exercised "poor judgment." He subsequently became a champion of campaign finance reform.

In 2000, promising the country "straight talk" and extensive government reform, McCain ran for the Republican presidential nomination, competing against Texas Gov. George W. Bush. Bush prevailed after a strenuous fight, including an especially brutal effort by the Bush campaign in the South Carolina primary. McCain eventually recovered from the defeat, campaigned hard for Bush's reelection as president in 2004, gave unswerving support to the Iraq War, and, after initially opposing Bush's tax cuts, voted against their repeal. In 2007 McCain announced that he would once again seek the Republican presidential nomination. Although his campaign seemed to be in serious trouble as the election year approached, he scored a decisive victory in New Hampshire and went on to secure the nomination with his primary victories on March 4, 2008. By aligning himself with Bush, McCain gained powerful political resources, but he also contradicted his reputation for independence, made himself look inconsistent on key issues (including taxes), and identified himself with a president who in his second term earned the longest sustained period of public disapproval ever. In the general election, McCain and his vice presidential running mate, Alaska Gov. Sarah Palin (*q.v.*), lost decisively to Obama and his running mate, Joe Biden (*q.v.*), who garnered nearly 53% of the vote.

(SEAN WILENTZ)

McCall Smith, Alexander

(b. Aug. 24, 1948, Bulawayo, Southern Rhodesia [now Zimbabwe]) On March 23, 2008, BBC television broadcast an adaptation of Alexander McCall Smith's best-selling novel *The No. 1 Ladies' Detective Agency* (1998) to critical raves. The film was the pilot for a 13-episode TV series featuring McCall Smith's indomitable Precious Ramotswe, to begin production later in the year. Despite the unexpected death of the film's director, Anthony Minghella, just a few days before the broadcast, 2008 looked to be another productive year for McCall Smith.

McCall Smith was raised in Southern Rhodesia and moved to Scotland at age 18 to study at the University of Edinburgh. He received a law degree in 1971 and then returned to Africa, where he helped to establish the law school at the University of Botswana. Back at the University of Edinburgh, where he eventually became a professor of medical law, McCall Smith published a range of scholarly works, including, with J. Kenyon Mason, *Law and Medical Ethics* (1991) and, with Colin Shapiro, *Forensic Aspects of Sleep* (1997). He also served as vice-chairman of the British Human Genetics Commission.

McCall Smith published his first fiction, a children's novel, in 1976. He went on to write more children's books, many of which were set in Africa or derived from African sources. *Children of Wax: African Folk Tales* (1989), a collection aimed at both children and adults, consists of stories he collected in Zimbabwe.

He also wrote radio plays and short stories, and it was from one of the latter that *The No. 1 Ladies' Detective Agency* emerged. The novel sold slowly at first. It did not appear in the U.S. until 2002, after McCall Smith had already published two more books centred on Mma Ramotswe (Mma being an honorific), Botswana's only female detective, but it soon after became an international best seller. By the time the series reached its ninth novel, *The Miracle at Speedy Motors* (2008), more than 15 million copies of the books had been sold in English alone. Throughout the engaging series, Mma Ramotswe—along with her faithful assistant, Mma Makutsi, and Mr. J.L.B. Maketoni—solve mysteries in which crime consists not of murder but of petty burglary, jealousy, and other puzzles of everyday life in Botswana. The books are "about good people leading good lives," McCall Smith explained to an interviewer.

McCall Smith embarked on three other series in 2003–04: *The Sunday Philosophy Club*, which began with a 2004 novel of the same name and has as its main character Isabel Dalhousie, a philosopher and amateur detective in Edinburgh; the *44 Scotland Street* series, which began as a serial published in the newspaper the *Scotsman* in 2004; and the *von Igelfeld* series, which began with *Portuguese Irregular Verbs* (2003), a comic novel about the German academic Dr. Moritz-Maria von Igelfeld.

In 2005 McCall Smith retired from teaching to focus on writing full-time. He was made CBE in 2007.

(J.E. LUEBERING)

McCullough, David

(b. July 7, 1933, Pittsburgh, Pa.)

In 2008, the 40th anniversary of the publication of his first book, American historian and biographer David McCullough saw his Pulitzer Prize-winning biography *John Adams* (2001) made into a television miniseries on the HBO cable channel. It was the second of his presidential biographies to be filmed, following the 1995 TV movie *Truman*.

David Gaub McCullough earned a B.A. (1955) in English literature from Yale University. After graduation he went to New York City, where he took a job at Time-Life's *Sports Illustrated* magazine. In 1961 McCullough moved to Washington, D.C., to work for the United States Information Agency. He left that post after Pres. John F. Kennedy's assassination in 1963 and became an editor for the American Heritage Publishing Co. While there, he began work on *The Johnstown Flood* (1968), the success of which led him to quit his job in 1970 and devote himself full time to writing. His next book, *The Great Bridge: The Epic Story of the Building of the Brooklyn Bridge* (1972), was followed by *The Path Between the Seas: The Creation of the Panama Canal, 1870–1914* (1977), *Mornings on Horseback: The Story of an Extraordinary Family, a Vanished Way of Life, and the Unique Child Who Became Theodore Roosevelt* (1981), *Truman* (1992), *Brave Companions: Portraits in History* (1992), *John Adams*, and *1776* (2005). Though McCullough's narrative approach to history received some criticism from academic historians, his works garnered an impressive list of prizes and awards, including two Pulitzer Prizes (*Truman* and *John Adams*), two National Book Awards (*The Path Between the Seas* and *Mornings on Horseback*), and two Francis Parkman

Prizes from the Society of American Historians (*The Path Between the Seas* and *Truman*). He was the recipient of the 1995 Charles Frankel Prize of the National Endowment for the Humanities (now the National Humanities Medal) and a 2006 Presidential Medal of Freedom. In addition to his writing, McCullough served as a television host on the PBS programs *Smithsonian World* (1984–88) and *The American Experience* (1991–2006), and he was the narrator of PBS documentaries, including Ken Burns's *Brooklyn Bridge* (1981) and *The Civil War* (1990), *FDR* (1994), *The Statue of Liberty* (1996), *Napoleon* (2000), and *Abraham and Mary: A House Divided* (2001). From 1991 to 1998 McCullough was president of the Society of American Historians. He was elected (1994) to the American Academy of Arts and Sciences and enshrined (2006) in the American Academy of Arts and Letters. He also served as a visiting professor or scholar in residence at the University of New Mexico; Cornell University, Ithaca, N.Y.; Dartmouth College, Hanover, N.H.; and Wesleyan University, Middletown, Conn. McCullough was a 2008 Janet Weis Fellow in Contemporary Letters at Bucknell University, Lewisburg, Pa.

(MARTIN L. WHITE)

Medvedev, Dmitry

(b. Sept. 14, 1965, Leningrad, U.S.S.R. [now St. Petersburg, Russia]) After Russian Pres. Vladimir Putin's party, United Russia, won an overwhelming majority of seats in the parliamentary elections of December 2007, Putin publicly designated his protégé, First Deputy Prime Minister Dmitry Medvedev, as his preferred successor. A constitutional provision forced Putin to step down in 2008, and Medvedev won the presidential election in early March with more than 70% of the vote. Medvedev formally assumed office as president on May 7.

Dmitry Anatolyevich Medvedev attended Leningrad State University (now St. Petersburg State University), where he earned a bachelor's degree in 1987 and a law degree in 1990. He accepted (1990) a faculty position at his alma mater and taught law there until 1999. In 1991 Medvedev joined the legal team of St. Petersburg's newly elected mayor, Anatoly Sobchak, who also had incorporated Putin into his administration. Medvedev and Putin worked together in the mayor's office for the next five years.

When Sobchak's term of office ended, Medvedev returned to academic life, and Putin moved to a position at the

Russian Pres. Dmitry Medvedev

Kremlin. After Putin became acting president of Russia in December 1999, he made Medvedev his protégé. In 2000 Medvedev headed Putin's presidential election campaign, and following Putin's victory Medvedev was named first deputy chief of staff. Later that same year, Medvedev was appointed chairman of the state-owned natural-gas monopoly Gazprom. In 2003 he became Putin's chief of staff, and two years later he was appointed to the newly created post of first deputy prime minister.

Throughout his service under Putin, Medvedev distinguished himself as an able administrator with an eye toward reform. His admiration of Western popular culture—in particular, his fondness for rock-and-roll music—made some conservatives within the Kremlin uneasy, but much of this criticism was softened after Putin named Medvedev his heir apparent. Medvedev responded by stating that Putin would serve as prime minister in his government, which led critics to wonder where executive power would actually reside. The central message of Medvedev's subsequent presidential campaign was, "Freedom is better than no freedom," a remark that hinted at an openness to the West that was uncharacteristic of the Putin years. Medvedev's commanding victory in the March presidential election was widely expected. Although some outside observers criticized the contest as unfair, most agreed that Medvedev's victory reflected the will of the majority of the Russian people. Within hours of his inauguration on May 7, he followed through on his vow to nominate Putin to be his prime minister, and Russia's parliament confirmed the appointment the next day. (EDITOR)

Meireles, Cildo

(b. 1948, Rio de Janeiro, Braz.)

In winning the 2008 Ordway Prize, an unrestricted gift of \$100,000, Brazilian conceptual artist Cildo Meireles won more than money—he won recognition as one of the foremost living artists of Latin America. The Ordway Prize, administered by the New Museum and the Creative Link for the Arts, in New York City, and named for naturalist and philanthropist Katherine Ordway, was awarded biennially and simultaneously to two individuals in mid-career, an artist and a curator.

Meireles moved with his family to Goiana (north of Recife) before he was 4 years old and then relocated with them to the modernist capital of Brasília when he was 10. There he lived for nine years, with architect Oscar Niemeyer's new city rising around him. Meireles hoped to study filmmaking, but this dream eventually faded, and his involvement in the arts took a different turn. He was only 19 when he participated in his first art exhibit, at the Museum of Modern Art of Bahia, in Salvador.

During a time of military rule and political repression in Brazil, events such as the death by torture (officially reported as suicide) of the journalist Wladimir Herzog were commonplace. Meireles responded by producing his two-part *Inserções em circuitos ideológicos* (1970; *Insertions into Ideological Circuits*). For this project he stamped anonymous messages in English or Portuguese on Brazilian cruzeiros and Coca-Cola bottles and introduced them into circulation. His banknotes said such things as “Quem matou Herzog?” (“Who killed Herzog?”) and “Eleições Diretas” (“Direct Elections”)—and sometimes “Yankees Go Home.” Although these objects later were collected in museums, Meireles—who was influenced by the Brazilian critic Ferreira Gullar—insisted that the objects were not the art. “Remember that the work is not what we see in a museum exhibition. It's not the bank notes or the Coca-Cola bottles. These objects are only relics. The work itself has no materiality. And it is ephemeral. It only exists when someone is interacting with it. In this respect, it's much more connected with the concept of the antiobject or the nonobject.”

Also at this time, Meireles made his first installation, *Eureka/Blindhotland* (1970–75), which by his own account “dealt with the difference between appearance and reality.” It consisted of

200 black balls having the same volume but different mass. Exhibition attendees were invited to interact with the balls, to meditate on the deceptiveness of appearance. Another of Meireles's installations, *Missão/missões: como construir catedrais* (1987; *Mission/Missions: How to Build Cathedrals*), was composed of 600,000 coins, a stack of 800 communion wafers, and 2,000 suspended cattle bones. According to the artist, it was about Europeans, particularly Jesuits, in the Americas, symbolizing “material power [and] spiritual power, and a kind of unavoidable, historically repeated consequence of this conjunction, which was tragedy.”

(KATHLEEN KUIPER)

Monson, Thomas Spencer

(b. Aug. 21, 1927, Salt Lake City, Utah) On Feb. 3, 2008, 80-year-old Thomas Spencer Monson was confirmed as the 16th president of the Church of Jesus Christ of Latter-day Saints (LDS). His ascension to the highest Mormon office was in no way surprising, for Monson had served for more than four decades in top LDS church posts. These included second counselor (third highest position) in the First Presidency from 1985 to 1995 and first counselor thereafter under the president, Gordon Hinckley. From 1995 Monson concurrently held the post of president of the Quorum of the Twelve Apostles, the senior priest of the LDS church, and so, per tradition, he was chosen president following Hinckley's death in January 2008.

Monson was the second born in a family of six children; his father was a printer. At age 17 he joined the U.S. Naval Reserve and served a year of active duty, including a few weeks at the end of World War II. He completed a business degree cum laude at the University of Utah in 1948. In the same year, he married and began his career in printing, rising to the post of general manager of Deseret Press, then the largest printing operation west of the Mississippi River. Monson's rise in LDS church affairs was equally notable. He was made bishop of a ward in Salt Lake City at age 22, and in 1959 he was called to serve as president of the Canadian Mission. In 1963 he was elevated to the Quorum of the Twelve Apostles. During the years following, Monson was active with LDS mission work in the South Pacific and especially in Eastern Europe, where he helped in the construction of a temple (dedicated in 1985) in Freiberg, E.Ger., and in gaining permission for the LDS to proselytize behind the Iron

George Frey/Getty Images

American Mormon church leader
Thomas Monson

Curtain. He also was active in LDS church publishing activities, including the preparation of new versions of basic Mormon texts. He served for many years on the National Executive Board of the Boy Scouts of America and received numerous awards from national and international scouting bodies.

Although LDS church membership had grown 13-fold since 1950, most new recruits were not Americans, and by 2008 there were almost the same number of church members in Latin America and the Caribbean as in the U.S. Furthermore, the campaign of a Mormon, former Massachusetts governor Mitt Romney, for the Republican presidential nomination in 2008 put the traditionally secretive church in the limelight. The LDS church was prospering, and its new president maintained that he would not veer unexpectedly from the church's traditional doctrine. (CHARLES TRUMBULL)

Newson, Marc

(b. 1963, Sydney, Australia)

Hot on the heels of the opening in 2007 of his luxe first-class lounges for Qantas Airways in the Melbourne and Sydney international airports, Australian designer Marc Newson in 2008 had a second solo exhibition at New York City's Gagosian Gallery. Newson's approach was deemed “an experimental exercise in extreme structures and advanced technologies,” and the gallery displayed some of his best-known objects. Though the show could represent his household goods and furniture, it could not begin to encompass the interior spaces he designed—his recording studio or restaurant interiors.

Newson attended the Sydney College of the Arts and graduated in 1984 with

a degree in jewelry and sculpture. The following year he won a grant from the Crafts Board of the Australia Council, which enabled him to create his breakthrough piece, the aluminum and fibre-glass Lockheed Lounge (1986). This was the first of several limited-edition chairs. Like many of his later furniture pieces, it is made of atypical materials. It has a seamless exterior (extruded substances captivated him) and a modernist yet somewhat retro form variously described as biomorphic or zoomorphic. In 1987 Newson moved to Japan, where he worked mostly with the design company *Idée*, creating among other objects the Charlotte chair (1987), the Super Guppy lamp (1987), the Embryo chair (1988), the three-legged carbon-fibre Black Hole table (1988), the Orgone lounge (1989), the Felt chair (1989), and a wicker chair (1990).

Newson moved to Paris in 1991 and designed household products for Philippe Starck and later glassware for Iittala in Finland and Alessi, Magis, and Flos in Italy. He formed a partnership with the Swiss businessman Oliver Ike to create Ikepod, a watch company, in 1994. Newson's award-winning shapes and watch cases of gold, silver, and titanium—each signed and numbered—made his watches among the most exclusive pieces of jewelry in the world. (The company was relaunched in 2005, with different partners.)

In 1997 Newson moved to London, where he began to design vehicles—among them the MN01 bicycle for Biomega (1999), the 021C concept car for Ford (1999), and the livery of a privately owned jet, Falcon 900B (1999). In 2006 Newson was named creative director of Qantas. In the U.K. he was named (2006) Royal Designer for Industry.

Newson's work was in the collections of the Design Museum in London; the Musée des Arts Decoratifs, Paris; the Museum of Modern Art, New York City; the Powerhouse Museum of Sydney; and the San Francisco Museum of Modern Art. (KATHLEEN KUIPER)

Nouvel, Jean

(b. Aug. 12, 1945, Fumel, Lot-et-Garonne *département*, France) French architect Jean Nouvel's lack of a signature style was his trademark. Rather than making his buildings recognizably his own, he designed them to "create a visual landscape" that fits their context—sometimes by making them contrast with the surrounding area. For his boldly experimental designs, which de-

French architect Jean Nouvel

fied a general characterization, he was awarded the 2008 Pritzker Architecture Prize. Architect Frank Gehry summarized Nouvel's strengths and weaknesses in this way: "He tries things and not everything works. There's a mixture of things that are extraordinary, things that are experiments, things that don't come off aesthetically. But Jean is willing to jump in and take on things and try. That's a great quality."

Nouvel's manner of conceptualizing a building had its roots in his origins. His parents, both teachers, suggested that instead of following his dream to become an artist, he should do something more practical so that he could earn a living; architecture provided a perfect compromise. In 1965 Nouvel captured the first of many prizes by winning a national competition to attend the *École des Beaux-Arts* in Paris. While there, he also worked for an architectural firm formed by the modernist architect Claude Parent and the "urbanist" and cultural theorist Paul Virilio. Nouvel graduated in 1972 with a degree in architecture.

Not until 1987, however, did Nouvel gain an international audience. That was the year the Institut du Monde Arabe (IMA) was completed, and for its design he won the 1989 Aga Khan Award for architectural excellence. The main, south facade of that building, with its high-tech aperture-like panels, manages to be at once both cutting-edge in its creative response to changing levels of light and evocative of traditional Arab *moucharaby* (latticework grills). Other

awards include a Golden Lion from the Venice Biennale (2000), a Royal Gold Medal from the Royal Institute of British Architects (2001), and the *Praemium Imperiale* (2001), presented by the Japan Art Association to "artists who have contributed significantly to the development of international arts and culture."

Nouvel's list of completed structures includes one of the three buildings that constitute Seoul's Leeum Museum (2004), Barcelona's bullet-shaped Agbar Tower (2005), the Guthrie Theatre (2006) in Minneapolis, and the quirky Quai Branly Museum (2006) in Paris. He also won a commission to design a branch of the Louvre to be built in Abu Dhabi and a 75-story mixed-use tower to be built next to New York City's Museum of Modern Art. With such an illustrious résumé, Nouvel earned a place in the pantheon of architectural superstars. (KATHLEEN KUIPER)

Obama, Barack

(b. Aug. 4, 1961, Honolulu, Hawaii) On Nov. 4, 2008, Democratic politician Barack Obama won election as the 44th U.S. president, defeating Arizona Sen. John McCain (*q.v.*), the Republican candidate. Obama was the first African American elected to that office. Before winning the presidency, Obama represented Illinois in the U.S. Senate (2005–08). He was the third African American to be elected to that body since the end of Reconstruction in 1877.

Barack Hussein Obama, Jr., spent most of his childhood and youth in Hawaii, where his parents had met

while they were both university students; his father was from Kenya, and his mother, a white woman, was a native of Kansas. Obama also lived for several years in Jakarta following his parents' divorce in 1964 and his mother's subsequent marriage to an Indonesian oil manager. Obama graduated from Columbia University, New York City (1983), and Harvard Law School (1991), where he was the first African American to serve as president of the *Harvard Law Review*. He moved to Chicago, where he had earlier served as a community organizer, and lectured on constitutional law at the University of Chicago before being elected (1996) to the Illinois Senate as a member of the Democratic Party. In 2004 he won election to the U.S. Senate and quickly became a major national political figure.

In February 2007 Obama announced that he would seek the Democratic Party's presidential nomination. His personal charisma, his stirring oratory, and his campaign promise to bring change to the established political system resonated with many Democrats, especially young and minority voters. On Jan. 3, 2008, Obama won a surprise victory in the first major nominating contest, the Iowa caucus, over Sen. Hillary Clinton, who was the overwhelming favourite to win the nomination. Five days later, however, Obama finished second to Clinton in the New Hampshire primary, and a bruising—and sometimes bitter—primary race ensued. Obama won more than a dozen states on Super Tuesday, February 5, and produced an impressive string of victories later in the month, which gave him a significant lead in pledged delegates. Although his momentum slowed in early March when Clinton won significant victories in Ohio and Texas, Obama still maintained his edge in delegates. On June 3, following the final primaries in Montana and South Dakota, the number of delegates pledged to Obama surpassed the total necessary to claim the Democratic nomination.

On August 27 Obama became the first African American to be nominated for the presidency by either major party. Bolstered by a fever of popular support, he eschewed federal financing of his campaign and raised hundreds of millions of dollars, much of it coming in small donations and over the Internet from a record number of donors. Obama's platform included his call for a swift withdrawal of most combat forces from Iraq and a restructuring of tax policy that would

bring more relief to lower- and middle-class voters. Obama and his vice presidential running mate, Delaware Sen. Joe Biden (*q.v.*), handily won the general election, capturing nearly 53% of the vote. Not only did Obama hold all of those states that John Kerry had won in the 2004 election, but he also won a number of states (*e.g.*, Colorado, Florida, Nevada, Ohio, and Virginia) that the Republicans had carried in the last two presidential elections. Shortly after his victory, Obama resigned from the Senate. (DAVID MENDELL)

Odinga, Raila Amolo

(b. Jan. 7, 1945, Maseno, Nyanza province, Kenya) Kenyan opposition politician and businessman Raila Odinga was named prime minister of the country on April 13, 2008, and was sworn in on April 17. The appointment followed violent tribal attacks in late 2007 that occurred in the wake of Odinga's being declared the loser (amid major voting irregularities) in his run for the presidency of the country against incumbent Mwai Kibaki of the Party of National Unity. During his campaign, Odinga sought to dispel the perceived grievances of some western Kenyan ethnic groups by denouncing corruption in high places and by campaigning for a fairer distribution of land and the devolvement of power to largely single-ethnic district councils. Though official results gave Kibaki the victory, an exit poll taken by U.S. observers and released in July 2008 suggested that Odinga was the winner.

Of Nilotic Luo descent, Odinga was the son of Jaramogi Oginga Odinga, the first vice president of independent Kenya. After earning a degree in mechanical engineering in East Germany, Odinga returned to Kenya in 1970 to become a lecturer at the University of Nairobi. He left that post to pursue a career in politics, and in 1982 he was accused of plotting against Pres. Daniel Arap Moi; he was imprisoned without trial for six years. After Odinga's release, he was twice arrested for campaigning against one-party rule, and in 1991 he sought refuge in Norway. He returned to Kenya in 1992, however, and was elected a member of the parliament that year.

In 1997 Odinga stood unsuccessfully for election as president of Kenya. He thereafter gave his support to Moi and the ruling Kikuyu-dominated Kenya African National Union (KANU), becoming energy minister in 2001. Odinga's hope of succeeding Moi as KANU's candidate for the presidency in

Riccardo Gangale/AP

Kenyan politician Raila Odinga

the 2002 elections was shattered when Moi called upon the party to support Uhuru Kenyatta, son of former president Jomo Kenyatta. Quitting KANU, Odinga formed the National Rainbow Coalition of Kenya, which, after a series of mergers, linked up with another coalition group under the leadership of former vice president Mwai Kibaki, himself a Kikuyu.

Odinga played a significant role in securing the election of Kibaki as president in 2002 but was disappointed not to be made prime minister, a post for which there was no constitutional provision at that time. When Odinga successfully led a campaign against a government bill, apparently aimed at strengthening still further the powers of the president, Kibaki dismissed his cabinet.

Odinga then formed the Orange Democratic Movement (ODM), which won a resounding majority in the December 2007 parliamentary elections. A delay in the announcement of the result of the presidential election, which Odinga also believed he had won, led him to accuse the government of electoral malpractice and was followed by riots in western Kenya and in the multiethnic slums in Nairobi, which resulted in the death of hundreds of Kikuyu, while thousands more were driven from their homes. The Kikuyu responded in areas where they were in the majority, and it was some weeks before order was restored. Former UN secretary-general Kofi Annan eventually brokered an agreement in February 2008 between Kibaki and Odinga that led to Odinga's being sworn in to the newly created post of prime minister under Kibaki's presidency and with a power-sharing cabinet. (KENNETH INGHAM)

Ortega, Amancio

(b. March 28, 1936, Busdongo de Arbas, León, Spain) In 2008 fashion executive Amancio Ortega, the founding chairman of Spanish clothing merchandiser Inditex (Industria de Diseño Textil, SA), saw his company become the world’s largest fashion retailer after it surpassed its chief competitor, American retailer Gap Inc., in first-quarter sales. Inditex, a holding company with more than 3,900 stores in 70 countries, was the brainchild of Ortega, who ranked among the world’s top 25 billionaires in 2008 with a net worth of roughly \$20 billion.

As a youth in La Coruña, Amancio Ortega Gaona gained an entry into the garment business by working as a delivery boy for a men’s shirt store and as an assistant in a tailor’s shop. Each job exposed him to the costs of manufacturing and delivering clothing directly to customers. He later managed a clothing store that, like the men’s shirt store, catered to a wealthy clientele. Ortega saw an opportunity to expand his client base by using cheaper materials and more efficient manufacturing systems and by competitively pricing garments. He first applied these concepts to a bathrobe business, Confecciones Goa (his initials, reversed), which he founded in 1963.

The full realization of this concept, known as fast fashion, was Zara, the internationally famous chain of ready-to-wear clothing stores. Ortega founded the first Zara store in La Coruña in 1975. It became the flagship of holding company Inditex, which he founded 10 years later. He remained the majority owner of the concern, which in 2008 included the brands Stradivarius, Pull and Bear, Uterqüe, Massimo Dutti, and Oysho. All Inditex businesses operated on the same principle: at fashion shows trend spotters picked up design ideas, in-house designers copied the best concepts, and Inditex’s highly efficient manufacturing operations, most of which were based in Spain, produced and delivered new fashions to stores just a few weeks after they had been spotted on fashion runways. In an era in which most clothing manufacturers outsourced production to China and other low-cost locations, Inditex produced two-thirds of its garments in Spain and surrounding countries.

New arrivals reached Zara stores not just in the traditional fashion seasons of fall, winter, spring, and summer, but on a yearlong weekly basis. Styles that did not sell were quickly removed from stores. The fast-fashion concept was so

popular with customers that Zara, with more than 1,000 outlets worldwide, spent relatively little on advertising. Despite Ortega’s international success in a business that fed on public images and publicity, however, he himself dressed simply, shunned the press, and lived a strictly private life. On the day of Inditex’s public offering in 2001, Ortega reportedly worked a regular schedule and ate lunch in the company’s cafeteria—despite the fact that his net worth had risen by \$6 billion.

(SARAH FORBES ORWIG)

Palin, Sarah

(b. Feb. 11, 1964, Sandpoint, Idaho) In 2008 Alaska Gov. Sarah Palin was chosen by U.S. Sen. John McCain (*q.v.*) of Arizona, the Republican candidate in the November presidential election, to be his vice presidential running mate. Palin, who had served as Alaska’s governor since 2006, was the first woman to appear on a Republican presidential ticket.

Sarah Louise Heath was less than a year old when her family relocated from Idaho to Skagway, Alaska. She was athletic as a youth, earning the nickname “Sarah Barracuda” with her tenacious play on Wasilla High School’s 1982 state championship basketball team. She also competed in cross-country and often accompanied her father on hunting trips. She completed (1987) a degree in journalism at

Republican vice presidential candidate Gov. Sarah Palin of Alaska

Elise Amendola/AP

the University of Idaho before returning to Alaska to work as a sports reporter at an Anchorage television station. She married Todd Palin, a commercial fisherman and North Slope oil-field worker, in 1988 and four years later entered politics, winning a seat on the Wasilla city council. In 1996 she launched a successful campaign to become Wasilla’s mayor. During her six years in office as mayor, she ushered through a series of infrastructure improvements funded by a sales-tax increase, and the city’s operating budget soared.

In 2002 Palin campaigned for the Republican nomination for the office of lieutenant governor of Alaska. Although she was ultimately unsuccessful, Palin elevated her profile within the party, and she was appointed to the Alaska Oil and Gas Conservation Commission by newly elected Republican Gov. Frank Murkowski. Palin’s time on the commission was short-lived, however. She resigned after encountering resistance to her investigation of Randy Ruedrich, the state Republican Party chair and a fellow commissioner; Ruedrich later admitted to ethics violations. In 2004 Palin further distanced herself from the party when she joined Democratic lawmakers in their call for an investigation of the Alaska attorney general, who had close ties to Murkowski. This and other issues hurt Murkowski politically, and Palin challenged him for the Republican nomination for governor in August 2006. She defeated him handily, winning 51% of the vote in a three-way race, before moving on to a comfortable victory in the general election three months later. Palin became the youngest governor in Alaska’s history, as well as the first woman to hold that post.

On August 29 Palin made her debut on the national stage when McCain selected her from among a field of higher-profile candidates to be his running mate. She quickly energized her party’s conservative base. The mother of five children—including an infant, born in April, with Down syndrome—Palin drew particular support from right-to-life activists. She delivered an acceptance speech that was enthusiastically received at the Republican national convention in early September, during which she cast herself as “just your average hockey mom” and touted her reformist credentials. Critics, however, questioned her readiness to assume the office of the vice presidency. Her shaky performances in some primetime inter-

views were famously lampooned by comedienne Tina Fey (*q.v.*) on *Saturday Night Live*. Reports that the Republican Party had spent some \$150,000 on designer clothing and other accessories for Palin also provided fodder for her critics, although Palin insisted that she had not shopped for the clothes herself and that they would be donated to charity after the campaign. On November 4 the McCain-Palin ticket was defeated by Barack Obama (*q.v.*) and his running mate, Joe Biden (*q.v.*). (EDITOR)

Patrick, Danica Sue

(b. March 25, 1982, Beloit, Wis.)

On April 19, 2008, in her 50th start in the open-wheel Indy Racing League (IRL), American race car driver Danica Patrick secured the first big win of her career, in the Firestone IndyCar 300 race at the Twin Ring Motegi circuit in Japan. Patrick, driving a Dallara-Honda for Andretti Green Racing, skillfully avoided taking a late pit stop in the race and finished 5.86 seconds ahead of former IRL titlist Helio Castroneves of Brazil to become the first woman to win an IndyCar championship event. Patrick's victory—and her sixth-place finish in the season-long drivers' championship—silenced many of her critics, but the question still remained in some minds: was she just a marketing phenomenon or a talented harbinger of how professional auto racing would evolve?

Patrick—a petite 1.57-m (5-ft 2-in), 45-kg (100-lb) brunette—was comely enough to command four pages in the 2008 swimsuit issue of *Sports Illustrated* magazine, host a cable television show, and market a clothing line that included sunglasses and bikinis. Meanwhile, she was a talented-enough race car driver to have collected a plethora of “firsts” for her sex since she began racing go-karts in Beloit, Wis., at the age of 10. At 16, after national success in go-karts, Patrick left high school to race Formula Fords and Vauxhalls in the U.K. In the 2000 Formula Ford festival, she was second, the best-ever finish for an American in that spawning ground for future professionals.

Patrick returned to the U.S. in 2002 after former Indy driver Bobby Rahal signed her. She was then promoted to Toyota Formula Atlantic open-wheel cars. Although she never won in that series, she finished third in the drivers' overall ranking in 2004. That led to a coveted position with the Rahal Letterman Racing team and a chance to qualify for the Indianapolis 500. Three other women—Janet Guthrie, Lyn St.

James, and Sara Fisher—had previously qualified for the most prestigious race in the U.S. In her first appearance at Indy in 2005, Patrick set the fastest lap in practice (229.88 mph [369.956 km/hr]), but she could not duplicate this feat during official qualifying. She became the first woman to lead the classic race (three times for a total of 19 laps) and eventually finished fourth. She was named Rookie of the Year and voted IRL Most Popular Driver.

Racing fans repeated the latter honour for 2006 and 2007, when Patrick switched allegiance to Andretti Green Racing. After the 2008 IRL season, it was reported that Ferrari had asked her to test for a Formula 1 ride. Whether she changed to F1 or remained exclusively on the IndyCar circuit, it was clear that Patrick's blend of driving skill, athleticism, and sexuality would continue to bring new exposure to auto racing. (ROBERT J. FENDELL)

Pitt, Brad

(b. Dec. 18, 1963, Shawnee, Okla.) American superstar Brad Pitt continued to demonstrate his versatility as an actor in 2008, with two new films: the zany *Burn After Reading*, in which he portrayed a somewhat dim-witted would-be blackmailer, and *The Curious Case of Benjamin Button*, a poignant fantasy about a man who ages backward. Each was also a big departure from Pitt's most recent outings: the Oscar-nominated drama *Babel* (2006), the period western *The Assassination of Jesse James by the Coward Robert Ford* (2007), and *Ocean's Thirteen* (2007), the latest sequel to the comedy caper films *Ocean's Eleven* (2001) and *Ocean's Twelve* (2004).

William Bradley Pitt was reared in Springfield, Mo., and attended (1983–87) the University of Missouri before dropping out just short of graduation to move to California and pursue an acting career. After playing minor television and movie roles, Pitt captured the public's attention as a charming scoundrel in the film *Thelma & Louise* (1991). He followed up with such popular movies as *A River Runs Through It* (1992), *Interview with the Vampire* (1994), and *Legends of the Fall* (1994), after which *People* magazine named him that year's Sexiest Man Alive (he held the title again in 2000). Refusing to be typecast by his good looks, however, Pitt starred as a police detective in the gritty thriller *Se7en* (1995) and as a demented malcontent in the fantasy *Twelve Monkeys* (1995),

for which he won a Golden Globe and was nominated for an Academy Award. He again deliberately played against type as Austrian mountain climber Heinrich Harrer in *Seven Years in Tibet* (1997), an Irish Republican Army terrorist in *The Devil's Own* (1997), a modern-day Grim Reaper in *Meet Joe Black* (1998), an underground boxer in *Fight Club* (1999), and the Greek warrior Achilles in *Troy* (2004).

The action comedy *Mr. & Mrs. Smith* (2005) paired Pitt with actress Angelina Jolie. They soon began an offscreen relationship (though Pitt was married) and became a media sensation, earning the joint tabloid monicker “Bran-gelina.” After Pitt divorced his wife, actress Jennifer Aniston, he adopted Jolie's two children. The pair had their first biological child in May 2006. The next year they adopted a boy from Vietnam, and in 2008 they added biological twins to their growing family.

Pitt and Jolie often used their celebrity status as a platform for speaking out on behalf of causes about which they cared. Pitt cofounded and was actively involved in Not on Our Watch, a campaign that directed resources to areas of the world suffering humanitarian crises (notably the Sudanese province of Darfur). In 2006 he established Make It Right, a multimillion-dollar project to construct environmentally friendly homes in New Orleans for people displaced by Hurricane Katrina, to which he pledged to match \$5 million in contributions. He also headed his own film-production company, Plan B Entertainment. With as many as three new movies due out in 2009 and more in the planning stages, however, Pitt clearly was not neglecting his many-sided acting career. (ANNE SISKA)

Prachanda

(b. Dec. 11, 1954, Lewadi, Nepal)

On Aug. 15, 2008, Prachanda, former leader of the 11-year Maoist insurgency, was elected the first prime minister of the new republic of Nepal by the Constituent Assembly, securing 464 of the 577 votes cast. Under Prachanda's leadership, the Communist Party of Nepal (Maoist) had won 220 seats to become the single largest party in the Assembly when it was voted into office on April 10. As prime minister, Prachanda, who had no previous experience with parliamentary politics, was faced with the task of rebuilding his country.

Pushpa Kamal Dahal was born into a poor farming family in the mountainous Kaski district of central Nepal. At

Gopal Chitrakar—Reuters/Landov

Nepalese Prime Minister Prachanda

the age of 11 he moved with his family to Chitwan district, where a school-teacher indoctrinated him in communism. In 1975 he graduated from the Institute of Agriculture and Animal Science in Rampur, Chitwan district. He continued to work in the Communist Party.

In 1980 Prachanda (a nom de guerre meaning “fierce”) was charged with leading the All Nepal National Free Students’ Union (Revolutionary), which was affiliated with the radical Communist Party of Nepal (Masal [“flame” in Nepalese]). In 1983 he was elected to the central committee of the CPN (Masal), which soon split into the CPN (Masal) and the Communist Party of Nepal (Fourth Convention). CPN (Masal) divided again (1985) into CPN (Masal) and CPN (Mashal [“flame” in Sanskrit]). Prachanda joined the latter, becoming a member of the politburo and rising to the position of general secretary in 1989. Several leftist parties merged in 1990 to form the Communist Party of Nepal (Unity Centre), with Prachanda as a general secretary, but in 1994 it also split in two. In March 1995 Prachanda renamed his branch to reflect its Maoist leanings.

The Maoist party launched its insurgent campaign to abolish the monarchy with an attack on several police stations on Feb. 13, 1996. During 10 years of insurgency, Prachanda remained underground, spending 8 of those years in India. Though the campaign led by Prachanda did not enjoy consistent good fortune, it was ultimately successful in its goal of ending Nepal’s 237-year-old monarchy.

Because Prachanda had spent nearly his entire career underground, he at first held little political appeal for the Nepalese public, which tended to view him with suspicion. After his June 2006 public appearance in a meeting with then prime minister Girija Prasad Koirala and opposition leaders to negotiate the creation of the country’s new government, however, his popularity began to increase. From the signing of the Comprehensive Peace Agreement in November 2006, the CPN (Maoist) sought to have Prachanda installed as the head of the new government, a campaign that succeeded less than two years later. (KESHAB POUDEL)

Ramirez, Manny

(b. May 30, 1972, Santo Domingo, Dom.Rep.) Slugger Manny Ramirez, a 36-year-old outfielder, was the primary component in one of the most noteworthy trades during the 2008 Major League Baseball (MLB) season. Although batting .299 with a team-leading 20 home runs—including the 500th of his career—for the Boston Red Sox, he was sent to the Los Angeles Dodgers in a complex transaction that also involved Jason Bay of the Pittsburgh Pirates. The dreadlocked Ramirez, a somewhat controversial individual while starring in Boston, declared during the early summer that “the Red Sox don’t deserve a player like me.” Management expressed

American baseball player Manny Ramirez

Keith Srakocic/AP

dismay with his remark and paid the \$7 million remaining on his contract to trade him to Los Angeles. He joined the Dodgers at the trading deadline, July 31, and quickly endeared himself to Los Angeles fans. He was also credited with bringing a looser attitude to his new team, which went from a 54–54 record when he arrived to 84–78 and the National League West Division title. In 53 games with the Dodgers—approximately a third of the regular-season schedule—Ramirez hit .396 with 17 home runs and 53 runs batted in (RBIs) and thereby supplied the team with some much-needed right-handed power. Although the Dodgers failed to make the World Series, in the team’s eight play-off games, Ramirez batted .520, with 10 RBIs, 11 walks, and 4 home runs, bringing his career record of postseason homers to 28. He was due to become a free agent during the winter of 2008–09, which meant that the Dodgers would have to sign him to a new contract or risk losing him to another team.

Manuel Aristides Ramirez left the Dominican Republic in 1985 for New York City’s Bronx, where he graduated from George Washington High School in 1991. He was signed by the Cleveland Indians, and in his first professional season, he was voted Appalachian League Player of the Year while playing for Cleveland’s Burlington, N.C., minor-league affiliate. Ramirez joined the Indians in 1993 and established himself as one of the most productive batters in either league. Although sidelined by a hamstring injury for part of the 2000 season, he amassed 38 home runs and 122 RBIs for the Indians in 118 games while compiling a .351 average. During that winter he signed with the Red Sox as a free agent.

Ramirez built a solid résumé in Boston and was voted Most Valuable Player of the 2004 World Series, the first MLB title for the Red Sox since 1918. During that Series Ramirez had seven hits in 17 at bats, including a home run and four RBIs, for a .412 average during a four-game sweep of the St. Louis Cardinals. In 2007 Ramirez batted .296 during the regular season with 20 home runs and 88 RBIs, and the Red Sox went on to win another World Series, sweeping the Colorado Rockies in four games. (ROBERT VERDI)

Ramsay, Gordon

(b. Nov. 8, 1966, Glasgow, Scot.) Notorious for his fiery temper and for his outbursts of profanities in the kitchen—and celebrated for his passion

Frazer Harrison/Getty Images

British chef and restaurateur Gordon Ramsay

for fresh locally grown seasonal ingredients—world-renowned British chef and restaurateur Gordon Ramsay continued to expand his culinary empire in 2008. Early in the year he opened Gordon Ramsay's Plane Food (in the new Terminal 5 of London's Heathrow Airport) and Gordon Ramsay au Trianon (in Versailles outside Paris). He also announced plans to open restaurants in such far-flung cities as Amsterdam and Melbourne, adding to those in London, New York City, Los Angeles, Prague, Tokyo, Dubai, and County Wicklow, Ire.

Ramsay was born in Scotland and raised in Stratford-Upon-Avon after his family moved to England. There he played association football (soccer) for Oxford United. At the age of 15 Ramsay was recruited by the Scottish Premier League Glasgow Rangers, but a knee injury ended his three-year stint (1982–85) with the team. After earning (1987) a higher national diploma in hotel management from North Oxon Technical College, he moved to London and began honing his culinary skills under chef Marco Pierre White at the restaurant Harvey's and under chef Albert Roux at La Gavroche. During the early 1990s Ramsay traveled to France, where he prepared classic French cuisine in the kitchens of master chefs Joël Robuchon and Guy Savoy. In 1993 Ramsay returned to London and became head chef of Aubergine, which by 1996 had won two Michelin stars.

In 1998 he embarked on running his own restaurant, the acclaimed Gordon Ramsay, which within three years had won its third Michelin star (the *Guide Michelin's* highest honour) and been acclaimed as one of the best restaurants

in the world. In 1999 he opened Pétrus, which earned a Michelin star within seven months, and in 2001 he established Gordon Ramsay at Claridge's, which won a Michelin star two years later. A growing succession of Michelin star-winning restaurants followed, including the Savoy Grill, the Boxwood Café, Menu, the Grill Room, Maze, and La Noisette. In 2001 he launched his first international restaurant, Verre, in Dubai. His first American location, Gordon Ramsay at the London, opened in 2006 in New York City.

In addition to his multimillion-dollar restaurant business, Ramsay achieved star status as a television personality. In 2004 he launched the BAFTA Award-winning series *Ramsay's Kitchen Nightmares*, in which he endeavoured to turn failing restaurants into profitable enterprises. Later that year he introduced *Hell's Kitchen*, in which he took on the challenge of turning aspiring restaurateurs into quality chefs. *The F-Word* (a pun on the word *food* and Ramsay's well-known fondness for a particular expletive) premiered in 2005.

Ramsay authored several best-selling cookbooks, including *Passion for Flavour* (1996), *Passion for Seafood* (1999), *A Chef for All Seasons* (2000), *Just Desserts* (2001), *Secrets* (2003), and *Gordon Ramsay Makes It Easy* (2005), as well as the autobiography *Humble Pie* (2006). He was made OBE in 2006. (BARBARA A. SCHREIBER)

Rashad, Phylicia

(b. June 19, 1948, Houston, Texas) American actress Phylicia Rashad, the first black woman to win (2004) a Tony Award for best actress (for her role as

Lena Younger, the matriarch of a struggling African American family in 1950s Chicago, in Lorraine Hansberry's *A Raisin in the Sun*), made history once again on Broadway when Tennessee Williams's *Cat on a Hot Tin Roof* opened with its first all-black cast in March 2008. With costar James Earl Jones, Rashad—in the role of Big Mama—anchored the production, which set Williams's tale of a wealthy Southern planter's morally foundering family at a remove from its original Jim Crow-era time frame to accommodate the African American cast. In February ABC broadcast Rashad's Tony-winning performance, in a television adaptation of *A Raisin in the Sun*. Well received by critics, the adaptation also featured Rashad's costars from the 2004 Broadway production, including Audra McDonald and Sean Combs.

Phylicia Ayers Allen was the second of four children born to Andrew Arthur Allen, a dentist, and Vivian Ayers Allen, a Pulitzer Prize-nominated poet. Phylicia's older brother, Andrew Arthur ("Tex") Allen, Jr., went on to become a jazz musician, and her sister, Debbie Allen, was a dancer, actress, and television producer and director, notably for *Cat on a Hot Tin Roof*. In 1970 Phylicia graduated from Howard University, Washington, D.C., with a B.F.A. in theatre. Soon thereafter she found work with the Negro Ensemble Company in New York City. She made her first appearance on Broadway in 1972 and had minor roles in the hit musicals *The Wiz*

American actress Phylicia Rashad

Carl Juste—Miami Herald/Landov

(1975) and *Dreamgirls* (1981) before making the transition to television. In 1982 she landed a regular role on the daytime soap opera *One Life to Live*. Two years later comedian Bill Cosby chose her for the role of his wife, attorney Clair Huxtable, in the groundbreaking situation comedy *The Cosby Show* (1984–92). After marrying (1985) sports broadcaster Ahmad Rashad, she began using his name professionally (the couple divorced in 2001). Her role as Clair—graceful but assertive, dignified but devoted—became a defining one for Rashad and earned her two Emmy Award nominations, two People's Choice Awards, and an NAACP Image Award. She also played Cosby's wife in the series *Cosby* (1996–2000). During the 1990s and early 2000s, Rashad returned to the stage while continuing to work steadily on TV. Her portrayal of the semimythical Aunt Ester in August Wilson's *Gem of the Ocean* (2003) in productions in Los Angeles and on Broadway won enthusiastic praise. Rashad's performance in *A Raisin in the Sun* also earned a 2004 Drama Desk Award. In 2007 Rashad made her directorial debut at the helm of the Seattle Repertory Theatre's production of *Gem of the Ocean*, and in 2008 she began working on the film *The Middle of Nowhere*, in which she had a starring role, scheduled for release in 2009.

(JANET MOREDOCK)

Rivers, Glenn

(b. Oct. 13, 1961, Chicago, Ill.) On June 17, 2008, Glenn ("Doc") Rivers, in his fourth season as head coach of the Boston Celtics, became the franchise's sixth head coach to win a National Basketball Association (NBA) championship. Rivers, who had never won a play-off series in eight previous seasons as a coach in the league, guided the Celtics on a dramatic journey to a 66–16 season that culminated in defeating the Los Angeles Lakers 4–2 in the best-of-seven finals.

Glenn Anton Rivers first emerged on the basketball scene as a star at Proviso East High School in Maywood, Ill., where he seemed destined to become the fourth member of his extended family to become a successful professional athlete: Jim Brewer, his uncle, and a cousin, Byron Irvin, both played in the NBA, and another cousin, Ken Singleton, was a Major League Baseball player. Rivers was nicknamed "Doc" by then Marquette University assistant coach Rick Majerus because Rivers wore a "Dr. J" T-shirt (in honour of

NBA star Julius Erving) at a summer basketball camp.

While attending Marquette, Rivers helped the U.S. team capture a silver medal at the 1982 Fédération Internationale de Basketball Association world championships. After three seasons at Marquette, he left to become a second-round draft choice of the Atlanta Hawks in 1983 (he completed his degree in political science in 1985). He played 13 seasons, the first 8 with the Hawks, remaining their all-time leader in assists with 3,866. Rivers went on to play 864 regular-season games in the NBA, including stops with the Los Angeles Clippers (1991–92), the New York Knicks (1992–94), and the San Antonio Spurs (1994–96). He retired after the 1995–96 season with career averages of 10.9 points, 5.7 assists, and 3 rebounds.

Rivers became a head coach for the first time in 1999–2000, taking an Orlando Magic team that was projected to finish near the bottom of its division to a 41–41 record and becoming NBA Coach of the Year. Fired after a 1–10 start in 2003–04, he worked as a TV analyst before resuming coaching with the Celtics in 2004–05.

That was where the lessons of his father, Grady, a former police lieutenant in Chicago, became most evident. The Celtics were 24–58 in 2006–07, with critics calling for Rivers's job. When his father died in November 2007 after a brief illness, Rivers missed one game to attend the funeral and then took back to his team the lifelong lessons of consistency and patience he had received from his father. With blockbuster trades in which the Celtics acquired Kevin Garnett from the Minnesota Timberwolves and Ray Allen from the Seattle SuperSonics, Rivers engineered the greatest turnaround in league history, winning the franchise's record 17th championship—and its first since 1985–86—just one day before Grady would have celebrated his 77th birthday.

(PHIL JASNER)

Robinson, Peter David

(b. Dec. 29, 1948, Belfast, N.Ire.)

On June 5, 2008, Peter Robinson became Northern Ireland's first minister, succeeding Ian Paisley, who had retired at the age of 82. It was the culmination of a career that had seen Robinson, one of the fiercest opponents of Irish republicanism, finally reconciled to the need to share power with the main republican party, Sinn Féin, the political arm of the Provisional Irish Republican Army (IRA).

Northern Ireland's first minister Peter Robinson

Robinson grew up in Belfast in an era when Northern Ireland's mainly Protestant unionists completely dominated the politics of the province through the Ulster Unionist Party (UUP). After studying at Belfast's Metropolitan College, he became a real-estate agent. Following the death in 1971 of a school friend at the hands of the recently revived IRA, however, Robinson helped to set up the Democratic Unionist Party (DUP), which demanded tougher policies against terrorism than those advanced by the UUP. He became the DUP's general secretary in 1975 and entered the U.K.'s Parliament in 1979 as MP for Belfast East, narrowly defeating (by just 64 votes) one of the UUP's most prominent politicians. In 1986 Robinson demonstrated his militancy by leading a "raid" of 500 unionists across the border into Clontibret, Ire., to confirm what he alleged was weak border security. Irish police arrested him, and he was fined £17,500 (about \$30,000). He also briefly stood aside as the DUP's deputy leader, a post he had held since 1980.

He was one of the DUP's leading critics of the Good Friday Agreement, a deal concluded in 1998 between the British and Irish governments, along with Northern Ireland's main parties, including Sinn Féin. When the agreement led to the establishment (1999) of a new Northern Ireland executive, however, he agreed to serve as minister for regional development. Britain restored direct rule over Northern Ireland in October 2002 amid a breakdown of relations between republicans and unionists. Despite the acrimony, that same month Robinson was the first

DUP politician to appear in a live television studio debate with a Sinn Féin politician, Martin McGuinness. It was an angry debate—at one point Robinson denounced McGuinness as a “former IRA commander,” while McGuinness retorted that Robinson should stop “acting like a bigot”—but a taboo had been broken.

Robinson went on to become a leading negotiator in the talks that led to the 2006 St. Andrew’s Agreement, which paved the way for a full restoration of the Northern Ireland executive and assembly, with Paisley, the DUP’s leader since its founding, as first minister and McGuinness as deputy first minister. When Paisley announced in March 2008 that he was stepping down in May, there was little doubt that Robinson would succeed him. On May 31, after 28 years as Paisley’s deputy, Robinson was confirmed as DUP leader, and less than a week later he was named first minister.

(PETER KELLNER)

Ryan, Kay

(b. Sept. 27, 1945, San Jose, Calif.) Quintessentially American poet Kay Ryan, who wrote punchy, wry verses about commonplace things with consummate craft, humour, and intelligence, in 2008 was named the 16th U.S. poet laureate. Her lines and verses were short and suggested Asian forms to many readers. She excelled at using words precisely and reveled in internal rhyme, slant rhyme, alliteration, and other wordplay; some critics were reminded of the verse of Emily Dickinson. Unlike most of her contemporaries, Ryan rarely wrote in the first person.

U.S. poet laureate Kay Ryan

Jennifer Loring—Library of Congress/AP

Though Ryan generally described herself as an “outsider,” she was not unknown. She produced six books; was published regularly in *The New Yorker*, *The Atlantic Monthly*, *The New York Review of Books*, *Poetry*, and *Paris Review*; and won major grants and prizes, including the \$100,000 Ruth Lilly Poetry Prize (2004), three Pushcart Prizes, and awards from the Guggenheim Foundation and the National Endowment for the Arts.

Ryan grew up in a succession of small towns in California’s Central Valley, where her father worked at a variety of jobs (including oil well driller, chromium miner, and Christmas-tree salesman), and her mother was a part-time grade-school teacher. Ryan enrolled at Antelope Valley College, Lancaster, Calif., but soon transferred to the University of California, Los Angeles, where she earned a B.A. (1967) and an M.A. (1968) in English. She moved to northern California in 1971 and took a part-time job teaching remedial English at the College of Marin, Kentfield, Calif., a course she still taught in 2008. Having written poetry since age 19 but still unsure of her true calling, in 1976 Ryan embarked on a cross-country bicycle trip. High in the Colorado Rockies, it came to her that she could pursue a career as a writer. For the next 20 years, she laboured in virtual literary isolation, but she gradually began attracting notice from readers, critics, and the mainstream poetry establishment.

Nonetheless, at least until 2008 Ryan lived the quiet life of a community college teacher. The poem “Hide and Seek” from Ryan’s collection *The Niagara River* (2005) might reveal something of the poet’s mindset: “It’s hard not / to jump out / instead of / waiting to be / found. It’s / hard to be / alone so long / and then hear / someone come / around. It’s / like some form / of skin’s developed / in the air / that, rather / than have torn, / you tear.”

(CHARLES TRUMBULL)

Salmond, Alex

(b. Dec. 31, 1954, Linlithgow, Scot.) On May 14, 2008, almost exactly one year after the Scottish National Party (SNP) ended decades of Labour Party dominance in Scottish politics, First Minister Alex Salmond addressed the Scottish Parliament to review his first year at the head of the SNP’s minority government. Salmond emphasized his government’s ongoing emphasis on such issues as sustainable economic growth, fairer taxes, education, and environmental awareness. He also reiter-

ated his earlier pledge to move forward with a national referendum on Scottish independence to be submitted in 2010.

Alexander Elliot Anderson Salmond studied economics at the University of St. Andrews and joined the civil service before taking a job as an economist (1980–87) with the Royal Bank of Scotland. From an early age he gained a reputation as something of a rebel. He joined the SNP as a student and was a prominent member of the 79 Group, a socialist republican faction that called for the SNP to become more aggressively radical following the 1979 U.K. general elections. Salmond was expelled from the SNP in 1982 when the 79 Group was banned. His exclusion lasted just one month, however, and by 1985 he was one of the SNP’s leading strategists. In the 1987 general election, he won the constituency of Banff and Buchan, a seat previously held by the Conservative Party. As an MP, he was ordered out of the House of Commons for a week in 1988 when he interrupted the chancellor of the Exchequer’s annual budget speech to protest the Conservative government’s decision to introduce a poll tax in Scotland while reducing income tax for more affluent people across the U.K.

In 1990 Salmond succeeded Gordon Wilson as the national convener (leader) of the SNP. He cooperated with Labour and Liberal Democrat politicians in Scotland to produce a shared plan for devolution and was a prominent and articulate campaigner in the successful 1997 referendum to establish a Scottish Parliament, with limited tax-leaving powers but virtually complete control over Scotland’s legislation and public services. Salmond was elected the MSP for Banff and Buchan in 1999 in the new Scottish Parliament’s first election and became leader of the opposition. The next year he suddenly resigned as SNP leader, following an internal dispute over the party’s finances, and was replaced by John Swinney.

After the SNP lost seats in 2003 in the second Scottish Parliament elections, Swinney stepped down (2004) and Salmond was reelected, winning 75% of the party members’ votes. He waged a highly effective campaign in the 2007 general elections, and the SNP gained 20 seats for a total of 47 MSPs in the 129-seat Scottish Parliament, one more than Labour. Despite lacking an outright majority, Salmond secured his election as first minister on May 16, 2007. He quickly implemented a number of popular measures, such as freez-

ing council tax rates, and began to promote his main ambition: full Scottish independence. (PETER KELLNER)

Samak Sundaravej

(b. June 13, 1935, Bangkok, Thai.)
On Jan. 28, 2008, by a vote of 310 to 163, the parliament of Thailand elected Samak Sundaravej, leader of the People Power Party (PPP) and a former mayor of Bangkok, as the country's new prime minister. King Bhumibol Adulyadej ratified the election the following day. Samak was the first Thai prime minister to be democratically elected since the ousting of Thaksin Shinawatra as prime minister in a September 2006 military coup.

Samak grew up in Bangkok, studied law at Thammasat University, and worked for a number of years as a newspaper columnist before entering politics. Originally a member of the Democrat Party, he was elected to the parliament in 1973. He stirred controversy three years later by spearheading a radio campaign against pro-democracy activists at Thammasat University and voicing support for the October 1976 crackdown that claimed the lives of dozens of students. After serving (1976–77) as interior minister, Samak founded his own political party, the Prachakorn Thai Party, which he led from 1979 to 2000.

In 1992, after a military junta had toppled the Thai government, Samak was appointed deputy prime minister. In May of that year he again conspicuously supported a bloody suppression of pro-democracy demonstrators by the Thai army. Samak later served with Thaksin in the cabinet of Prime Minister Banharn Silpa-archa. In 2000 Samak scored a resounding victory in the Bangkok mayoral race, but his four-year term in office ended amid allegations of corruption. He went on to host political talk shows as well as a popular cooking show on television, returning to politics in 2006 with a successful run for the Senate, where he served until Thaksin's overthrow. After a military-appointed tribunal dissolved Thaksin's Thai Rak Thai (TRT) party and many top-ranking TRT members were banned from politics, Samak helped establish the pro-Thaksin PPP in August 2007.

Under Samak's leadership, the PPP achieved a comfortable plurality win in Thailand's general election the following December and subsequently was able to form a multiparty governing coalition. One month after Samak as-

Pornchai Kittiwongsakul—AFP/Getty Images

Thai Prime Minister Samak Sundaravej

sumed the prime ministership, Thaksin returned to Thailand from exile in the U.K. How much power Thaksin would wield in Samak's government was the subject of much speculation. Critics alleged that Thaksin would control the government from behind the scenes. After Samak signaled his intention to amend Thailand's postcoup constitution, the opposition People's Alliance for Democracy (PAD) launched a mass protest against him, describing the move as an attempt to lay the groundwork for a return to power by Thaksin. Samak resisted the PAD's calls for his resignation, but in early September he was forced to step down after the Constitutional Court found him guilty of having illegally accepted payment for TV cooking show appearances that he had made while serving as prime minister. Samak also lost a defamation suit later that month. A bid by some of Samak's supporters in the PPP to renominate him eventually lost steam. Amid renewed protests by the opposition, the PPP named Somchai Wongsawat, Thaksin's brother-in-law, as Samak's successor, but he was soon ousted and the PPP dissolved by the Constitutional Court.

(SHERMAN HOLLAR)

Satrapı, Marjane

(b. 1969, Rasht, Iran)
In 2008 illustrator and writer Marjane Satrapı had reached a level of worldwide fame that would have seemed un-

likely in the 1980s, when she nearly died, homeless, in Vienna; her best-known book, *Persepolis*, topped one million in sales and was available in two dozen languages. Satrapı's film adaptation of the work was also released on DVD in 2008, a year after it had been nominated for an Academy Award for best animated feature.

Satrapı grew up in Tehran, the only child of Westernized parents. Her father was an engineer and her mother a clothing designer. Satrapı attended the Lycée Français in Tehran, but life became more difficult after the Iranian Revolution of 1979, when her family's Western way of life increasingly drew the attention of Iranian authorities. By 1984 Satrapı's parents had decided to send her to Austria to attend school. A failed relationship there exacerbated her sense of alienation and contributed to a downward spiral that found her living on the streets and using drugs. She returned to Tehran at age 19, studied art, and, after a short-lived marriage, moved back to Europe in 1993. In France she earned a degree in art, and by the mid-1990s she was living permanently in Paris.

Satrapı began working on *Persepolis* in 1999. It was published first in France in two volumes, as *Persepolis 1* (2000) and *Persepolis 2* (2001), which were combined as *Persepolis: The Story of a Childhood* when translated into English in 2003. The work was described as a graphic memoir, a genre that melds the format of a graphic novel with a prose-only memoir. Through a stripped-down visual style that shows the influence of German Expressionism, Satrapı tells the story of her childhood in Tehran. It is a story that Western readers found at once familiar—a restive adolescent who loves Nike shoes and rock music—and foreign—she is stopped and threatened with arrest for wearing those shoes as she walks through a city damaged by bombing raids during the Iran-Iraq War (1980–88).

Persepolis 3 and *Persepolis 4* were published in France in 2002 and 2003, respectively, and were translated together into English as *Persepolis 2: The Story of a Return* in 2004. *Persepolis 2* begins where *Persepolis* ends, with Satrapı living in Europe so as to experience more safety and freedom than her parents felt Iran could offer. The family friend with whom Satrapı was intended to live instead shuffles her to a boarding house, however, and Satrapı's life gradually dissolves. She returns to Iran but feels out of place,

and she eventually leaves again for Europe. *Persepolis* and *Persepolis 2* were praised for their analysis of the gaps and junctures between East and West and for their candour, their engaging narratives, and their humour.

Satrapi, who wrote in French, continued to probe the boundaries between the graphic novel and the memoir with *Broderies* (2003; *Embroideries*) and *Poulet aux prunes* (2004; *Chicken with Plums*). The former consists of stories told by Satrapi's mother, grandmother, and other female relatives and friends about their experiences as women living in Iran; the latter recounts the story of her great-uncle, a renowned *tar* (lute) player who resolves to die when he cannot adequately replace his broken instrument. (J.E. LUEBERING)

Shirakawa, Masaaki

(b. Sept. 27, 1949, Kitakyushu, Japan) The confirmation of Masaaki Shirakawa as the new governor of the Bank of Japan (BOJ) on April 9, 2008, ended a monthlong political showdown between the government of Prime Minister Yasuo Fukuda and the opposition-dominated upper house of the Diet (parliament) that had left Japan without a permanent central bank governor for the first time in decades. The two sides traded bitter recriminations over who was to blame for the deadlock, which came at an increasingly turbulent time for the Japanese economy and the global financial system as a whole. Ultimately, however, as a scheduled meeting of finance ministers and central bank leaders from the Group of Seven (G-7) countries approached, the two sides settled on Shirakawa, a BOJ veteran who had won approval as the bank's deputy governor in March and who had served as the BOJ's acting governor while the nomination drama played out.

The 58-year-old Shirakawa brought to the governor's office more than three decades of experience at the central bank. He joined the BOJ in 1972 after graduating with a bachelor's degree in economics from the University of Tokyo. He later studied in the U.S. at the University of Chicago, earning a master's degree in economics in 1977 before returning to Japan. Shirakawa was named general manager of the central bank's Oita branch in 1994. The following year he was selected to lead the BOJ's New York City office as general manager for the Americas. He was appointed an executive director at the central bank in 2002.

Shirakawa was widely respected for his expertise in monetary policy planning. Many observers saw him as the mastermind behind the unorthodox policy of "quantitative easing" that the central bank had introduced in March 2001. Intended to combat crippling deflation, the policy involved infusing cash into the Japanese banking system while at the same time pegging interest rates at 0%. The BOJ abandoned quantitative easing in 2006 once the economy had stabilized. Shirakawa left the central bank that year to accept a professorship at the Kyoto University School of Government, where he remained until 2008.

As Shirakawa formally assumed office as BOJ governor, fears of a recession in Japan were mounting. Ahead of the meeting of G-7 finance leaders in mid-April, Shirakawa specifically cited higher energy and commodities prices as major drags on the economy. While vowing to maintain a "flexible" approach to monetary policy, he also emphasized the need to "closely examine both upside and downside risks" of any policy changes. (SHERMAN HOLLAR)

Smith, Anna Deavere

(b. Sept. 18, 1950, Baltimore, Md.)

Anna Deavere Smith, who rose to prominence in the early 1990s while performing highly acclaimed one-woman shows dealing with race and class in the late 20th-century United States, returned in 2008 to the form that made her famous. In *Let Me Down Easy*, Smith broadened her perspective to explore the resiliency and vulnerability of the human body; she portrayed more than 20 characters who spoke out about current events such as genocide in Rwanda, steroid use among athletes, AIDS in Africa, and the U.S. health care system; the play opened in January in New Haven, Conn. Although she could be categorized as a playwright, an actress, an author, a journalist, or an educator, Smith appeared to have the main ambition of serving as a kind of mirror, reflecting American society back on itself.

Smith was raised in a racially segregated middle-class section of Baltimore. She was a shy child who nonetheless developed a talent for mimicry. She studied linguistics at Beaver College (now Arcadia University) near Philadelphia, earning a B.A. (1971) before moving to San Francisco to study acting at the American Conservatory Theatre, where she earned an M.F.A. degree (1977). The following

Peter Kramer/Getty Images

American playwright and actress Anna Deavere Smith

year she took a position teaching drama at Carnegie Mellon University in Pittsburgh. While there, Smith explored methods for actors to create characters by studying real people engaged in actual conversations. Inspired by her research, she launched her own ongoing project, *On the Road: A Search for American Character*.

In addition to landing a role on the television soap opera *All My Children*, Smith wrote and performed several well-received plays as part of the *On the Road* project, but her breakthrough work was *Fires in the Mirror: Crown Heights, Brooklyn and Other Identities* (1992), which told the story of the racial tension that rocked the Crown Heights neighbourhood of Brooklyn following an incident in 1991 in which the car of a Hasidic Jew went out of control and hit and killed a black child. Smith crafted the play from her own in-depth interviews, and she performed all 29 roles, moving seamlessly from one character to the next. The show received high critical praise and was a finalist for the Pulitzer Prize. In 1993 her next offering, *Twilight: Los Angeles, 1992*, was a well-executed and well-received exploration of the violence that erupted after the acquittal of four white police officers charged in the beating of Rodney King, a black man.

As an actress Smith appeared on television shows such as *The West Wing* and *Presidio Med* and had roles in the films *The American President*, *The Human Stain*, and *Dave*. She also authored two books: *Talk to Me: Travels in Media and Politics* (2000) and *Letters to a Young Artist* (2006). She was awarded

a John D. and Catherine T. MacArthur Foundation fellowship (a “genius grant”) in 1996. After 10 years as a professor of the arts, Smith left her tenured position at Stanford in 2000 and later joined the faculty at New York University’s Tisch School of the Arts.

(ANTHONY G. CRAINE)

Steinmeier, Frank-Walter

(b. Jan. 5, 1956, Detmold, North Rhine–Westphalia, W.Ger. [now in Germany]) On Sept. 7, 2008, German Vice-Chancellor and Foreign Minister Frank-Walter Steinmeier was announced as the official candidate of the Social Democratic Party (SPD) for the chancellorship in the 2009 parliamentary elections. The SPD had been in ideological uncertainty for almost a decade, and the new leftist party Die Linke had preyed on those voters who felt that the SPD had moved too far from its centre-left roots. The criticism that the SPD had become virtually indistinguishable from the centre-right Christian Democratic Union (CDU) was biting and was not helped by SPD’s participation in the grand coalition under Chancellor Angela Merkel of the CDU. Although many people considered Steinmeier the proper choice to give the SPD a new direction and regain voter confidence, to others the former civil servant who had never held elective office seemed an unlikely pick.

Steinmeier was the son of a carpenter and a factory worker. As a student he attended meetings of the young socialists regularly, and after finishing high school in Blomberg in 1974, he joined the SPD. Following his completion of mandatory conscription in 1976, he received (1980) a law and politics degree from the University of Giessen, where he joined the faculty in 1986 while working on his Ph.D. dissertation (1991) on state intervention and homelessness. He left academia shortly thereafter and turned to politics.

He took a position in the media law and policy division of the state Chancellery of Lower Saxony, where he quickly progressed to head the office of then-premier Gerhard Schröder in 1993. When Schröder became federal chancellor in 1998, Steinmeier also moved to Bonn to take a job in the Chancellery and to become the commissioner for the federal intelligence service. After the head of the Chancellery withdrew, Steinmeier took over the position. He became one of Schröder’s most trusted advisers, the author of a white paper on retirement

Carsten Koall/Getty Images

German Vice-Chancellor and Foreign Minister Frank-Walter Steinmeier

reform and tax reform, and a decisive voice in a series of economic reforms known as Agenda 2010.

When Merkel took office and established her grand coalition cabinet in November 2005, she unexpectedly turned to Steinmeier—the confidant of Schröder, her predecessor and political rival—to head the Foreign Office. Although the choice seemed unorthodox, in political and diplomatic circles Steinmeier’s appointment was greeted with approval, and in 2007 he added the role of vice-chancellor to his responsibilities. That same year he also served as the president of the European Council.

Despite his overall popularity, Steinmeier had not escaped criticism. He was accused of human rights violations regarding German alleged terrorists who were apprehended by U.S. authorities and transported to Guantánamo Bay in Cuba. This cost him approval from the general public and led some people to question whether he was enough of a Social Democrat to redefine the SPD and move it back into favour with voters.

(NICOLA CORKIN)

Stewart, Patrick

(b. July 13, 1940, Mirfield, West Yorkshire, Eng.) In 2008 British actor Patrick Stewart’s masterful performance of the title role in Shakespeare’s *Macbeth* brought unexpected freshness

to the play. The production, which started in London and later moved to Broadway, was set in a claustrophobic Stalinist U.S.S.R., which seemed well suited to the play’s atmosphere of paranoid treachery. Stewart won raves—and a Tony Award nomination—for his rich realization of the central character.

Stewart was the son of a military man, but while his brothers completed military service of their own, he began acting onstage at the age of 12. He performed in playhouses around England before making his London theatrical debut in 1966; he joined the prestigious Royal Shakespeare Theatre the next year and made his first Broadway appearance in 1971, as Snout in another Shakespeare classic, *A Midsummer Night’s Dream*.

Despite taking small roles in American and British films and on television from 1973 on, Stewart remained primarily a stage actor for the first quarter century of his career. Then, in 1987, he first appeared in the part that made him a familiar face for audiences around the world: Capt. Jean-Luc Picard in the science-fiction series *Star Trek: The Next Generation (TNG)*, following veteran *Star Trek* actor William Shatner into the captaincy of the starship *Enterprise*, arguably the most famous spaceship in popular culture. Although it was a surprising choice for someone considered to be a “serious” actor, the role brought Stewart an unprecedented level of fame. His cultured voice and natural gravitas lent great credence to the role and made him the urbane and deeply moral centre of *TNG*. The show ran for seven seasons and spawned four feature films between 1994 and 2002.

In 2000 Stewart brought his powerful presence to the American blockbuster film *X-Men*, playing paraplegic genius Professor Xavier. The professor—like Picard, a peace-loving and intelligent man—similarly helped to ground a fantastical franchise, and Stewart reprised the role in two successful sequels (2003 and 2006).

In the 1990s he took on a greater role behind the scenes, serving as both the star and the executive producer of the made-for-TV movies *The Canterville Ghost* (1996), *A Christmas Carol* (1999), *King of Texas* (2002), and *The Lion in Winter* (2003). Often, Stewart used his majestic tones and perfect British diction to comedic effect in animated shows, and in 2006 his hilarious guest turn on the HBO comedy series *Extras* earned him an Emmy nomination.

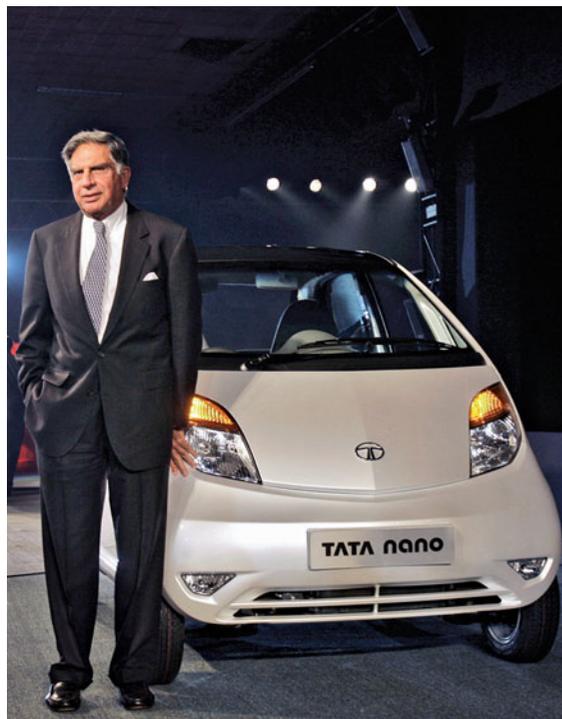

Despite these successes on-screen, Stewart never gave up the stage, and he never stopped performing Shakespeare. In the 1990s he played Prospero in *The Tempest* and the title role in an innovative take on *Othello*. In the wake of great praise for his 2008 *Macbeth*, the actor tackled the role of Claudius in a new production of *Hamlet*.

(MELISSA ALBERT)

Tata, Ratan

(b. Dec. 28, 1937, Bombay [now Mumbai], India) Indian business mogul Ratan Tata, chairman of the privately owned Tata Group, a Mumbai-based conglomerate of nearly 100 companies, made international headlines in 2008 with some of the year's most ambitious moves in the automotive industry. On January 10 Tata Motors officially launched the Nano, a tiny rear-engined, pod-shaped vehicle that was expected to sell for 100,000 Indian rupees, or about \$2,500. Although only slightly more than 3 m (10 ft) long and about 1.5 m (5 ft) wide, the highly touted "People's Car" could seat up to five adults and, in Tata's words, would provide a "safe, affordable, all-weather form of transport" to millions of middle- and lower-income consumers both in India and abroad. Tata had his eye on the luxury auto market as well, announcing

Indian business magnate Ratan Tata

Saurabh Das/AP

on March 26 that Tata Motors had agreed to purchase the elite British car brands Jaguar and Land Rover from the Ford Motor Co. The \$2.3 billion deal, completed in early June, marked the largest-ever acquisition by an Indian automotive firm. The global financial crisis and plummeting car sales, however, delayed the Nano's introduction and forced Tata to seek new investors.

Ratan Naval Tata was a member of a prominent family of Indian industrialists and philanthropists. He was educated at Cornell University, Ithaca, N.Y., where he earned a B.S. (1962) in architecture before returning to work in India. He gained experience in a number of Tata Group businesses and was named director in charge (1971) of one of them, the National Radio and Electronics Co. He became chairman of Tata Industries a decade later and in 1991 succeeded his uncle, J.R.D. Tata, as chairman of the Tata Group.

Upon assuming leadership of the conglomerate, Tata aggressively sought to expand it, and increasingly he focused on globalizing its businesses. In 2000 the group acquired London-based Tetley Tea for \$431.3 million, and in 2004 it purchased the truck-manufacturing operations of South Korea's Daewoo Motors for \$102 million. In 2007 Tata Steel completed the biggest corporate takeover by an Indian company when it acquired the giant Anglo-Dutch steel manufacturer Corus Group for \$11.3 billion.

Among many other honours accorded him during his career, Tata received the Padma Bhushan, one of India's most distinguished civilian awards, in 2000. *Fortune* magazine included him on its 2007 list of the 25 most powerful people in business, and in 2008 *Time* magazine listed him among the 100 most influential people in the world. Although Tata had talked of the possibility of his stepping down from the chairmanship of the Tata Group following the launch of the Nano, he was not officially scheduled to retire until 2012.

(SHERMAN HOLLAR)

Thaci, Hashim

(b. April 24, 1968, the village of Brocna, Yugos. [now Buroje/Brocna, Kosovo]) On Jan. 9, 2008, former rebel leader Hashim Thaci was elected prime minister of Kosovo by a majority vote in the parliament. The following month, on February 17, Kosovo declared its independence from Serbia.

Thaci was born in the Drenica valley, west of Pristina (the capital). This region, historically restive to Serbian rule, became the birthplace in the early 1990s of the Kosovo Liberation Army (KLA), an ethnically Albanian guerrilla movement fighting to end Serbian control of the province. Thaci studied philosophy and history at the University of Pristina and enrolled as a graduate student at the University of Zürich, where he studied Balkan history and international relations. In Pristina and Zürich he was active among Kosovo Albanian (Kosovar) political groups. He became cofounder of the organization People's Movement of Kosovo, which analysts believed created that group's paramilitary wing, the KLA. Known as "the snake," Thaci allegedly secured financing for the KLA's training and arms and engaged in a number of terrorist actions in Kosovo. Local and international media reported that Thaci's alleged criminal activities accounted for about 15% of the province's prostitution operations and arms, oil, and cigarette smuggling.

In July 1997 the District Court of Pristina sentenced Thaci in absentia to 10 years in prison for "criminal acts of terrorism." According to former KLA officials, Thaci allegedly ordered the assassination of his officers and other potential Kosovar political leaders and military commanders. Bujar Bukoshi, who served (1991–2000) as prime minister of the Kosovar government in exile, declared that "cadavers have never been an obstacle to Thaci's career." In 1997 several Western governments named the KLA a terrorist organization, but subsequent to Serbia's brutal crackdown (1998–99) on dissent, which was followed by NATO armed intervention, the KLA was seen as a resistance-liberation movement, with Thaci as its leader.

Thaci gained recognition at the international conference in Rambouillet, France, as leader of the Kosovar Albanian negotiating team and thus marginalized Ibrahim Rugova, who had long been regarded as a pacifist and architect of Kosovo's independence drive. During the negotiations between Koso-

var leaders and Serbia, Western diplomats came to see Thaci as a “voice of reason,” and he emerged from the final diplomatic settlement not only as the leader of the strongest faction within a sharply divided KLA but also as the Kosovar political leader with the greatest influence. Serbia’s refusal to sign the peace accords was followed by NATO air strikes that led to Serbia’s withdrawal from Kosovo in June 1999. Thereafter, Kosovo became an international protectorate.

Thaci’s tenure as prime minister was rife with controversy, however, and violence against opposition leaders continued. Organized crime remained a chief concern as the unemployment rate exceeded 40%. In addition, Thaci was unable to convince the country’s Serb minority (and others, such as Romanians and Turks) that Kosovo was not only home to the Albanian majority but their home as well.

(MILAN ANDREJEVICH)

Tillerson, Rex W.

(b. March 23, 1952, Wichita Falls, Texas) ExxonMobil Chairman and CEO Rex Tillerson opened 2008 in a good position to repeat his past successes. ExxonMobil, the world’s largest petroleum company, closed 2007 with earnings of \$40.6 billion, ensuring its rank as the world’s most profitable firm for the second year in a row. That success did not prevent prominent shareholders—including descendants of oil tycoon John D. Rockefeller—from challenging Tillerson’s control over the firm; they launched a proposal to split the CEO and chairman roles by naming an independent board member as chair. Central to their criticism was the oil company’s reliance on traditional energy sources, especially in an age when most energy firms were directing a portion of their research funds to the development of biofuels and wind and solar energy. Tillerson brushed aside various charges that the firm emphasized short-term profitability at the expense of larger concerns such as pollution, global warming, and the development of sustainable resources. In May a majority of shareholders reflected full support of Tillerson’s leadership as CEO and chairman by rejecting the proposal to split the two roles.

Having grown up in two of the country’s leading oil- and gas-producing states, Oklahoma and Texas, Tillerson entered the engineering program at the University of Texas at Austin (B.A.,

1975). He joined Exxon Corp. as a production engineer, and by the mid-1980s he was a business development manager in the firm’s natural gas department. He later served as the general manager (1989–92) for Exxon’s oil and gas production operation in a region that spanned Arkansas, Kansas, Oklahoma, and Texas. Tillerson took his first overseas assignment as president of Exxon Yemen, Inc., and next oversaw (1995–99) company operations in Thailand’s Khorat Plateau, the Caspian Sea, and Russia’s Sakhalin Island. After Exxon merged with Mobil Corp. in 1999 to form ExxonMobil, he held a number of senior executive positions. CEO Lee Raymond personally chose Tillerson as his successor, and the new CEO assumed leadership in 2006.

Tillerson’s successes stemmed from a broad working knowledge of ExxonMobil’s many oil and natural gas operations. His experience managing technologically and geologically challenging upstream (exploration and drilling) operations prepared him for the difficult conditions that became the norm for the oil industry in the 21st century, especially as the world’s supplies of easy-to-reach crude oil diminished. Geopolitics posed yet another challenge, particularly in Venezuela’s nationalization of oil fields (2007), which stripped ExxonMobil of its oil concessions in two Venezuelan projects. Tillerson asserted that fossil fuels represented the only resource capable of meeting growing global energy demands. Further evidence of the firm’s commitment to oil production came in June 2008 when ExxonMobil revealed its plan to exit the low-profit-margin retail gasoline business. Seven weeks later Tillerson announced that ExxonMobil had broken its own record in the second quarter of 2008, with a net income of \$11.68 billion; third-quarter net income was even higher, at \$14.83 billion.

(SARAH FORBES ORWIG)

Timbaland

(b. March 10, 1972, Norfolk, Va.) After two of the most successful years of his career, American hip-hop producer and performer Timbaland showed few signs of slowing down in 2008. In February he collected his second Grammy Award (best dance recording, for Justin Timberlake’s “LoveStoned/I Think that She Knows”), following four other nominations, including best nonclassical producer. Timbaland’s production work was prominent on new albums by pop

singers Madonna and Ashlee Simpson, and Verizon Wireless announced that he would record a set of songs for the V CAST cell-phone network as its inaugural Mobile Producer in Residence.

He was born Timothy Z. Mosley. As a teenage hip-hop disc jockey, he became friends with an aspiring rapper named Missy Elliott, who asked the young DJ to assemble a demo recording for her rhythm and blues (R&B) group. Though the project soon fell apart, Mosley’s production skills were noticed by popular R&B producer DeVante Swing, who encouraged him to pursue studio work and suggested the nickname Timbaland.

In 1996 Timbaland experienced a commercial breakthrough with the Ginuwine single “Pony.” The song’s off-kilter rhythm and creative use of electronic samples, unique among R&B recordings at the time, became hallmarks of Timbaland’s production style. His reputation grew, thanks to the massive popularity of Aaliyah’s album *One in a Million* (1996) and Elliott’s solo debut album, *Supa Dupa Fly* (1997). Timbaland’s distinctive involvement in their sound marked the start of a close association with both artists, and he was routinely hailed for his ability to craft hits that were both artistically innovative and commercially successful. Timbaland applied his singular touch to tracks from hip-hop’s leading lights, including Jay-Z, Nas, and Snoop Dogg, and in 2001 he established a record label, Beat Club, to promote up-and-coming artists.

Although he was widely credited with reinventing the hip-hop landscape, true stardom eluded Timbaland until 2006, when he produced albums for pop stars Timberlake and Nelly Furtado. Not only did their worldwide fame expand the audience for his work, but Timbaland’s more visible role—he rapped between the singers’ verses and appeared in their videos—also made him one of the most sought-after producers in pop music as a whole. He soon took on projects with Icelandic avant-garde singer Björk and British former new-wave band Duran Duran.

In 2007 Timbaland unveiled a new solo record. Though he had already released four albums under his own name (including three with his childhood friend Melvin [“Magoo”] Barcliff), *Shock Value* was the first to gain considerable mainstream notice, owing in part to the record’s extensive list of unexpected collaborators, such as rock band Fall Out Boy and British super-

star Elton John. By early 2008 *Shock Value* had sold more than a million copies in the U.S. and had spawned three top-five hits.

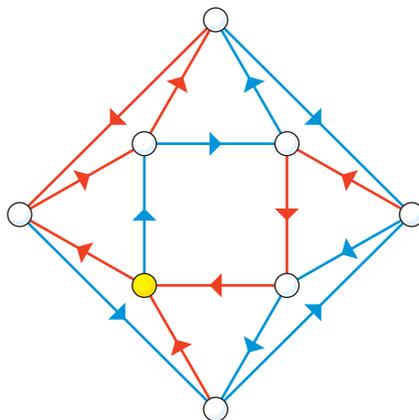

(JOHN M. CUNNINGHAM)

Trahtman, Avraham

(b. Feb. 10, 1944, Kalinovo, Sverdlovsk oblast, U.S.S.R. [now in Russia])

The astonishing news emerged in 2008 that in September 2007 a 63-year-old Israeli mathematician, Avraham Trahtman, had solved a long-standing problem in graph theory. The road-colouring conjecture, as it was known before being solved by Trahtman, was first suggested in 1970 by the Israeli-American mathematician Benjamin Weiss and the American mathematicians Roy L. Adler and L. Wayne Goodwyn. The theorem concerns a special type of graph, or network, that fulfills certain conditions. The network must have a finite number of vertices (specific locations, or points) and directed edges (one-way paths), be strongly connected (a path must exist from any vertex a to any other vertex b and a path from b to a), and aperiodic (essentially, the cycles, or complete routes following different directions, must be independent). The road-colouring theorem asserts that for such a network, there always exists a synchronized colouring, or method of labeling the edges, to create a map with a simple set of directions, possibly involving many repetitions of the directions, that will lead from any starting point to any other given point. In other words, by following simple directions, such as to take a “red-blue-red” path, it is possible to start from any location and be certain to end up at the desired destination. The existence of such “universal maps” has theoretical implications for real-life problems in computer science, though having a universal map is not the same as having the most efficient route for any individual case.

Trahtman (also known as Trakhtman) earned an undergraduate degree (1967) and a graduate degree (1973) in mathematics from Ural State University, in Sverdlovsk (now Yekaterinburg, Russia). He taught in that same city at the Ural State Technical University (1969–84) and at the Sverdlovsk Pedagogical University (1991–92) before immigrating to Israel in 1992. Like many of the recent immigrants following the breakup of the Soviet Union, Trahtman had difficulty finding an academic position, and he first accepted work as a security guard and lectured (1994–95) part-time in the

In this sample network, starting from any circle, follow the arrows in the order “red-blue-red” to reach the yellow circle.

pre-education department at Hebrew University in Jerusalem. In 1995 Trahtman obtained a professorship at Bar-Ilan University in Ramat Gan, near Tel Aviv.

Trahtman’s solution is notable for its brevity: at less than eight pages it is extremely concise and considered quite elegant. The proof is also rather noteworthy in that most major mathematical breakthroughs come from individuals before the age of 40, or even 30. Trahtman proved, however, that age was not a barrier to solving a nearly 40-year-old mathematical conundrum.

(WILLIAM HOSCH)

Tymoshenko, Yuliya

(b. Nov. 27, 1960, Dnipropetrovsk, Ukraine, U.S.S.R.) In May 2008 Yuliya Tymoshenko, Ukraine’s newly appointed prime minister, was engaged in a direct contest for power with Pres. Viktor Yushchenko. The conflict over authority between the presidency and the parliament presaged a serious constitutional crisis that led to the formation of a new parliamentary coalition in December. As the two former allies clashed over various issues, surveys indicated that Tymoshenko had emerged as Ukraine’s popular politician.

She was born Yuliya Volodymyrivna, and her family lineage was reported variously as Ukrainian, Russian, Latvian, and Jewish. She studied cybernetics at Dnipropetrovsk State University and in 1984 received a degree in economics. She had married Oleksandr Tymoshenko in 1979 and given birth to a daughter the following year.

In 1995 Tymoshenko became president of United Energy Systems of

Ukraine (UESU). The company imported gas from Russia, which could then be reexported to the West or sold internally. In return, UESU exported metals, pipes, and other goods to Russia. The business earned her the epithet of “the gas princess.” She amassed a fortune and was linked to other successful entrepreneurs, including Pavlo Lazarenko.

Tymoshenko moved smoothly into a political career, exploiting her business connections and natural beauty and eventually adopting what became her trademark “Ukrainian” braided hairstyle. She was first elected to the Ukrainian Parliament in 1996 and in 1999 was appointed deputy prime minister for fuel and energy under Yushchenko, who was then prime minister. Two years later, in early 2001, she was dismissed, arrested, and briefly jailed on corruption charges. Tymoshenko always maintained that the charges were politically motivated, and they were later dropped.

In November 2001 she founded the Yuliya Tymoshenko Bloc (BYT; originally the National Rescue Forum) in opposition to Pres. Leonid Kuchma. Although Tymoshenko had previously been considered a strong candidate for the presidency, she formed an alliance with Yushchenko’s Our Ukraine and supported his bid for president in 2004. During the events of the Orange Revolution, Tymoshenko was a key figure, denouncing Viktor Yanukovich’s presidential election campaign and the alleged electoral fraud that resulted in Yanukovich’s victory being overturned. After Yushchenko was installed as president, he named her prime minister in January 2005. Her cabinet was dismissed nine months later; however, after fractious disputes with the head of the Security and Defense Council and her controversial attempts to reprivatize companies that had been sold at less than market value.

The BYT formed the main opposition after the collapse of the Orange coalition in the summer of 2006 and finished in second place in the 2007 parliamentary campaign. On Oct. 15, 2007, Our Ukraine–People’s Self-Defense and the BYT agreed to form a majority in the new parliament, and on December 18 Tymoshenko regained her position as prime minister. By this time the most recognizable figure in Ukraine, she campaigned for changes to the constitution that would transform the country into a parliamentary republic.

(DAVID R. MARPLES)

Vonn, Lindsey

(b. Oct. 18, 1984, St. Paul, Minn.)

A few years earlier, even Lindsey Kildow Vonn would not have predicted that her 2007–08 Alpine skiing season would be her finest. At the World Cup final, held in Bormio, Italy, in mid-March, Vonn and teammate Bode Miller became the first Americans to sweep the overall World Cup titles since Phil Mahre and Tamara McKinney accomplished the feat in 1983. At the season's penultimate competition, in Crans-Montana, Switz., Vonn won her 10th career World Cup downhill race to break the American record set by Picabo Street and Daron Rahlves; by then she had already clinched the downhill title, the first American woman to do so since Street in 1996. Barely a week after competing in Bormio, Vonn won the women's slalom at the U.S. Alpine championships in Carrabassett Valley, Maine, for her fourth national title—a welcome turnaround for someone whose career had been filled with setbacks in 2006 and 2007.

Vonn, born Lindsey Kildow, burst onto the scene in 1999 at age 14 when she won the slalom race at Italy's Trofeo Topolino competition for skiers aged 11–14, becoming the first American female to have captured the event. She skied in the 2002 Winter Olympics in Salt Lake City, Utah, racing in Alpine combined and slalom, but she managed only a sixth-place finish in combined. She secured a silver medal in downhill at the 2003 junior world championships and again took silver in downhill one year later at the U.S. championships. Vonn triumphed in a World Cup race for the first time in 2004, winning in downhill at Lake Louise, Alta. That victory served as a springboard to five more top-three finishes at the next few World Cup events, and she finished the 2004–05 season ranked sixth overall.

She was a medal favourite going into the 2006 Olympic Winter Games in Turin, Italy, but she crashed during a downhill training run and was airlifted to a hospital. Vonn, who said at the time that she thought she had broken her back and that her career was over, miraculously returned and within two days was competing despite the injury. She did not win a medal, but her gutsy showing earned her the U.S. Olympic Spirit Award. Vonn recovered in time to win silver medals in downhill and supergiant slalom at the 2007 Alpine world championships, but she partially tore the anterior cruciate ligament in her right knee

in a crash during a training session to put an early end to her season.

Her determination did not waver, however. After taking a brief time-out in September 2007 to marry fellow skier Thomas Vonn, she earned six World Cup victories to finish the 2007–08 season with 1,403 points, more than 200 points ahead of her nearest competitor. (PAUL DIGIACOMO)

Winehouse, Amy

(b. Sept. 14, 1983, London, Eng.)

“No, no, no,” British singer Amy Winehouse's sultry refusal to enter drug and alcohol treatment in her song “Rehab,” elicited big yeses in 2008 from consumers, critics, and notables in the music industry, who made her album *Back to Black* a massive hit, lavishly praised its retro soul, and honoured it with five Grammy Awards, including two (best song and best recording) for “Rehab.” Winehouse's rise to fame, however, was accompanied by a very public slide into personal chaos. That slide—marked by dramatic anorexic weight loss, drunken performances, an arrest in Norway for marijuana possession, and the incarceration of her husband, Blake Fielder-Civil, after a bar fight—culminated in January in the posting on the Internet by the *Sun* newspaper of a video in which Winehouse appeared to be smoking crack cocaine. In May she finally said “yes” to rehab.

Born to a Jewish family, Winehouse was raised primarily by her mother, a pharmacist, who divorced her father, a taxicab driver, when Winehouse was nine. Early on she demonstrated an interest in the arts, but she was expelled from Sylvia Young theatre school for wearing a forbidden nose ring. At the prestigious BRIT School, Winehouse showed ability as an actor as well as a singer, and by age 16 she was performing with jazz groups. On her critically acclaimed debut album, *Frank* (2003), she proved herself to be a shrewd, caustic lyricist, and her smoky, evocative vocals drew comparisons to jazz legendary singers Sarah Vaughan, Dinah Washington, and Billie Holiday.

A series of tumultuous romances followed for Winehouse, none more fevered than her on-again, off-again relationship with Fielder-Civil, about whom many of the heartbreak songs on her next album, *Back to Black* (2006), were written. A very different-looking Winehouse began appearing in the tabloids as the new album took off in Britain and broke through in the U.S. (largely because of the infectious “Re-

*British pop singer Amy Winehouse*

hab”), entering the American charts at number seven, the highest debut position ever for a British woman. The now stick-thin, tattooed Winehouse began piling her jet-black hair in an enormous beehive that, along with heavy Cleopatra-style eye makeup, became her trademark look. Her singing on *Back to Black*, more in the vein of Motown and 1960s and '70s soul, delighted critics. After marrying Fielder-Civil in May 2007, Winehouse began behaving increasingly erratically and canceling shows. When, in the wake of the *Sun* video, Winehouse was unable to obtain a visa to appear at the Grammy Awards ceremony in Los Angeles, a special satellite performance was arranged in London. In November she was named Best Selling Pop/Rock Female at the World Music Awards. Her volatile marriage, however, appeared to be on the rocks.

(JEFF WALLENFELDT)

Wolfe, Nathan

(b. Aug. 24, 1970, Detroit, Mich.)

At a meeting sponsored by the American Association for the Advancement of Science in February 2008, American virologist and epidemiologist Nathan Wolfe announced his plans for a Global Viral Forecasting Initiative (GVFI) to monitor the transmission of viruses from animals to humans in countries worldwide. The initiative was launched to reduce the threat of disease to public health by detecting the emergence of infectious agents in humans and to control them before the

agents gave rise to diseases of epidemic proportions. The GVFI stemmed from a project Wolfe conducted in rural villages in central Africa. His investigation of the hunting and butchering practices in these villages showed that viruses can jump from wild animals to humans through animal-to-hunter contact. Wolfe indicated that he would need to raise \$50 million to expand his monitoring project in central Africa to other countries around the world. By spring 2008, 100 scientists in nine countries had begun to collaborate for the GVFI.

Wolfe received a bachelor's degree (1993) in human biology from Stanford University. He then attended Harvard University, where he received a master's degree (1995) in biological anthropology and a doctorate (1998) in immunology and infectious disease. From 1999 to 2006 Wolfe was a postdoctoral student and then an assistant professor at Johns Hopkins University, Baltimore, Md. There he worked with American epidemiologist Donald Burke, who suspected that the practice of hunting bushmeat (primates and other wild animals hunted for food) in Africa had exposed a source of the human immunodeficiency virus (HIV). Based in Cameroon, Wolfe studied the local hunters and their hunting practices. Although research conditions sometimes proved difficult, Wolfe was undaunted. In 2004 he and his colleagues found that 1% of bushmeat hunters were infected with simian foamy virus—a virus that is closely related to HIV and is carried by nonhuman primates. This groundbreaking study demonstrated that infectious agents common to wild animals can be transmitted to humans via contact with the animal's blood and that these agents can potentially give rise to new strains of infectious pathogens in humans.

In 2006 Wolfe joined the department of epidemiology at the University of California, Los Angeles. He began pursuing ways to monitor, predict, and prevent animal-to-human transfer of viruses and soon recognized the need for a program such as the GVFI. Wolfe had ongoing projects not only in Africa but also in Southeast Asia. In China he was collaborating with other scientists in investigating wet markets (food markets that sell live animals) as a source of zoonoses (diseases from wild animals). Wolfe was also involved in wildlife conservation and habitat preservation as a means to limit the hunting of wild animals and thus the spread of infectious

viruses. Among awards that Wolfe received was the National Institutes of Health Director's Pioneer Award (2005).

(KARA ROGERS)

Yamanaka, Shinya

(b. Sept. 4, 1962, Osaka, Japan)

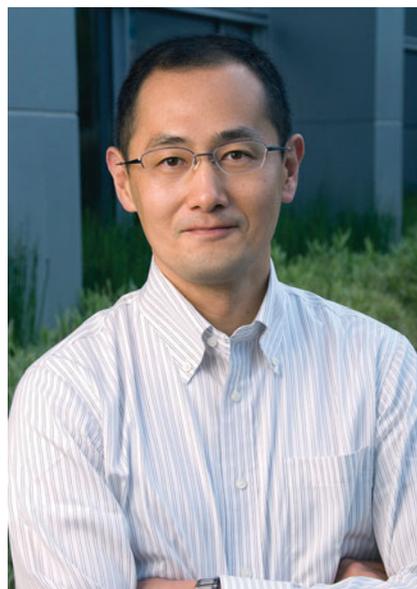

In 2008 Japanese physician and stem-cell researcher Shinya Yamanaka advanced the front lines of stem-cell research yet again when he reported a new breakthrough in his research—the generation of induced pluripotent stem (iPS) cells from mouse liver and stomach cells. In 2006 Yamanaka had single-handedly revolutionized the field of stem-cell research when he first announced that he had succeeded in generating iPS cells. The cells had the properties of embryonic stem cells but were produced by inserting four specific genes into the nuclei of mouse adult fibroblasts (connective-tissue cells). The following year Yamanaka reported that he had derived iPS cells from human adult fibroblasts—the first successful attempt at generating human versions of these cells. This discovery marked a turning point in stem-cell research because it offered a way of obtaining human stem cells without the controversial use of human embryos. Yamanaka's technique to convert adult cells into iPS cells up to that time employed a retrovirus that contained a gene called *c-Myc*. This gene was believed to play a fundamental role in reprogramming the nuclei of adult cells. Yamanaka recognized, however, that the activation of the *c-Myc* gene during

the process of creating iPS cells led to the formation of tumours when the stem cells were later transplanted into mice. He subsequently proceeded to create iPS cells without *c-Myc* in order to render the cells noncancerous and thereby overcome a major concern in the therapeutic safety of the iPS cells.

Yamanaka received a medical degree from Kobe University in 1987 and a Ph.D. in pharmacology from the Osaka City University Graduate School in 1993. That year he joined the Gladstone Institute of Cardiovascular Disease, San Francisco, where he began investigating the *c-Myc* gene in specific strains of knockout mice (mice in which a specific gene has been rendered nonfunctional in order to investigate the gene's function). In 1996 Yamanaka returned to Osaka City University, where he remained until 1999, when he took a position at the Nara Institute of Science and Technology. During these years his research became increasingly focused on stem cells. In 2004 Yamanaka moved again, this time to the Institute for Frontier Medical Sciences at Kyoto University, where he began his landmark studies on finding ways to induce pluripotency in cells. Yamanaka again sought research opportunities in the United States. He subsequently was awarded funding that allowed him to split his time between Kyoto and the Gladstone Institute. In 2007 Yamanaka became a senior investigator at the Gladstone Institute.

Japanese physician Shinya Yamanaka

Chris Goodfellow

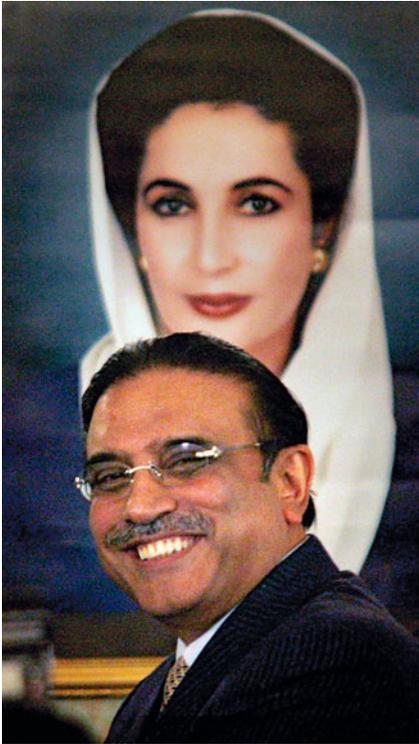

Zardari, Asif Ali

(b. July 26, 1955, Karachi, Pak.)

Asif Ali Zardari, the husband of former Pakistani prime minister Benazir Bhutto, was elected president of Pakistan on Sept. 6, 2008. Zardari had assumed de facto leadership of the Pakistan People's Party (PPP) following Bhutto's assassination on Dec. 27, 2007.

Zardari was educated at St. Patrick's School in Karachi and later studied business in London. He gained a reputation as a playboy and gadfly for his easygoing lifestyle. Zardari was an avid polo player and an intense competitor but demonstrated little interest in the political scene. His betrothal to Bhutto, who was the daughter of former president (1971–73) and prime minister (1973–77) Zulfikar Ali Bhutto and whom he had first met five days prior to the public announcement of their engagement, surprised many observers. On Dec. 18, 1987, the two were married in an arranged and relatively simple

Anjum Naveed/AP

Pakistani Pres. Asif Ali Zardari

ple ceremony. The couple had three children: a son, Bilawal, and two daughters, Bakhtwar and Asifa.

The couple had been married less than a year when Pres. Mohammad Zia-ul-Haq was killed, ending more than a decade of military rule. Bhutto's subsequent success at the polls ushered her into office as prime minister. In 1990 her tenure was cut short by corruption-related scandals, however, and both she and Zardari were the focus of attacks from opposition politicians as well as disgruntled members of the PPP, Bhutto's own party. Arrested on kidnapping and extortion charges, Zardari was imprisoned in 1990, and following his release in 1993, corruption allegations against him multiplied (some labeled him "Mr. Ten Percent," alleging that he had taken kickbacks on large government contracts during Bhutto's tenure in office).

Zardari served as a member of the National Assembly from 1990 to 1993—during which time he was periodically released from prison to attend sessions—and from 1993 to 1996. After Bhutto's return to power in 1993, he served as minister of the environment (1993–96) and federal minister for investment (1995–96) in her government. Zardari aggressively sought control of the PPP, but he was the subject of ever-

increasing criticism from opponents within and outside the party. In addition, Zardari was deeply involved in a Bhutto family feud led by Bhutto's brother, Murtaza, and mother, Nusrat; the conflict between Zardari and Murtaza over leadership of the Bhutto clan ruptured the PPP and destabilized Bhutto's government. The Murtaza-Zardari rivalry ended abruptly on Sept. 20, 1996, when Murtaza was shot and killed by police.

Zardari was implicated in Murtaza's death, and following the dissolution of Bhutto's second government in November 1996, he was arrested on charges that included corruption, money laundering, and murder. Although never convicted, Zardari was imprisoned from 1997 to 2004; he was elected to the Senate from his jail cell during this time. The toll exacted on Zardari's health by his imprisonment was considerable. Following his release he sought medical treatment in the United States for psychological distress. He returned to Pakistan with Bhutto's resumption of political activity in 2007 and was given amnesty for his alleged offenses. Following Bhutto's assassination Zardari named his son, Bilawal, chairman of the PPP and made himself the party's cochairman.

(LAWRENCE ZIRING)

Zuma, Jacob

(b. April 12, 1942, Inkandla, Natal, S.Af.) Although Jacob Zuma was elected president of the African National Congress (ANC) in December 2007, his chances of replacing outgoing South African Pres. Thabo Mbeki as president of the country in the 2009 election remained unclear in 2008. Shortly after his overwhelming victory over Mbeki as ANC president, Zuma was recharged with corruption and fraud, and additional charges of money laundering, racketeering, and tax evasion were brought against him.

Zuma was the son of a policeman. He received no formal schooling, and he joined the ANC in 1959 and its military wing, Umkonto We Sizwe (MK), in 1962. He was arrested in 1963 and sentenced to 10 years in prison on Robben Island for conspiring to overthrow the apartheid government. After Zuma's release he set up underground networks to recruit for MK, fleeing the country in 1975 to escape arrest. He was based in Swaziland and later Mozambique, becoming (1977) a member of the ANC's national executive committee. In 1987 he moved to ANC headquarters in

Lusaka, Zambia, where he served as head of underground structures and head of the intelligence department.

When the South African ban on the ANC was lifted in 1990, he was elected chairperson of the southern Natal region, and in 1991 he became ANC deputy general secretary. Following South Africa's first multiracial elections in 1994, Zuma became a member of the executive committee for economic affairs and tourism in KwaZulu-Natal.

In December 1997 he was elected deputy president of the ANC, and in June 1999 he was appointed deputy president of the country. In June 2005, however, President Mbeki relieved him of this position following the fraud and corruption conviction of a close Zuma colleague, businessman Schabir Shaik. The judge in that case ruled that there was a generally corrupt relationship between Shaik and Zuma, who was subsequently charged with two counts of corruption.

Zuma initially recused himself from all ANC activities, but the ANC national general council defied Mbeki by reinstating him as an active member and, eventually, as ANC deputy president. The Congress of South African Trade Unions (COSATU) and the South African Communist Party (SACP)—the ANC's two allies in a tripartite alliance—with the ANC Youth League claimed that the charges against Zuma were politically motivated to prevent his succession as president.

Supported by thousands of demonstrators, in March 2006 Zuma faced an additional trial on a rape charge, of which he was acquitted in May. Although a Durban court struck the corruption case from the roll in September 2006, the charges were reinstated in December 2007. In September 2008 a judge threw out the charges based on evidence that Mbeki had conspired with prosecutors. Mbeki was forced to resign as president, but at year's end it was still uncertain if Zuma's trial would resume in 2009 just ahead of the presidential election.

The support of influential COSATU and SACP leaders led some to maintain that if Zuma were elected president, he would introduce socialist, or at least more left-wing, economic policies. There was little evidence to support this theory, however, and Zuma stated that he would continue to implement existing ANC policies. His election as ANC president rather reflected deep unhappiness with Mbeki.

(MARTIN LEGASSICK)

Obituaries

In 2008 the world **LOST** many **LEADERS**, pathfinders, **NEWSMAKERS**, heroes, **CULTURAL ICONS**, and **ROGUES**. The pages below **RECAPTURE** the lives and accomplishments of those we **REMEMBER** best.

Abu Ghazala, 'Abd al-Halim, Egyptian military leader (b. Jan. 15, 1930, Al-Zohour, Egypt—d. Sept. 6, 2008, Cairo, Egypt), used his position as Egypt's field marshal to help preserve the fragile 1979 peace treaty between his country and Israel after the assassination in 1981 of Egyptian Pres. Anwar el-Sadat. Abu Ghazala joined the Egyptian army in 1948, participated in the 1952 coup that overthrew King Farouk, and fought in the 1967 and 1973 wars against Israel. In 1981 Abu Ghazala was appointed minister of defense and commander of the army; the next year he was promoted to field marshal. He was fired as defense minister in 1987, however, following allegations of involvement in a plot to illegally acquire U.S. missile technology. He retired from public life in 1993. Abu Ghazala's honours included Egypt's Medal of Liberation, Order of Independence, Medal of Honour, and Medal of the Republic.

Adams, Edie (ELIZABETH EDITH ENKE), American singer (b. April 16, 1927, Kingston, Pa.—d. Oct. 15, 2008, Los Angeles, Calif.), was a sultry blonde beauty who served as the comic foil for her husband, Ernie Kovacs, in his TV comedy-show sketches; she also spent more than two decades appearing in Muriel cigar advertisements, in which she sang and breathily invited, "Why don't you pick one up and smoke it sometime?" Though Adams, a graduate of the Juilliard School of Music, New York City, initially pursued a career in opera, she attracted the attention of Kovacs's director, who was impressed with her performance on the *Arthur Godfrey's Talent Scouts* TV show and offered her an audition. Though her repertoire of popular songs was slim, she was selected to join Kovacs's show. In 1954 she and Kovacs eloped to Mexico. Adams also found success on Broadway in *Wonderful Town* (1953) and then earned (1957) a Tony Award

for her featured (supporting) role as Daisy Mae in *Li'l Abner*. That same year Adams and Kovacs were nominated for Emmy Awards for best performance in a comedy series. In the late 1950s the couple moved to Hollywood, and Adams began appearing in films. Some of her credits include *The Apartment* (1960), *It's a Mad Mad Mad Mad World*,

AP

Singer and actress Edie Adams

Love with the Proper Stranger, and *Under the Yum Yum Tree* (all in 1963). After Kovacs's death (1962) in an automobile crash, she worked to pay her husband's massive back-tax bill and won a highly publicized custody battle for his children from a previous marriage. She briefly (1963–64) hosted her own TV musical comedy show, *Here's Edie*, and later made cameo appearances and played bit parts in a number of prime-time TV shows.

Aleksey II (ALEKSEY MIKHAILOVICH RIDIGER, OR RÜDIGER), Russian Orthodox prelate (b. Feb. 23, 1929, Tallinn, Est.—d. Dec. 5, 2008, near Moscow, Russia), as the Russian Ortho-

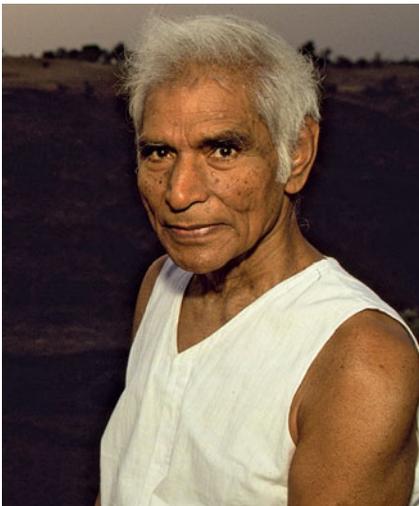

dox patriarch of Moscow and all Russia from 1990, was the spiritual leader of more than 140 million people and the first patriarch in Soviet history to be chosen without government pressure. (Candidates were nominated from the floor, and for the first time the election was conducted by secret ballot.) He graduated from the Leningrad Theological Academy in 1953. He was consecrated an archbishop in 1964, served (1968–86) as metropolitan of Tallinn and Estonia, and in July 1986 became metropolitan of Leningrad (St. Petersburg) and Novgorod. He was a permanent member of the Holy Synod and administrator of affairs for the Moscow patriarchate before succeeding Patriarch Pimen on June 7, 1990. Aleksey quickly became an outspoken advocate of the rights of the church, asking the Soviet government to allow the option of religious education in the state schools and urging it to pass a "freedom of conscience" law legalizing religious worship. He also issued statements condemning anti-Semitism and refusing to identify the church with Russian nationalism.

Allen, Paula Gunn (PAULA MARIE FRANCIS), American poet, novelist, and scholar (b. Oct. 24, 1939, Albuquerque, N.M.—d. May 29, 2008, Fort Bragg, Calif.), combined the influences of feminism and her Native American heritage (her mother was part Laguna-Sioux) in writings that focused on the experiences of Native American women. While completing her Ph.D. (1975) at the University of New Mexico, she published her first book of poetry, *The Blind Lion* (1974). Allen's first novel, *The Woman Who Owned the Shadows* (1983), weaves traditional tribal songs, rituals, and legends into the story of a woman of mixed heritage whose struggle for survival is aided by Spider Grandmother, a figure from ancient tribal mythology. In *The Sacred*

Hoop: Recovering the Feminine in American Indian Traditions (1986), Allen argued that feminist and Native American perspectives on life are compatible, claiming that traditional tribal lifestyles were never patriarchal and were generally based on “spirit-centered, woman-focused worldviews.” Allen helped establish a Native American literary presence in the U.S. with several anthologies, including *Spider Woman’s Granddaughters: Traditional Tales & Contemporary Writing by Native American Women* (1989), *Voice of the Turtle: American Indian Literature, 1900–1970* (1994), and *Song of the Turtle: American Indian Literature, 1974–1994* (1996). She also edited several general works on Native American writing, including the pioneering *Studies in American Indian Literature* (1983) and *Grandmothers of the Light: A Medicine Woman’s Source Book* (1991). Allen’s other books of verse include *Coyote’s Daylight Trip* (1978), *Skins and Bones* (1988), and *Life Is a Fatal Disease: Collected Poems 1962–1995* (1997). Allen’s biography *Pocahontas: Medicine Woman, Spy, Entrepreneur, Diplomat* (2004) told the story of that historical figure from the Native American viewpoint.

Amte, Baba (MURLIDHAR DEVIDAS AMTE), Indian lawyer and social activist (b. Dec. 26, 1914, Maharashtra district, British India—d. Feb. 9, 2008, Anandvan, Maharashtra, India), devoted his life to India’s Harijan (untouchables) and especially to the care of those individuals who suffered from leprosy (Hansen’s disease). His work earned him numerous international

Indian social activist Baba Amte

Marie Dorigny—REA/Redux

awards, notably the 1971 Padma Shree, the 1988 UN Human Rights Prize, a share of the 1990 Templeton Prize, and the 1999 Gandhi Peace Prize. Amte was born into an affluent Brahmin family and acquired the nickname Baba as a child. He trained as a barrister but, influenced by Mahatma Gandhi’s nonviolent fight for justice, abandoned his legal career in the 1940s. He settled with his wife in a labour ashram, then studied leprosy at the Calcutta (now Kolkata) School of Tropical Medicine, and in 1951 founded Anandvan, an ashram dedicated to the treatment and rehabilitation of leprosy patients. Amte, who suffered from cancer, died at the Anandvan ashram and was given a Maharashtra state funeral.

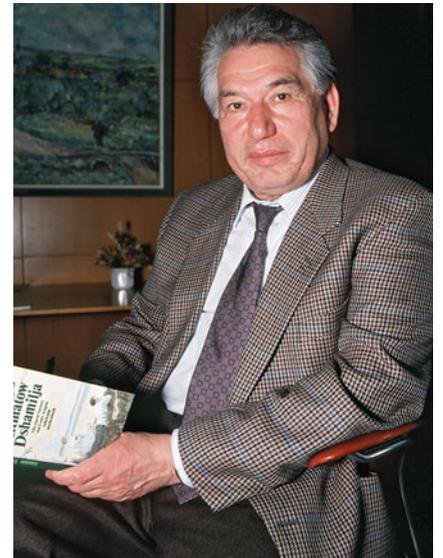

Arnold, Eddy (RICHARD EDWARD ARNOLD; “THE TENNESSEE PLOWBOY”), American singer and guitarist (b. May 15, 1918, Henderson, Tenn.—d. May 8, 2008, Franklin, Tenn.), ushered country music, which had been labeled as hill-billy music, into the mainstream with his gentlemanly appearance and mellow tenor voice, which he modeled after Bing Crosby and Perry Como; during Arnold’s six-decade-long career, he sold more than 85 million recordings and reigned on the *Billboard* country charts, with the highest number of top 10 hits (92) and number of weeks at number one (145). Arnold’s breakthrough hit, “I’ll Hold You in My Heart (till I Can Hold You in My Arms)” (1947), was followed by such blockbusters as “Bouquet of Roses” (1948), “Texarkana Baby” (1948), “Take Me in Your Arms and Hold Me” (1949), and “Cattle Call” (1955). Though the advent of rock and roll temporarily diluted his popularity, he incorporated the smooth country-pop Nashville Sound by using a string section as his backup, and during the 1960s he regained prominence with such songs as “What’s He Doing in My World” (1965), “Somebody like Me” (1966), and “Then You Can Tell Me Goodbye” (1968). His appearances on television and his performances in Las Vegas cemented his career. In 1999 Arnold officially retired, but in 2005 he recorded his 100th album, *After All This Time*. He was inducted into the Country Music Hall of Fame in 1966 and was crowned the Country Music Association’s Entertainer of the Year in 1967.

Arpino, Gerald (GENNARO PETER ARPINO), American ballet choreographer (b. Jan. 14, 1923, Staten Island, N.Y.—d. Oct. 29, 2008, Chicago, Ill.),

was a leader of the Joffrey Ballet from its founding in 1956 until 2007. He joined the Coast Guard in 1942, and while stationed in Seattle in 1945, he met dancer Robert Joffrey and began his study of dance. After training and performing in New York City, he toured with the Ballet Russe and appeared in Broadway musicals before helping Joffrey found the Joffrey Ballet. In 1961 Arpino created his first choreography, *Ropes*, and soon afterward he became the company’s resident choreographer. He was best known for his fast, youthful ballets, including *Olympics*, *Trinity*, *Kettentanz*, and *Viva Vivaldi*, but also created such pieces as the anti-nuclear-war *Clowns* and the romantic *Sea Shadow* and *Secret Places*. Arpino became artistic director after Joffrey’s death in 1988 and, except for a period in 1990, continued serving in that position. He moved the company to Chicago in 1995, and in 2007 he became director emeritus.

Aytmatov, Chingiz (CHINGIZ TORKULOVIICH AYTMATOV), Kyrgyz author and diplomat (b. Dec. 12, 1928, Sheker, Kirgiz A.S.S.R. [now Kyrgyzstan], U.S.S.R.—d. June 10, 2008, Nürnberg,

Elsner—dpa/Landov

Kyrgyz author Chingiz Aytmatov

Ger.), explored such themes as love and friendship, the trials and heroism of wartime, and the emancipation of Kyrgyz youth from restrictive custom and tradition; he was awarded the Soviet state prize for literature in 1968, 1977, and 1983. Aytmatov’s literary career started in 1952, and in 1959 he began

writing for the newspaper *Pravda*. He achieved major recognition (and the Lenin Prize) for the short story collection *Povesti gor i stepey* (1963; *Tales of the Mountains and Steppes*). Among Aytmatov's most important Kyrgyz-language works are *Trudnaya pereprava* (1956; "A Difficult Passage"), *Pervy uchitel* (1967; "The First Teacher"), and *Proshchay, Gulsary!* (1967; *Farewell, Gulsary!*). His novels written originally in Russian include *I dolshe veka dlitsia den* (1981; *The Day Lasts More than a Hundred Years*), *Plakha* (1986; *The Place of the Skull*), and *Tavro Kassandry* (1995; "The Mark of Cassandra"). He also co-wrote, with Kaltai Mukhamedzhanov, *Voskhozhenie na Fudziyamu* (1973; *The Ascent of Mount Fuji*), a play that was considered provocative during the Soviet era for its examination of the themes of authority and dissent. Aytmatov was a member (1966–89) of the Supreme Soviet of the U.S.S.R. and an adviser (1990–91) to Soviet Pres. Mikhail Gorbachev, and he also served as Soviet ambassador to Luxembourg and Belgium. After Kyrgyzstan gained independence (1991), Aytmatov served in the Kyrgyz diplomatic corps and as a member of the parliament.

Azcona, Rafael, Spanish novelist and screenwriter (b. Oct 24, 1926, Logroño, Spain—d. March 24, 2008, Madrid, Spain), penned some 100 screenplays, notably for *La Grande Bouffe* (1973) and *Belle Epoque* (1992), which won the Academy Award for best foreign-language film. Many of Azcona's scripts—including his first two, *Se vende un tranvía* and *El pisito* (both 1959)—were adapted from his own novels and short stories. In 1988 he won the first of five Goya Awards for best screenplay, for *El bosque animado* (he was simultaneously nominated for *Moros y cristianos*). He was granted Spain's Fine Arts Gold Medal in 1994 and was awarded an honorary Goya for lifetime achievement in 1998. Azcona's last film, *Los girasoles ciegos* (2008), was an adaptation of a novel by Alberto Méndez.

Barnato Walker, Diana, British pilot (b. Jan. 15, 1918, London, Eng.—d. April 28, 2008, Surrey, Eng.), as a prominent member of the Atagirls, the women's branch of the World War II Air Transport Auxiliary (ATA), delivered some 250 Spitfires and other planes to Royal Air Force (RAF) squadrons, often in poor weather or under enemy attack and without weapons or functioning instruments. She was born into a wealthy

family, the daughter of Woolf Barnato (chairman of Bentley Motors and three-time winner of the Le Mans 24-hour automobile race) and the granddaughter of South African diamond baron Barney Barnato. She took private flying lessons for fun in the 1930s and in 1941 joined the ATA because women were not accepted as RAF pilots. In 1944 she married Spitfire pilot Derek Walker, but he was killed in a plane crash less than a year later. After the war Barnato Walker obtained a commercial pilot's license and worked with the Women's Junior Air Corps. On Aug. 26, 1963, she broke the sound barrier in a Lightning fighter jet, setting a world record for women of Mach 1.65 (2,031 km/hr; 1,262 mph). Barnato Walker was made MBE in 1965. Her autobiography, *Spreading My Wings*, was published in 1994.

Barnes, Clive, British-born American theatre and dance critic (b. May 13, 1927, London, Eng.—d. Nov. 19, 2008, New York, N.Y.), championed critical dance coverage and made the stage medium accessible to a generation of theatregoers. Following his graduation from the University of Oxford, where he worked as an editor for a university dance periodical, Barnes led the charge among young critics aiming to legitimize specialized dance criticism. He freelanced for a time before being hired (1961) as the first full-time dance critic for *The Times* (London). In 1965 he was hired by the *New York Times*, where he spent the next 13 years writing about theatre and dance and growing in stature to become one of the city's most influential critics. When in 1978 he was asked to confine his coverage to dance, he left for the *New York Post*. There he was allowed to continue dual critical duties. Barnes also continued throughout his career to freelance for other publications. Always independent in his tastes, he was an early supporter of such choreographers as George Balanchine and Martha Graham and of Russian dancer Mikhail Baryshnikov.

Baronova, Irina, Russian-born ballerina (b. March 13, 1919, Petrograd [now St. Petersburg], Russia—d. June 28, 2008, Byron Bay, N.S.W., Australia), was the youngest and most graceful of the "baby ballerinas," a trio of teenage dancers who in the 1930s captured public attention and attracted audiences to the Ballet Russe de Monte Carlo. Baronova, remembered by many for her golden locks and delicate features, conveyed elegance and energy on stage. In

1920 her family fled from the Russian Revolution, living first in Romania before moving (1928) to Paris so that she could study dance under former prima ballerina Olga Preobrajenska. George Balanchine saw Baronova dance at the Paris Opéra and cast her in his staging of *Orpheus in the Underworld* (1931), for which she received sensational reviews. The following year he invited her to join the Ballet Russe de Monte Carlo, and during her 15-year career, she toured worldwide with that company and Bal-

Russian-born ballerina Irina Baronova

let Theatre (later American Ballet Theatre). Baronova danced in a wide variety of ballets, including *Les Présages* (in a role she originated in 1933) and the 1941 premiere of *Bluebeard*. She also appeared in several films, including the 2005 documentary *Ballets Russes*. Baronova retired from dancing in 1946 and eventually settled in Australia. Her memoirs, *Irina: Ballet, Life and Loves*, were published in 2005.

Baugh, Sammy (SAMUEL ADRIAN BAUGH), American football player (b. March 17, 1914, Temple, Texas—d. Dec. 17, 2008, Rotan, Texas), led the National Football League (NFL) in forward passing in 6 of his 16 seasons (1937–52) with the Washington Redskins and was considered the first outstanding quarterback in the history of American professional gridiron football. On two oc-

casions (Oct. 31, 1943, and Nov. 23, 1947), he passed for six touchdowns in a single game. He also excelled as a punter and as a defensive back. In 1943 Baugh led the NFL in passing, punting, and interceptions (as a defensive back). At Texas Christian University, Baugh became the greatest passer in the Southwest Conference, and he led his team to victory in the 1936 Sugar Bowl and the 1937 Cotton Bowl. After graduation in 1937, Baugh joined the Redskins and also the St. Louis Cardinals baseball organization, for which he played shortstop in the minor leagues for a few years. Nicknamed "Slingin' Sammy," Baugh led the NFL in passing in his first season and helped Washington achieve an 8–3 record and a spot in the championship game, where he threw three touchdown passes in a 28–21 upset of the Chicago Bears. He led the NFL in passing again in 1940, 1943, 1945, 1947, and 1949 and in average yards per punt in 1940–43. As a defensive back, he led the NFL in pass interceptions in 1943 with 11. He had a career record of 1,693 pass completions in 2,995 attempts (56.5%) for 21,886 yd and 187 touchdowns. Baugh was head coach of two American Football League teams, the New York Titans (afterward Jets) in 1960–61 and the Houston Oilers in 1964. He was elected to the Pro Football Hall of Fame in 1963.

Bessmertnova, Natalya Igoryevna, Russian ballerina (b. July 19, 1941, Moscow, U.S.S.R.—d. Feb. 19, 2008, Moscow, Russia), brought elegance, technical expertise, and a deeply romantic style to some 30 different roles during her long career (1961–95) with the Bolshoi Ballet. Bessmertnova was particularly admired for her subtle interpretation of the title character in *Giselle* (which she first performed in 1963) and for the roles created for her by the Bolshoi's artistic director and chief choreographer Yury Grigorovich, whom she married in 1968. An internal dispute at the Bolshoi in 1995 led to Grigorovich's resignation and a one-day strike by some of the dancers (including Bessmertnova) that forced the ballet company's first canceled performance. Bessmertnova was fined and dismissed, though she later returned as a teacher and coach.

Bevel, the Rev. James Luther, American civil rights leader (b. Oct. 19, 1936, Itta Bena, Miss.—d. Dec. 19, 2008, Springfield, Va.), was a pivotal and passionate figure during the early 1960s

and, as the project director of the Southern Christian Leadership Conference, became one of the most influential advisers to the Rev. Martin Luther King, Jr., who headed the SCLC. On Bevel's recommendation, hundreds of youngsters were mobilized in 1963 in the "children's crusade" to participate in peaceful antisegregation protests in downtown Birmingham, Ala. The news coverage, which featured children being water-hosed by police and more than 600 youngsters arrested, prompted a groundswell of support for the civil rights movement. Bevel was later instrumental in organizing the historic march in Alabama from Selma to Montgomery. The event was credited with helping to usher in the 1965 Voting Rights Act. Though Bevel initially intended to pursue a recording career, he recognized a calling to the ministry and was ordained after attending the American Baptist Theological Seminary in Nashville. Bevel was forced from his position with the SCLC after exhibiting erratic behaviour. His contention that convicted assassin James Earl Ray was not guilty of King's murder embarrassed many in the movement. In 2008 Bevel's legacy was further tarnished when he was found guilty of having engaged in an incestuous relationship with a teenage daughter in the 1990s.

Birla, K(ishna) K(umar), Indian industrialist and philanthropist (b. Nov. 12, 1918, Pilani, Rajasthan state, British India—d. Aug. 30, 2008, Kolkata [Calcutta], India), guided the Birla international conglomerate (originally founded by his father, Ghanshyam Das Birla), with holdings ranging from sugar to shipping to the nationally distributed daily newspaper *Hindustan Times*. Birla attended Lahore University (B.A., 1939) before joining the family business in 1940. He also represented Mahatma Gandhi's Congress Party in the Rajhya Sabha (upper house of parliament) for 18 years (1984–2002). Birla's philanthropic work included the Birla Institute of Science and Technology and the International Centre for Excellence (both established by his father), the K.K. Birla Foundation, the K.K. Birla Academy of Scientific, Historical and Cultural Research, and the Lakshmi Narayan Hindu temple in Delhi.

Böselager, Count Philipp von, German army officer (b. Sept. 6, 1917, Burg Heimerzheim, near Bonn, Ger.—d. May 1, 2008, Altenahr, Ger.), provided

the plastic explosives for the briefcase bomb that was used in the assassination attempt on Adolf Hitler by German officers on July 20, 1944. Böselager attended Jesuit Roman Catholic schools and hoped to study law, but his aristocratic family suggested that he enlist in the cavalry instead, in part to avoid joining the National Socialist Party. He was approached by antiwar conspirators as part of a plot to shoot Hitler and SS chief Heinrich Himmler at a conference in March 1943, but the plan was called off at the last minute. In 1944 Böselager was involved in research on captured British-made explosives, which he hand delivered to the plotters. He and his brother George, a coconspirator, avoided arrest after the bomb failed to kill Hitler, and their roles in the episode were not revealed until much later. After the war Böselager completed his studies in law and economics, worked with the West German army, and addressed young people on Nazi atrocities. He later revealed that he regretted not shooting Hitler in 1943 when he had the chance.

Bowman, Christopher, American figure skater (b. March 30, 1967, Los Angeles, Calif.—d. Jan. 10, 2008, North Hills, Calif.), was dubbed "Bowman the Showman" because of his flamboyance on the ice and his ability to thrill a crowd with his dynamic performances. During his career Bowman, who captured the U.S. men's figure skating titles in 1989 and 1992, took a silver (1989) and a bronze medal (1990) at the world championships. He also competed in the 1988 and 1992 Winter Olympics, placing seventh and fourth, respectively. Bowman later performed with the Champions on Ice tour and the Ice Capades. After his professional skating career ended, Bowman admitted that he had a serious cocaine addiction; his death was attributed to a drug overdose.

Brant, Henry Dreyfuss, American composer (b. Sept. 15, 1913, Montreal, Que.—d. April 26, 2008, Santa Barbara, Calif.), was a musical prodigy who had begun composing by age nine (for an ensemble of instruments of his own invention) and went on to produce avant-garde compositions whose performances often relied upon the special placement of instruments. Some of his earliest works included unconventional acoustic sound sources, notably *Music for a Five and Dime Store* (1932), which incorporated a collection of kitchen im-

Carlos Barria—Reuters/Landov

Mambo pioneer Cachao

the mambo. Cachao studied music as a child, and by age 13 he was playing double bass with the Havana Philharmonic Orchestra. In the late 1930s, with the Arcaño dance band, Cachao and Orestes infused the sedate Cuban *danzón* with a new Afro-Cuban beat that they called mambo, which by the 1950s represented Cuban music worldwide. Jam sessions that Cachao began in 1957 helped Cuban musicians develop salsa. In 1962 he left Cuba, first for Spain and then for New York City, where he performed and recorded into the 1970s. By 1980, after a short period in Las Vegas, he had moved to Miami. To bring the musician wider exposure, Cuban-born actor and director Andy García produced recording sessions that resulted in *Master Sessions I and II* (the first volume received a 1994 Grammy Award) and directed a documentary titled *Cachao. . . como su ritmo no hay dos* (1994). Cachao returned to the international stage in the 1990s. He received a Grammy for the album *¡Ahora Sí!* (2004), and he was the subject of a 2008 documentary, *Cachao: uno más*.

Calder, Angus Lindsay, Scottish critic, poet, and historian (b. Feb. 5, 1942, Sutton, Surrey, Eng.—d. June 5, 2008,

plements as well as a violin and piano. His *Antiphony 1* (1953) widely dispersed five different orchestral groups; *Voyage Four* (1963) positioned musicians beneath the floor as well as on walls; and *Orbits* (1979) featured 80 trombones. Brant's Pulitzer Prize-winning *Ice Field* (2001) drew on a childhood experience in which he traveled the Atlantic aboard an ocean liner that maneuvered around many icebergs. He taught composition in New York City at Columbia University and the Juilliard School before serving (1957–80) as an instructor at Bennington (Vt.) College. In 2007 Brant completed *Textures and Timbres*, a textbook on orchestration.

Brecht, George (GEORGE MACDARMID), American conceptual artist and sculptor (b. Aug. 27, 1926, New York, N.Y.—d. Dec. 5, 2008, Cologne, Ger.), created art from an approach that valued fluid boundaries between artistic disciplines and playful engagement with the viewer. Brecht attended (1946–50) the Philadelphia College of Pharmacy and Science and took a job as a research chemist but soon became inspired by the works of avant-garde composer John Cage. Although Brecht's own attempts at composition were short-lived, he retained from Cage both an interest in chance and a focus on multimedia "events" as defining elements of his work, and by the early 1960s he was affiliated with the Fluxus movement, a like-minded group of conceptual artists. Brecht was especially known for his sculptural installations of everyday objects and for his use of written instructions, which he called "event scores," in the creation of art.

Brown, Bill (WILLIAM ALFRED BROWN), Australian cricketer (b. July 31, 1912, Toowoomba, Queens., Australia—d. March 16, 2008, Brisbane, Australia), was the last pre-World War II Australian Test player and one of the last of the Invincibles of captain Don Bradman's 1948 touring side that was unbeaten in England. Brown, a right-handed opening batsman, made his first-class debut for New South Wales in 1932 and his Test debut in 1934 against England at Trent Bridge (Nottingham). He captained (1946) Australia in the first postwar Test match, against New Zealand. In his war-shortened career, Brown appeared in 189 first-class matches, scoring 13,838 runs in 284 innings (average 51.44), with 15 not outs, 39 centuries, and a high score of 265 not out. He played in 22 Tests, scoring 1,592

runs in 35 innings (average 46.82), with a high score of 206 not out. His partnerships with Jack Fingleton for Australia were especially productive, averaging 63.75 in 10 Tests, including the first opening partnership of more than 200 for Australia: a 233 against South Africa at Cape Town in 1936. In the field Brown took 110 first-class catches, including 14 in Tests. He retired from Test cricket in 1948 and from first-class cricket after the 1949–50 season. In 2000 Brown was awarded the Medal of the Order of Australia.

Buckley, William Frank, Jr., American editor, commentator, and writer (b. Nov. 24, 1925, New York, N.Y.—d. Feb. 27, 2008, Stamford, Conn.), became an important intellectual influence in politics as the founder (1955) and editor in chief of the journal *National Review*, which he used as a forum for conservative views and ideas. The oil fortune amassed by Buckley's immigrant grandfather enabled the boy to be reared in comfortable circumstances. His early education was by private tutors and at two English boys schools. Buckley spent a year at the University of Mexico and then served three years in the U.S. Army during World War II before entering Yale University. There he taught Spanish, distinguished himself in debate, and was chairman of the *Yale Daily News*. He later joined the staff of *The American Mercury* literary magazine. His column of political commentary, "On the Right," was syndicated in 1962 and appeared regularly in more than 200 newspapers. Starting in 1966, Buckley served as host of *Firing Line*, a weekly television interview program dealing with politics and public affairs. He wrote more than 50 books, among them *God and Man at Yale* (1951), *Up from Liberalism* (1959), and *Rumbles Left and Right* (1963). He coauthored *McCarthy and His Enemies* (1954), and in the late 1970s he turned his hand to writing spy novels, which include *Saving the Queen* (1976), *Stained Glass* (1978), *Marco Polo, if You Can* (1982), and *See You Later Alligator* (1985). His political novel *The Rake* was published in 2007, and at the time of his death, Buckley was working on books about politicians Barry Goldwater and Ronald Reagan.

Cachao (ISRAEL CACHAO LÓPEZ), Cuban-born bassist, composer, and bandleader (b. Sept. 14, 1918, Havana, Cuba—d. March 22, 2008, Coral Gables, Fla.), was credited, along with his brother, Orestes, with the creation of

Edinburgh, Scot.), published numerous literary criticisms, collections of poetry, and historical analyses, but he was especially admired for his critical work *T.S. Eliot* (1987). Calder's impact as a historian was mainly based on his doctoral thesis, *The People's War: Britain, 1939–1945* (1969, reissued 1992), in which he questioned British tactics during World War II through the eyes of ordinary citizens; the book garnered him a *Mail on Sunday*/John Llewellyn Rhys Prize in 1970. He wrote several other works concerning British history, including *Revolutionary Empire: The Rise of the English-Speaking Empires from the Fifteenth Century to the 1780s* (1981) and *The Myth of the Blitz* (1991). In 1967 Calder won an Eric Gregory Award for his poetry, and in 1984 he helped establish the Scottish Poetry Library.

Calvo Sotelo y Bustelo, Leopoldo, Spanish politician (b. April 14, 1926, Madrid, Spain—d. May 3, 2008, Pozuelo de Alarcón, near Madrid), was Spain's second prime minister (February 1981–December 1982) to preside over the country's difficult transition from Francisco Franco's military dictatorship to a modern constitutional monarchy. Calvo Sotelo survived an attempted right-wing coup during his inauguration on Feb. 23, 1981; within two days King Juan Carlos had rallied support for the government, and Calvo Sotelo was sworn in on February 25. Although he served as prime minister for less than two years, he was credited with instituting much-needed reforms in post-Franco Spain, negotiating the country's entry into NATO, and authorizing a degree of autonomy that temporarily quelled rebellion in the factious Basque region. Trained as a chemical engineer, he represented an industry trade union in Franco's government before joining the cabinet under Prime Minister Adolfo Suárez. Calvo Sotelo cofounded the coalition political party Union of the Democratic Centre, which won a majority in the 1979 parliamentary elections, and was named to succeed Suárez when the latter resigned in February 1981. When Felipe González's Socialist Party won a parliamentary majority in 1982 elections, Calvo Sotelo stepped down in a peaceful handover of power.

Caminer, David (DAVID TREISMAN), British computer software engineer (b. June 26, 1915, London, Eng.—d. June 19, 2008, London) developed (with hardware designer John Pinkerton), the world's first business computer, LEO

(Lyons Electronic Office), which revolutionized the speed and accuracy with which routine business data could be processed. Caminer, with Pinkerton, completed LEO in 1951. It was first utilized to estimate the cost of tea-shop baked goods, and within two years Lyons became the first company to issue computerized paychecks. Caminer designed two additional generations of LEO and from 1959 helped run LEO Computers, a corporate spin-off. He remained with the organization through a series of mergers and led the development of a communications network designed for the European Commission. Caminer was made OBE in 1980.

Capa, Cornell (KORNEL FRIEDMANN), American photographer (b. April 10, 1918, Budapest, Hung.—d. May 23, 2008, New York, N.Y.), as a *Life* magazine photojournalist (1946–67), made issues of social justice and politics the focus of images that provided an appreciation of the beauty of simple, ordinary events; he also founded (1974) the International Center of Photography in New York City. Capa's best-known photo depicts three elegant ballerinas (1958) at the Bolshoi Ballet School in Moscow. Following the death (1954) in Vietnam of his brother Robert, a wartime photographer, Capa joined Magnum Photos (which Robert cofounded). Some of Cornell Capa's most arresting works were of the presidential campaigns of Adlai Stevenson and John F. Kennedy. In addition, he captured in stills the education of mentally handicapped children, Christian missionaries in Latin America, and activities related to the regime of Pres. Juan Perón in Argentina. Some of Capa's books include *Farewell to Eden* (1964), *The Concerned Photographer* (1968), and *Cornell Capa: Photographs* (1992).

Cardoso, Ruth (RUTH VILAÇA CORRÊA LEITE CARDOSO), Brazilian anthropologist, educator, and public figure (b. Sept. 19, 1930, Araraquara, Braz.—d. June 24, 2008, São Paulo, Braz.), as the prominent wife of Brazilian Pres. Fernando Henrique Cardoso, and thus Brazil's first lady from 1995 to 2003, advocated and initiated important social-reform programs. Perhaps Cardoso's greatest achievement was establishing (1995) Community Solidarity (later called *Comunitas*), an organization devoted to combating illiteracy, poverty, and hunger through public and private economic investment. Her model for the organization was imi-

tated worldwide, owing in part to its success at teaching some three million Brazilians to read. Cardoso studied anthropology at the University of São Paulo (B.A., 1953; Ph.D., 1972), where she met Fernando Cardoso. They were married in 1952. After a 1964 coup overthrew Brazil's government, the pair went into exile, living in several countries, including the U.S., where she completed her postdoctoral studies as a Fulbright scholar at Columbia University, New York City. She taught at various universities, including the University of California, Berkeley. After Cardoso and her husband returned to Brazil in the 1970s, they founded the Brazilian Centre for Analysis and Planning (Cebrap), a social science research and advocacy organization. She also spent several years on the board of the United Nations Foundation.

Carey, Ron (RONALD ROBERT CAREY), American labour leader (b. March 22, 1936, New York, N.Y.—d. Dec. 11, 2008, New York, N.Y.), as president (1992–97) of the International Brotherhood of Teamsters (IBT), was one of the foremost American labour figures of the decade; although he spearheaded efforts to clean up corruption within the union, he was eventually forced from office after becoming embroiled in a campaign-finance scandal.

Carlin, George (GEORGE DENIS PATRICK CARLIN), American comedian (b. May 12, 1937, New York, N.Y.—d. June 22, 2008, Santa Monica, Calif.), began working in the late 1950s as a wisecracking radio disc jockey and low-key stand-up comedian known for such whimsical routines as “Wonderful WINO” and the “Hippy Dippy Weatherman”; beginning in the 1970s, however, he transformed himself into a provocative and incisive antiestablishment comic icon. Carlin was most closely identified with the monologue “Seven Words You Can Never Say on Television,” in which he satirically analyzed the use and misuse of seven of the raunchiest obscenities in the English language (which were still banned on American commercial television and radio in 2008). Carlin was arrested in 1972 for performing the monologue onstage, but a judge dismissed the case. In 1973 New York City radio station WBAI-FM triggered a lawsuit by the Federal Communications Commission (FCC) after it aired a recorded version of the routine called “Filthy Words”; the landmark “Carlin case” was finally settled in 1978

Vincent Laforet—The New York Times/Redux

Antiestablishment comedian George Carlin

by the U.S. Supreme Court, which gave the FCC the right to determine when to censor radio and TV broadcasts. Carlin released more than 20 comedy record albums and starred in 14 HBO cable TV specials, the last of which, *It's Bad for Ya*, aired in March 2008. As an actor, he usually played a character inspired by his own comic persona (notably in the short-lived situation comedy *The George Carlin Show* [1994]), with the notable exception of his stint in the 1990s as the amiable narrator (and onscreen host, Mr. Conductor) of the children's programs *Thomas the Tank Engine* and *Friends* and *Shining Time Station*. Carlin was honoured with the American Comedy Awards' Lifetime Achievement Award (2001) and the Mark Twain Prize for American Humor (2008). In 2004 cable TV's Comedy Central network ranked Carlin second on its list of the "100 Greatest Stand-Ups of All Time," behind African American actor-comedian Richard Pryor and just ahead of the legendary Lenny Bruce.

Cartan, Henri (HENRI-PAUL CARTAN), French mathematician (b. July 8, 1904, Nancy, France—d. Aug. 13, 2008, Paris, France), made fundamental advances in the theory of analytic functions. Cartan was also a founding member of the secretive group of mathematicians who published the multivolume *Éléments de mathématique* (begun in 1939) under the joint pseudonym Nicolas Bourbaki. Cartan, the son of the distinguished mathematician Élie Cartan, earned a

Ph.D. in 1928 from the École Normale Supérieure in Paris (ENS-Ulm) and began his academic career as professor of mathematics (1928–29) at the Lycée Caen. He was appointed deputy professor at the University of Lille in 1929 and two years later became professor of mathematics at the University of Strasbourg. In 1940 he joined the ENS-Ulm faculty, where he remained until 1965; from 1970 to 1975 he taught at the University of Paris-Sud at Orsay. His major works include *Homological Algebra* (1956; written with Samuel Eilenberg) and *Elementary Theory of Analytic Functions of One or Several Complex Variables* (1963). Cartan was the recipient of the 1980 Wolf Foundation Prize in Mathematics, and in 1989 he was made commander of the Legion of Honour.

Caymmi, Dorival, Brazilian singer and songwriter (b. April 30, 1914, Salvador, Bahia state, Braz.—d. Aug. 16, 2008, Rio de Janeiro, Braz.), became a national icon with his deep velvety voice and romantic lyrics that evoked the charm of Bahia's fishing villages, its beaches, and its beautiful women. Caymmi vaulted to fame when his song "O que é que a Baiana tem?" became a hit in 1938 for Brazilian bombshell Carmen Miranda, whom Caymmi instructed to move her arms and hands to the beat of the music—movement that became her trademark. Caymmi, who contributed more than 100 tunes to his country's songbook, notably "O samba da minha terra," "Marina," and "Das rosas," performed as a regular on Rádio Nacional and released some 20 albums. He was awarded France's Order of Arts and Letters in 1984.

Césaire, Aimé-Fernand-David, Martinican poet, playwright, and politician (b. June 26, 1913, Basse-Pointe, Martinique—d. April 17, 2008, Fort-de-France, Martinique), was cofounder of Negritude, an influential movement to restore the cultural identity of black Africans; he was often credited with having coined the movement's name. Césaire left Martinique in 1931 to be educated in Paris, where he became associated with Léopold Sédar Senghor (later president of Senegal) and others involved in the Negritude movement. In 1939 Césaire returned to Martinique and engaged in political action supporting the decolonization of the French colonies of Africa. In 1945 he became mayor of Fort-de-France, the capital of Martinique, and he retained that position until 2001 (he was briefly

out of office in 1983–84). In 1946 Césaire became a deputy for Martinique in the French National Assembly, where he remained until 1993. Viewing the plight of the blacks as only one facet of the proletarian struggle, he joined (1946) the Communist Party, but he quit a decade later and formed the Martinique Progressive Party. As a poet, Césaire found that Surrealism, which freed him from the traditional forms of language, was the best expression for his convictions. He voiced his ardent rebellion in a French that was heavy with African imagery. In the fiery poems of *Cahier d'un retour au pays natal* (1939, rev. ed. 1956; *Return to My Native Land*, 1948) and *Soleil cou-coupé* (1948), he lashed out against the oppressors. Césaire later turned to the theatre, discarding Negritude for black militancy. His tragedies are vehemently political, notably *La Tragédie du Roi Christophe* (1963; *The Tragedy of King Christophe*), a drama of 19th-century Haiti; *Une Saison au Congo* (1966; *A Season in the Congo*), an epic look at the political career and assassination of Congolese leader Patrice Lumumba; and *Une Tempête* (1969; *The Tempest*, 1985), which was an adaptation of William Shakespeare's *The Tempest*.

Chahine, (Gabriel) Youssef, Egyptian filmmaker (b. Jan. 25, 1926, Alexandria, Egypt—d. July 27, 2008, Cairo, Egypt), crafted more than 40 films, including musicals, dramas, comedies, and historical epics. Much of his work, however, was critical of the Egyptian

Egyptian film director Youssef Chahine

Mohamed al Sehety/AP

government and condemned social oppression and religious fanaticism; his willingness to tackle risky subjects caused some of his films to be censored, notably *Al-Mohager* (1994; *The Emigrant*), which was banned in Egypt after militant Islamists denounced it as blasphemous. Chahine directed his first film, *Baba Amin (Father Amine)*, in 1950. Perhaps his most prominent works were *Bab el hadid* (1958; *Cairo: Central Station*), in which he played the leading role, and the autobiographical Alexandria trilogy and its follow-up, *Alexandria . . . New York* (2004). He was honoured in 1997 with a lifetime achievement award at the Cannes Festival, and his final film, *Heya fawda* (2007; *Chaos*), was screened at the Toronto and Venice film festivals.

Charisse, Cyd (TULA ELLICE FINKLEA), American dancer and actress (b. March 8, 1921/22, Amarillo, Texas—d. June 17, 2008, Los Angeles, Calif.), won acclaim for her glamorous looks and sensual, technically flawless dancing in a handful of 1950s movie musicals, notably *The Band Wagon* (1953) and *Silk Stockings* (1957), both with Fred Astaire. As

American dancer Cyd Charisse in *The Band Wagon*

Hulton Archive/Getty Images

a teenager, she toured with the Ballet Russe de Monte Carlo before debuting in a ballet sequence in the film *Something to Shout About* (1943), under the stage name Lily Norwood. She garnered the attention of MGM Studios, which hired her in 1946 and changed her name to Cyd Charisse, based on a childhood nickname. Charisse achieved star status with her dialogueless dance routine opposite Gene Kelly in the musical *Singin' in the Rain* (1952). She later partnered with Kelly in the smash musicals *Brigadoon* (1954) and *It's Always Fair Weather* (1955), but she had limited success as a straight actress. In 1963 Charisse and her husband, singer Tony Martin, formed a nightclub act and began touring internationally. The couple wrote *The Two of Us* (1976), a combined autobiography. She appeared on television and made a stage comeback in the Broadway musical *Grand Hotel* (1992). U.S. Pres. George W. Bush awarded Charisse a National Medal of the Arts in 2006.

Chopra, B(aldev) R(aj), Indian filmmaker (b. April 22, 1914, Punjab, British India—d. Nov. 5, 2008, Mumbai [Bombay], India), was respected for producing and directing socially relevant Hindi-language films, including the musical *Naya daur* (1957), in which a village resists the advent of mechanized transport; *Sadhna* (1958), which dealt with prostitution; the murder mystery *Kanoon* (1960); *Gumrah* (1963), which addressed adultery and won an Indian National Film Award as best Hindi film; *Hamraaz* (1967), for which Chopra won the first Indian National Film Award for best director; and *Insaf ka tarazu* (1980), which focused on rape. In 1988 Chopra directed the popular television serial *Mahabharat*, based on the Sanskrit epic the *Mahabharata*. Chopra received the 1998 Dadasaheb Phalke Award for his contributions to Indian cinema.

Christodoulos (CHRISTOS PARASKEVAIDIS), Greek religious leader (b. Jan. 17, 1939, Xanthi, Greece—d. Jan. 28, 2008, Psychiko, Greece), won adulation and stirred controversy as leader of the Greek Orthodox Church (archbishop of Athens and All Greece) from 1998. He was perhaps best known outside Greece for receiving Pope John Paul II in 2001, in a first step toward healing the rift between the Roman Catholic and the Orthodox churches, and for his 2006 visit to Pope Benedict XVI. Within Greece, Christodoulos was a political

Lefteris Pitarakis/AP

Greek Orthodox Church leader Christodoulos

conservative and extreme nationalist known for his failed crusade in 2001 against the removal of religious affiliation from national identity cards and for his embrace of the Internet and the concerns of teenagers, which raised the popularity of the church among the young. He became a priest in 1965 and was elected metropolitan of Demetrias in 1974 before becoming the youngest man ever to be named head of the Greek Orthodox Church.

Clarke, Sir Arthur Charles, British author (b. Dec. 16, 1917, Minehead, Somerset, Eng.—d. March 19, 2008, Colombo, Sri Lanka), wrote more than 100 fiction and nonfiction books, but he was best known for such visionary science-fiction novels as *Childhood's End* (1953), *The City and the Stars* (1956), *Rendezvous with Rama* (1973; winner of Nebula and Hugo awards), *The Fountains of Paradise* (1979; winner of Nebula and Hugo awards), and *The Songs of Distant Earth* (1986) and for his work on Stanley Kubrick's hugely successful motion picture *2001: A Space Odyssey* (1968). The cult film was based on Clarke's short story "The Sentinel" (1951), which Clarke and Kubrick subsequently developed into a novel (1968) published under the same name as the movie. Clarke later wrote three sequels, *2010: Odyssey Two* (1982; filmed 1984), *2061: Odyssey Three*

(1988), and *3001: The Final Odyssey* (1997). As a young man, Clarke worked as a government auditor (1936–41) and joined a small advanced group called the British Interplanetary Society. While serving (1941–46) in the Royal Air Force as a radar instructor and technician, he published his first science-fiction stories. In 1945 he wrote the article “Extra-Terrestrial Relays” for *Wireless World*, in which he envisioned a communications satellite system that would relay radio and television signals throughout the world; this system, which was in operation two decades later, was the first of many scientific advances that Clarke predicted. Collections of his essays and lectures include *Voices from the Sky* (1965), *The View from Serendip* (1977), *Ascent to Orbit: A Scientific Autobiography* (1984), *As-tounding Days: A Science Fictional Autobiography* (1989), *By Space Possessed* (1993), and *Greetings, Carbon-Based Biped!* (1999). The Arthur C. Clarke Center (later Institute) for Modern Technologies was established in Sri Lanka in 1984. Clarke was awarded a knighthood in 1998, but it was not officially conferred until 2000.

Claus, Hugo Maurice Julien, Belgian novelist, playwright, and poet (b. April 5, 1929, Bruges, Belg.—d. March 19, 2008, Antwerp, Belg.), was a towering figure in Belgian literature and was regarded as a leading 20th-century Renaissance man. Claus was best known for his semiautobiographical novel *Het verdriet van België* (1983; *The Sorrow of Belgium*, 1990), set in Flanders in the years surrounding World War II. His novels, which also include *De metsiers* (1950; *The Duck Hunt*, 1955) and *De verwondering* (1962; “Bewilderment”), are experimental in nature and use a variety of narrative structures. The themes of his poetry, as in the rest of his oeuvre, are antiauthoritarian and frequently shocking, as exemplified in *Oostakkerse gedichten* (1955). Among his many notable plays are *Suiker* (1958; *Sugar*, 2007), *Vrijdag* (1969; *Friday*, 1972), and *Het leven en de werken van Leopold II* (1970). Claus was also a respected short-story writer, translator, scriptwriter, theatre director, and painter.

Conner, Bruce, American artist (b. Nov. 18, 1933, McPherson, Kan.—d. July 7, 2008, San Francisco, Calif.), explored themes of light and dark in a wide variety of media, including assemblages, experimental film, draw-

ings, and photograms. Associated with the San Francisco Bay Area Beat scene in the late 1950s, he first attracted attention with his complex assemblages of found objects. The best known of his short films (also collages of found and new footage) was the 12-minute *A Movie* (1958), which in 1991 was added to the National Film Registry at the Library of Congress. Other works include intricate mandala drawings, photograms of his body, ink-blot drawings, and small collages. Conner’s art was acquired by several museums.

Conté, Lansana, Guinean strongman (b. c. 1934, Loumbaya-Moussaya, Dubréka prefecture, French Guinea—d. Dec. 22, 2008, Conakry, Guinea), was the autocratic ruler of his country for almost 25 years after initially taking control as the head of the Military Committee for National Recovery (CMRN) that assumed power in April 1984, shortly after the death of Pres. Ahmed Touré. Conté, a member of the Susu ethnic group and a Muslim, received his military training in Côte d’Ivoire and Senegal before enlisting (1955) in the French army. He took part in the defense of Conakry during the attempted invasion from neighbouring Portuguese Guinea (now Guinea-Bissau) in November 1970, though he fought with Guinea-Bissau nationalists in 1971 during their struggle for independence from Portugal. After taking a technical course (1974) in Minsk, U.S.S.R. (now in Belarus), he was made (1975) chief of staff of land forces, a post that he retained until Touré’s death. President Conté promised the restoration of human rights and full democratic elections and was reelected three times (1993, 1998, and 2003) in ostensibly multiparty ballots, but he grew increasingly authoritarian amid growing accusations of fraud and intimidation of the opposition. During the last three years of his life, Conté, who was believed to be diabetic and possibly suffering from leukemia, sought medical treatment outside of the country.

Cook, Beryl (BERYL FRANCES LANSLEY), British artist (b. Sept. 10, 1926, Egham, Surrey, Eng.—d. May 28, 2008, Plymouth, Devon, Eng.), painted humorous scenes of plump people enjoying themselves in common social situations, such as shopping, drinking in bars, or dancing in clubs. Cook had no professional training and did not begin painting until she was in her 40s. After

a friend persuaded her to allow him to sell some of her paintings, Cook’s reputation grew. In 1975 she had her first exhibition at the Plymouth Arts Centre and was featured in *The Sunday Times* magazine. Her first London exhibition followed at the Portal Gallery in 1976. Cook earned widespread fame when she was featured in 1979 in an episode of the TV program *The South Bank Show*. She was made OBE in 1995; because she was intensely shy, however, she refused to travel to Buckingham Palace to accept the award in person. To honour the Queen’s Golden Jubilee in 2002, Cook painted *The Royal Couple*, which was featured in the Golden Jubilee Exhibition. In 2004 BBC TV aired *Bosom Pals*, an animated series featuring popular characters from some of Cook’s paintings. The Portal Gallery in London hosted (2006) an exhibition of Cook’s work to honour her 80th birthday.

Cornioley, Pearl (CECILE PEARL WITHERINGTON), British wartime agent (b. June 24, 1914, Paris, France—d. Feb. 24, 2008, Loire Valley, France), as an operative of the British Special Operations Executive (SOE), commanded a network of French Resistance forces during World War II. After her British expatriate parents returned to England in 1940, Pearl Witherington worked for the British Air Ministry until June 1943, when she joined the SOE. The following September she parachuted into occupied France under the code name Pauline, and by May 1944 she was overseeing some 3,000 Resistance fighters engaged in guerrilla warfare against German troops, who reportedly offered a reward of 1 million francs for her capture. In October 1944 she returned to England and married her longtime French fiancé and fellow Resistance member, Henri Cornioley. After the war she was deemed ineligible for a Military Cross for bravery because she was a woman, but she refused to accept a civilian MBE. The official snub was finally rectified 60 years later when she was made CBE (2004) and awarded (2006) her parachute wings by the Royal Air Force. Cornioley was also a member of the French Legion of Honour.

Court, Hazel, British actress (b. Feb. 10, 1926, Sutton Coldfield, Warwickshire [now part of Birmingham], Eng.—d. April 15, 2008, near Lake Tahoe, Calif.), shrieked her way to an enduring fan base and the sobriquet

“queen of scream” for her work in such Hammer studio cult horror films as *The Curse of Frankenstein* (1957), *Premature Burial* (1962), *The Raven* (1963), and *The Masque of the Red Death* (1964). The glamorous green-eyed redhead began acting in a Birmingham repertory company and made her film debut in 1944. Her screen appearances, which ranged from comedy to melodrama in addition to the horror classics, included a short-lived situation comedy, *Dick and the Duchess* (1957–58), and numerous television guest spots. After retiring from acting in the 1970s, Court became a successful sculptor.

Crichton, (John) Michael, American author, physician, and television and motion picture producer-director (b. Oct. 23, 1942, Chicago, Ill.—d. Nov. 4, 2008, Los Angeles, Calif.), used his medical training and vivid imagination to pen wildly popular fictional tales that blended scientific and technological themes amid a fast-paced narrative; he was also the creator of the Emmy Award-winning television series *ER* (1994–2009). Among Crichton’s blockbuster thrillers were the novels *The Andromeda Strain* (1969; filmed 1971, TV miniseries 2008), which focused on an alien virus, and *Jurassic Park* (1990; co-writer of 1993 screenplay), the story of cloned dinosaurs run amok. Under the pseudonym John Lange, he penned eight thrillers, including *Odds On* (1966) and *Binary* (1972; teleplay *Pursuit*), and under the name Jeffrey Hudson, Crichton wrote the Edgar Award-winning medical detective novel *A Case of Need* (1968; filmed as *The Carey Treatment* [1972]), which centred on the moral issues surrounding abortion. After earning his M.D. (1969), Crichton

conducted research briefly at the Salk Institute for Biological Studies, La Jolla, Calif., but on the merits of his success with *The Andromeda Strain*, he began writing full time. After publishing the nonfiction *Five Patients* (1970), he returned to the techno-thriller genre with *The Terminal Man* (1972; filmed 1974), *Sphere* (1987; filmed 1998), *The Lost World* (1995; filmed 1997), a sequel to *Jurassic Park*, and *Prey* (2002). Crichton’s screenplays include *The Great Train Robbery* (1979), *Congo* (1995), and *Rising Sun* (1993)—all based on his books—and *Coma* (1978) and *Twister* (1996). Crichton’s novel *State of Fear* (2004), which debunked the theory of global warming, was widely panned by scientists.

Crumley, James, American writer (b. Oct. 12, 1939, Three Rivers, Texas—d. Sept. 17, 2008, Missoula, Mont.), penned violent mystery novels that featured vivid characterizations and sordid settings amid the natural splendour of the western United States; the works transcended the conventions of the genre. Crumley attended the Georgia Institute of Technology, Texas Arts and Industries University (B.A., 1964), and the Writers’ Workshop at the University of Iowa (M.F.A., 1966). His U.S. Army service (1958–61) provided inspiration for his Vietnam War novel *One to Count Cadence* (1969). In his detective novels, down-and-out detective protagonists Milo Milodragovich and C.W. Sughrue live in the fictional mountain city of Meriwether, Mont. Both are also alcoholics and cocaine addicts; divorced war veterans who are fond of firearms, military tactics, and fistfights over small matters; loyal to moral codes at odds with those of conventional society; and prone to existential crises in the course of events. Other works include *The Wrong Case* (1975), *The Last Good Kiss* (1978), *Dancing Bear* (1983), *The Final Country* (2001), and *The Right Madness* (2005).

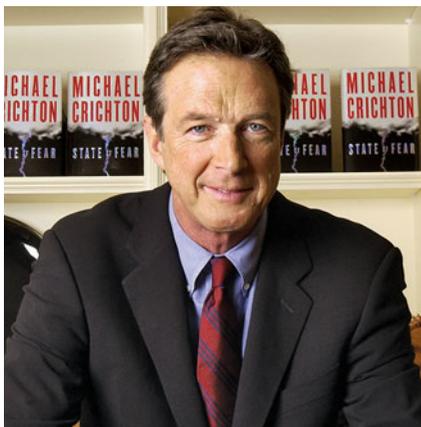

Dahlbeck, Eva, Swedish actress and writer (b. March 8, 1920, Saltsjö-Duvnäs, Swed.—d. Feb. 8, 2008, Stockholm, Swed.), portrayed strong, wise women in several early films by Swedish director Ingmar Bergman, notably *Sommarnattens ledne* (1955; *Smiles of a Summer Night*) and *Nära livet* (1958; U.S. title, *Brink of Life*), for which she, together with the film’s other actresses, won the ensemble award for best actress at the Cannes Festival in 1958. Dahlbeck appeared in

more than 50 movies from her debut in 1941 until her last role in 1970. She was also an accomplished stage actress during the same period, and she won the Eugene O’Neill Award in 1961. From the 1960s Dahlbeck devoted herself to writing, producing 10 novels as well as poetry, plays, and screenplays.

Darling, Erik, American folk musician (b. Sept. 25, 1933, Baltimore, Md.—d. Aug. 3, 2008, Chapel Hill, N.C.), was a masterful guitarist and banjo player who recorded with several prominent groups during the American folk music revival of the 1950s and ’60s. Darling was a member of the Folksay Trio, whose 1951 recording of “Tom Dooley” heavily influenced the Kingston Trio’s later hit version of the song. He was also a member of the Tarriers, who scored a top 10 hit in 1957 with their recording of “The Banana Boat Song,” and in 1958 Darling replaced legendary folk artist Pete Seeger in the Weavers, with whom he played until 1962. The following year, with the Rooftop Singers, he recorded his most successful song, “Walk Right In,” which became a number one hit. In addition, Darling released a number of solo albums, including *True Religion* (1961), *Train Time* (1962), *The Possible Dream* (1975), *Border Town at Midnight* (1994), and *Child, Child* (2000).

Darwish, Mahmūd, Palestinian poet (b. March 13, 1942, Birwa, British Palestine [now in Israel]—d. Aug. 9, 2008, Houston, Texas), gave voice to the struggles of the Palestinian people through several books of prose and more than 20 collections of poetry. After the establishment of Israel (1948), Darwish witnessed massacres that forced his family to escape to Lebanon. A year later their clandestine return put them in limbo, as they were declared “present-absent aliens.” Darwish left Birwa again in 1970 and traveled to the Soviet Union to complete his education in Moscow. He lived in Cairo, Beirut, London, and Paris, as well as Tunis, Tun., before returning home in 1996 to live in the West Bank town of Ramallah. Darwish’s life in exile inspired his most creative work, and he often personified Palestine itself as a mother or a cruel beloved. In his single-poem volume *Halat hisar* (2002; “A State of Siege”), he explored the multiple reoccupations of Ramallah and the resulting sense of Palestinian isolation, though he foresaw a future of peaceful coexistence that could be achieved

Best-selling author Michael Crichton

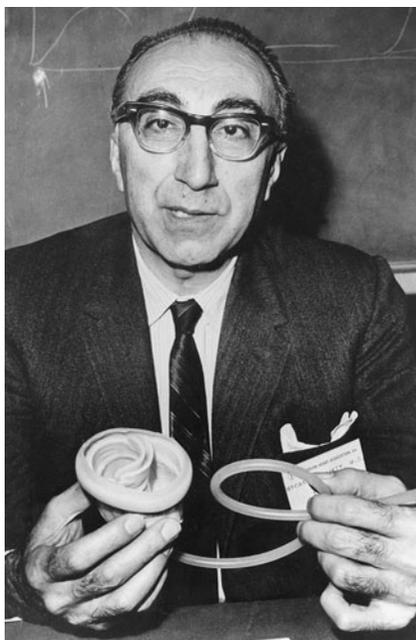

Jim Cooper/AP

through dialogue between Israelis and Palestinians. A member of the executive committee of the Palestine Liberation Organization (PLO), Darwish wrote the declaration of independence issued (1988) by the Palestine National Council, but he resigned from the PLO in 1993 to protest the signing of the Oslo Accords. In 2000 Israeli Prime Minister Ehud Barak vetoed a plan by his education minister to include Darwish's poems of reconciliation in Israel's school curriculum. Collections of Darwish's poems in English translation include *The Adam of Two Edens* (2000), *Unfortunately, It Was Paradise* (2003), and *The Butterfly's Burden* (2007). From 1981 he also served as editor of the literary journal *Al-Karmel*.

DeBakey, Michael Ellis, American cardiovascular surgeon, and educator (b. Sept. 7, 1908, Lake Charles, La.—d. July 11, 2008, Houston, Texas), pioneered surgical procedures for the treatment of defects and diseases of the cardiovascular system. In 1932 DeBakey devised the “roller pump,” an essential component of the heart-lung machine that permitted open-heart surgery. He also developed an efficient method of correcting aortic aneurysms by grafting frozen blood vessels to replace diseased vessels, and by 1953 he had demonstrated a technique of using plastic tubing (Dacron) instead of arterial homografts to replace diseased vessels. In addition, he performed the first successful carotid endarterectomy for stroke (1953), the first successful coronary artery bypass (1964), and the first successful implantation of a ventricular assist device (1966). DeBakey received B.S. (1930), M.D. (1932), and M.S. (1935) degrees from Tulane University School of Medicine in New Orleans. His work with the U.S. surgeon general's office during and after World War II led to the development of mobile army surgical hospitals (MASH units) and the Department of Veterans Affairs (VA) hospital research system. In 1948 DeBakey became professor of surgery and chairman of the department of surgery at Baylor College of Medicine in Houston, where he later served as president (1969–79) and chancellor (1979–96). He edited the *Yearbook of Surgery* (1958–70), was the founding editor of the *Journal of Vascular Surgery*, and served on many medical editorial boards. Among his more than 1,600 professional and lay publications is *The New Living Heart* (1997). DeBakey's numerous awards include

AP

Cardiovascular surgeon Michael DeBakey

the American Medical Association Distinguished Service Award (1959), the Albert Lasker Award for Clinical Medical Research (1963; corecipient), the Eleanor Roosevelt Humanities Award (1969), the Presidential Medal of Freedom with Distinction (1969), the U.S.S.R. Academy of Sciences 50th Anniversary Jubilee Medal (1973), the National Medal of Science (1987), the Denton A. Cooley Cardiovascular Surgical Society's lifetime achievement award (2007), and the Congressional Gold Medal (2008), the highest civilian award given by the U.S. Congress.

Delannoy, Jean, French filmmaker (b. Jan. 12, 1908, Noisy-le-Sec, France—d. June 18, 2008, Guainville, France), enjoyed tremendous popularity with French audiences for his films, many of which explored thought-provoking moral and philosophical issues, but he received intense criticism from French New Wave (Nouvelle Vague) directors for focusing on the script rather than imposing his own directorial vision on the final product. Delannoy studied philosophy at the Sorbonne and had stints in journalism, banking, and acting before he was hired (1930) as a film editor at the Paramount Studios in Joinville. Four years later he directed *Paris-Deauville*, the first of more than 70 motion pictures that he wrote and/or directed. In 1939 he began work on *Macao, l'enfer du jeu* (*Gambling*

Hell), but the German occupation forces ordered the film reshot without Jewish actor-director Erich von Stroheim. Delannoy replaced Stroheim with French actor Pierre Renoir, and the Nazi-approved version of the film was released in 1942. Delannoy, however, kept the original, which he released in 1945 after World War II ended. *La Symphonie pastorale* (1946) earned the Grand Prix at the 1946 Cannes Festival, and *Dieu a besoin des hommes* (1950) received awards at both the Venice and Berlin film festivals. His last film was *Marie de Nazareth* (1995). In 1986 Delannoy was awarded an honorary César Award.

Di Stefano, Giuseppe, Italian lyric tenor (b. July 24, 1921, Motta Santa Anastasia, Sicily, Italy—d. March 3, 2008, Santa Maria Hoe, near Milan, Italy), was hailed as one of the finest operatic tenors of his generation. Di Stefano was admired for the warmth of his voice and for his bravura stage presence in such operas as *La traviata*, *Rigoletto*, *Faust*, *L'elisir d'amore*, *Un ballo in maschera*, and *Tosca*. Some of his greatest performances were opposite soprano Maria Callas, his frequent partner from 1951 to the mid-1960s; he later persuaded her to come out of retirement for a joint U.S., Asian, and European tour (1973–74). Di Stefano sang popular music as a child and during his World War II army service. In 1943 he fled to Switzerland, where he studied opera and sang recitals on the radio. He made his operatic debut in Massenet's *Manon* in Reggio Emilia, Italy, in 1946 and made his American debut two years later at New York City's Metropolitan Opera, where he went on to sing more than 100 performances over 17 seasons. In later years Di Stefano's voice darkened, and he ventured into heavier dramatic roles; he continued to perform occasionally until 1992.

Diddley, Bo (OTHA ELLAS BATES; ELLAS MCDANIEL), American singer, songwriter, and guitarist (b. Dec. 30, 1928, McComb, Miss.—d. June 2, 2008, Archer, Fla.), was one of the most influential performers of rock music's early period. Raised mostly in Chicago by his adoptive family, from whom he took the surname McDaniel, he recorded for the legendary blues label Chess Records as Bo Diddley (a name most likely derived from the diddley bow, a one-stringed African guitar popular in the Mississippi Delta re-

gion). Despite scoring few major hits, he was nevertheless one of rock's most innovative artists because he had developed his own beat: chink-a-chink-chink, ca-chink-chink. That syncopated beat (also known as "hambone" or "shave-and-a-haircut-two-bits") had surfaced in a few big-band rhythm-and-blues charts of the 1940s, but Diddley stripped it down and beefed it up. He made it, with its obvious African roots, one of the irresistible dance sounds in rock and roll. It was appropriated by fellow 1950s rockers (Johnny Otis's "Willie and the Hand Jive" [1958]), 1960s garage bands (the Strangeloves' "I Want Candy" [1965]), and budding superstars (the Rolling Stones' version of Buddy Holly's Diddley-influenced "Not Fade Away" [1964]). Diddley's own songs hit the pop charts just five times and the Top 20 only once (even though his 1955 debut single, "Bo Diddley," backed

Mark Obstfeld—Photoshot/Landov

Rock and Roll Hall of Famer Bo Diddley

with "I'm a Man," was number one on the rhythm-and-blues charts). In 1987 Diddley was inducted into the Rock and Roll Hall of Fame.

Dith Pran, Cambodian photojournalist and interpreter (b. Sept. 27, 1942, Siemréab, Camb.—d. March 30, 2008, New Brunswick, N.J.), was the real-life model for the central character in the film *The Killing Fields* (1984), which was based on the 1980 article "The Death and Life of Dith Pran" by *New York Times* correspondent Sydney Schanberg. Dith acted as Schanberg's

Michael Nagle/Getty Images

Cambodian photojournalist Dith Pran

assistant (1972–75) as they covered the Cambodian civil war, and when the Khmer Rouge seized power in 1975, he risked his life to save Schanberg and other Western journalists, who then failed in their attempt to get him out of the country with them. He was taken prisoner, tortured, and put to work as a farm labourer, nearly starving in conditions of virtual slavery. In early 1979 Dith was liberated by invading Vietnamese forces, but after returning home he learned that some 50 members of his family had died in the Khmer "killing fields." Concerned that he was still in danger because he had worked with the Americans, he fled. On Oct. 3, 1979, after walking through the jungle for more than three months, he emerged in Thailand and sent word to Schanberg, who had been trying to find his friend for more than four years. Dith joined the *New York Times* staff as a photojournalist in 1980 and in 1994 founded the Dith Pran Holocaust Awareness Project. He became a U.S. citizen in 1986.

Dixon, Frank James, American immunologist (b. March 9, 1920, St. Paul, Minn.—d. Feb. 8, 2008, San Diego, Calif.), was the founding director (1961) of the Scripps Research Institute, La Jolla, Calif., where he developed isotope tracer techniques that were used to track the dynamics of protein. This work led to the analysis and classification of several conditions, including serum sickness, glomerulonephritis, and immunologic renal disease. For his work on the latter, he was honoured with the 1975 Albert Lasker Award for

Basic Medical Research. Dixon also conducted fundamental work on analyzing and classifying tumours of the testes, pinpointing how systemic lupus erythematosus begins, studying the effects of viruses on the immune system, and exploring the causes of rheumatoid arthritis. He retired in 1987.

Donati, Enrico, Italian-born American painter and sculptor (b. Feb. 19, 1909, Milan, Italy—d. April 25, 2008, New York, N.Y.), was the last surviving member of the group of European artists who gathered in New York City at the outbreak of World War II and helped usher in the Surrealist movement in the U.S. Though he initially began his career as a composer, Donati fled fascist Italy and settled in Paris, where his musical career was eclipsed by his growing interest in anthropology. After exploring the American Southwest and Canada to collect Indian artifacts, he settled in New York City, working as a commercial artist and printer. Upon his return to Paris, he became fascinated by the Surrealist movement, but when war broke out in 1939, he moved back to New York City. There André Breton, the foremost disciple of Surrealism, welcomed Donati into the fold of followers. When Surrealism began to fade, Donati reinvented himself as a Constructivist, and he later dabbled in Abstract Expressionism. In the 1950s he began experimenting with surface and texture and frosted canvases with paint mixed with sand, dust, coffee grounds, and debris picked up from his vacuum cleaner, which was combined with pigment and glue. Donati's work was given a major retrospective in 1961 at the Palais des Beaux-Arts in Brussels. In addition to his art, Donati became (1965) the owner of the French perfume company Houbigant Inc., which he was credited with revitalizing; in 1978 the concern was valued at \$50 million.

Drew, Ronnie, Irish folk musician (b. Sept. 16, 1934, Dun Laoghaire, Ire.—d. Aug. 16, 2008, Dublin, Ire.), founded (1962) the highly popular and influential musical group the Dubliners and served as its front man for more than 30 years. Drew's unique gruff voice and unkempt appearance, combined with his band's rambunctious behaviour and rowdy performances, enlivened traditional Irish music in the 1960s. The group released a succession of albums, notably *The Dubliners* (1964), *Finnegan Wakes* (1966), *A Drop of the Hard Stuff*

Niall Carson—PA Photos/Landov

Irish folk musician Ronnie Drew

(1967), and *Drinkin' and Courtin'* (1968). Drew's albums during his solo career (1978–79 and from 1994) included *Dirty Rotten Shame* (1995) and *The Humour Is on Me Now* (1999). Drew and the Dubliners were credited with inspiring younger Irish musicians such as U2, the Pogues, and Sinéad O'Connor, many of whom united to record the tribute song "The Ballad of Ronnie Drew" (2008).

Drnovsek, Janez, Slovenian politician (b. May 17, 1950, Celje, Yugos. [now in Slovenia]—d. Feb. 23, 2008, Zaplana, Slvn.), helped lead Slovenia to a relatively peaceful independence from Yugoslavia and, as the new country's prime minister (May 14, 1992–May 3, 2000, and Nov. 17, 2000–Dec. 11, 2002) and president (2002–07), led it to membership in NATO and the European Union. In 1989 Slovenia for the first time held a regional plebiscite to choose its president; Drnovsek defeated the Communist Party's preferred candidate and became Slovenia's representative to the collective presidency just as the head position rotated to Slovenia. (From 1980 Yugoslavia was ruled by a collective presidency of regional representatives, with the top position rotating.) After Slovenia became independent in 1991, he was elected its second prime minister. He followed a program of gradual liberalization. During his presidency Drnovsek, who had recently been diagnosed with cancer, transformed himself into something of a New Age guru, pursuing quixotic peace initiatives and publishing several books on finding inner balance. These

activities exasperated the country's government but endeared him to the people.

Dulles, Avery Robert Cardinal, American prelate and theologian (b. Aug. 24, 1918, Auburn, N.Y.—d. Dec. 12, 2008, Bronx, N.Y.), was one of the preeminent Roman Catholic theologians in the United States and an astute liaison between the church's liberal and conservative factions during the latter half of the 20th century. Born to a family of Protestant statesmen (his father was politician John Foster Dulles), Dulles converted to Catholicism while attending Harvard University and, after a stint in the navy, joined the order of the Jesuits. Following his ordination as a priest in 1956, he devoted himself to a life of teaching and took on professorships at Woodstock (Md.) College (1960–74; from 1969 located in New York City), the Catholic University of America, Washington, D.C. (1974–88), and Fordham University, New York City (1988–2008). He also penned more than 20 books of theology, including *Models of the Church* (1974), a best seller that addressed the profound social reforms that were then taking place within Roman Catholicism. In 2001 he was elevated to cardinal, thereby becoming the first American to be appointed to that position without first having served as bishop.

Elliott, Osborn ("OZ"), American journalist and editor (b. Oct. 25, 1924, New York, N.Y.—d. Sept. 28, 2008, New York City), advanced *Newsweek* magazine to a stature rivaling that of its chief rival, *Time*, during his tenure (1961–76) as its editor. After working as an associate editor for *Time*, in 1955 Elliott accepted a business editor position with *Newsweek*. Under his watch as *Newsweek*'s editor, the magazine gave high-profile coverage to civil rights issues, discarding neutrality to express support for the cause of equality, and circulation nearly doubled. He served (1977–86) as dean of Columbia University's Graduate School of Journalism, and he later became professor emeritus.

Ellis, Alton Nehemiah, Jamaican singer (b. Sept. 1, 1938, Kingston, Jam.—d. Oct. 11, 2008, London, Eng.), was called the "godfather of rocksteady," the Jamaican pop music style that followed ska and preceded reggae. One of the most soulful vocalists in the history of Jamaican music, Ellis began his career in 1959 as part of the duo Al-

ton and Eddie (Perkins). As a solo performer, he recorded for the two giants of the Jamaican recording industry, Coxsone Dodd and Duke Reid. Ellis's "Girl I've Got a Date" (1966) was widely regarded as the first hit in the style for which he provided a name with "Get Ready Rock Steady" (also 1966), but throughout his life Ellis was critical of the rebellious violent "rude boy" subculture that emerged in conjunction with rocksteady. Although neither of these songs nor the hit "Cry Tough" appeared on *Mr. Soul of Jamaica* (1967), the album was widely considered both Ellis's defining work and the high point of rocksteady. In the early 1970s, as rocksteady waned and reggae waxed, hits came slower for Ellis, and he relocated to Canada and then Britain. In 1994 he received the Order of Distinction medal from Jamaica.

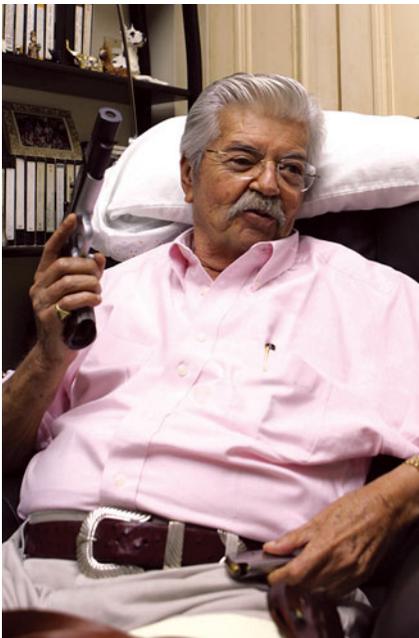

Fairhurst, Angus, British artist (b. Oct. 4, 1966, Pembury, Kent, Eng.—d. March 29, 2008, Bridge of Orchy, Argyll, Scot.), was a founding member (with Damien Hirst and Sarah Lucas) of the Young British Artists group that dominated British art in the 1990s; he was perhaps best known for a series of artworks featuring bronze representations of gorillas. Fairhurst participated in the seminal 1988 art show "Freeze" in London that launched the Young British Artists phenomenon. With incisive humour and great attention to form, he worked in collage, sculpture, painting, and installation and performance art. His work appeared in several important exhibitions, most recently in "In-a-Gadda-da-Vida" at Tate Britain in 2004.

Faraz, Ahmed (SYED AHMAD SHAH), Pakistani poet (b. Jan. 14, 1931, Nowshera, near Kohat, North West Frontier, British India [now in Pakistan]—d. Aug. 25, 2008, Islamabad, Pak.), crafted more than a dozen volumes of contemporary Urdu poetry, in which he expressed passionate feelings about love and revolutionary protests against both capitalism and militarism. His much-admired ghazals (romantic lyric poetry set to music) were popular in India as well as in Pakistan. Faraz, the son of classical poet Agha Syed Muhammad Shah Bark Kohati, studied Persian and Urdu at Edwards College in Peshawar and published the verse collection *Tanha Tanha* while still a student. He earned a master's degree at Peshawar University, where he later taught language. A strong supporter of assassi-

nated Pakistani leader Zulfikar Ali Bhutto, Faraz was briefly imprisoned and spent several years in self-imposed exile in Europe and Canada. During his time in exile, he wrote some of his best-loved poems, including *Mahasra* ("The Siege") and *Dekhtay Hain* ("Let Us Gaze"). Faraz was the founding director of the Pakistan Academy of Letters and the recipient (2004) of the Hilal-e-Imtiaz, but he returned the award in 2006 in protest against Pres. Pervez Musharraf.

Febres Cordero (Ribadeneyra), León, Ecuadoran politician (b. March 9, 1931, Guayaquil, Ecuador—d. Dec. 15, 2008, Guayaquil), developed a reputation as a larger-than-life strongman while serving a tumultuous term

Dolores Ochoa R./AP

Ecuadoran strongman León Febres Cordero

(1984–88) as president of Ecuador. Febres Cordero studied mechanical engineering in the United States before returning home and entering national politics in 1966 as a congressional deputy. As a member of the right-wing Social Christian Party, Febres Cordero was elected president and soon gained fame throughout Latin America for his tough-guy image, bolstered by an affinity for cigarettes and pistols. Though his free-market approach to economic policy won him the admiration of U.S. Pres. Ronald Reagan, his relationship with his own legislature

was frequently contentious, and his brief kidnapping in 1987 at the hands of rebel commandos underscored Ecuador's political instability. Following his presidency, Febres Cordero served (1992–2000) as the mayor of his hometown, Guayaquil.

Felt, W(illiam) Mark, Sr., American government official (b. Aug. 17, 1913, Twin Falls, Idaho—d. Dec. 18, 2008, Santa Rosa, Calif.), served as the associate director of the FBI in the early 1970s and in 2005 captured public attention when he revealed in an interview with *Vanity Fair* magazine that he was "Deep Throat," the anonymous informant at the centre of the Watergate Scandal (1972–75). Felt joined the FBI as a freshly minted lawyer in 1942. By 1971 he was effectively in charge of the bureau's day-to-day operations, though he was unexpectedly passed over for its top post a year later upon the death of J. Edgar Hoover. Shortly thereafter he began to secretly cooperate with reporter Bob Woodward in the *Washington Post* newspaper's investigation into the abuses of presidential powers stemming from the break-in of the Watergate complex during the 1972 presidential election campaign; his inside information was considered instrumental in implicating the White House. Felt retired from the FBI in 1973. In 1980 he was convicted of having ordering illegal break-ins of homes in the pursuit of bombing suspects, but he was later pardoned.

Ferrer, Mel (MELCHOR GASTON FERRER), American actor, producer, and director (b. Aug. 25, 1917, Elberon, N.J.—d. June 2, 2008, Santa Barbara, Calif.), was a successful stage and film actor and director, though he was often better known as the first husband (1954–68) of actress Audrey Hepburn, with whom he costarred in the 1956 film version of *War and Peace*. Ferrer briefly attended Princeton University and wrote the children's book *Tito's Hats* (1940) before moving to New York City to pursue an acting career. Although he preferred directing, Ferrer was admired for his performances as Luis Bello, Mexico's most idolized matador, in *The Brave Bulls* (1951), a swashbuckling French nobleman in *Scaramouche* (1952), and a crippled puppeteer in the musical *Lili* (1953), which many considered his best role. In theatre Ferrer cofounded (1947) California's La Jolla Playhouse, with actors Gregory Peck and Dorothy McGuire,

and starred on Broadway opposite Hepburn in Jean Giraudoux's *Ondine* (1954). Ferrer later enjoyed modest success on television, most notably in a recurring role on the CBS drama *Falcon Crest* in the 1980s.

Fischer, Bobby (ROBERT JAMES FISCHER), American-born chess master (b. March 9, 1943, Chicago, Ill.—d. Jan. 17, 2008, Reykjavík, Ice.), became the youngest grandmaster in history when he received the title in 1958. His youthful intemperance and brilliant playing drew the attention of the American public to the game of chess, particularly when, in a highly publicized match held in Reykjavík in 1972, he defeated Boris Spassky of the Soviet Union and became the first native-born American to hold the title of world champion. Fischer learned the moves of chess at age 6 and at 16 dropped out of high school to devote himself fully to the game. In 1958 he won the first of his many American championships. In world championship candidate matches during 1970–71, Fischer won 20 consecutive games before losing once and drawing three times to former world champion Tigran Petrosyan of the Soviet Union in a final match won by Fischer. In 1972 when he defeated Spassky, Fischer won the \$156,000 victor's share of the \$250,000 purse. In 1975 Fischer refused to meet his Soviet challenger, Anatoly Karpov, and the Fédération Internationale des Échecs (FIDE; the international chess federa-

Chess legend Bobby Fischer

John Lent/AP

Al Bello/Getty Images

St. Louis Rams owner Georgia Irwin with the Vince Lombardi Trophy after Super Bowl XXXIV

tion) deprived him of his championship and declared Karpov champion by default. Fischer then withdrew from serious play for almost 20 years, returning to defeat Spassky in a privately organized rematch in Yugoslavia in 1992. After defeating Spassky, Fischer went into seclusion, in part because he had violated U.S. restrictions on participating in events in Yugoslavia. On July 13, 2004, he was detained at Narita Airport in Tokyo after authorities discovered that his U.S. passport had been revoked. Fischer fought deportation to the United States, where he faced criminal charges for violating sanctions against the former Yugoslavia. On March 21, 2005, Fischer was granted Icelandic citizenship, and within days he was flown to Reykjavík.

Foch, Nina (NINA CONSUELO MAUD FOCK), Dutch-born American actress and teacher (b. April 20, 1924, Leiden, Neth.—d. Dec. 5, 2008, Los Angeles, Calif.), specialized in portraying coolly manipulative women over a prolific seven-decade career. Foch grew up in New York City and studied at the American Academy of Dramatic Arts. She made her screen debut in the short film *Wagon Wheels West* (1943) and then appeared in a string of B-movies before winning recognition as a conniving socialite in *An American in Paris* (1951). Though Foch never became a star, she was cast in several high-profile Hollywood productions, including *The Ten Commandments* (1956) and *Spartacus* (1960), and earned a supporting actress Oscar nomination for her role in *Executive Suite* (1954). In addition to acting on stage and in television (she could be seen in more than 90 series between 1949 and 2007), Foch also taught for 40 years at the University of Southern California's film school.

Ford, Alan Robert, American swimmer (b. Dec. 7, 1923, Panama City, Panama Canal Zone [now Panama]—d. Nov. 3, 2008, Sarasota, Fla.), was admired for his lightning speed, tremendous strength, and perfect swimmer's physique; the "human fish," as Ford was dubbed, became (1944) the first person to break the 50-second barrier in the 100-yd freestyle, recording 49.4 sec. At age eight Ford won his first medal, presented to him by famed swimmer and celebrity Johnny Weissmuller; 11 years later, at age 19, he broke Weissmuller's record (of 51 sec flat) in the 100-yd freestyle. Ford spent his high-school years at Mercersburg

(Pa.) Academy, drawn by the school's intensive swimming program. He continued to compete while pursuing a degree (B.A., 1945) at Yale University and won collegiate championships in the 50- and 100-yd freestyle events and the 150-yd backstroke. The cancellation of the 1944 Olympic Games due to World War II and Ford's own service in the U.S. Navy caused him to stop training for several years. After he completed his navy service, he resumed his regimen and made the 1948 Olympic team after only six months of intense physical work; he captured the silver medal in the 100-m freestyle. In 1966 he was inducted into the International Swimming Hall of Fame.

Fraser, George MacDonald, British writer (b. April 2, 1925, Carlisle, Cumbria, Eng.—d. Jan. 2, 2008, Strang, Isle of Man), was best known for his series of 12 comic historical novels, written in the form of an extended memoir, about the exploits of Harry Flashman, a hard-drinking, womanizing, vain, and cowardly character who played a leading role in many major events of the 19th century. The novels came from Fraser's imagining the adult life of the bully Flashman in the Thomas Hughes classic novel *Tom Brown's School Days* (1857). The first novel in the series, *Flashman: From the Flashman Papers, 1839–1842*, which was set in Afghanistan, appeared in 1969. A memoir of Fraser's wartime (1943–47) experiences, *Quartered Safe Out Here*, appeared in 1992. After World War II, Fraser went into journalism, and he eventually served (1964–69) as the deputy editor of the *Glasgow Herald* (now *The Herald*). Besides the Flashman novels, Fraser wrote five other historical novels, three books of short stories, and a scholarly study of the Anglo-Scottish border reivers, as well as a number of screenplays. He was made OBE in 1999.

Frontiere, Georgia Irwin, American sports executive (b. Nov. 21, 1927, St. Louis, Mo.—d. Jan. 18, 2008, Los Angeles, Calif.), became the first female owner of a National Football League team when she inherited the Los Angeles Rams following the death in 1979 of her husband, Carroll Rosenbloom. Enduring criticisms that a woman could not handle ownership of a professional football franchise, Frontiere garnered further reproach when in 1980 she moved the team to Anaheim, Calif., and again in 1995 when she relocated the

Rams to St. Louis. Under her leadership the Rams went on to win the Super Bowl in 2000.

Fyodorov, Boris Grigoryevich, Russian economist and politician (b. Feb. 13, 1958, Moscow, Russia, U.S.S.R.—d. Nov. 20, 2008, London, Eng.), was one of post-Soviet Russia's leading exponents of free-market economic reforms. Fyodorov was cofounder (1994) of the investment bank United Financial Group (UFG) and UFG Asset Management, represented his country at the European Bank for Reconstruction and Development (1991–92) and the World Bank (1992), and from 2000 served as a reform-minded director of the government-owned natural gas company Gazprom. Fyodorov studied economics at the Moscow Finance Institute (graduated 1980) and the Soviet Academy's Institute of World Economy and International Relations (Ph.D., 1989). After working at the State Bank and as an economic adviser to Pres. Mikhail Gorbachev, he served as deputy prime minister (1992–94), finance minister (1993), and chief tax administrator (1998). Fyodorov was elected to the Duma (parliament) in 1993 and again in 1995 at the head of his own free-market party, Forward Russia.

Gajdusek, D(aniel) Carleton, American physician and medical researcher (b. Sept. 9, 1923, Yonkers, N.Y.—found dead Dec. 12, 2008, Tromsø, Nor.), was corecipient (with Baruch S. Blumberg) of the 1976 Nobel Prize for Physiology or Medicine for his research on the causal agents of various degenerative neurological disorders. Gajdusek graduated (1943) from the University of Rochester, N.Y. He received an M.D. (1946) from Harvard University and served (1949–52) as a fellow in pediatrics and infectious diseases at Harvard. In the next three years, he held positions at the Institute of Research of the Walter Reed Army Medical Center in Washington, D.C., and the Institut Pasteur, Tehran. It was in 1955, while he was a visiting investigator at the Walter and Eliza Hall Institute of Medical Research in Melbourne, that Gajdusek began the work that culminated in the Nobel Prize. Gajdusek co-discovered and provided the first medical description of a unique central nervous system disorder occurring only among the Fore people of New Guinea and known by them as kuru (“trembling”). Living among the Fore, studying their language and culture, and performing autopsies on kuru victims, Gajdusek came to the conclusion that the disease was transmitted in the ritualistic eating of the brains of the deceased, a Fore funeral custom. Gajdusek became (1958) the head of laboratories for virological and neurological research at the National Institutes of Health (NIH). After years of further research, much of it conducted with his NIH colleague Clarence Gibbs, Jr., he postulated that the delayed onset of the disease could be attributed to a virus capable of extremely slow action or, perhaps, having the ability to remain dormant for years. Gajdusek’s study had significant implications for research into the causes of another degenerative brain disease, called Creutzfeldt-Jakob disease. After pleading guilty to having sexually molested a teenaged boy, Gajdusek served one year in prison.

Gencer, Leyla (AYSHE LEYLA CEYREKGIL), Turkish soprano (b. Oct. 10, 1928?, Istanbul, Tur.—d. May 9/10, 2008, Milan, Italy), performed more than 70 roles throughout her 35-year operatic career. Known as the Turkish Diva, Gencer was most famous for her roles in the operas of Gaetano Donizetti and Giuseppe Verdi. She trained in Turkey with the Italian opera greats Giannina Arangi-Lombardi and Apollo

Granforte before making her debut (1950) in Ankara as Santuzza in Pietro Mascagni’s *Cavalleria rusticana*. Gencer played Madame Lidoine in the 1957 premiere of Francis Poulenc’s *Dialogues des Carmelites* at La Scala in Milan. She went on to perform a wide variety of roles internationally, including Violetta (*La traviata*), Leonora (*Il trovatore*), the Countess (*The Marriage of Figaro*), Donna Elvira (*Don Giovanni*), and the title characters in *Norma* and *Madama Butterfly*. Gencer retired from the operatic stage in 1985, though she continued to give occasional public performances until 1992. The Leyla Gencer Vocal Competition was established (1995) in Istanbul in her honour.

Geremek, Bronislaw, Polish historian and politician (b. March 6, 1932, Warsaw, Pol.—d. July 13, 2008, near Lubien, Pol.), was an outspoken supporter of government reform in the 1980s, a prominent adviser to Lech Walesa (then leader of the Solidarity labour movement), and a key negotiator in laying the groundwork for the national elections (1989) that unexpectedly brought Solidarity (and Walesa) to power. Later, as Poland’s foreign minister (1997–2000), he signed the agreement that brought the country into NATO in 1999. Geremek, who was born Jewish, was smuggled out of the Warsaw Ghetto during World War II. He joined Poland’s Communist Party in 1950 but became disillusioned and resigned in 1968. He studied at the University of Warsaw and in Paris, where he remained to teach French medieval history at the Sorbonne (1962–65) and the College of France (1992–93) and to serve as head of the Paris Polish Cultural Institute. Back in Warsaw, he joined (2002) the faculty of the College of Europe, Natolin. The turning point of Geremek’s political career came in 1980 when he drove to Gdansk to deliver a letter to Walesa that a group of intellectuals had signed in support of Solidarity. In addition, Geremek served (1989–2001) as a representative in Poland’s parliament and as a member (2004–08) of the European Parliament.

Geschonneck, Erwin, German actor (b. Dec. 27, 1906, Bartenstein, East Prussia, Ger. [now Bartoszyce, Pol.]—d. March 12, 2008, Berlin, Ger.), was one of East Germany’s most respected character actors on the stage—in Hamburg (1946–49) and as a member (1949–56) of Bertolt Brecht’s Berliner Ensemble—and on-screen (1946–95) in scores of

movie and television appearances, notably as the tragic Kowalski in the Academy Award-nominated film *Jakob, der Lügner* (1975; *Jacob the Liar*). Geschonneck joined the German Communist Party in 1919, and when Hitler came to power (1933), he fled to the Soviet Union and eventually to Prague, where he was arrested by the Gestapo. After spending six years in German concentration camps, Geschonneck in 1945 was among some 4,000 prisoners being transported on the liner *Cap Arcona* when it was sunk by British forces. He was one of only about 350 survivors and later appeared in a 1982 East German TV movie and a 1995 documentary about the incident.

Getty, Estelle (ESTELLE SCHER GETTLEMAN), American actress, (b. July 25, 1923, New York, N.Y.—d. July 22, 2008, Los Angeles, Calif.), earned a legion of fans and seven straight Emmy Award

Lennox McLendon/AP

Emmy Award-winning actress Estelle Getty

nominations (1986–92; she won in 1988) for her portrayal of Sophia Petrillo, the tiny sharp-tongued Sicilian octogenarian in NBC television’s popular situation comedy *The Golden Girls* (1985–92). Getty appeared in plays in small Off-Broadway theatres until 1981, when she was cast as Harvey Fierstein’s mother in the hit Broadway production *Torch Song Trilogy*. Getty also played Sophia in two *Golden Girls* spin-offs, *Empty Nest* (1988–95) and *The Golden Palace* (1992–93). Her film credits include *Mask* (1985), *Stop! Or My Mom Will Shoot* (1992), and *Stuart Little* (1999).

Giardello, Joey (CARMINE ORLANDO TILELLI), American boxer (b. July 16, 1930, Brooklyn, N.Y.—d. Sept. 4, 2008, Cherry Hill, N.J.), as undisputed world middleweight champion (1963–65), defended his title with a win by unanimous decision on Dec. 14, 1964, against Rubin (“Hurricane”) Carter and later sued the makers of the film *The Hurricane* (1999) because of its depiction of the fight as unfairly awarded to him for racial reasons; the lawsuit ended in a settlement. Giardello defeated Dick Tiger of Nigeria on Dec. 7, 1963, to win the title, but Tiger regained it in their next bout, on Oct. 21, 1965. Giardello’s first professional fight was in 1948. He retired in 1967 with a record of 101 wins (33 by knockout), 25 losses, and 8 draws. He was inducted into the International Boxing Hall of Fame in 1993.

Gibson, William, American playwright (b. Nov. 13, 1914, Bronx, N.Y.—d. Nov. 25, 2008, Stockbridge, Mass.), won instant acclaim for his play *The Miracle Worker* (1959), which was based on the life of Helen Keller, a deaf and blind child whose determined teacher, Annie Sullivan, taught her to communicate by using sign language. The original playscript, created as a teleplay, was significantly reworked for the stage. *The Miracle Worker* opened on Broadway on Oct. 19, 1959. It ran 719 performances and received four Tony Awards, including one for best play. Gibson’s screenplay for the 1962 film adaptation received an Oscar nomination. Though his later works never received the same level of praise, plays such as *Golda* (1977) and *Golda’s Balcony* (2003) were well received.

Giordano, Gus (AUGUST T. GIORDANO), American jazz dancer and choreographer (b. July 10, 1923, St. Louis, Mo.—d. March 9, 2008, Chicago, Ill.), was one of the pioneers of the style known as jazz dance and succeeded in gaining it the respect already enjoyed by ballet and modern dance. Following a Broadway career that included performances in *Paint Your Wagon* and *On the Town*, Giordano moved (1953) to the Chicago area and opened a dance studio. In 1962 he founded what became Giordano Jazz Dance Chicago, considered the first troupe to concentrate exclusively on jazz dance. Giordano organized (1990) the first Jazz Dance World Congress, an annual international convention featuring master classes and performances, choreographed hundreds of dance numbers,

and wrote several books on jazz dance. A 1980 Emmy Award for his television special “The Rehearsal” was only one of his numerous honours.

Giroux, Robert, American editor and publisher (b. April 8, 1914, Jersey City, N.J.—d. Sept. 5, 2008, Tinton Falls, N.J.), introduced and guided many of the top authors of the 20th century in a lengthy career in which he ascended to partner (1964) and chairman (1973) of the distinguished publishing house Farrar, Straus and Giroux, which became known for its literary fiction. Giroux published the debut novels of numerous significant writers, including Jean Stafford, Robert Lowell, Bernard Malamud, Flannery O’Connor, Jack Kerouac, and Susan Sontag. Giroux began his editing career in 1940 at Harcourt, Brace, & Co., rising to become executive editor in 1948. He became disillusioned, however, when the company refused to allow him to publish J.D. Salinger’s *The Catcher in the Rye*, and in 1955 he took his services to Farrar, Straus & Co. (from 1964 Farrar, Straus and Giroux). Such was the esteem in which writers held him that some 15 authors, notably T.S. Eliot, Malamud, and O’Connor, made the move with him.

Giuffre, Jimmy (JAMES PETER GIUFFRE), American jazz woodwind player and composer (b. April 26, 1921, Dallas, Texas—d. April 24, 2008, Pittsfield, Mass.), experimented with jazz sounds and structures and, with a series of combos named the Jimmy Giuffre Three, pioneered chamber jazz—at first in an original, subdued folk-jazz idiom (1956–59) and then in some of the first free-improvisation works. He first became renowned as composer of the Woody Herman band hit “Four Brothers” (1947) and then played saxophones and clarinet with Shorty Rogers and other West Coast figures before leading his own daring recording dates. In the early Three combos, Giuffre played quiet, low-register clarinet and saxophones, joined by guitar and bass or trombone. In the 1960s he concentrated on clarinet and played a bolder, more expressive music that abandoned themes, rhythms, and fixed harmonic structures. Though these later Threes were initially controversial, their influential recordings were hailed when reissued on CD in the 1990s. By then Giuffre, who had taught at colleges and experimented with jazz-world music fusions, was once again performing free jazz.

Glossop, Peter, British opera singer (b. July 6, 1928, Wadsley, Sheffield, Yorkshire, Eng.—d. Sept. 7, 2008, Rousdon, Devon, Eng.), was a powerful onstage presence with a robust, well-placed voice that made him one of the leading interpreters of Giuseppe Verdi great baritone roles; in 1965 he became the first Englishman to sing Verdi (*Rigoletto*) at Milan’s La Scala. He was also a notable interpreter of Benjamin Britten, especially as the lead in *Billy Budd*. After his national service, Glossop worked as a bank clerk while studying singing and, from 1949, performing with the local Sheffield Operatic Society. He auditioned for the chorus at the Sadler’s Wells Opera (now the English National Opera) in 1952, and by 1955 he was one of the company’s principal baritones. He made his debut at the Royal Opera at Covent Garden in 1961 and soon was performing throughout Europe and the U.S. From 1979 until his retirement in 1985, Glossop expanded his repertoire to include Wagnerian roles. His autobiography, *Peter Glossop, the Story of a Yorkshire Baritone*, was published in 2004.

González Cruchaga, the Right Rev. Carlos, Chilean Roman Catholic bishop (b. June 8, 1921, Santiago, Chile—d. Sept. 21, 2008, Santiago), adamantly defended human rights during the Chilean military dictatorship (1974–90) of Augusto Pinochet. Following in the footsteps of his cousin, the Chilean saint Father Alberto Hurtado Cruchaga (beatified in 1994), González was ordained a priest in 1944. He was first appointed to the San Joaquín parish in Santiago and in 1966 became bishop of Talca. González was subjected to a campaign of intimidation when he confronted Pinochet about 15 missing individuals found in an unmarked grave during the dictator’s reign. González established a self-help centre for Talca’s peasants, and as president (1988–92) of the Chilean Episcopal Conference, he played a significant role in helping to drive Pinochet out of power and in establishing democracy. González authored the book *¿Y qué hiciste con tu hermano?* (2007).

González, Ángel, Spanish poet (b. Sept. 6, 1925, Oviedo, Spain—d. Jan. 12, 2008, Madrid, Spain), was greatly respected as a member of the “Generation of 1950” for his finely honed socially engaged poetic works as well as for lyrical poetry in which he explored his own nature and limitations. His po-

etry was informed by his experience growing up during the Spanish Civil War (1936–39) and living during the subsequent rule of Gen. Francisco Franco. González was an official (1955–72) of Spain's Ministry of Public Works in Madrid when he began writing verse and published *Aspero mundo* (1956; *Harsh World and Other Poems*, 1977); it won immediate critical acclaim. Other important works followed, including *Sin esperanza, con convencimiento* (1961), *Grado elemental* (1962), and *Tratado de urbanismo* (1967). In addition, he edited a number of anthologies and works of literary criticism. González was a professor of contemporary Spanish literature at the University of New Mexico in Albuquerque for almost 20 years (1974–93) and divided his time thereafter between the U.S. and Spain. Among his many honours, González was given the 1985 Prince of Asturias Award for Letters, served as a member of the Royal Spanish Academy from 1997, and won the inaugural Federico García Lorca International Poetry Prize in 2004.

Goodman, Dody (DOLORES GOODMAN), American actress (b. Oct. 28, 1914?, Columbus, Ohio—d. June 22, 2008, Englewood, N.J.), exploited her distinctive high-pitched voice and zany personality on television shows, notably as the main character's dotty mother in the cult hit *Mary Hartman, Mary Hartman* (1976–78) and its sequel, *Fernwood Forever* (1977–80), and as the school secretary in the movies *Grease* (1978) and *Grease 2* (1982). Goodman trained at the School of American Ballet and the Metropolitan Opera Ballet School in New York City and danced in the chorus at Radio City Music Hall and on Broadway before transitioning into TV. As a regular (1957–58) on *The Jack Paar Show*, she was well known for her quirky humour and her tendency to upstage the star.

Graham, Robert, Mexican-born American sculptor (b. Aug. 19, 1938, Mexico City, Mex.—d. Dec. 27, 2008, Santa Monica, Calif.), was celebrated for his civic monuments, many of them massive in scale and all of them sculpted in bronze. Among his best-known designs were the Olympic Gateway (1984) in Los Angeles, the Joe Louis Memorial (1986) in Detroit, the Franklin Delano Roosevelt Memorial (1997) in Washington, D.C., the Duke Ellington Monument (1997) in New York City, and the Charlie "Bird" Parker Memorial (1999)

in Kansas City, Mo. Graham was also acclaimed for his many smaller-scale works, especially his sculptures of the nude female figure. After studying at San Jose (Calif.) State College and the San Francisco Art Institute, Graham had his first solo exhibition in 1964. He married actress Anjelica Huston in 1992. Graham received the California Governor's Award for the Arts in 1993, and he was inducted into the California Museum's Hall of Fame in 2008.

Gray, Simon (SIMON JAMES HOLLIDAY GRAY), British dramatist (b. Oct. 21, 1936, Hayling Island, Hampshire, Eng.—d. Aug. 6, 2008, London, Eng.), wrote plays, often set in academia, that were noted for their challenging story lines, complex characterizations, and witty, highly literary dialogue. Gray's first stage play was *Wise Child* (1968), which features a criminal transvestite, but his best-known work—and first international success—was *Butley* (1971; filmed 1974), a play about a petulant university professor whose venomous wit masks an inner emptiness. Gray alternately lived in Canada and England, attending Westminster School in London; Dalhousie University, Halifax, N.S. (B.A., 1957); and Trinity College, Cambridge (B.A., 1961). While working as a university lecturer in both countries, he wrote satiric novels and farcical plays for stage and television, including *Spoiled* (1971), *Otherwise Engaged* (1975), *The Rear Column* (1978), *Quartermaine's Terms* (1981), *Hidden Laughter* (1990), *Fat Chance* (1995), *The Late Middle Classes* (1999), *The Old Masters* (2004), and *Little Nell* (2006). His autobiographical nonfiction works include *The Smoking Diaries* (2004), *The Year of the Jouncer* (2006), and *The Last Cigarette* (2008). Gray was made CBE (Commander of the British Empire) in 2005.

Griffin, Johnny (JOHN ARNOLD GRIFFIN III), American jazz tenor saxophonist (b. April 24, 1928, Chicago, Ill.—d. July 25, 2008, Availles-Limouzine, France), was noted for his fluency in the hard-bop idiom. He toured with Lionel Hampton's big band (1945–47) and with trumpeter Joe Morris (1947–50) before playing two years (1951–53) in a U.S. Army band. In Chicago and then in New York City, Griffin established a national reputation while playing with Art Blakey (1957) and Thelonious Monk (1958). Together with tenor saxophonist Eddie ("Lockjaw") Davis, Griffin led a quintet in 1960–62. He moved to France in

1963 and then maintained an active career touring European jazz centres, soloing with the Kenny Clarke–Francy Boland big band in the late 1960s and, from 1978, leading his quartet in annual tours in the U.S. Griffin's tenor saxophone improvising was in a transitional style that fused swing and bebop elements. In early recordings, such as *A Blowing Session* (1957) and *Way Out!* (1958), he was noted for his creativity and technical dexterity, even while creating complex harmonic structures (chord changes) at fast tempos.

Griffiths, Philip Jones, Welsh photo-journalist (b. Feb. 18, 1936, Rhuddlan, Wales—d. March 19, 2008, London, Eng.), gained international recognition for his 1971 book *Vietnam, Inc.*, in which he used powerful images of wounded civilians and destroyed villages to challenge attitudes toward American involvement in the Vietnam War. Although Griffiths trained at Liverpool University to become a pharmacist, he worked as a freelance photographer from 1961. He first joined Magnum Photos, the co-op for freelance photographers, in 1966, became a full member in 1971, and served as president during 1980–85. Griffiths's work took him to more than 120 countries, including conflicts in Algeria, Bosnia, Cambodia, Iraq, Israel, and Northern Ireland. His later books include *Dark Odyssey* (1996) and *Vietnam at Peace* (2005).

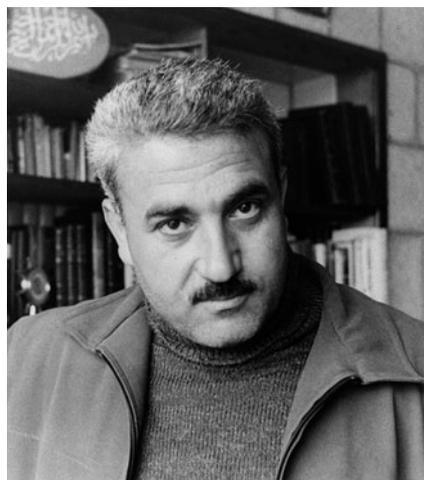

Groebli, Werner Fritz ("FRICK"), Swiss ice skater and comedian (b. April 21, 1915, Basel, Switz.—d. April 14, 2008, Zürich, Switz.), delighted audiences for more than 45 years (1934–80), first as half of the skating comedy team Frick and Frack and then as Mr. Frick after his partner, Hansruedi Mauch ("Frack"), was forced to retire in the 1950s because of health problems. The pair, who joined the Ice Follies in 1939, executed their slapstick comedy routines on the ice with perfect timing and exceptional athleticism, and Groebli continued to do his trademark cantilever spread eagle (in which he bent backwards at the knees to within inches of the ice) until well into his 60s. He was inducted into the World Figure Skating Hall of Fame in 1984.

Güines, Tatá (FEDERICO ARÍSTIDES SOTO ALEJO), Cuban percussionist (b. June 30, 1930, Güines, Cuba—d. Feb. 4, 2008, Havana, Cuba), was hailed as the King of the Congas and Golden Hands,

winning accolades for popularizing Afro-Cuban rhythms worldwide with his fiery drumming. After performing with top musicians in Cuba during the 1930s and '40s, Güines moved in 1957 to the U.S., where he was welcomed by such jazz greats as Dizzy Gillespie, Maynard Ferguson, and Miles Davis, with whom he jammed. Güines added percussion to studio recordings by Frank Sinatra and Josephine Baker and recorded (with bassist Cachao) the seminal album *Cuban Jazz Session in Miniature* (1957). Unhappy with the segregationist atmosphere in the U.S., Güines returned to Cuba after Fidel Castro's revolution in 1959. In later years Güines gained renewed attention when in 2004 he won a Latin Grammy for the album *Lagrimas Negras*, or *Black Tears*. In 2006 he was awarded Cuba's National Music Award.

Habash, George, Palestinian militant (b. 1925/26, Lydda, Palestine [now Lod,

AP

Palestinian militant George Habash

Israel]—d. Jan. 26, 2008, Amman, Jordan), was leader (1967–2000) of the Popular Front for the Liberation of Palestine (PFLP). Habash fled Palestine in 1948, after Israel was established there, and earned a medical degree at the American University of Beirut. In the early 1950s he was active in the Youth of Vengeance group, which advocated violent attacks on traditional Arab governments. Habash founded the militant PFLP after his goal to liberate Palestine through Arab unity proved unrealistic following Israel's victory in the Six-Day War (1967). Under his leadership, the PFLP staged several airplane hijackings, including the abduc-

tion of three Western passenger jets to a Jordanian airstrip in September 1970. These activities destabilized the Jordanian monarchy and triggered King Hussein's crackdown on Palestinian guerrillas operating in Jordan. In the bloody civil war that followed, the PFLP and other guerrillas were driven from the country. Following the Yom Kippur War (1973), Habash became the leading voice of the Rejection Front, four Palestinian groups that opposed any diplomatic settlement to the conflict with Israel. Under his leadership the PFLP successfully organized clandestine cells in the Israeli-occupied West Bank and Gaza Strip. Habash stepped down as leader of the PFLP in 2000.

Haerberlin, Paul, French chef and restaurateur (b. 1923, Illhaeusern, France—d. May 10, 2008, Illhaeusern), transformed his family's inn in the Alsatian town of Illhaeusern into a Michelin three-star restaurant. L'Arbre Vert was established in 1878 by Haerberlin's grandparents but was destroyed during World War II. Haerberlin and his brother, Jean-Pierre, rebuilt it in 1950, renaming it L'Auberge de l'ill. The brothers wanted the restaurant to revolutionize previous conceptions of French cuisine, and Haerberlin's cooking helped to define what became known as *nouvelle cuisine*. Some of Haerberlin's most famous creations include salmon soufflé, frog mousse, and Périgord truffle wrapped in foie gras. In 1976 he turned the kitchen over to his son, Marc, but he remained involved in the restaurant until 2007.

Chef Paul Haerberlin, French master of nouvelle cuisine

Yannick Bohn—Maxppp/Landov

Hagen, Earle Harry, American musician and songwriter (b. July 9, 1919, Chicago, Ill.—d. May 26, 2008, Rancho Mirage, Calif.), composed some of the most memorable music for television, including the themes for *The Andy Griffith Show*, *The Dick Van Dyke Show*, *Gomer Pyle, U.S.M.C.*, *Eight Is Enough*, *Make Room for Daddy*, and *The Dukes of Hazzard*. Hagen won (1968) an Emmy Award for his creative musical arrangements for the espionage series *I Spy*. Before writing for television, Hagen played trombone and toured with big band legends Benny Goodman and Tommy Dorsey. In 1939, while playing with the Ray Noble Orchestra, Hagen composed "Harlem Nocturne," later considered a jazz standard. He also wrote several books, including an autobiography, *Memoirs of a Famous Composer—Nobody Ever Heard Of* (2000), and two textbooks on composing music for films.

Haider, Jörg, Austrian politician (b. Jan. 26, 1950, Bad Goisern, Austria—d. Oct. 11, 2008, near Klagenfurt, Austria), as the charismatic but controversial populist leader of the far-right Freedom Party of Austria (FPÖ; 1986–2000) and the prominent governor of the state of Kärnten (1989–91; 1999–2008), transformed the FPÖ and increased its appeal among conservative Austrian voters. Haider denounced immigration, opposed the expansion of the EU to the east, and exploited the Austrian people's disgust with their scandal-ridden government, but his extreme views and complimentary remarks about Nazi Germany eventually cost him (and the FPÖ) support. Haider studied at the University of Vienna, where he received (1973) a law degree and subsequently taught law. He became chairman of the FPÖ's youth organization and in 1979, at age 29, was elected to the parliament. In 1983 Haider was named to head the FPÖ in Kärnten; three years later he became chairman of the federal party. He was elected governor of Kärnten in 1989 at the head of a coalition with the centre-right Austrian People's Party (ÖVP). He was forced to resign in 1991, partly as a result of his praise for Adolf Hitler's employment policies, but he was reelected in March 1999. In parliamentary elections that October, the FPÖ finished second with 27% of the vote and formed a national coalition government with the ÖVP. This development sparked international protests; the Israeli government recalled its ambassador; and the EU

imposed political sanctions against Austria. Haider was forced to resign as FPÖ leader, though he remained active in the party and continued as governor of Kärnten. In 2005 he formed a new party, the Alliance for the Future of Austria (BZÖ). Haider died from injuries sustained in a car accident.

Haines, Connie (YVONNE MARIE ANTOINETTE JAMAIS), American singer (b. Jan. 20, 1921, Savannah, Ga.—d. Sept. 22, 2008, Clearwater Beach, Fla.), was a petite but powerful vocalist who performed with Frank Sinatra in the big swing bands of Harry James and Tommy Dorsey and went on to make more than 200 solo recordings, 25 of which sold more than 50,000 copies. Some of her best-known songs include “Let’s Get Away from It All,” “Friendship,” “What Is This Thing Called Love?,” and “Snootie Little Cutie.” As a child, Haines was billed on radio as “Baby Yvonne Marie, the Little Princess of the Air.” After winning numerous talent contests, she joined James’s band at age 18 and changed her surname to sound like his. Her duos with Sinatra included the popular “Oh Look at Me Now” and “You Might Have Belonged to Another.” In addition, “the Nightingale from Savannah” appeared (1942–46) on the Abbott and Costello radio show, in several films (notably, *Duchess of Idaho* [1950] and *Birth of a Band* [1954]), and with singer Beryl Davis and Hollywood stars Jane Russell and Rhonda Fleming in a gospel quartet; the quartet scored a hit with “Do Lord.” Haines remained active into her 80s, singing in nightclubs, cabarets, and big band revivals.

Hall, Oakley Maxwell (O.M. HALL; JASON MANOR), American novelist (b. July 1, 1920, San Diego, Calif.—d. May 12, 2008, Nevada City, Calif.), spun tales of the Old West in novels that gained cult followings, notably *Warlock* (1958; filmed 1959; reissued 2005), which he penned under the name O.M. Hall. Hall published his first mystery novel, *Murder City* (1949) before earning an M.F.A. (1950) from the University of Iowa. Another favourite, this one about skiing, *Downhill Racers* (1963), was made into a film (*Downhill Racer*, 1969) starring Robert Redford. Hall’s best-known works, however, remained the ones set in the Old West, including *The Bad Lands* (1978), *The Coming of the Kid* (1985), and *Apaches* (1986). A series of five mysteries featuring the real-life 19th-century journalist Ambrose Bierce debuted

with *Ambrose Bierce and the Queen of Spades* (1998). Hall, who also wrote two compendiums—*The Art & Craft of Novel Writing* (1994) and *How Fiction Works* (2000)—served for nearly 20 years as director of the writing program at the University of California, Irvine.

Handley, Vernon George (“TOD”), British conductor (b. Nov. 11, 1930, Enfield, Middlesex, Eng.—d. Sept. 10, 2008, Monmouthshire, Wales), championed British composers, both in concert and in the studio; he made more than 150 recordings (nearly 90 of which included British music that had not previously been recorded), embracing works by such composers as Malcolm Arnold, Granville Bantock, Arnold Bax, Arthur Bliss, Rutland Boughton, Frederick Delius, Edward Elgar, Gustav Holst, E.J. Moeran, Robert Simpson, Charles Villiers Stanford, Ralph Vaughan Williams, and William Walton. Handley persuaded conductor Sir Adrian Boult to become his mentor. After making his debut (1961) with the Bournemouth Symphony, Handley conducted often with the Royal Philharmonic (1961–2008), as well as the Ulster (N.Ire.) Orchestra, the Royal Liverpool Philharmonic, and the Guildhall Philharmonic, which he founded in London in 1962. Outside England he conducted regularly with the Malmö (Swed.) Symphony Orchestra and with the Melbourne and West Australian symphonies. Handley was made CBE in 2004 and was granted lifetime achievement awards by *Gramophone* magazine (2003) and the Classical Brit awards (2007).

Harel, Yossi (YOSEF HAMBURGER), Israeli Zionist and intelligence officer (b. Jan. 4, 1918?, Jerusalem, British Palestine [now in Israel]—d. April 26, 2008, Tel Aviv, Israel), commanded the ship *Exodus 1947*, which sailed from the port of Sète (near Marseille) in July 1947, carrying more than 4,500 Jewish Holocaust survivors to Haifa, Palestine, where a blockade by the British prevented the refugees from landing. After several days of highly publicized skirmishes, the passengers were deported back to Europe. The incident, which raised international unease about the plight of Holocaust survivors and contributed to the founding (1948) of the state of Israel, was later dramatized in Leon Uris’s novel *Exodus* (1958; filmed 1960), in which the character representing Harel was renamed Ari Ben Canaan. Harel later worked in Israeli army intelligence.

Harkness, Ned (NEVIN D. HARKNESS), Canadian hockey and lacrosse coach (b. Sept. 19, 1921, Ottawa, Ont.—d. Sept. 19, 2008, Rochester, N.Y.), held the distinction of becoming the first coach to win national collegiate championships in two different sports. He led teams in both ice hockey and lacrosse at Rensselaer Polytechnic Institute, Troy, N.Y. (1949–63), where his lacrosse team captured a National Collegiate Athletic Association (NCAA) championship in 1952 and the hockey team earned a title in 1954. He moved to Cornell University, Ithaca, N.Y. (1963–70), where his teams won ice hockey NCAA championships in 1967 and 1970; the latter squad scored a perfect 29–0–0 record, becoming the only undefeated, untied national championship team in NCAA history. He made the transition to the National Hockey League in 1970, briefly heading the Detroit Red Wings, before serving as the franchise’s general manager (1973–74) and ultimately returning to college-level sports at Union College, Schenectady, N.Y. (1975–77). Harkness was inducted into the U.S. Hockey Hall of Fame in 1994 and the National Lacrosse Hall of Fame in 2001.

Harris, René Reynaldo, Nauruan politician (b. Nov. 11, 1947?, Nauru—d. July 5, 2008, Nauru), served four times (April 27, 1999–April 20, 2000; March 30, 2001–Jan. 9, 2003; Jan. 17–18, 2003; Aug. 8, 2003–June 22, 2004) as Nauru’s president; his 31 years (1977–2008) as a member of the country’s Parliament made him Nauru’s longest-serving politician, but his career was clouded by accusations of corruption and financial mismanagement. He also served (1992–95) as chairman of the Nauru Phosphate Corp. and manager of the island’s shipping line. Harris graduated from Geelong College, Victoria, Australia. After more than 20 years in Parliament, he succeeded Bernard Dowiyogo as president in 1999, shortly before Nauru was admitted to the UN. Harris was defeated by Dowiyogo in April 2000 and again in January 2003 but regained the presidency each time. In 2001 Harris and Australian Prime Minister John Howard negotiated the controversial “Pacific Solution,” in which Nauru received millions of dollars of much-needed financial aid in exchange for maintaining detention centres for Australia-bound asylum seekers; the centres were closed in March 2004. Harris was ousted for the last time in a no-

confidence vote in June 2004 and lost his seat in Parliament in April 2008.

Hartigan, Grace, American painter (b. March 28, 1922, Newark, N.J.—d. Nov. 15, 2008, Baltimore, Md.), created vibrant American-culture-inspired canvases, considered by some to be precursors of the Pop art movement. Hartigan began a painting career in New York City. She was a latecomer to the Abstract Expressionist movement and was also influenced by the work of such New York School poets as John Ashbery and Frank O'Hara; she collaborated with O'Hara in 1952 to create *Oranges*, a 12-painting series based on texts that he wrote. Initially gestural and obscure, Hartigan's vividly coloured work evolved over time to include recognizable imagery, which she often drew from film, advertising, and earlier paintings. She quickly won recognition for her art, appearing in 1950 in a "New Talent" show at the Kootz Gallery and soon after having her first one-woman show. An early painting, *Persian Jacket* (1952), was purchased for the permanent collection of the Museum of Modern Art in New York City. Hartigan later moved to Baltimore and became director (1965) of the Maryland Institute College of Art's Hoffberger School of Painting, where she taught until her retirement in 2007.

Harvey-Jones, Sir John Henry, British businessman (b. April 16, 1924, London, Eng.—d. Jan. 10, 2008, Hereford, Eng.), as chairman and CEO (1982–87) of Imperial Chemical Industries (ICI), combined an ebullient personality, sharp business acumen, and willingness to make tough, often unpopular, decisions to turn ICI from a troubled chemical firm into Britain's first £1 billion company. Harvey-Jones trained at the Royal Naval College, Dartmouth, and began his World War II service at age 16. In 1956, after having served in the submarine service, naval intelligence, and, reportedly, MI6, he took a low-level job at ICI. By 1970 he was head of the company's petrochemical and plastics division, and eight years later he was a deputy chairman. After retiring (1987) from ICI, he appeared on television, notably as the star of the 1990s documentary show *Troubleshooters*, in which his shaggy hair, flamboyant ties, and jovial, no-holds-barred advice to struggling companies made him an unexpected TV celebrity and inspired several books. Harvey-Jones was also chairman (1989–94) of the news magazine *The*

Economist. He was named Industrialist of the Year for three consecutive years (1986–88) and was knighted in 1985.

Haskins, Don (DONALD L. HASKINS), American college basketball coach (b. March 14, 1930, Enid, Okla.—d. Sept. 7, 2008, El Paso, Texas), helped bring racial integration to college basketball when in 1966 he started five African American players on his Texas Western College team, and the squad defeated the all-white University of Kentucky team to win the National Collegiate Athletic Association (NCAA) Division I championship. The season was memorialized in the 2006 movie *Glory Road*, based on a 2005 book of the same title by Haskins and coauthor Dan Wetzel. Haskins, who was regarded as an exceptionally tough and talented coach, first headed the basketball program at Texas Western (from 1967, the University of Texas at El Paso) in the 1961–62 season and retired in 1999. In his 38-year career, he led 14 teams to the NCAA tournament and had a career win-loss record of 719–353. Haskins was inducted into the Naismith Memorial Basketball Hall of Fame in 1997, and in 2007 he was inducted again with his 1965–66 Texas Western team.

Hayes, Isaac Lee, Jr., American singer-songwriter, musician, and actor (b. Aug. 20, 1942, Covington, Tenn.—d. Aug. 10, 2008, East Memphis, Tenn.), was a pioneering figure in soul music whose recordings influenced the development of such musical genres as disco, rap, and urban-contemporary. The charismatic performer—known for his shaved head, dark sunglasses, and smooth baritone voice—was perhaps best remembered for his compelling sound track for the 1971 film *Shaft*; the title song, "Theme from Shaft," became a number one hit and earned Hayes an Academy Award for best original song. Hayes reached his greatest popularity in the late 1960s and '70s, placing (1969–76) 10 consecutive albums on the American pop and rhythm and blues charts. Hayes was a self-taught pianist and saxophonist. He began his professional career performing at Memphis nightclubs and was eventually hired as a session musician for Memphis-based Stax Records; he went on to become one of the label's most successful songwriters. Although Hayes's debut solo album, *Presenting Isaac Hayes* (1967), did not fare well commercially, his next release, *Hot Buttered Soul* (1969), sold more than one

Paul Warner/AP

Charismatic soul performer Isaac Hayes

million copies and established him as a star. Among his other notable albums were *Black Moses* (1971), *Joy* (1973), *Live at the Sahara Tahoe* (1973), and *Chocolate Chip* (1975). Hayes later devoted much of his attention to acting, appearing in such movies as *Escape from New York* (1981), *I'm Gonna Git You Sucka* (1988), and *It Could Happen to You* (1994) and in various TV series, notably the animated hit *South Park*, for which he provided (1997–2006) the voice of the character Chef. He was inducted in 2002 into the Rock and Roll Hall of Fame.

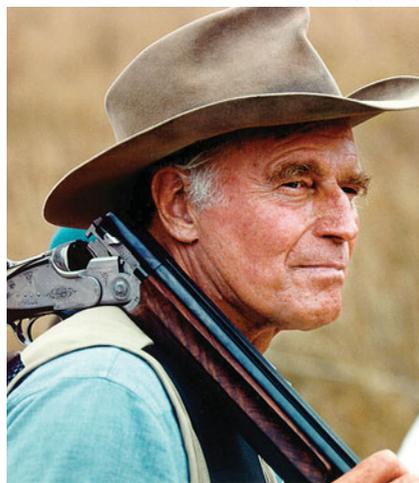

Healey, Jeff (NORMAN JEFFREY HEALEY), Canadian musician (b. March 25, 1966, Toronto, Ont.—d. March 2, 2008, Toronto), was a virtuoso guitarist whom retinoblastoma had left blind before he was a year old. He played the instrument positioned flat on his lap, a highly unconventional method that he adopted for convenience when, at a very young age, he began playing the guitar. Healey sold millions of blues-rock records with his Jeff Healey Band and his subsequent Jazz Wizards band, for which he also played trumpet and clarinet. Healey reached the apex of his career in the late 1980s with the album *See the Light*. A single from that album, "Angel Eyes," scaled *Billboard's* Hot 100 chart to number 5. His second album, *Hell to Pay*, featured guest artists, including George Harrison. Healey's final album, *Mess of Blues*, appeared posthumously.

Helms, Jesse Alexander, American politician (b. Oct. 18, 1921, Monroe,

N.C.—d. July 4, 2008, Raleigh, N.C.), as a longtime member (1973–2003) of the U.S. Senate, was a leading figure in the conservative movement. Nicknamed “Senator No,” he maintained a staunchly right-wing stance on social issues, leading crusades against abortion and homosexuality, supporting prayer in public schools, and opposing the busing of students for racial integration, but he was perhaps best known for his vehement opposition to civil rights and gay rights. Helms attended Wingate (N.C.) Junior College (now Wingate University) and Wake Forest College (now Wake Forest University), Winston-Salem, N.C., but abandoned his schooling in 1941, becoming city editor for the *Raleigh Times*. He served (1942–45) as a navy recruiter and from 1948 to 1951 was program director for radio station WRAL in Raleigh. He then served as an aide to North Carolina Senators Willis Smith (1951–53) and Alton Lennon (1953), was the executive director (1953–60) of the North Carolina Bankers Association, and worked as a political commentator (1960–72) for WRAL, WRAL-TV, and the Tobacco Radio Network. Originally a Democrat, Helms left the party in 1970, in large part because of his opposition to the Civil Rights Act (1964), and two years later he was elected to the Senate as a Republican. Portrayed by his critics as a demagogue, an extremist, and a bigot—he famously opposed the creation of a national holiday in honour of Martin Luther King, Jr.—Helms nevertheless displayed formidable skills as a politician and was reelected four times (1978, 1984, 1990, and 1996), though he never garnered more than 55% of the vote. He served as the chair of the Senate’s Agriculture Committee (1981–86) and Foreign Relations Committee (1995–2000). In the latter position, he supported military governments in Latin America, actively opposed arms control, and fought against nearly all foreign aid programs. In his final year in the Senate, he reconsidered his earlier position on HIV/AIDS and sponsored a bill that provided relief to AIDS victims in Africa, where transmission of the disease occurred largely through heterosexual contact. Helms published *Here’s Where I Stand: A Memoir* in 2005.

Heston, Charlton (JOHN CHARLTON CARTER), American actor (b. Oct. 4, 1924, Evanston, Ill.—d. April 5, 2008, Beverly Hills, Calif.), possessed a com-

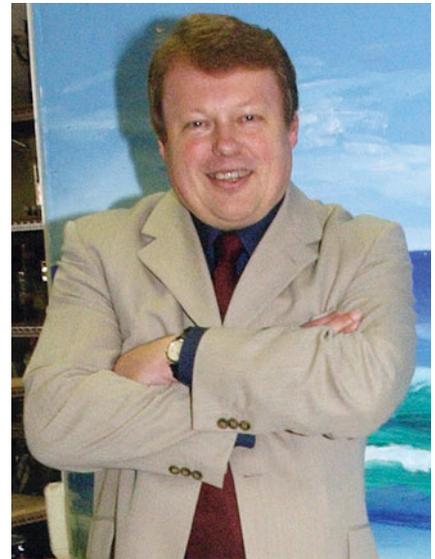

manding screen presence with his broad shoulders, chiseled features, and compelling speaking voice and became best known for his role as Moses in Cecil B. DeMille’s *The Ten Commandments* (1956). Heston made his Broadway debut in *Antony and Cleopatra* (1947). His first Hollywood film was *Dark City* (1950), and he followed that with *The Greatest Show on Earth* (1952), in which he appeared as the circus manager, and *The President’s Lady* (1953) portraying Pres. Andrew Jackson. Among Heston’s numerous subsequent films were *Touch of Evil* (1958) and *Ben-Hur* (1959), which won 11 Academy Awards, including a best actor award for Heston; the film secured his position as the premiere historical character actor in Hollywood. The films that followed placed him in several larger-than-life roles: the eponymous Spanish warrior in *El Cid* (1961), Michelangelo in *The Agony and the Ecstasy* (1965), and John the Baptist in *The Greatest Story Ever Told* (1965). In 1968 Heston starred in the western *Will*

Film star Charlton Heston

Penny and in *Planet of the Apes*, the first in a string of science-fiction films that included the cult favourites *The Omega Man* (1971) and *Soylent Green* (1973). Heston continued to be identified, however, for his work in period dramas. He twice played Mark Antony, in *Julius Caesar* (1970) and in *Antony and Cleopatra* (1973), which he also directed. Heston also served as the president (1966–71) of the Screen Actors Guild, chairman (1973–83) of the American Film Institute, and president (1998–2003) of the National Rifle Association of America.

British conductor Richard Hickox

Hickox, Richard, British conductor (b. March 5, 1948, Stokenchurch, Buckinghamshire, Eng.—d. Nov. 23, 2008, Cardiff, Wales), was noted for his promotion of English composers, his success as a choral conductor, and his prodigious output of more than 300 classical recordings. Hickox studied organ and composing at the Royal Academy of Music (1966–67) and organ at Queen’s College, Cambridge (1967–70). In 1971, soon after making his conducting debut, he founded the Richard Hickox Orchestra and Richard Hickox Singers (later renamed the City of London Sinfonia and City of London Singers). Other appointments included music director (1976–91) and conductor emeritus (from 1991) of the London Symphony Chorus, principal guest conductor of the Dutch Radio Orchestra (1980–84), associate conductor of the San Diego Symphony Orchestra (1983–84), associate guest conductor of the London Symphony Orchestra (from 1985), and principal conductor (2000–06) and conductor emeritus (from 2006) of the BBC National Orchestra of Wales. He became music director of Opera Australia in 2005. Hickox was made CBE in 2002.

Hightower, Rosella, American ballerina and ballet teacher (b. Jan. 30, 1920, Ardmore, Okla.—d. Nov. 3/4, 2008, Cannes, France), had an international career during which she was renowned for her lyricism and virtuosity. Hightower was a Native American of Choctaw descent. She began her study of ballet in Kansas City, Mo., in

1928 and in 1937 traveled to Europe. Hightower performed with Leonide Massine's Ballet Russe (1938–41), with Ballet Theatre (now American Ballet Theatre; 1941–45), and then primarily with Marquis George de Cuevas's company until his death in 1961. In 1962 Hightower founded the Centre of Classical Dance in Cannes; it came to be considered one of the leading ballet schools in Europe. She also served as the director of the Marseille Opera Ballet (1969–72), the Nancy Grand Theatre (1973–74), and the Paris Opéra Ballet (1980–83) in France and La Scala Ballet in Milan (1985–86). Hightower was named a Chevalier of the Legion of Honour in 1975.

Hill, Phil (PHILIP TOLL HILL, JR.), American race car driver (b. April 20, 1927, Miami, Fla.—d. Aug. 28, 2008, Monterey, Calif.), became the first American-born race car driver to win (1961) the Formula 1 (F1) Grand Prix world championship of drivers. Hill worked as a mechanic for midget-car racing in the Santa Monica, Calif., area before winning his first sports car competition in 1949; in 1956 he became an F1 driver for Ferrari. Hill was a disciplined perfectionist in car preparation and in study of the course. He secured the world drivers' championship when he won the 1961 Italian Grand Prix, in which Count Wolfgang von Trips, his Ferrari teammate (and leader for the championship by four points), was killed. Hill also won the Le Mans 24-hour endurance race (1958, 1961–62), the Sebring 12-hour race (1958–59, 1961), the 1964 Daytona Continental 2,000-km road race, the 1966 Nürburgring 1,000-km race, and the 1967 BOAC Six Hours at Brands Hatch. He left Ferrari in 1962 and retired in 1967. In 1991 Hill was inducted into the International Motorsports Hall of Fame.

Hillary, Sir Edmund Percival, New Zealand explorer (b. July 20, 1919, Auckland, N.Z.—d. Jan. 11, 2008, Auckland), galvanized the world when, on May 29, 1953, he and Tibetan mountaineer Tenzing Norgay were the first to reach the summit of Mt. Everest (8,850 m [29,035 ft]), the highest mountain in the world. Hillary began climbing in New Zealand's Southern Alps while in high school and took it up again after his World War II military service. In 1951 he joined a New Zealand party to the central Himalayas and later participated in a British reconnaissance expedition of the southern flank of Everest.

Wayne Drought/AP

New Zealand mountaineer Sir Edmund Hillary

He subsequently joined an expedition launched in the spring of 1953. After another pair of climbers failed to reach the top on May 27, Hillary and Tenzing set out for it early on May 29; by late morning they were standing on the summit, where they remained for 15 minutes. Hillary was knighted immediately after the expedition returned to London. (He made other forays to the Everest region during the early 1960s but never again tried to climb to the top.) Between 1955 and 1958 he commanded the New Zealand group participating in the British Commonwealth Trans-Antarctic Expedition led by Vivian Fuchs. Hillary reached the South Pole by tractor on Jan. 4, 1958, and in 1967 he was among those who scaled Antarctica's Mt. Herschel (3,335 m [10,941 ft]) for the first time. He later led (1977) the first jet-boat expedition up the Ganges River and then climbed to the river's source in the Himalayas. From 1985 to 1988 Hillary served as New Zealand's high commissioner to India, Nepal, and Bangladesh. He recounted his exploits in *High Adventure* (1955), *The Crossing of Antarctica* (1958; with Fuchs), *No Latitude for Error* (1961), and the autobiography *Nothing Venture, Nothing Win* (1975). Through the Himalayan Trust, which he founded in 1960, Hillary built schools, hospitals, and airfields for the Himalayan peoples, especially the Sherpas, and in 2003, as part of the observance of the 50th anniversary of his and Tenzing's climb, he was made an honorary citizen of Nepal.

Hillerman, Tony (ANTHONY GROVE HILLERMAN), American novelist (b. May 27, 1925, Sacred Heart, Okla.—d. Oct. 26, 2008, Albuquerque, N.M.), produced taut mysteries that brought to light rich American Indian customs and culture and featured Navajo tribal officers as protagonists; Lieut. Joe Leaphorn (introduced in *The Blessing Way* [1970], Hillerman's debut novel) and Sgt. Jim Chee (who made his bow in *People of Darkness* [1980]) use the latest police crime-solving methods coupled with traditional Navajo beliefs (*hozro*, or harmony) in their detection. The lyrical novels, which were prized for their authenticity, explored the conflicts between traditional Native American values and those of modern society. The works were set in the sprawling U.S. Southwest (Arizona, Utah, Colorado, and New Mexico) and focused on the motivation of the suspect. Hillerman, a natural storyteller, spent his youth in Depression-era Oklahoma, where he attended a grammar school for Indian girls and a high school with the Potawatomie. After service in World War II, he graduated (1946) with a B.A. in journalism from the University of Oklahoma. Armed with his intimate knowledge of and feeling of kinship with American Indians, he began writing fiction while serving (1965–85) as a professor (emeritus from 1985) at the University of New Mexico. He found commercial success in 1986 with *Skinwalkers*, the book that brought together the cynical Leaphorn (who understood but did not embrace Navajo practices) and the younger Chee (who was studying to become a Navajo *hataali*, or shaman). Hillerman produced 18 novels in the series, ending with *The Shape Shifter* (2006), and a number of nonfiction works, including *New Mexico, Rio Grande, and Other Essays* (1992). Among his numerous awards were two from the Mystery Writers of America: the Edgar Allan Poe Award (1974, for *Dance Hall of the Dead* [1973]) and the Grandmaster Award (1991).

Hillery, Patrick John, Irish politician (b. May 2, 1923, Milltown Malbay, County Clare, Ire.—d. April 12, 2008, Dublin, Ire.), served (1976–90) as the sixth president of Ireland. Hillery attended University College, Dublin, studying science and medicine. His practice of medicine yielded to politics in 1951 when, as a member of the Fianna Fáil party, he won election to Parliament. He later headed four government ministries: Education (1959–65),

Industry and Commerce (1965–66), Labour (1966–69), and Foreign Affairs (1969–72). In 1973 he became Ireland's first representative on the Commission of the European Economic Community (precursor of the European Union) and achieved the post of vice president of the Commission. He succeeded to the Irish presidency in 1976 upon the abrupt resignation of Cearbhall Ó Dálaigh. When Hillery's term of office ended in September 1983, he indicated that he did not intend to seek a second term but changed his mind when all three political parties pleaded with him to reconsider. He was returned for a further seven years without an electoral contest. After leaving office in 1990, Hillery retired from politics.

Hinckley, Gordon Bitner, American religious leader (b. June 23, 1910, Salt Lake City, Utah—d. Jan. 27, 2008, Salt Lake City), served (1995–2008) as the charismatic 15th president of the Church of Jesus Christ of Latter-day Saints. As the architect of the church's massive public relations network, Hinckley succeeded in overhauling the public image of Mormonism. He emphasized the words *Jesus Christ* in the church's official logo and opened up the church's genealogical records to the public online. He was the first president to use television to promote Mormonism, appearing on such programs as CNN's *Larry King Live*, and he was the first to visit (1999) the site of the 1857 Mountain Meadows massacre, in which Mormon mercenaries slaughtered members of a wagon train on its way West. Hinckley was also the most traveled president in the church's 177-year history, promoting the message of Mormonism in more than 60 countries, which resulted in a rapid growth in its membership from some 9 million to an estimated 12 million worldwide. His missionary efforts resulted in the construction of more than 100 Mormon temples across the globe. In 2004 Hinckley was awarded the Presidential Medal of Freedom.

Hofmann, Albert, Swiss chemist (b. Jan. 11, 1906, Baden, Switz.—d. April 29, 2008, Burg, Switz.), discovered the psychedelic drug lysergic acid diethylamide (LSD), which he first synthesized in 1938 by isolating compounds found in the fungus ergot. Hofmann's initial discovery was set aside for five years until April 1943, when he returned to his earlier therapeutic research on LSD. After ingesting a small

amount of the synthesized drug, he experienced dreamlike hallucinations, which he concluded could be of use in psychiatric treatment. He spent years investigating LSD's hallucinogenic properties in the belief that the drug would one day be useful in the therapeutic treatment of schizophrenics and other psychiatric patients.

Holtzman, Jerome, American sports-writer (b. July 12, 1926, Chicago, Ill.—d. July 19, 2008, Evanston, Ill.), possessed an encyclopaedic knowledge of baseball and was dubbed the “dean” of sportswriters; he chronicled the games of the Chicago Cubs and White Sox baseball teams as a respected journalist for the *Chicago Sun-Times* (1957–81) and the *Chicago Tribune* (1981–99) newspapers, and in 1998 commissioner Bud Selig named him baseball's official historian. Holtzman was also responsible for the implementation (1969) of a new baseball rule that designated a “save” to a relief pitcher who took the mound when his team was ahead in scoring and secured the win; it was the first significant addition to baseball statistics since 1920, when runs batted in began to be recorded. He also served as a columnist for *The Sporting News*, wrote the *Encyclopædia Britannica* entry on baseball, and authored the definitive text *No Cheering in the Press Box* (1974, reissued 1995). Holtzman was inducted into the writers' wing of the Baseball Hall of Fame in 1989.

Hua Guofeng (SU ZHU), Chinese politician (b. Feb. 16, 1921, Jiaocheng, Shanxi province, China—d. Aug. 20, 2008, Beijing, China), served as premier (1976–80) of China and chairman (1976–81) of the Chinese Communist Party (CCP). Hua, who joined the CCP in 1938, was a local party secretary in Hunan (the home province of Mao Zedong) before he was transferred in 1955 to head the party apparatus in Xiangtan county in Hunan. Hua became vice-governor of the province in 1958 and was a strong supporter of Mao in the Great Leap Forward (1958–59). During the Cultural Revolution (1966–76), Hua received Mao's endorsement against rebel groups in Hunan, and he was active in setting up (1968) that province's revolutionary committee and in reestablishing (1970) its party committee. He became a member of the Political Bureau in August 1973 and moved to Peking (Beijing), where he was named minister of public security in January 1975. After

the death of Premier Zhou Enlai in January 1976, Hua was named acting premier. In April—allegedly at the instigation of Mao's wife, Jiang Qing, and three of her political allies (the Gang of Four)—Mao chose Hua as permanent premier over Vice-Premier Deng Xiaoping, who was purged. Hua became chairman of the CCP after the death of Mao in September 1976. Just days after Mao's death, Hua ordered the arrest of the Gang of Four. In 1977 Hua allowed Deng to be rehabilitated and restored to his former position as vice-premier. Hua resigned the premiership in 1980, and the following year he was replaced as party chairman.

Hubbard, Freddie (FREDERICK DEWAYNE HUBBARD), American jazz musician (b. April 7, 1938, Indianapolis, Ind.—d. Dec. 29, 2008, Sherman Oaks, Calif.), played bravura trumpet solos with a harmonic-rhythmic flair that made him the most exciting late-bop virtuoso on his instrument. Early in his career, while influenced by bop-era trumpeters (including Clifford Brown and Lee Morgan), Hubbard developed a big, commanding tone and a subtle style of inventing melodies that flowed and, alternately, burst into dramatic contrasts. A prolific and daring recording artist, he not only was a major hard-bop figure but also played free jazz with Ornette Coleman, John Coltrane, and Eric Dolphy and modal jazz with Wayne Shorter. After performing (1961–64) in Art Blakey's Jazz Messengers, Hubbard led combos, including 1970s jazz-rock fusion groups that recorded the popular albums *Red Clay* and *First Light* (Grammy Award, 1972). He also played (1976–79) with Shorter and Herbie Hancock in the all-

Jazz musician Freddie Hubbard

Matt Kryger—The Indianapolis Star/AP

star quintet V.S.O.P. and on sound tracks for films, including *Blowup*. Years of intense trumpeting led to a lip infection in 1992 that severely curtailed Hubbard's career. In later years he played the less-demanding flugelhorn, rather than the trumpet, accompanied by the New Jazz Composers Octet.

Hughes, Brendan ("THE DARK"), Northern Irish militant (b. 1948, Belfast, N.Ire.—d. Feb. 16, 2008, Belfast), joined the Irish Republican Army (IRA) in 1969, becoming an important street fighter, arms smuggler, and strategist; later, as an IRA leader in the Maze prison, he led protests, including a 53-day hunger strike in 1980. Hughes was captured in 1973 but escaped six months later; after being recaptured in 1974, he was sentenced to 15 years in prison and returned to the Maze. After the British government in 1976 reclassified the prisoners as criminals, Hughes led the campaign for the return of the status of political prisoner. In 1977 he began the "dirty protest," in which prisoners refused to wash or use prison toilets. Hughes was released from prison in 1986, and he opposed the peace process.

Huntington, Samuel Phillips, American political scientist (b. April 18, 1927, New York, N.Y.—d. Dec. 24, 2008, Martha's Vineyard, Mass.), was an important political commentator in national debates on U.S. foreign policy in the late 20th and early 21st century and the author of a number of influential books on subjects that included national security strategy, defense policy making, American political ideology, transnational organizations, conservatism, the governability of democracies, processes of democratization, and the comparison of U.S. and Soviet governments. Two of his most important works were *Political Order in Changing Societies* (1968) and the controversial *The Clash of Civilizations and the Remaking of World Order* (1996), in which he cautioned against intervention in non-Western cultures. After earning a Ph.D. (1951) from Harvard University, Huntington joined its faculty. He became associate director (1959) of the Institute for War and Peace Studies at Columbia University, New York City, but he returned (1962) to Harvard, where he served as chairman of the department of government (1967–69; 1970–71) as well as director of the Center for International Affairs (1978–89) and of the John M. Olin Institute for Strategic Studies (1989–2000). From

1996 to 2004 he presided as chair of the Harvard Academy for International and Area Studies. Huntington founded the journal *Foreign Policy* in 1970. He was an adviser to Vice Pres. Hubert Humphrey during Humphrey's unsuccessful 1968 presidential campaign, chairman of the Democratic Party's Foreign Policy Advisory Committee in the mid-1970s, and coordinator of security planning in the National Security Council (1977–79) during the administration of Pres. Jimmy Carter.

Hurwicz, Leonid, Russian-born American economist (b. Aug. 21, 1917, Moscow, Russia—d. June 24, 2008, Minneapolis, Minn.), shared (with Eric S. Maskin and Roger B. Myerson) the 2007 Nobel Prize for Economics for his formulation of mechanism design theory, a microeconomic model of resource allocation that attempts to produce the best outcome for market participants under nonideal conditions. As a result of his study of mechanism design, Hurwicz concluded that the most efficient market system for both buyers and sellers is the double auction. Hurwicz's parents fled their native Poland for Moscow, where Leonid was born, to escape the ravages of World War I. Fearing persecution from the newly installed Soviet government, the family returned to Poland in 1919. After earning a law degree (1938) from the University of Warsaw, Hurwicz continued his education at the London School of Economics and the Graduate Institute of International Studies in Geneva, but the outbreak of World War II forced him to immigrate to the U.S. by way of Portugal. Hurwicz served as a research assistant for Paul Samuelson at the Massachusetts Institute of Technology and for Oskar Lange at the University of Chicago and took a number of teaching positions before settling in 1951 at the University of Minnesota. He remained there for the rest of his career, retiring from full-time teaching in 1988 but continuing as professor emeritus.

Ichikawa, Kon, Japanese motion-picture director (b. Nov. 20, 1915, Ise, Japan—d. Feb. 13, 2008, Tokyo, Japan), introduced sophisticated Western-style comedy to Japan in the 1950s, but he was better known for *Biruma no tategoto* (1956; *The Burmese Harp*) and *Nobi* (1959; *Fires on the Plain*), two dramatic antiwar films. Ichikawa made his first motion picture, *Musume Dojo-ji* (*The Girl at Dojo Temple*), in 1946 for the Shintoho Motion Picture Co. *Sam-*

byaku rokujugo ya (1948; "Three Hundred and Sixty-five Nights") was his first big box-office success. He collaborated with his wife, Wada Natto, a screenwriter, on the screenplays for many of his early films. In the 1950s Ichikawa and Wada developed the genre of the verbally witty comedy in Japan in such pictures as *Ashi ni sawatta onna* (1953; "The Woman Who Touched the Legs"), a remake of an earlier silent comedy, and *Pu-san* (1953; "Mr. Pu"). *Kagi* (1959; *Odd Obsession*), *Bonchi* (1960), *Kuroi junin no onna* (1961; "Ten Dark Women"), *Yukinojo henge* (1963; "The Revenge of Yukinojo"), and *Matatabi* (1973; "The Wanderers") were notable for Ichikawa's delicate treatment of the material and the strikingly beautiful visual composition of each scene. One of his greatest achievements was the compelling documentary *Tokyo Orimpikku* (1965; *Tokyo Olympiad*), in which he emphasized the attitudes and responses of the spectators and competitors over the outcome of the 1964 Summer Olympics in Tokyo. His later work included a serialization of *The Tale of Genji* and a number of suspense melodramas.

Immonen, Riitta Narhi, Finnish fashion designer (b. May 13, 1918, Ilo-mantsi, Fin.—d. Aug. 24, 2008, Helsinki, Fin.), was cofounder, with textile artist Armi Ratia, of the Marimekko clothing, textile, and interior-design company. Immonen designed all 27 outfits in Marimekko's debut showing on May 20, 1951, and her stylish, elegantly cut dresses—fashioned from Ratia's boldly coloured handprinted cotton fabrics—established what was to become Marimekko's signature look. Immonen trained as a dressmaker and in 1942 opened a salon in Helsinki, where she progressed from making wartime clothes from mass-produced fabric to using unique handwoven textiles in one-of-a-kind couture designs that caught Ratia's attention. In 1956 Immonen resigned her 49% share in Marimekko to focus on her own salon, turning out limited-production professional uniforms (from 1955), couture (until 1975), and the ready-to-wear line Riitta Immonen Sport (until 1985). Immonen also contributed (1953–64) a fashion-advice column in the Finnish women's magazine *Eeva*.

Ito, Kiyoshi, Japanese mathematician (b. Sept. 7, 1915, Hokusei-cho, Mie prefecture, Japan—d. Nov. 10, 2008, Kyoto, Japan), was a major contributor to

the theory of probability. Building on the work of Andrey Nikolayevich Kolmogorov, Paul Lévy, and Joseph Leo Doob, Ito was able to apply the techniques of differential and integral calculus to stochastic processes (random phenomena that evolve over time), such as Brownian motion. This work became known as the Ito stochastic calculus. The Ito calculus was applied in a number of fields, including engineering, population genetics, and mathematical finance. Ito graduated (1938) from the Imperial University in Tokyo, where he was awarded his doctorate in 1945. He worked (1939–43) for the Cabinet Statistics Bureau before serving as an assistant professor (1943–52) at Nagoya Imperial University and professor (1952–79) at Kyoto University, where he was director (1976–79) of the Research Institute for Mathematical Sciences. Among the awards bestowed on Ito were the Wolf Foundation Prize (1987), the Kyoto Prize (1998), and the Carl Friedrich Gauss Prize for Applications of Mathematics (2006).

Jacobs, Klaus Johann, German-born Swiss entrepreneur and philanthropist (b. Dec. 3, 1936, Bremen, Ger.—d. Sept. 11, 2008, Küsnacht, Switz.), took control of his family’s coffee-trading business in 1969, moved (1973) the headquarters from Bremen to Zürich, and subsequently merged (1982) it with Suchard-Tobler to create the international coffee and confectionery giant Jacobs Suchard AG. In 1990 Jacobs sold the majority of that company to U.S.-based Philip Morris for \$3.8 billion, though he retained some divisions. In 1996 he acquired the French candy firm Cacao Barry and christened the newly combined business Barry Callebaut; by 2008 it was one of the world’s premier chocolate companies.

Jastrow, Robert, American astrophysicist (b. Sept. 7, 1925, New York, N.Y.—d. Feb. 8, 2008, Arlington, Va.), popularized space science as a commentator on dozens of television programs and as the author of numerous books, notably the best-selling *Red Giants and White Dwarfs* (1967); he also played a vital role in guiding NASA’s lunar exploration program as the founding director (1961–81) of NASA’s Goddard Institute for Space Studies (GISS). Jastrow was also a cofounder (1984) of the George C. Marshall Institute, which provided policy makers with technical analyses of issues relating to science and technology.

Jeyaretnam, J(oshua) B(enjamin), Singaporean lawyer and politician (b. Jan. 5, 1926, Ceylon [now Sri Lanka]—d. Sept. 30, 2008, Singapore), was a longtime critic of Singapore’s authoritarian ruling People’s Action Party (PAP) and the country’s first opposition party

Roslan Rahman—AFP/Getty Images

Singaporean politician J.B. Jeyaretnam

MP (1981–86; 1997–2001). Jeyaretnam (commonly called JBJ) earned a law degree (1951) at University College, London. He practiced law in Singapore and served as chief of the Subordinate Judiciary, but he resigned in 1963. Jeyaretnam joined the opposition Workers’ Party, rising to secretary-general in 1971. After a decade of attempts, he won a parliamentary by-election in 1981. He was reelected in 1984, but he was accused of corruption and stripped of his seat two years later. In the 1997 general election, the Workers’ Party won enough votes to earn one nonconstituency seat, which was claimed by Jeyaretnam. Over the years he was repeatedly sued for libel and defamation by Prime Ministers Lee Kuan Yew (1959–90), Goh Chok Tong (1990–2004), and Lee Hsien Loong (from 2004) and other prominent PAP politicians. In 2001 Jeyaretnam declared bankruptcy and left the Workers’ Party. He founded a new opposition Reform Party in April 2008.

Johnson, (Charles) Van, American actor (b. Aug. 25, 1916, Newport, R.I.—d. Dec. 12, 2008, Nyack, N.Y.), was one of Hollywood’s biggest stars during the

early part of his six-decade career, particularly during his 12-year tenure (1942–54) at MGM studios, where he made nearly 50 films. Johnson’s clean-cut good looks and easygoing “boy-next-door” charm made him especially popular with swooning bobby-soxers, which led to his nickname “the Voiceless Sinatra,” and in 1945 he ranked second only to Bing Crosby on the list of Top 10 Box Office Stars. Johnson’s career began in the Broadway musicals *New Faces of 1936* (1936), *Too Many Girls* (1939), and *Pal Joey* (1940), in which he served as understudy to Gene Kelly, later his costar in the movie *Brigadoon* (1954). Johnson made his film debut in *Murder in the Big House* (1942); later that year he was put under contract by MGM. During his years with that studio, Johnson starred in several war films, notably *A Guy Named Joe* (1943), *Thirty Seconds over Tokyo* (1944), *Command Decision* (1948), and *Battleground* (1949). His versatility and boyish appeal also led to leading roles in comedies and musicals, including *Two Girls and a Sailor* (1944), *The Bride Goes Wild* (1948), *In the Good Old Summertime* (1949), and *Duchess of Idaho* (1950). He occasionally revealed his dramatic talents, notably in *The Caine Mutiny* (1954). After his film career waned, Johnson continued to act in local theatre and on television, though he periodically returned to the big screen, as in Woody Allen’s *The Purple Rose of Cairo* (1985).

Johnston, Ollie (OLIVER MARTIN JOHNSTON, JR.), American animator (b. Oct. 31, 1912, Palo Alto, Calif.—d. April

Disney animator Ollie Johnston

Richard Hartt—Time Life Pictures/Getty Images

14, 2008, Sequim, Wash.), was a member of Walt Disney's "Nine Old Men," a group of top-notch animators. Johnston began his lifelong career (1935–78) with Disney working on such shorts as *Mickey's Garden* (1935). He soon advanced into feature animations, creating such memorable characters as the dwarfs in *Snow White and the Seven Dwarfs* (1937), the Blue Fairy scenes in *Pinocchio* (1940), the stepsisters in *Cinderella* (1950), Mr. Smee in *Peter Pan* (1953), Pongo and Perdita in *101 Dalmatians* (1961), the dancing penguin waiters in *Mary Poppins* (1964), Mowgli and Baloo in *The Jungle Book* (1967), and Rufus the cat in *The Rescuers* (1977). Johnston was also a coauthor of what some considered the bible of animation, *Disney Animation: The Illusion of Life* (1981). Johnston was awarded the National Medal of Arts in 2005.

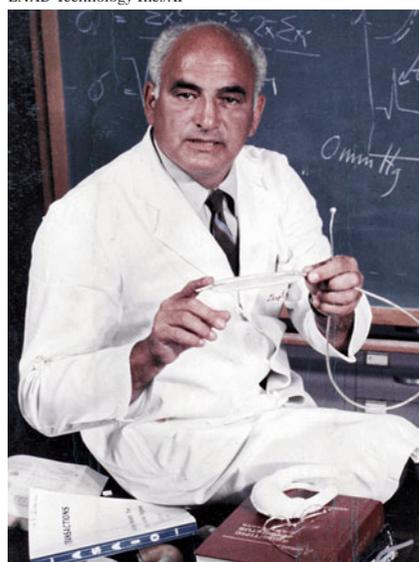

Jordan, Hamilton (WILLIAM HAMILTON MCWHORTER JORDAN), American political strategist and government official (b. Sept. 21, 1944, Charlotte, N.C.—d. May 20, 2008, Atlanta, Ga.), was a highly influential adviser to Jimmy Carter during the latter's successful 1976 U.S. presidential campaign and later served as chief of staff in the Carter administration. Jordan helped guide Carter's political career from the early stages, volunteering on his unsuccessful 1966 gubernatorial bid in Georgia and managing Carter's victorious bid for the governor's office four years later. The top campaign strategist for Carter in 1976, Jordan was subsequently named as domestic adviser to the president and (1979) chief of staff, with responsibility for foreign policy.

Kagel, Mauricio Raúl, Argentine-born avant-garde composer (b. Dec. 24, 1931, Buenos Aires, Arg.—d. Sept. 18, 2008, Cologne, Ger.), incorporated sound effects—both artificial ones and those using the human voice—into complex provocative musical compositions such as *Anagrama* (1957–58), with sound effects created by soloists, a speaking chorus, and musical instruments; *Acustica* (1968–70), in which he made use of car horns, cash registers, and walkie-talkies; and *Staats theater* (1967–70), an "antiopera" consisting of nine sections to be performed in random order. Kagel was strongly influenced by Pierre Boulez, who persuaded him to immigrate to Germany in 1957, and Karlheinz Stockhausen, whom he succeeded as director of the Cologne Courses for New Music. Kagel also

wrote radio plays and screenplays and taught at Cologne's University of Music.

Kantrowitz, Adrian, American heart surgeon (b. Oct. 4, 1918, New York, N.Y.—d. Nov. 14, 2008, Ann Arbor, Mich.), was a pioneer in the development of mechanical hearts and other devices to improve heart function. In 1967 he performed the first human heart transplant in the U.S. at Maimonides Medical Center in New York City. Kantrowitz was an adjunct surgeon (1951–55) at Montefiore (N.Y.) Hospital and served (1955–70) in various surgical posts at Maimonides. In 1951 he made the first film to show the inside of a beat-

L.VAD Technology Inc./AP

Cardiologist and surgeon Adrian Kantrowitz

ing human heart. He introduced an improved heart-lung machine in 1958, a pacemaker small enough to implant in 1962, and a balloon pump for short-term use after surgery in 1967. Kantrowitz transplanted a human heart into an infant on Dec. 6, 1967, just three days after South African surgeon Christiaan Barnard performed the world's first human heart transplant. Kantrowitz moved to Detroit, where he chaired the department of surgery (1970–75) and the department of cardiovascular surgery (1975–83) at Sinai Hospital. In 1983 he and his wife, Jean Rosensaft Kantrowitz, founded L.VAD Technology, a research firm that focused on developing new cardiovascular devices. The American Society of Artificial Internal Organs presented Kantrowitz with a lifetime achievement award in 2001.

Kantrowitz, Arthur Robert, American physicist and engineer (b. Oct. 20, 1913, New York, N.Y.—d. Nov. 29, 2008, New York, N.Y.), helped bridge a theoretical understanding of fluid dynamics with practical applications, as demonstrated in his innovation of using shock waves through low-pressure gas in a tube to design the first nose cones for intercontinental missiles. From his work it was determined that the best protection for a nose cone returning to Earth from space at high speed through the atmosphere would be a surface material that would ablate, or slowly vaporize, carrying away friction-generated heat. He also carried out pioneering work in other areas that involved the complex behaviour of hot gases, such as thermonuclear fusion under magnetic containment, supersonic compressors, high-power lasers, and magnetohydrodynamics for electric-power generation. Later in his career he helped develop a temporary heart-assist pump with his brother Adrian (*q.v.*), a cardiovascular surgeon, and he devoted efforts to establish a so-called science court to deal with scientific controversies in public policy. Kantrowitz received a Ph.D. (1947) from Columbia University, New York City. He headed (1937–46) the gas dynamics section at the National Advisory Committee for Aeronautics (the predecessor of NASA) and was a professor (1946–58) at Cornell University, Ithaca, N.Y. He founded (1955) and was CEO of Avco-Everett Research Laboratory. In 1978 he joined the faculty at the School of Engineering at Dartmouth College, Hanover, N.H.

Keenan, Brian, Northern Irish republican militant (b. 1942, Belfast, N.Ire.—d. May 21, 2008, Dublin, Ire.), served two prison sentences for delivering weapons to the Irish Republican Army (IRA) and helping orchestrate the IRA bombing campaign in Britain in the 1970s, but he eventually assisted in the disarmament of the IRA in 2005. Keenan joined the Provisional IRA in 1970, and by 1972 he had established a relationship with Libya that allowed him to deliver weapons to the IRA. He quickly moved up the ranks of the radical organization, becoming quartermaster general in 1973 and organizing the IRA bombings in London shortly thereafter. Keenan was arrested in 1979 on 18 counts of planning terrorist acts, including 6 killings, and was sentenced to 18 years in prison. After his release

(1993) on parole, Keenan expressed the belief that supporting the peace process through politics, rather than through violence, was the best way to achieve a united Ireland, and he became actively involved in promoting an IRA cease-fire and disarmament. Much of the success of the peace process was attributed to Keenan's efforts and leadership. In 1996 he was appointed to the seven-member IRA army council, and three years later he was involved in secret disarmament talks with Canadian Gen. John de Chastelain. Keenan in 2005 stepped down from his position on the army council for health reasons.

Keyes, Evelyn Louise, American actress (b. Nov. 20, 1916, Port Arthur, Texas—d. July 4, 2008, Montecito, Calif.), attained a level of stardom on the silver screen with her role as Scarlett O'Hara's put-upon sister Suellen in the Academy Award-winning *Gone with the Wind* (1939) and in the tabloids with her tumultuous romantic life, which included marriages to directors Charles Vidor and John Huston and bandleader Artie Shaw. Keyes played bit parts before being cast in *Gone with the Wind*. Her later varied movies included *The Face Behind the Mask* (1941), *Here Comes Mr. Jordan* (1941), *Dangerous Blondes* (1943), and *The Jolson Story* (1946).

Khalil, Mustafa, Egyptian politician (b. Nov. 18, 1920, Qalyub, Egypt—d. June 7, 2008, Cairo, Egypt), as Egypt's prime minister (1978–80) and foreign minister (1979–80), helped to secure the Camp David Accords (1978) and subsequent peace treaty (1979) between his country and Israel, an action that set the framework for other Arab states to make peace with Israel. Khalil graduated (1941) from Cairo University with a degree in civil engineering and earned master's (1948) and doctoral (1951) degrees from the University of Illinois. After working for railroad companies in both the United States and Egypt, Khalil taught (1951–56) engineering at Ain Shams University in Cairo. When Egypt became a republic in 1953, Khalil began advising the new government, and in 1958 he joined the cabinet as minister of transport and communications. He held various other ministerial posts, including deputy prime minister (1964–66), before his appointment as prime minister. In 1980 Khalil became deputy chairman of the Democratic National Party; he stepped down in 2007.

Kitt, Eartha Mae, American singer and dancer (b. Jan. 17, 1927, North, S.C.—d. Dec. 25, 2008, Connecticut), was a shapely singer who seduced audiences with her extraordinary and distinctive sultry voice; she also achieved success as a dramatic stage and film actress, earning numerous Tony and Grammy Award nominations. The daughter of a white man and a black woman, Kitt from the age of eight grew up with relatives in an ethnically diverse section of Harlem, New York City. At 16 she joined Katherine Dunham's

Ira Schwarz/AP

Sizzling entertainer Eartha Kitt

dance troupe, touring the U.S., Mexico, South America, and Europe. When the Dunham company returned to the U.S., the multilingual Kitt stayed in Paris, where she won immediate popularity as a nightclub singer. She made her acting debut in 1950 as Helen of Troy in *Time Runs*, an Orson Welles adaptation of *Faust*. With her appearance in the Broadway revue *New Faces of 1952* and with early 1950s recordings such as "C'est Si Bon," "Santa Baby," and "I Want to Be Evil," Kitt became a star. Her success continued in nightclubs; theatre productions, such as *Mrs. Pat-*

erson (1954) and *Shinbone Alley* (1957); films, including *St. Louis Blues* (1958) and *Anna Lucasta* (1959); and television appearances, notably the role of Catwoman in the late 1960s series *Batman*. After she publicly criticized the Vietnam War at a 1968 White House luncheon in the presence of the first lady, Lady Bird (Claudia) Johnson, Kitt's career went into a severe decline; in the 1970s it began to recover after news surfaced that she had been subjected to U.S. Secret Service surveillance. She made a comeback in the U.S. with *Timbuktu!* (1978), a remake of *Kismet* featuring an all-black cast. Kitt continued to perform in nightclubs, theatres, and films and on recordings until her death, and she received two Daytime Emmy Awards (2007 and 2008) for her role as the scheming Yzma in the children's television program *The Emperor's New School*. Kitt published three autobiographies: *Thursday's Child* (1956), *Alone with Me* (1976), and *I'm Still Here: Confessions of a Sex Kitten* (1989).

Korman, Harvey Herschel, American comedian (b. Feb. 15, 1927, Chicago, Ill.—d. May 29, 2008, Los Angeles, Calif.), delighted television viewers with the screwball roles he created as part of the ensemble cast of *The Carol Burnett Show*. During Korman's 10 seasons (1967–77) with the program, he garnered four Emmy Awards and a Golden Globe Award. He was most closely identified with the parts he played in recurring skits. One lampooned a TV soap opera ("As the Stomach Turns"); another was a spoof of the film *Gone with the Wind*; and a number of others featured him with Burnett as her spouse (notably the characters Ed and Eunice Higgins). Korman launched his show business career as a bit player (1964–67) on *The Danny Kaye Show*, which helped him gain entry to *The Carol Burnett Show*. He left her show to star in his own vehicle, *The Harvey Korman Show* (1978). The latter was canceled after three episodes, however, and Korman became a regular on *The Tim Conway Show* (1980–81) and a player on *Mama's Family* (reprising the Burnett show character Ed Higgins). Korman's film credits include *Blazing Saddles* (1974), *High Anxiety* (1977), and *The Trail of the Pink Panther* (1982).

Lamb, Willis Eugene, Jr., American physicist (b. July 12, 1913, Los Angeles, Calif.—d. May 15, 2008, Tucson, Ariz.), was corecipient, with Polykarp Kusch,

of the 1955 Nobel Prize for Physics for experimental work that spurred refinements in the quantum theories of electromagnetic phenomena. Lamb joined the faculty of Columbia University, New York City, in 1938 and worked in the Radiation Laboratory there during World War II. Though the quantum mechanics of P.A.M. Dirac had predicted the hyperfine structure of the lines that appear in the spectrum (dispersed light, as by a prism), Lamb applied new methods to measure the lines and in 1947 found their positions to be slightly different from what had been predicted. While a professor of physics (1951–56) at Stanford University, Lamb devised microwave techniques for examining the hyperfine structure of the spectral lines of helium. He taught at the University of Oxford until 1962, when he was appointed a professor of physics at Yale University. In 1974 he became a professor of physics and optical sciences at the University of Arizona, where he remained until his retirement in 2002. Lamb was also the recipient of the 1992 Einstein Medal (given by the Society for Optical and Quantum Electronics) and a 2000 National Medal of Science.

Lapid, Joseph (TOMISLAV LAMPEL; “TOMMY”), Israeli journalist and politician (b. Dec. 27, 1931, Novi Sad, Yugos. [now in Serbia]—d. June 1, 2008, Tel Aviv, Israel), enjoyed a successful career in journalism that spanned print media, radio, and television; he used his reputation as a journalist as a springboard into politics as a member of the secularist Shinui (“Change”) party and served (2003–04) as deputy prime minister and justice minister in a coalition government headed by Prime Minister Ariel Sharon. Joseph (or Yosef) Lapid survived World War II in the Budapest ghetto, although his father was killed in a concentration camp. After the war, he and his mother immigrated (1948) to Israel. Lapid earned a law degree (1955) from Tel Aviv University and went to work as a journalist for the newspaper *Maariv*, where he spent more than 20 years as a columnist, foreign correspondent, and managing editor. He was also director general (1979–84) of the Israel Broadcasting Authority, hosted *My Week*, a weekly Hebrew-language broadcast on Israel Radio, and in the 1990s appeared as a panelist on the current affairs television program *Popolitika*. After being elected to the Knesset (parliament) in 1999, Lapid opposed the special treatment—including politi-

cal, social, and financial advantages—enjoyed by the ultra-Orthodox in Israel. He returned to journalism in 2006. That same year he was appointed chairman of the board of directors of Yad Vashem, Israel’s Holocaust Martyrs’ and Heroes’ Remembrance Authority.

Laurus, Metropolitan (VASSILY MIKHAILOVICH SKURLA), Czech religious leader (b. Jan. 1, 1928, Ladomirovo, Czechoslovakia [now in Slovakia]—d. March 16, 2008, Jordanville, N.Y.), was instrumental in reconciling the 80-year dispute between the Russian Orthodox Church Outside of Russia and its parent church in Russia; the separation occurred in 1927 when Moscow Patriarch Sergey proclaimed allegiance to the Communist Party. Laurus joined a monastery at about age 10, and he arrived in 1946 in Jordanville with other monks after fleeing advancing Soviet troops. He was ordained a priest in 1954 and consecrated bishop of Manhattan in 1967 and bishop of Syracuse, N.Y., in 1976. In 2001 the Synod of Bishops elected Laurus metropolitan of the Russian Orthodox Church Outside of Russia. In 2007, in a gesture of peace, Laurus exchanged kisses with Alexis II, the patriarch of Moscow and All Russia, at a historic ceremony at which a reunification pact was signed in Moscow’s Christ the Saviour Cathedral in the presence of Russian Pres. Vladimir Putin. Laurus maintained administrative independence for his 400 parishes outside Russia.

Lederberg, Joshua, American geneticist (b. May 23, 1925, Montclair, N.J.—d. Feb. 2, 2008, New York, N.Y.), was a pioneer in the field of bacterial genetics and shared the 1958 Nobel Prize for Physiology or Medicine (with George W. Beadle and Edward L. Tatum) for discovering the mechanisms of genetic recombination in bacteria. Lederberg studied under Tatum at Yale (Ph.D., 1948) and taught at the University of Wisconsin (1947–59), where he established a department of medical genetics. In 1959 he joined the faculty of the Stanford Medical School, serving as director of the Kennedy Laboratories of Molecular Medicine there from 1962 to 1978, when he moved to New York City to become president of Rockefeller University. He held that post until 1990. With Tatum he published “Gene Recombination in *Escherichia coli*” (1946), in which he reported that the mixing of two different strains of a bacterium resulted in genetic recombina-

tion between them and thus to a new, crossbred strain of the bacterium. Scientists had previously thought that bacteria reproduced only asexually—i.e., by cells splitting in two; Lederberg and Tatum showed that they could also reproduce sexually and that bacterial genetic systems are similar to those of multicellular organisms. While biologists who had not previously believed that “sex” existed in bacteria such as *E. coli* were still confirming Lederberg’s discovery, he and his student Norton D. Zinder reported another and equally surprising finding. In the paper “Genetic Exchange in *Salmonella*” (1952), they revealed that certain bacteriophages (bacteria-infecting viruses) are capable of carrying a bacterial gene from one bacterium to another, a phenomenon they termed transduction. Moreover, his discovery of transduction provided the first hint that genes could be inserted into cells.

Ledger, Heath (HEATHCLIFF ANDREW LEDGER), Australian actor (b. April 4, 1979, Perth, Australia—d. Jan. 22, 2008, New York, N.Y.), was renowned for his moving and intense performances in diverse motion-picture roles, in particular the taciturn and tormented cowboy Ennis Del Mar in *Brokeback Mountain* (2005), for which he won best actor honours from the Australian Film Institute and received a nomination in the Academy Awards, BAFTA Awards, and Golden Globes. Ledger began his career in the late 1990s on Australian television, notably in the soap opera *Home and Away* and the mythic adventure series *Roar*, and in films, including the black comedy *Two Hands* (1999). His first Hollywood movie, the teen romance *10 Things I Hate About You* (1999), won him great attention. Ledger resisted being typecast as a teen heartthrob, however, and won critical acclaim for his varied roles in *The Patriot* (2000), *Monster’s Ball* (2001), *Lords of Dogtown* and *Casanova* (both 2005), and *Candy* (2006). He had completed his role as the Joker in the Batman movie *The Dark Knight* (2008) and was working on the Terry Gilliam film *The Imaginarium of Doctor Parnassus* at the time of his death from an accidental overdose of a mixture of prescription drugs.

Leigh, Dorian (DORIAN ELIZABETH LEIGH PARKER), American fashion model (b. April 23, 1917, San Antonio, Texas—d. July 7, 2008, Falls Church, Va.), dominated the 1940s and ’50s fash-

ion scene, with appearances on more than 50 magazine covers (including 7 for *Vogue* in 1946 alone) and in a 1952 advertising campaign for Revlon cosmetics; she was widely considered the first supermodel, though the publicity surrounding her stormy personal life sometimes rivaled that of her career. At the age of 27 she applied to be a model at Harry Conover Agency, which re-

Gjon Mill—Time Life Pictures/Getty Images

Fashion model Dorian Leigh

ferred her to Diana Vreeland at *Harper's Bazaar*. Vreeland featured her on the magazine's cover in June 1944. Leigh later joined Eileen Ford's esteemed modeling agency on the condition that her much younger sister—the future supermodel Suzy Parker—be hired as well. At age 40, Leigh, with Ford, opened Paris's first modeling agency. Leigh later trained as a chef, opened a restaurant, and wrote two cookbooks—*Pancakes* (1988) and *Doughnuts* (1994)—as well as an autobiography, *The Girl Who Had Everything* (1980).

Leonard, John, American literary critic (b. Feb. 25, 1939, Washington, D.C.—d. Nov. 5, 2008, New York, N.Y.), with his stylistically ornate and humorous prose, was regarded as one of the preeminent cultural critics of his

time. Though he was a lifelong leftist, Leonard began his journalism career in 1959 at the conservative *National Review* magazine. Later, during his tenure (1967–82) with the *New York Times*, he headed the newspaper's *Sunday Book Review* and served as a cultural critic. He was known best for his sweeping, verbose writings on literature and American culture, but he also wrote regularly about other media. He published a dozen books, some of which were collections of his criticism. In 2006 he was the recipient of the National Book Critics Circle lifetime achievement award. At the time of Leonard's death, he held posts at the journal *The Nation* and at *New York* and *Harper's* magazines.

Lepeshinskaya, Olga Vasiliyevna, Russian ballerina (b. Sept. 15 [Sept. 28, New Style], 1916, Kiev, Russia—d. Dec. 20, 2008, Moscow, Russia), was one of the most popular stars of the Bolshoi Ballet for some 30 years (1933–63). Known for the virtuosity, dynamic technique, and humour and drama with which she infused her dancing, she shone in both classic and, especially, contemporary roles. Lepeshinskaya was a favourite of Joseph Stalin and was awarded the Stalin Prize in 1941, 1946, 1947, and 1950. Following her retirement from the Bolshoi, she taught internationally for many years.

Li Ximing, Chinese government official (b. 1926—d. Nov. 8, 2008, Beijing, China), as the Communist Party of China (CPC) boss in Beijing during the 1989 Tiananmen Square pro-democracy movement, notably advocated the military crackdown on the student-led demonstrators that ended in a massacre. Li was among a number of prominent conservatives removed from their positions by Chinese paramount leader Deng Xiaoping in a shake-up of party leadership in 1992. Li later served as vice-chairman of the Standing Committee of the eighth National Congress of the CPC before retiring in 1998.

López Trujillo, Alfonso Cardinal, Colombian Roman Catholic prelate (b. Nov. 8, 1935, Villahermosa, Colom.—d. April 19, 2008, Rome, Italy), exerted enormous influence as a conservative leader in the Latin American Bishops' Council until 1990, when he became even more powerful as president of the Pontifical Council for the Family and thus the chief voice in the Vatican in the defense of traditional family values.

Bullit Marquez/AP

Cardinal Alfonso López Trujillo

López Trujillo was unwavering in his opposition to abortion, same-sex marriage, and condoms. He caused a major stir in 2003 when he declared that condoms did not prevent the spread of AIDS because the HIV virus could “easily pass through.” In 2006 López Trujillo ignited controversy again when he announced that for those involved in stem cell research (which he likened to abortion) “excommunication is valid for the women, the doctors, and researchers who destroy embryos.” After his ordination in 1960, López Trujillo was named auxiliary bishop of Bogotá (1971) and archbishop of Medellín (1979); in 1983 he was elevated to cardinal.

Lorenz, Edward Norton, American meteorologist and mathematician (b. May 23, 1917, West Hartford, Conn.—d. April 16, 2008, Cambridge, Mass.), was considered the father of modern chaos theory. In his effort to predict the weather by using computers, Lorenz constructed a weather model that showed that almost any two nearby starting points, indicating the current weather, will quickly diverge trajectories and will quite frequently end up in different “lobes,” which correspond to calm or stormy weather. His model's twin-lobed shape gave rise to the somewhat facetious “butterfly effect” metaphor: the flapping of a butterfly's wings in China today may cause a tornado in Kansas tomorrow. For his groundbreaking work (his findings were published in 1963 in a paper entitled “Deterministic Nonperiodic Flow”), Lorenz shared the 1983 Cra-

foord Prize of the Royal Swedish Academy of Sciences and was awarded the 1991 Kyoto Prize.

Loving, Mildred (MILDRED DELORES JETER), American civil rights activist (b. July 22, 1939, Virginia—d. May 2, 2008, Central Point, Va.), was one of the plaintiffs in the landmark 1967 U.S. Supreme Court case *Loving v. Virginia*, in which the court overturned longstanding miscegenation laws that had prohibited interracial marriages. In 1958 Mildred Jeter married her high-school sweetheart, Richard Loving, in the District of Columbia, but when the two returned home to Virginia, they were unaware that their marriage—between a black woman and a white man—was invalid there. The Lovings were jailed and charged with unlawful cohabitation. Though they were sentenced to one year's imprisonment, they

AP

Civil rights activists Mildred Loving and her husband, Richard.

were allowed to have that sentence suspended if they left the state for 25 years. The couple moved to Washington, D.C., but on a visit home in 1964, they were arrested for traveling together. In light of the 1964 civil rights laws, the Lovings secured an attorney and in April 1967 took their case to the Supreme Court, which unanimously ruled in their favour.

Lubich, Chiara (SILVIA LUBICH), Italian Roman Catholic lay leader (b. Jan. 22, 1920, Trento, Italy—d. March 14, 2008, near Rome, Italy), founded (1943) the Focolare Movement, a lay organization dedicated to peace, spiritual renewal, and ecumenical dialogue.

Lubich, who trained as a teacher, felt a religious calling and changed her name to Chiara in honour of St. Clare of Assisi but rejected joining a convent. She laid the foundations for the Focolare ("hearth") Movement when she and other young women studied the Bible while gathered together in air-raid shelters during World War II. Lubich worked tirelessly to expand the movement's values of spiritual unity and devotion to the poor in war-ravaged Europe and, later, throughout the world. Pope John XXIII endorsed the Focolare Movement in 1962, and in 1990 the Vatican approved the group's formal constitution. By 2008 the movement claimed 18 branches in 182 countries and millions of followers, including several thousand living in religious communities. Lubich's many personal awards included the Templeton Prize for Progress in Religion (1977), the UNESCO Prize for Peace Education (1996), and the Council of Europe's Human Rights Prize (1998).

Lyttelton, Humphrey Richard Adeane ("HUMPH"), British jazz musician and radio personality (b. May 23, 1921, Eton College, near Windsor, Berkshire, Eng.—d. April 25, 2008, London, Eng.), was a renowned trumpeter and bandleader, as well as a noted radio broadcaster, journalist, cartoonist, calligrapher, author, songwriter, and jazz critic. His trumpeting was strongly influenced by American Louis Armstrong, who reportedly considered him England's best. After serving in the Grenadier Guards during World War II, Lyttelton played with George Webb's Dixielanders and then formed (1948) his own popular traditional jazz combo. From the early 1950s he gradually led his band into a swing-revival idiom, adding saxophonist Bruce Turner and touring widely, including visits to the Middle East and to North America; they also accompanied top American players and singers on tours of Britain. In 1967 Lyttelton began hosting the weekly BBC Radio program *The Best of Jazz*, but he was most acclaimed as the ribald, though seemingly innocent, host of BBC Radio's weekly comedy game show *I'm Sorry I Haven't a Clue*.

Mac, Bernie (BERNARD JEFFREY McCULLOUGH), American comedian and actor (b. Oct. 5, 1957, Chicago, Ill.—d. Aug. 9, 2008, Chicago), earned two Emmy nominations (2002 and 2003) for his portrayal of a high-strung co-

median looking after his drug-addicted sister's three children on the television series *The Bernie Mac Show* (2001–06); he also achieved box-office success with roles in such films as *Ocean's Eleven* (2001) and its two sequels and *Charlie's Angels: Full Throttle* (2003). Mac's career ignited after he won a national comedy search in 1990. He hosted the HBO late-night comedy-variety show *Midnight Mac* before joining (1996) the cast of the TV sitcom *Moesha*. He later starred on the 1999–2000 "Kings of Comedy" concert tour, which was filmed by director Spike Lee and released in 2000 as the documentary *The Original Kings of Comedy*.

Maciel Degollado, the Rev. Marcial, Mexican Roman Catholic priest (b. March 10, 1920, Cotija de la Paz, Mex.—d. Jan. 30, 2008, Houston, Texas), founded (1941) the Roman Catholic religious order Legionaries of Christ (also known as the Legion of Christ), of which he remained head until 2005. The order attracted some 2,500 seminarians in 20 countries and had 650 priests across the globe; its lay affiliate, Regnum Christi, boasted a membership of 50,000. In 2006, following an investigation into former seminarians' allegations of sexual abuse (dating back to the 1940s–'60s), the Vatican requested that Maciel end his public ministry.

Mahesh Yogi, Maharishi, Hindu religious leader (b. 1917?, Jabalpur, British India—d. Feb. 5, 2008, Vlodrop, Neth.), introduced the practice of transcendental meditation (TM) to the West. Little is known of the Maharishi's early life, including the exact place and date of his birth. He studied physics at the University of Allahabad and worked for a time in factories. He later left for the Himalayas, where for 13 years he studied under Guru Dev, the founder of TM. When Guru Dev died in 1952, the Maharishi organized a movement to spread the teachings of TM throughout the world; his first world tour took place in 1959 and took him to the United States. The movement grew slowly until the late 1960s, when the English rock group the Beatles and other celebrities began to join his following. Although the Maharishi had a falling out with the Beatles, his movement continued to expand. He founded several study centres, including the nonsectarian Maharishi International University (later the Maharishi University of Management) in Fairfield, Iowa.

From 1990 he lived in the Dutch village of Vlodrop. The principles of transcendental meditation are discussed in the Maharishi's books *The Science of Being and Art of Living* (1963) and *Meditations of Maharishi Mahesh Yogi* (1968).

Makeba, Miriam (ZENSI MIRIAM MAKEBA; "MAMA AFRIKA"), South African singer (b. March 4, 1932, Prospect township, near Johannesburg, S.Af.—d. Nov. 10, 2008, Castel Volturno, near Naples, Italy), was one

Antony Kaminju—Reuters/Landov

South African singer Miriam Makeba

of the world's most prominent black African performers, though she spent some three decades (1960–91) in exile from her South African homeland (which responded to her antiapartheid stands by banning her songs and revoking her passport) until Nelson Mandela encouraged her return after his 1990 release from prison. Makeba released some 50 albums (original and compilations) and appeared on the recordings of other musicians. She especially excelled at Xhosa and Zulu songs, which she introduced to Western audiences, and her best-known songs, including "Pata Pata" and "The Click Song" ("Qongqothwane"), featured the distinctive click sounds of her native

Xhosa language. Makeba was the daughter of a Swazi mother and a Xhosa father. She grew up in Sophiatown, a segregated black township outside Johannesburg, and began singing in a school choir at an early age. She became a professional vocalist in 1954, and by the late 1950s she was well known in South Africa. Her appearance in the documentary film *Come Back, Africa* (1959) attracted the interest of Harry Belafonte, among others. With the help of her new friends, Makeba settled (1959) in the U.S. In 1965 she and Belafonte won a Grammy Award for best folk recording for their album *An Evening with Belafonte/Makeba*. Makeba was married to South African trumpeter Hugh Masekela (1964–66) and to West Indian-born American black activist Stokely Carmichael (1968–78). She relocated with Carmichael to Africa, settled in Guinea, and then moved to Belgium, continuing to record and tour in Africa and Europe. In April 1991 she gave her first concert in South Africa in more than 30 years.

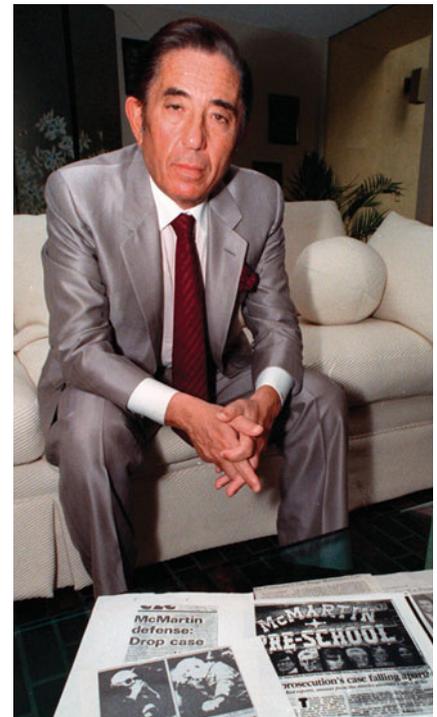

Mamo, Sir Anthony Joseph, Maltese jurist and statesman (b. Jan. 9, 1909, Birkirkara, Malta—d. May 1, 2008, Mosta, Malta), was the first president (1974–76) of the independent Republic of Malta and came to be regarded as a symbol of the new country. Mamo obtained (1934) a degree in law from the University of Malta and later was a criminal law professor (1943–57) there. He devoted most of his life to the public sector, however, serving as a member of the commission (1936–42) that revised Malta's legal code, a crown counsel (1942–51) in the attorney general's office, deputy attorney general (1951–55), attorney general (1955–57), and chief justice and president of the Constitutional Court (1957–71) before being sworn in as governor-general on July 4, 1971. As the crown colony's last governor-general, he was named to the largely ceremonial post of president on Dec. 13, 1974, when the island country gained its formal independence from the U.K. Mamo was knighted in 1960 and created a Companion of Honour in the National Order of Merit in 1990.

Manekshaw, Sam (SAM HORMUSJI FRAMJI JAMSHEDJI MANEKSHAW), Indian field marshal and military hero (b. April 3, 1914, Amritsar, British India—d. June 27, 2008, Wellington, India), as chief of staff (1969–73) of the Indian armed forces, was credited with India's swift military victory in December 1971

over Pakistan, which led to the creation of Bangladesh. He was the son of a Parsi doctor, who chose not to send his son to Britain to be educated; instead, Manekshaw attended the Indian Military Academy at Dehra Dun, receiving his commission in 1934 as part of the first class of Indian cadets. In early 1971 Manekshaw—over Prime Minister Indira Gandhi's objections—postponed intervening in the war between West Pakistan and secessionist East Pakistan (Bangladesh) until the monsoon season was over. Indian forces finally crossed the border on December 3, and on December 16 Pakistan surrendered, almost without a fight. Shortly before his retirement in 1973, Manekshaw was made field marshal, one of only two Indian soldiers ever to receive the title. He was also the recipient of two of India's highest civilian awards, the Padma Bhushan (1968) and the Padma Vibhushan (1972).

Mann, Abby (ABRAHAM GOODMAN), American screenwriter (b. Dec. 1, 1927, Philadelphia, Pa.—d. March 25, 2008, Beverly Hills, Calif.), examined the Nazi war crimes trials in the film *Judgment at Nuremberg* (1961), for which he won an Academy Award for best screenplay, and was the creator of the TV series *Kojak* (1973–78), inspired

Screenwriter Abby Mann

Mark Terrill/AP

by his Emmy Award-winning *The Marcus-Nelson Murders* (1973). During his 50-year career, Mann directed and wrote screenplays for dozens of films, including *Ship of Fools* (1965), *The Detective* (1968), and *Report to the Commissioner* (1975). Mann also wrote and directed the miniseries *King* (1978), based on the life of the Rev. Martin Luther King, Jr.

Martin, Del (DOROTHY L. TALIAFERRO), American gay rights activist (b. May 5, 1921, San Francisco, Calif.—d. Aug. 27, 2008, San Francisco), was in the forefront of the battle for lesbian and gay rights for more than 50 years. After a brief early marriage, she found that she was attracted to women. Martin and her partner, Phyllis Lyon, founded (1955) the first advocacy group for lesbians, Daughters of Bilitis, which grew to have chapters in several cities before it disbanded in 1970. The couple wrote the landmark book *Lesbian/Woman* (1972), followed by *Lesbian Love and Liberation* (1973); Martin also wrote the classic *Battered Wives* (1976). Martin was an early member of the National Organization for Women (NOW) and was the first avowed lesbian to serve on its board of directors. In 1972 Martin and Lyon founded the Alice B. Toklas Democratic Club, the first gay political organization in the U.S. When San Francisco Mayor Gavin Newsom directed on Feb. 12, 2004, that marriage licenses be issued to same-sex couples, Martin and Lyon were the first couple married. After the California Supreme Court nullified marriages made under that directive, Martin and Lyon joined a lawsuit. In May 2008, however, the same court ruled 4-3 that the state's ban on same-sex marriage was unconstitutional. On June 16, after 55 years together, Martin and Lyon became the first same-sex couple to be legally wed in California.

Martin, Dick (THOMAS RICHARD MARTIN), American comedian (b. Jan. 30, 1922, Battle Creek, Mich.—d. May 24, 2008, Santa Monica, Calif.), was the irrepressible cohost with straight man Dan Rowan of the breakout hit television variety show *Rowan & Martin's Laugh-In* (1968-73), which featured an ensemble cast of largely unknown comics whose frenetic-paced routines were interspersed with unexpected drop-ins by celebrities such as Robert Goulet, Cher, Jack Benny, and even Pres. Richard M. Nixon. In its first two seasons, *Laugh-In* topped the ratings

and won Emmy Awards for outstanding variety or musical series. The show introduced a slew of taglines, including one for Martin, "You bet your sweet bippy," which became his signature. Prior to *Laugh-In* Martin and Rowan performed together in nightclubs, and after the show left the airwaves, Martin began a career in directing for TV.

Marulanda Vélez, Manuel (PEDRO ANTONIO MARÍN; "TIROFIJO"), Colombian guerrilla leader (b. May 12, 1930?, Génova, Colom.—d. March 26, 2008, unknown mountain encampment, Colombia), was a founder (1964) and commander of the Revolutionary Armed Forces of Colombia (FARC), estimated to possess some 10,000 to 15,000 armed soldiers and thousands of supporters, largely drawn from Colombia's rural areas. The FARC supported a redistribution of assets from the wealthy to the poor and opposed the influence that multinational corporations and foreign governments (particularly the United States) had on Colombia. Born into a peasant family, Marulanda was never able to determine with certainty the year of his birth. He began fighting with several armed groups against right-wing forces in Colombia in 1948. By the mid-1960s these armed groups had merged into the FARC, which Marulanda headed from 1990 until his death. He earned the nickname "Tirofijo" ("Sureshot") because of his skills as a marksman.

McKay, Jim (JAMES KENNETH MC-MANUS), American sportscaster and journalist (b. Sept. 24, 1921, Philadelphia, Pa.—d. June 7, 2008, Monkton, Md.), was a pioneer in American television sports coverage; as the sagacious and personable host (from 1961) of the groundbreaking ABC show *The Wide World of Sports*, he was one of the most recognizable faces on American TV, and in 1968 he became the first TV sports commentator to win an Emmy Award (he won 13 altogether, including a 1990 award for lifetime achievement). McKay gained international acclaim for his uninterrupted 16-hour coverage of the Israeli hostage crisis during the 1972 Olympics in Munich. After learning that all 11 members of the Israeli team had been killed by their Palestinian captors, he stated, with his characteristic simplicity, "They're all gone." McKay's exceptional coverage of those Games earned him a George Polk Award and two Emmys (for sports and news broadcasting).

McKusick, Victor Almon, American physician and genome researcher (b. Oct. 21, 1921, Parkman, Maine—d. July 22, 2008, Baltimore, Md.), was a pioneer in the study of medical genetics, founding president (1988-91) of HUGO (the Human Genome Organisation), and the creator of the multivolume reference work *Mendelian Inheritance in Man* (12 editions, 1966-98) and its Internet corollary (from 1987), the *Online Mendelian Inheritance in Man* (OMIM). He published the influential textbook *Cardiovascular Sound in Health and Disease* (1958), but a heart patient whose condition was related to rare inherited diseases triggered his switch to genetics. In 1957 he founded the first medical genetics clinic at Johns Hopkins, where he remained as chairman of the department of medicine (from 1973) and professor of medical genetics (1985-2007). McKusick's most significant research included identifying the gene that causes Marfan syndrome and pinpointing the genetic basis for a form of dwarfism known as McKusick-Kaufman syndrome. His numerous honours include the Albert Lasker Award for Special Achievement in Medical Science (1997), Canada's Gairdner Award (1977), the U.S. National Medal of Science (2001), and the Japan Prize in Medical Genetics and Genomics (2008).

Miles, Buddy (GEORGE ALLEN MILES, JR.), American drummer and singer (b. Sept. 5, 1947, Omaha, Neb.—d. Feb. 26, 2008, Austin, Texas), was a soulful singer and an innovator in the fusion of psychedelic rock with soul, jazz, and blues. He had begun performing by the age of 12 with his father's jazz band, the Bebops, and he went on to work with the Ink Spots, the Delfonics, and Wilson Pickett. In the late 1960s Miles formed his own groups, the Electric Flag (with Mike Bloomfield) and the Buddy Miles Express, but he was best known as the drummer in Jimi Hendrix's all African American trio, the Band of Gypsys (assembled in 1969). That group, with Billy Cox on bass, recorded an eponymous live album that featured the song "Them Changes," which became Miles's signature song after he rerecorded it with his own band. His powerful drumming was featured on more than 70 albums with artists such as Stevie Wonder, Barry White, and Carlos Santana. During the 1980s Miles achieved a modicum of celebrity as the vocalist on the Claymation California Raisins commercials.

In 2004 Miles and Cox released the album *The Band of Gypsies Return*.

Minghella, Anthony, British playwright, screenwriter, and director (b. Jan. 6, 1954, Ryde, Isle of Wight, Eng.—d. March 18, 2008, London, Eng.), was one of Britain's most gifted and admired filmmakers; he won the Academy Award for best director for his third movie, *The English Patient* (1996), which also captured the best picture and seven other Oscars (he was nominated but failed to win for best adapted screenplay). After graduating from the University of Hull, Minghella taught there, contributed scripts to such television programs as *Grange Hill* and *Inspector Morse*, and wrote for the theatre. He was named most promising playwright by the London Theatre Critics Circle in 1984 and won the best new play award two years later for *Made in Bangkok*. In 1990 he made his directing debut with the poignant romantic comedy *Truly Madly Deeply*. The BAFTA-winning film was followed by *Mr. Wonderful* (1993), *The English Patient*, *The Talented Mr. Ripley* (1999), which garnered five Oscar nominations, an adaptation of Samuel Beckett's *Play* (2000), *Cold Mountain* (2003), which earned seven Oscar nominations, and *Breaking and Entering* (2006).

Mirghani, Ahmad Ali al-, Sudanese politician (b. Aug. 16, 1941, Khartoum, Anglo-Egyptian Sudan [now in The Sudan]—d. Nov. 2, 2008, Alexandria, Egypt), headed a rare democratically elected government in The Sudan as chairman of the Supreme Council from May 6, 1986, until he was overthrown by a military coup on June 30, 1989. In November 1988 Mirghani reached a peace agreement with the Sudan People's Liberation Army (SPLA), headed by John Garang. The coalition government at that time included the National Islamic Front, which refused to support the agreement. After the 1989 coup, Mirghani went into exile, mostly in Egypt, where he headed the National Democratic Alliance, which opposed the military regime in The Sudan, and cofounded the Islamic Development Corporation and the Sudanese Islamic Bank. In 2001 Mirghani returned to The Sudan and worked to end the civil war in the south and seek peace in Darfur province.

Mitchell, Mitch (JOHN MITCHELL), British rock-and-roll drummer (b. July 9, 1947, Ealing, Middlesex, Eng.—d.

Kevin Harvey/AP

Rock-and-roll musician Mitch Mitchell

Nov. 12, 2008, Portland, Ore.), was the powerful and innovative drummer of the legendary trio the Jimi Hendrix Experience from 1966, when he was hired to tour with guitarist Jimi Hendrix. Mitchell's drumming underpinned the band's debut single, "Hey Joe" (1966), and his jazz-inflected rhythms complemented Hendrix's virtuoso guitar playing on the group's first album, *Are You Experienced?* (1967), notably on the tracks "Purple Haze," "Manic Depression," and "Third Stone from the Sun." Mitchell backed Hendrix at the Monterey Pop Festival in 1967 and at the Woodstock Festival in 1969. The Jimi Hendrix Experience was inducted into the Rock and Roll Hall of Fame in 1992.

Mohammed, Warith Deen (WALLACE D. MUHAMMAD), American religious leader (b. Oct. 30, 1933, Detroit, Mich.—d. Sept. 9, 2008, Markham, Ill.), after succeeding his father, Elijah Muhammad, as head of the black nationalist Nation of Islam in 1975, reformed the organization and moved it toward inclusion within the worldwide Islamic community. Mohammad received religious training in the tradition of the Nation, but while serving a federal prison sentence (1961–62) for refusing the military draft, he came to see the teachings of the Nation of Islam as differing from those of true Islam. He left and rejoined the organiza-

tion three times before becoming supreme minister when his father died in 1975. Mohammed adopted the title imam (1976) and renamed the organization the World Community of al-Islam in the West; the name was changed to the American Muslim Mission in 1978 and to the Muslim American Society in 1985. Although Mohammed's changes were welcomed by many, a dissident minority led by Louis Farrakhan split in 1978 and reestablished the Nation of Islam according to the precepts of Elijah Muhammad. In 1992 Mohammed became the first Muslim to give the traditional invocation in the U.S. Senate.

Mondavi, Robert Gerald, American winemaker (b. June 18, 1913, Virginia, Minn.—d. May 16, 2008, Yountville, Calif.), created American wines that rivaled European labels and helped generate the rebirth of California's wine industry. Mondavi introduced the use of stainless steel tanks for cold fermentation, reinstated French oak barrels into the winemaking process, and inaugurated tastings and public tours of his winery. Mondavi urged his father (then co-owner of a small California winery) to buy (1943) the historic Charles Krug Winery and helped run the business with his father and brother for more than 20 years. After a falling out with his brother, however, Mondavi left (1965) the Krug Winery. The next year he established the Robert Mondavi Winery with the goal of producing world-class wines in California; it was the first major winery to be built in the Napa Valley since the 1930s. After additional family squabbles and several years of fluctuating wine sales, Mondavi sold his company in 2004 to Constellation Brands for \$1.3 billion.

Mordyukova, Nonna (NOYABRINA VIKTOROVNA MORDYUKOVA), Soviet actress (b. Nov. 25, 1925, Konstantinovskaya, Ukraine, U.S.S.R. [now in Russia]—d. July 6, 2008, Moscow, Russia), epitomized the ideal Soviet woman in films that typecast her as a strong mother figure torn between her conflicting loyalties to family and state. Mordyukova grew up on a collective farm and studied acting at the Russian State Institute of Cinematography. She made her screen debut in *Molodaya gvardiya* (1948; *The Young Guard*), but her breakthrough roles came in *Chuzhaya rodnya* (1955; *Other People's Relatives*) and Aleksandr Askoldov's *Kommissar* (*The Commissar*), which was filmed in

1967 but was not released until 1987, largely owing to its controversial themes of anti-Semitism and the Holocaust. Mordyukova's other significant films include *Prostaya istoriya* (1960; *A Simple Story*), the comedies *Brilliantovaya ruka* (1968; *The Diamond Arm*) and *Inkognito iz Peterburga* (1977; *Incognito from St. Petersburg*), and her final screen appearance, *Mama* (1999). Mordyukova was honoured (1992) with the Order for Service to the Fatherland.

Morse, Barry (HERBERT MORSE), British actor (b. June 10, 1918, London, Eng.—d. Feb. 2, 2008, London), was an accomplished actor in some 3,000 stage and screen roles over a seven-decade (1935–2005) career, but Morse's other achievements were overshadowed by his portrayal of Lieut. Philip Gerard, the tenacious police detective who relentlessly pursued the title character in the American television series *The Fugitive* (1963–67). After studying at the Royal Academy of Dramatic Arts, he began working (1930s) onstage and in British radio. In 1951 Morse settled in Canada, where he eventually won numerous acting awards.

Mphahlele, Es'kia (EZEKIEL MPHAHLELE), South African writer, editor, and teacher (b. Dec. 17, 1919, Marabastad, S.Af.—d. Oct. 27, 2008, Lebowakgomo, S.Af.), addressed negritude, nationalism, the black African writer, and the literary image of Africa, notably through his memoir about growing up under apartheid, *Down Second Avenue* (1959). Mphahlele trained as a teacher and pursued graduate studies at the University of South Africa (M.A., 1956) and later in the U.S. at the University of Denver (Ph.D., 1968). His early career teaching English and Afrikaans was terminated by the South African government because of his strong opposition to the Bantu Education Act. After going into voluntary exile in 1957, Mphahlele held a number of academic and cultural posts in Nigeria, Europe, and the U.S. He returned home in 1977 and later became head (1983–87) of the department of African literature at the University of the Witwatersrand, Johannesburg. Mphahlele was coeditor (1960–64) with Ulli Beier and Wole Soyinka of the Nigerian literary periodical *Black Orpheus*, cofounded South Africa's first independent black publishing house, and coedited the anthology *Modern African Stories* (1964). His critical writings include volumes of essays, notably

The African Image (1962), *Voices in the Whirlwind* (1972), *Es'kia* (2002), and *Es'kia Continued* (2005). He also wrote several short-story collections, including *In Corner B* (1967), *The Unbroken Song* (1981), and *Renewal Time* (1988); the novels *The Wanderers* (1971) and *Chirundu* (1979); and a sequel to his autobiography, *Afrika My Music* (1984).

Mr. Blackwell (RICHARD SYLVAN SELZER), American fashion designer and Hollywood tastemaker (b. Aug. 29, 1922, Brooklyn, N.Y.—d. Oct. 19, 2008, Los Angeles, Calif.), attracted media and public attention for his annual "10 Worst Dressed Women's List," in which he used his biting wit to pillory what he viewed as the horrendous fashion

Reed Saxon/AP

Fashion tastemaker Mr. Blackwell

choices of the people whom he selected; his "best-dressed list" gained much less attention. Blackwell enjoyed a brief career as a child actor and a Hollywood agent before founding (1958) the House of Blackwell, his fashion concern. The company's classic designs remained popular until the 1960s heyday of the miniskirts, and in the mid-1970s Blackwell shuttered the doors to his business.

Mulligan, Robert Patrick, American film and television director (b. Aug. 23, 1925, Bronx, N.Y.—d. Dec. 20, 2008, Lyme, Conn.), began his career directing for *The Philco Television Playhouse*, *Studio One*, and *Playhouse 90*, earning an Emmy Award for his direction of the TV film *The Moon and the Sixpence*, but he achieved his greatest renown for di-

recting compelling movies that involved complex human relationships, notably *To Kill a Mockingbird* (1962), for which he earned an Academy Award nomination. Mulligan's other film credits include *Fear Strikes Out* (1957), *The Great Imposter* (1961), *Inside Daisy Clover* (1965), *Up the Down Staircase* (1967), *Summer of '42* (1971), and *The Man in the Moon* (1991), his last.

Murdoch, Colin Albert, New Zealand pharmacist, veterinary chemist, and inventor (b. Feb. 6, 1929, Christchurch, N.Z.—d. May 4, 2008, Timaru, N.Z.), held patents on some 46 inventions, most notably the first disposable sterile prefilled hypodermic syringe, which he devised (1956) at age 27 while seeking an easier way to vaccinate animals. His other inventions included a less-dangerous form of veterinary tranquilizer dart (plus various rifles and pistols with which to dispense the projectiles, along with advanced telescopic rangefinder sights), disposable automatic vaccinator syringes, silent automatic-dialing burglar alarms, heat-sensing cells for silent fire alarms, transmitter relocation darts, and the childproof medicine bottle cap, which earned him a gold medal at the 1976 World Inventors Fair in Brussels. Murdoch registered (1961) the international trade name Paxarms Ltd., but he repeatedly refused to defend his patents. He was made an Officer of the New Zealand Order of Merit in 2000. In August 2007 the tranquilizer gun was honoured on a New Zealand postage stamp.

Mwanawasa, Levy Patrick, Zambian attorney and politician (b. Sept. 3, 1948, Mufulira, Northern Rhodesia [now Zambia]—d. Aug. 19, 2008, Paris, France), as the third president (2002–08) of Zambia, launched an anticorruption campaign that included stripping his predecessor, Frederick Chiluba, of immunity from prosecution and distinguished himself as one of the few African leaders to publicly criticize Zimbabwean Pres. Robert Mugabe. Mwanawasa, a member of the Lenje tribe, read law (1970–73) at the University of Zambia, Lusaka. He became an assistant in a law firm in Ndola in 1974 and qualified for the bar in 1975. After forming (1978) his own legal firm, he became (1982) vice-chairman of the Law Association of Zambia and served (1985–86) as the country's solicitor general. When Pres. Kenneth Kaunda reluctantly approved the creation of opposition parties in December

1990, Mwanawasa joined the new Movement for Multiparty Democracy (MMD), headed by Chiluba. In 1991 Mwanawasa was elected to the National Assembly for the Ndola constituency. He was appointed vice president and leader of the Assembly under President Chiluba, but he resigned office in July 1994, accusing the Chiluba government of condoning irresponsibility and greed. With Chiluba's impending retirement, Mwanawasa was unexpectedly adopted in 2001 as the MMD's candidate for president. He polled only 28.69% of the votes cast, while the nearest of the other 10 candidates received 26.76%; the result was initially challenged by his opponents, but he moved quickly to establish his authority and distance himself from Chiluba. Although Mwanawasa suffered a stroke in April 2006, he stood for reelection later that year, garnering 42.98% of the vote. Sporadic violence ensued in areas loyal to his nearest challenger, Michael Sata (with 29.37%). The results stood, however, and Mwanawasa was sworn in for his second term. He suffered another stroke in late June 2008 and was taken to France for medical treatment.

Nasir, Ibrahim, Maldivian politician (b. Sept. 2, 1926, Male, British Maldives—d. Nov. 22, 2008, Singapore), dominated life in the Indian Ocean archipelago of some 1,200 islands for more than 20 years. In 1957 Nasir was named prime minister under the British protectorate's ruling sultan, and in 1965 when Maldives gained independence from Britain—under an agreement that Nasir negotiated—he remained prime minister of the new country. Three years later he engineered a referendum in which the sultanate was abolished and replaced with a republic, of which he became the first president. Under Nasir's control, Maldives was transformed into a modern country, with improved education and telecommunications, an international airport, a modernized fishing industry, and a reputation as a luxury tourism destination. Nasir's dictatorial style angered many, however, and in 1978 he formally refused a third term in office and fled the country amid public unrest and unproven allegations of corruption.

Ndiaye, Iba, Senegalese painter (b. 1928, Saint-Louis, French West Africa [now in Senegal]—d. Oct. 5, 2008, Paris, France), was one of Senegal's leading Modernist artists and a co-founder of the negritude art movement

known as the École de Dakar, but his richly coloured semiabstract paintings more often reflected Western influences, especially jazz and classic European art, than the African Primitivism common to many of his compatriots.

Nerina, Nadia (NADINE JUDD), South African ballerina (b. Oct. 21, 1927, Cape Town, S.Af.—d. Oct. 6, 2008, Beaulieu-sur-Mer, France), was celebrated for her remarkable versatility of roles, her bravura footwork, and her onstage charm. After touring South Africa in 1942, she went (1945) to England, where she studied under Dame Marie Rambert. Nerina became prima ballerina of the Sadler's Wells Ballet (now the Royal Ballet) in 1951, excelling in both classical and modern repertoires. She was especially noteworthy as the girlish Lise in *La Fille mal gardée*, which choreographer Sir Frederick Ashton created for her in 1960. In the U.S.S.R. she appeared as guest artist with the Bolshoi and Leningrad (St. Petersburg) Kirov (now Mariinsky) ballets. Nerina continued with the Royal Ballet as a soloist from 1967 to 1969, when she retired.

Newell, Peter Francis, Canadian-born American basketball coach (b. Aug. 31, 1915, Vancouver, B.C.—d. Nov. 17, 2008, Rancho Santa Fe, Calif.), served as the influential coach of the basketball teams at the University of San Francisco (1946–50), where his 1949 team captured the National Invitation Tournament (NIT) title; Michigan State University (1950–54); and the University of California, Berkeley (1954–60), where he guided his team to triumph in the 1959 National Collegiate Athletic Association (NCAA) tournament. The following year he led the U.S. basketball team to a gold medal in the 1960 Rome Olympic Games. He later served (1972–76) as general manager of the National Basketball Association (NBA) Los Angeles Lakers. Newell was inducted into the Basketball Hall of Fame in 1979.

Newman, Paul Leonard, American actor (b. Jan. 26, 1925, Cleveland, Ohio—d. Sept. 26, 2008, Westport, Conn.), was a matinee idol whose striking good looks and startling blue eyes became hallmarks in a film career in which he was honoured for his compelling performances with nine Academy Award nominations (one win); he also won two honorary Oscars, a lifetime achievement (1986) and the Jean Her-

Award-winning actor Paul Newman

sholt Humanitarian Award (1994). Newman honed his craft at New York City's Actors Studio. Following his Broadway debut in *Picnic* (1953), he signed a film contract with Warner Brothers and also appeared in live television dramas (*Our Town* [1955] and *Bang the Drum Slowly* [1956]). His impressive portrayal of boxer Rocky Graziano in *Somebody Up There Likes Me* (1956) was followed by *The Rack* (1956), *Cat on a Hot Tin Roof* (1958; for which he received his first Academy Award nomination), *The Long, Hot Summer* (1958), and *The Young Philadelphians* (1959). Newman essayed the role that perhaps best defined his screen persona, that of pool shark "Fast" Eddie Felson in *The Hustler* (1961) and earned another Oscar nomination. *The Hustler* was the first in a series of films in which Newman portrayed antiheroic protagonists. *Hud* (1963), *Harper* (1966), *Hombre* (1967), and *Cool Hand Luke* (1967) further solidified his image as an ingratiating iconoclast. Newman costarred in 11 films with his second wife, actress Joanne Woodward, and directed her in several others, beginning with *Rachel, Rachel* (1968). Two enormously popular comedies teamed Newman with costar Robert Redford. The western *Butch Cassidy and the Sundance Kid* (1969) received seven Oscar nominations, and the Depression-era film *The Sting* (1973) won the Academy Award for best picture. Newman maintained his star status with such popular films as *The Towering Inferno* (1974), *Slap Shot* (1977), *Fort Apache the Bronx* (1981), and two for which he received Oscar

nominations, *Absence of Malice* (1981) and *The Verdict* (1982). He finally won the Academy Award for his reprise as Felson in *The Color of Money* (1986). He also earned nominations for his depiction of an unemployed construction worker in *Nobody's Fool* (1994) and for his supporting role as a mob boss in *Road to Perdition* (2002). In 2005 he starred in the television movie *Empire Falls*, for which he won Emmy, Golden Globe, and Screen Actors Guild awards. After voicing a character in the animated film *Cars* (2006), Newman retired in 2007. In addition to his Hollywood career, Newman launched (1982) the successful Newman's Own line of food products: its profits benefited a number of charitable causes. In 1988 he founded the Hole in the Wall Gang Camp in south-central Connecticut for children with serious medical conditions. A passionate race car driver since the early 1970s, Newman became co-owner in 1982 of Newman/Haas/Lanigan Racing.

Ngugi wa Mirii, Kenyan-born Zimbabwean playwright and activist (b. 1951, Limuru, Kenya—d. May 3, 2008, Harare, Zimb.), was coauthor with Ngugi wa Thiong'o of two plays that criticized the Kenyan government. Both men were arrested and imprisoned for the Gikuyu-language play *Ngaahika ndeenda* (1977; *I Will Marry When I Want*), which attacks capitalism, religious hypocrisy, and corruption among the new economic elite of Kenya; five years later *Mother Cry for Me* caused such a negative reaction from the Kenyan government that both men were forced into exile. Ngugi wa Mirii settled in Zimbabwe, where he wrote about the social issues facing ordinary citizens, as well as extensive criticisms of imperialism and capitalism; he was also a strong supporter of the Pan-African cause. In 1985, with the support of the Zimbabwean government, Ngugi wa Mirii was awarded funding to found the Zimbabwe Association of Community Theatre, with the goal of bringing about social change through the arts. He became a Zimbabwean citizen shortly thereafter.

Niane, Katoucha, Guinean-born French fashion model (b. 1960, Conakry, Guinea—found dead Feb. 28, 2008, Paris, France), became the muse of French designer Yves Saint Laurent in the 1980s as one of the first black African top models in Paris. Katoucha, as she was known, arrived in Paris in

the early 1980s and soon began working for Thierry Mugler, Paco Rabanne, and Christian Lacroix before beginning her long association with Saint Laurent. She retired from modeling in 1994 and began a campaign against female genital mutilation, which she had been made to undergo at the age of nine. She was declared missing in early February after her handbag was found on her houseboat but she had disappeared; her body was found in the Seine River.

Nielsen, Inga, Danish soprano (b. June 2, 1946, Holbæk, Den.—d. Feb. 10, 2008, Copenhagen, Den.), was known for the lyrical beauty of her voice and for her dramatic talent, especially as she matured into weightier roles. Nielsen began singing as a child and made her professional debut in 1971 at Gelsenkirchen, W.Ger. She specialized in light soubrette roles for several years, but in the 1980s her growing vocal power allowed her to take more demanding and theatrical roles, notably Konstanze in Mozart's opera *Die Entführung aus dem Serail* (*Abduction from the Seraglio*), the protagonist in Arnold Schoenberg's monodrama *Erwartung*, and the title role in Richard Strauss's opera *Salome*.

Nissel, Siegmund Walter ("SIGGI"), German-born Austrian violinist (b. Jan. 3, 1922, Munich, Ger.—d. May 21, 2008, London, Eng.), toured for almost 40 years with the chamber group the Amadeus Quartet, best known for its repertoire of music by Mozart, Beethoven, Brahms, Haydn, and Schubert. Nissel was evacuated to Britain in 1938. While interned (1940) on the Isle of Man as an enemy alien, he met violinists Norbert Brainin and Peter Schidlof. Once released, the three men were introduced to cellist Martin Lovett and formed a quartet, with Schidlof playing viola. Although the group was originally called the Brainin Quartet, the name was changed, at Nissel's suggestion, to the Amadeus Quartet when the group debuted (1948) in London. With Nissel playing second violin and serving as unofficial manager, the group enjoyed enormous popularity from its inception. Nissel concerned himself with ensuring that the quartet had an adequate musical balance and frequently mediated differences between other members. They toured worldwide and made hundreds of recordings over the next four decades, but after Schidlof's death (1987), the quartet broke up. Thereafter Nissel

concentrated on teaching music at the Royal Academy of Music in London and the Musikhochschule in Cologne, Ger. He was made OBE in 1970.

Norbu, Thubten Jigme (TASHI TSERING; TAKTSE RINPOCHE), Tibetan religious leader, scholar, and activist (b. Aug. 16, 1922, Takster, Amdo, Tibet—d. Sept. 5, 2008, Bloomington, Ind.), was identified as the reincarnation of the Tibetan lama Taktser Rinpoche at age three, 10 years before the birth of his brother, the future 14th Dalai Lama. The 13th Dalai Lama gave him the spiritual name Thubten Jigme Norbu. As an incarnate monk, Norbu studied extensively and was appointed abbot of Kumbum monastery in Amdo. After the Chinese invasion of Tibet in 1950, he was escorted to the capital, Lhasa, by Communist Chinese troops who offered to make him governor-general if he would persuade the Dalai Lama to cooperate. Norbu instead counseled his brother to flee the country. Norbu, who disagreed with his brother's belief in peaceful resistance to Chinese rule in Tibet, worked as a CIA translator and endorsed guerrilla warfare for Tibetan independence. He eventually resigned from the Buddhist priesthood, married, and settled in the U.S.

Norman, Larry David, American singer-songwriter (b. April 8, 1947, Corpus Christi, Texas—d. Feb. 24, 2008, Salem, Ore.), was generally regarded as the father of Christian rock music, though his controversial lyrics (which covered such social themes as racism, poverty, and sexually transmitted diseases) and hippielike appearance (ragged jeans and long hair) kept his recordings from gaining a mainstream Christian following in the U.S. Norman's song "Why Should the Devil Have All the Good Music?" (1972) was especially derided in some Christian quarters. His *Upon This Rock* (1969) was hailed as the first Christian rock album, and years later another album, *Only Visiting This Planet* (1972), was voted the most influential Christian album by *Contemporary Christian Music* magazine. In 2001 he was inducted into the Gospel Music Hall of Fame.

Nouhak Phoumsavan (NOUHAH PHOUMSAVANH), Laotian resistance leader and politician (b. April 9, 1914, Mukdahan, French Indochina—d. Sept. 9, 2008, Vientiane, Laos), was (with Kaysone Phomvihane and Prince Souphanouvong) a member of the trium-

virate of men at the centre of Laotian resistance to French rule in Indochina and, after independence from France (1954), to the government that replaced it. Nouhak spent many years as a shadowy figure working behind the scenes in the Vietnam-dominated Indochinese Communist Party, the nationalist Lao Issara (“Free Laos”), the Pathet Lao, the clandestine People’s Party of Laos, and finally the Lao People’s Revolutionary Party (LPRP), which he co-founded in 1972. After the end of the Vietnam War also brought peace to Laos, the LPRP emerged in 1975 to win Laos’s first general election, and Nouhak joined the new communist government as the hard-line head of the economic ministry. When President Kaysone died in 1992, Nouhak was appointed his successor. He retired in February 1998.

O’Brien, Conor Cruise, Irish diplomat, politician, educator, and journalist (b. Nov. 3, 1917, Dublin, Ire.—d. Dec. 18, 2008, Howth, near Dublin), was one of Ireland’s most provocative political and intellectual figures. Although he was a fierce advocate of his homeland, O’Brien was a strong critic of Irish Republican Army violence and of what he considered the romanticized desire for reunification with Northern Ireland. O’Brien attended a Roman Catholic grammar school and the predominantly Protestant Trinity College, Dublin (B.A., 1941; Ph.D., 1953) before joining the Irish diplomatic corps. His collection of essays *Maria Cross: Imaginative Patterns in a Group of Modern Catholic Writers* (1952; written under the pseudonym Donat O’Donnell) impressed UN Secretary-General Dag Hammarskjöld, who in 1961 appointed him UN special representative in the Congo (later the Democratic Republic of the Congo). O’Brien ordered UN peacekeeping forces into the breakaway Katanga province, and the resulting scandal forced him out of office. Despite UN objections, he wrote *To Katanga and Back* (1963) to explain his actions. After serving as vice-chancellor of the University of Ghana (1962–65) and Albert Schweitzer Professor of Humanities at New York University (1965–69), O’Brien entered Irish politics. He held (1969–77) a Labour Party seat in the Dail (parliament) and then (1977–79) in the Senate, representing Trinity College, of which he was pro-chancellor (1973–2008). In 1979 he was named editor in chief of the British Sunday newspaper *The Observer*, but he

left after three tumultuous years. O’Brien remained an active newspaper columnist, especially for the *Irish Independent* (until 2007).

O’Faolain, Nuala, Irish writer and journalist (b. March 1, 1940, Dublin, Ire.—d. May 9, 2008, Dublin), wrote a popular opinion column for the *Irish Times* newspaper and several books in which she addressed the themes of love, loss, rejection, and social problems. Through her works, which were drawn largely from personal experience, O’Faolain gave a voice to the latent doubts and fears of middle-aged women. O’Faolain briefly taught English at University College, Dublin, and acted as a producer at both the BBC (1970–77) and Radio Telefis Eirann (from 1977). She began writing her column for the *Irish Times* in 1986, and in 1995 a publisher offered to compile a book of her most memorable columns. What O’Faolain had originally envisioned as a brief introduction to the book turned into a 200-page memoir, *Are You Somebody?: The Accidental Memoir of a Dublin Woman* (1996). O’Faolain followed the best-selling book with a continuation, *Almost There: The Onward Journey of a Dublin Woman* (2003), and two novels, *My Dream of You* (2001) and *The Story of Chicago May* (2006), which was awarded a Prix Fémina.

Odetta (ODETTA HOLMES FELIUS), American folk singer (b. Dec. 31, 1930, Birmingham, Ala.—d. Dec. 2, 2008, New York, N.Y.), became for many the voice of the civil rights movement of the early 1960s, and her renditions of spirituals encapsulated the times. At age six Odetta moved with her family to Los Angeles. The family loved music, and at age 13 Odetta began studying classical voice. In 1950, on her first trip to San Francisco, she encountered the emergent folk scene. She took up guitar and began performing traditional music. Within a few years her career took off as she developed a distinctive mixture of folk, blues, and spirituals, sung in an impassioned and convincing style of her own. She moved (1953) to New York City, where she met singers Pete Seeger and Harry Belafonte, who became loyal supporters. Her debut solo recording, *Sings Ballads and Blues* (1956), was soon followed by *At the Gate of Horn* (1957). In the late 1950s and early 1960s, she continued to record as a leading folk musician—although recording could never do her

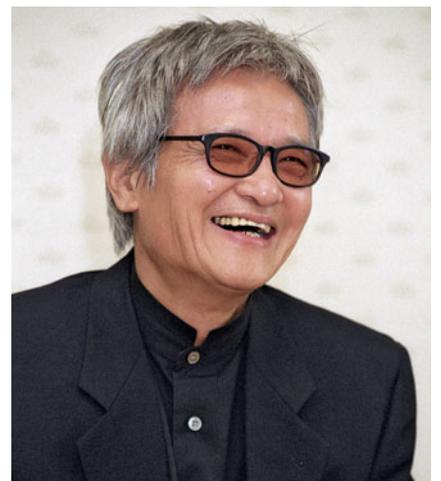

American folk singer Odetta

performances justice. Her music and her politics fit in perfectly with the growing civil rights movement, and she sang at the March on Washington led by the Rev. Martin Luther King, Jr. (1963), as well as for U.S. Pres. John F. Kennedy. As the movements waned and interest in folk music declined, Odetta fell somewhat into obscurity, although she continued to perform. In 1999 Pres. Bill Clinton awarded her the National Medal of Arts; in 2003 the Library of Congress named her a Living Legend.

Ogata, Ken (OGATA AKINOBU), Japanese actor (b. July 20, 1937, Tokyo, Japan—d. Oct. 5, 2008, Tokyo), was in-

Japanese actor Ken Ogata

Kyodo/AP

ternationally acclaimed for his powerful performances in such films as *Vengeance Is Mine* (1979), in which he portrayed a ruthless killer, and *Mishima: A Life in Four Chapters* (1985), about famed Japanese novelist Mishima Yukio. Ogata appeared in more than 50 films, beginning with *One Long Road* (1960), as well as in some 25 Japanese television series. Among his other notable films were *The Ballad of Narayama* (1983), *Zegen* (1987), *Dream of Russia* (1992), and *The Pillow Book* (1996). In recognition of his contribution to the arts, Ogata was awarded Japan's Medal with Purple Ribbon in 2000.

Okosuns, Sonny (SUNNY OKOSUN), Nigerian musician (b. Jan. 1, 1947, Enugu or Benin City, Nigeria—d. May 24, 2008, Washington, D.C.), composed songs advocating the Pan-African cause and supporting the reform of African social and political conditions. Okosuns (or Okosun), who sang both in English and in the Nigerian languages of Ishaan and Ibo, created a unique musical style by combining various genres, including reggae, pop, rock, calypso, and Nigerian highlife dance music. As a youth, he taught himself guitar and played with several different bands before forming (1972) Paperback Ltd., which later became known as Ozziddi ("Message"). Although he produced dozens of albums, he first gained international acclaim with *Fire in Soweto* (1977). Okosuns played on the Artists Against Apartheid album *Sun City* (1985), and in 1994 he was invited to perform at the inauguration of South African Pres. Nelson Mandela. From the late 1980s Okosuns performed gospel music under the name Evangelist Sonny Okosuns; his gospel album *Songs of Praise* (1994) sold nearly a million copies. In 1998 he founded the House of Prayer Ministry in Ikeja.

Page, Bettie, American model (b. April 22, 1923, Nashville, Tenn.—d. Dec. 11, 2008, Los Angeles, Calif.), was a legendary pinup model of the 1950s whose provocative photographs were credited with helping to usher in the 1960s sexual revolution. Page's modeling career lasted from about 1950 to 1957, during which time she attracted a huge following by appearing in numerous men's magazines such as *Wink*, *Peek*, *Titter*, and *Eyeful*; in 1955 she also became one of the earliest centrefold models for *Playboy*. Her work for fetish photographer Irving Klaw eventually

Hulton Archive/Getty Images

Legendary pinup model Bettie Page

drew the attention of government authorities; Page was subpoenaed to appear before a congressional panel investigating obscenity, but she never testified. She soon gave up modeling, however, and dropped from public view altogether; she reportedly became a born-again Christian and in later years suffered bouts of mental illness. A great revival of interest in Page began in the 1990s. Richard Foster's biography, *The Real Bettie Page: The Truth About the Queen of the Pinups*, appeared in 1997, and she was also the subject of two films, *Bettie Page: Dark Angel* (2004) and *The Notorious Bettie Page* (2005).

Pak Kyongni (PARK KYUNG-NI), South Korean poet and novelist (b. Oct. 28, 1926, Tongyeong, Korea—d. May 5, 2008, Seoul, S.Kor), garnered international acclaim for the 21-volume epic novel *Toji* (1969–94; *Land*), in which she chronicled Korea's tumultuous history from 1897 to 1945. The novel, widely regarded as a masterpiece of Korean literature, took Pak more than 25 years to complete and won numerous honours, including the Woltan Literature Award. Pak published two early short stories, "Gyesan" (1955; "Calculations") and "Heuk heuk baek baek" (1956; "Black Is Black, White Is White"), but she first captured public attention with the novel *Kim yakkuk uttal tul* (1962; "Daughters of Pharmacist Kim"). Many of Pak's works, including *Pulshin shidae* (1957; "Age of Distrust")

and *Shijang kwa chonjang* (1964; "The Marketplace and the Battlefield"), feature a female character widowed by the Korean War, a situation that mirrored Pak's own experience. She composed several poems about the importance of protecting the environment and in 1999 established the Toji Cultural Centre in Wonju, S.Kor., which nurtured young writers and encouraged environmental awareness. Pak was posthumously awarded the Order of Culture Merit Geumgwan, the highest honour for South Korean writers and artists.

Palacio, Andy Vivien, Belizean musician (b. Dec. 2, 1960, Barranco, Belize—d. Jan. 19, 2008, Belize City, Belize), used his music to help preserve the culture of the Garifuna (descendants of Carib Indians and Africans exiled in the 18th century from British colonies in the eastern Caribbean). A bandleader and composer, Palacio hosted (1981) a Garifuna program on Radio Belize in an effort to stimulate interest in the culture and language through music and song. His infusion of traditional elements of Garifuna music with electric guitars inspired a younger generation of musicians. In collaboration with other Garifuna musicians, a group that was known as the Garifuna Collective, Palacio produced several influential albums, notably *Paranda* (1999) and *Wátina* (2007). He was awarded Belize's Order of Meritorious Service in September 2007, and two months later he was named a UNESCO Artist for Peace.

Palade, George Emil, Romanian-born American cell biologist (b. Nov. 19, 1912, Iasi, Rom.—d. Oct. 7, 2008, Del Mar, Calif.), developed tissue-preparation methods, advanced centrifuging techniques, and conducted electron microscopy studies that resulted in the discovery of several cellular structures. With Albert Claude and Christian de Duve, he was awarded the Nobel Prize for Physiology or Medicine in 1974. Palade received (1940) a degree in medicine from the University of Bucharest, where he remained as a professor until after World War II. He immigrated to the U.S. in 1946 and began work at the Rockefeller Institute, New York City, becoming a professor of cytology in 1958. Palade performed many studies on the internal organization of such cell structures as mitochondria, chloroplasts, the Golgi apparatus, and others. His most important discovery was that microsomes, bodies formerly thought

to be fragments of mitochondria, are actually parts of the endoplasmic reticulum (internal cellular transport system) and have a high RNA content. They were subsequently named ribosomes. He left the Rockefeller Institute in 1973 to direct studies in cell biology at Yale University Medical School, and in 1990 he moved to the University of California, San Diego (UCSD), School of Medicine. Though he retired in 2001, Palade remained at UCSD as professor emeritus of medicine. Palade also received the Albert Lasker Award for Basic Medical Research (1966) and the National Medal of Science (1986). He became a naturalized U.S. citizen in 1952.

Palmer, Earl, American drummer (b. Oct. 25, 1924, New Orleans, La.—d. Sept. 19, 2008, Banning, Calif.), provided the “solid stickwork and feverish backbeat” that laid the foundations for rock and roll drumming; his distinctive style was notable on such recordings as Little Richard’s “Tutti Frutti,” the Righteous Brothers’ “You’ve Lost That Lovin’ Feelin’,” Fats Domino’s “The Fat Man,” Smiley Lewis’s “I Hear You Knockin’,” Sam Cooke’s “You Send Me,” and Ike and Tina Turner’s “River Deep, Mountain High.” Palmer, who was inducted into the Rock and Roll Hall of Fame in 2000, was one of the few sidemen to earn the honour.

Papa Wendo (WENDO KOLOSOY; ANTOINE KALOSOYI), Congolese musician (b. 1925, Mushie, Bandundu region, Belgian Congo [now Democratic Republic of the Congo]—d. July 22, 2008, Kinshasa, Dem. Rep. of the Congo), helped lay the foundations of Congolese rumba, a form of lilting Afropop dance music that combines indigenous traditional songs with Afro-Cuban rumba rhythms. He was orphaned as a boy and eventually earned a living as a professional boxer while singing part time until he scored a massive hit with “Marie-Louise” (recorded in 1948), which made great use of his distinctive vocal style and flair for improvisation. Some of his devotees believed the record had supernatural—even satanic—powers, which led concerned officials in the Roman Catholic Church and the government to have Wendo arrested and briefly imprisoned. After his release he became an even more popular performer and a personal friend of Patrice Lumumba (later prime minister). The shift of Congolese rumba into the less-traditional *soukous* dance mu-

sic, along with Lumumba’s assassination (1961) and other political upheavals in the newly independent country, led Wendo to stop performing in public. He made a comeback—and regained political favour—with the albums *Nani akolela Wendo?* (1993), *Marie Louise* (1999), and *Amba* (2002).

Papadopoulos, Tassos, Cypriot politician (b. Jan. 7, 1934, Nicosia, Cyprus—d. Dec. 12, 2008, Nicosia), triumphed over Pres. Glafcos Clerides and eight other candidates in 2003 to become the Republic of Cyprus’s fifth president. In that position he called on the Greek Cypriot community to reject a UN-sponsored reunification plan and then oversaw the entry of the Greek portion of the island country into the EU in May 2004 and its adoption of the euro currency in January 2008. His later attempts to reach a settlement with the breakaway Turkish zone failed. Papadopoulos trained in law at London University’s King’s College and Gray’s Inn and returned home in 1955 to practice law. A member of EOKA, the anti-British resistance group during the last years of colonial rule, he took part in the negotiations leading to independence in 1960. Afterward he became minister of the interior—the youngest member of the cabinet—and he later held other important posts. For years he was a political ally of Clerides, until he broke with his mentor in the mid-1970s. When Papadopoulos ran for president in 2003, as the leader of the moderate-right Democratic Party (DIKO), his EOKA credentials tended to identify him with the right, but he was elected with the support of the Social Democrats and the communist-led Progressive Party of the Working People (AKEL). In February 2008 Papadopoulos lost his reelection bid.

Patarkatsishvili, Badri (ARKADY SHALOVICH PATARKATSISHVILI), Georgian oligarch (b. Oct. 31, 1955, Tbilisi, Georgia, U.S.S.R. [now in Georgia]—d. Feb. 12, 2008, Leatherhead, Surrey, Eng.), made a fortune in labyrinthine business dealings during the post-Soviet period of privatization of state-owned industries in Russia; Patarkatsishvili was instrumental in the 2003 Rose Revolution, which brought Mikheil Saakashvili to power in Georgia, but finally came to oppose Saakashvili. Patarkatsishvili became a regional director of Boris Berezovsky’s LogoVAZ car-distribution network in 1990 and by 1992 was the company’s

deputy general director. He moved to Moscow in 1993 and became involved with, among other businesses, the oil company Sibneft and two television stations. The business climate in Russia changed with the rise to power of Pres. Vladimir Putin, and in 2001 Patarkatsishvili returned to Georgia, where he invested heavily in local businesses and media outlets. He was believed to have been an impetus for the antigovernment riots in Tbilisi in November 2007 and was accused of plotting a coup; he fled to England, from which he launched an unsuccessful campaign for Georgia’s presidency.

Piccard, Jacques-Ernest-Jean, Swiss oceanic engineer, economist, and physicist (b. July 28, 1922, Brussels, Belg.—d. Nov. 1, 2008, La Tour-de-Peilz, Switz.), helped his father, Auguste Piccard, build the bathyscaphe for deep-sea exploration, and he also invented

AFP/Getty Images

Swiss oceanic engineer Jacques Piccard

the mesoscaphe, an undersea vessel for exploring middle depths. Piccard studied at the University of Geneva, taking a year off (1944–45) to serve with the French First Army. Upon receiving his licentiate in 1946, he taught at the university for two years before entering private teaching. Meanwhile, he was helping his father to design bathyscaphes, and in 1953 they took the *Trieste* on a dive of 3,099 m (10,168 ft) off the island of Ponza, Italy. In 1958 the U.S. Navy bought the vessel and retained Piccard as a consultant. On Jan. 23, 1960, he and Naval Lieut. Don Walsh set a submarine depth record by descending the *Trieste* 10,916 m (35,810

ft) into the Mariana Trench in the Pacific Ocean. Piccard recounted this feat in *Seven Miles Down* (1961), written with Robert Dietz. He introduced his first mesoscaphe, the *Auguste Piccard*, at the 1964 Swiss National Exhibition in Lausanne. In 1969 Piccard drifted some 3,000 km (1,800 mi) along the east coast of North America in the mesoscaphe *Ben Franklin*, conducting research on the Gulf Stream for the U.S. Navy. In the 1970s he founded the Foundation for the Study and Protection of Seas and Lakes, based in Cully, Switz.

Pinter, Harold British playwright, director, actor, screenwriter, and political activist (b. Oct. 10, 1930, London, Eng.—d. Dec. 24, 2008, London), won international renown—and the 2005 Nobel Prize for Literature—as one of the most complex and challenging post-World War II English-language dramatists. His 29 plays are noted for their use of understatement and subtle underlying menace within deceptively ordinary settings, while his characters' colloquial "Pinteresque" speech consists of disjointed and oddly ambivalent conversation punctuated by resonant hesitations and silences that reveal not only the characters' own alienation and the difficulties they have in communicating but also the many layers of meaning that can be contained in even the most innocuous statements. The son of a Jewish tailor, Pinter grew up in a working-class area in London's East End. He studied at the Royal Academy of Dramatic Art in 1948 but left after two terms to become an actor. Pinter toured Ireland and England with various acting companies, appearing under the name David Baron in provincial repertory theatres until 1959. After 1956 he began to write for the stage. The one-act dramas *The Room* (1957) and *The Dumb Waiter* (1959) established the mood of comic menace that was to figure largely in his later works. Pinter's first full-length play, *The Birthday Party* (1958; filmed 1968), puzzled the London audiences and lasted only a week. After his radio play *A Slight Ache* (1959) was adapted for the stage (1961), his reputation as the originator of a unique dramatic idiom was secured by his next two full-length plays, *The Caretaker* (1960; filmed 1963) and *The Homecoming* (1965; filmed 1969). Pinter's later successes included *Old Times* (1971), *No Man's Land* (1975), *Betrayal* (1978; filmed 1983), *Moonlight* (1993), and *Celebration* (2000). From

the 1970s on, Pinter directed his own and others' works, wrote radio and television dramas, made occasional acting appearances, and wrote adapted motion-picture screenplays. Among the latter are *The Servant* (1963), *Accident* (1967), *The Go-Between* (1970), *The Last Tycoon* (1976), *The French Lieutenant's Woman* (1981), *The Handmaid's Tale* (1990), and the remake of *Sleuth* (2007). Pinter was also a noted poet, and his verse—such as that in *War* (2003)—often reflected his sometimes controversial left-wing political views. Pinter was made (2002) a Companion of Honour and named (2007) a chevalier of the French Legion of Honour.

Pleshette, Suzanne, American actress (b. Jan. 31, 1937, New York, N.Y.—d. Jan. 19, 2008, Los Angeles, Calif.), was a brunette beauty whose throaty voice became her trademark on Broadway, in films, and on television; she was especially remembered for her role as sardonic Emily Hartley, the schoolteacher wife and foil to her husband, Bob, on the TV sitcom *The Bob Newhart Show* (1972–78), for which she was nominated for two Emmy Awards. After starring in *Rome Adventure* (1962) and *40 Pounds of Trouble* (1963), Pleshette portrayed a teacher pecked to death by feathered killers in the Alfred Hitchcock classic *The Birds* (1963). On Broadway she performed in *Compulsion* (1957) and *The Cold Wind and the*

Warm (1958) before replacing (1961) Anne Bancroft in *The Miracle Worker*. Other TV roles earned her two more Emmy nominations, one of them for her title role characterization in the TV film *Leona Helmsley: The Queen of Mean* (1990). Pleshette's other film roles include *Nevada Smith* (1966), *The Ugly Dachshund* (1966), and *Blackbeard's Ghost* (1968).

Pollack, Sydney Irwin, American director, producer, and actor (b. July 1, 1934, Lafayette, Ind.—d. May 26, 2008, Pacific Palisades, Calif.), directed numerous television shows and more than a score of movies, including the epic romance *Out of Africa* (1985), a period piece set in colonial Kenya that earned him Academy Awards for best director and best picture. Pollack directed actor Robert Redford in several films, including *The Way We Were* (1973), *Three Days of the Condor* (1975), *The Electric Horseman* (1979), and *Out of Africa*. Pollack was best remembered by many, however, for his work on the comedy *Tootsie* (1982), which garnered him Oscar nominations for best director and best picture, won him a New York Film Critics Circle Award for best director, and earned him plaudits for his on-screen appearance as Dustin Hoffman's long-suffering agent. Pollack began his career as an actor on Broadway and on television, but performing in a teleplay piqued his interest in directing. He later directed more than 80 television programs, including a 1965 episode of *Bob Hope Presents the Chrysler Theatre* for which he won an Emmy Award. Pollack directed his first feature film, *The Slender Thread*, in 1965 and received his first Academy Award nomination for *They Shoot Horses, Don't They?* (1968). This was followed by such popular films as *Absence of Malice* (1981), *The Firm* (1993), and *The Interpreter* (2005).

Rakowski, Mieczyslaw Franciszek, Polish newspaper editor and politician (b. Dec. 1, 1926, Kowalewko, Pol.—d. Nov. 7, 2008, Warsaw, Pol.), as the last communist prime minister of Poland (September 1988–July 1989), presided over the dissolution of the old regime and the transfer of power to the country's first democratically elected government. Rakowski was the son of poor farmers who were executed during the World War II Nazi occupation of Poland. He joined (1946) the communist party, which sponsored his studies at the Institute of Social Science (Ph.D.

American actress Suzanne Pleshette

in history, 1957). As deputy editor (1956–58) and editor (1958–82) of the party's prestigious weekly newspaper *Polityka*, he provided an approved outlet for modest dissent among Poland's intelligentsia. He was promoted in 1975 to membership in the Central Committee, was made deputy prime minister in 1981, and was appointed prime minister on Sept. 28, 1988.

Rambo, Dottie (JOYCE REBA LUTTRELL), American songwriter and singer (b. March 2, 1934, Madisonville, Ky.—d. May 11, 2008, Mount Vernon, Mo.), wrote more than 2,500 songs, many of which became gospel standards, including “I Go to the Rock,” “Stand by the River” (2003; a megahit that Rambo sang with Dolly Parton), and “He Looked Beyond My Fault and Saw My Need,” probably her best-known hymn. Rambo began songwriting at age 8, and by the time she was 12, she had launched her musical ca-

Curtis Hilbun/AP

Singer and songwriter Dottie Rambo

reer. She was married at 16 to Buck Rambo and with her husband formed the Singing Echoes, but when their 13-year-old daughter joined the act in 1964, the group became the Singing Rambos (later the Rambos). With her folksy alto voice, Rambo developed a sound that blended elements of black gospel and country music. Her album of spirituals, *It's the Soul of Me* (1968), won a Grammy Award for Best Soul Gospel Performance, an unusual honour for a white performer. In 1989, however, a back injury interrupted her career. Making a comeback as a singer

in 2003, Rambo embarked on a busy touring schedule. She was killed when her tour bus left the highway. Rambo was inducted into the Gospel Music Association Hall of Fame as a solo singer in 1992 and was honoured again in 2001 when the Rambos gained admission. In 2007 she was installed as a member of the Nashville Songwriters Hall of Fame.

Rauschenberg, Robert (MILTON RAUSCHENBERG), American painter, graphic artist, performance artist, and photographer (b. Oct. 22, 1925, Port Arthur, Texas—d. May 12, 2008, Captiva Island, Florida), was a Renaissance man who blurred divisions between the arts and whose works helped serve as a transformational link between Abstract Expressionism and other new art movements; his early offerings anticipated the Pop art movement. Rauschenberg's first paintings in the early 1950s comprised a series of all-white and all-black surfaces underlaid with wrinkled newspaper. In subsequent works he began to explore the possibilities of making art from such varied objects as Coca-Cola bottles, traffic barricades, and stuffed birds, calling the works “combine” paintings. In 1955 Rauschenberg became associated with the Merce Cunningham Dance Company, first as a designer of costumes and sets and later as a technical director. He also produced theatrical pieces in collaboration with composer John Cage. From the late 1950s Rauschenberg experimented with the use of newspaper and magazine photographs in his paintings, devising a process using solvent to transfer images directly onto the canvas. About 1962 he borrowed from Andy Warhol the silk-screen stencil technique for applying photographic images to large expanses of canvas, reinforcing the images and unifying them compositionally with broad strokes of paint reminiscent of Abstract Expressionist brushwork. By the 1970s, however, he had turned to prints on silk, cotton, and cheesecloth, as well as to three-dimensional constructions. Among Rauschenberg's preoccupations from the 1970s to the 1990s were lithography and other printmaking techniques. Following a stroke in 2002 that left his right side paralyzed, Rauschenberg continued to create, using his left hand and employing the aid of assistants.

Reynolds, Nick (NICHOLAS WELLS REYNOLDS), American musician (b.

July 27, 1933, San Diego, Calif.—d. Oct. 1, 2008, San Diego), with Bob Shane and Dave Guard, was a founding member in 1957 of the Kingston Trio, the group that helped spark the folk music revival of the 1960s. Reynolds played guitar and often contributed bongo and other percussion to the songs. With a repertoire that drew on traditional folk material but eschewed the left-wing sympathies typical of many American folk performers in the first half of the 20th century, the trio conveyed the lighthearted optimism of mainstream Americans at the onset of the 1960s. The trio, with their tight harmonies and clean-cut image, scored a breakthrough hit with the song “Tom Doolley” (1958), which earned them their first Grammy Award for best country and western performance (folk music was not a category). That song was followed by such hit singles as “M.T.A.,” “A Worried Man,” and “The Wanderer” and a series of chart-topping albums—including *Kingston Trio at Large* (1959; which won a Grammy), *Here We Go Again* (1959), and *String Along* (1960); 13 of the trio's albums reached the Top 10. In 1961 Guard left the group and was replaced by singer-songwriter John Stewart (q.v.). The group disbanded in 1967.

Risi, Dino, Italian filmmaker (b. Dec. 23, 1916, Milan, Italy—d. June 7, 2008, Rome, Italy), wrote and/or directed more than 80 films, documentaries, and television shows throughout his nearly six-decade-long (1946–2002) career. Risi helped to establish the satiric commedia all'italiana style, which portrayed the problems facing Italian society following the country's overwhelming economic growth during the 1960s. Risi worked as assistant director under Alberto Lattuada and Mario Soldati before launching his own directing career with the film *Vacanze col gangster* (1951). Risi's most famous work, *Il sorpasso* (1962), served as a commentary on Italy at the time, its newfound wealth, and the repercussions that resulted from a life of spontaneity and ease. *Profumo di donna* (1974) received two Academy Award nominations, including one for the adapted screenplay that Risi co-wrote, and was remade in English as *Scent of a Woman* (1992). Risi's other movies include *Poveri ma belli* (1957), *Una vita difficile* (1961), and *I mostri* (1963). He was given a Golden Lion lifetime achievement award at the Venice Film Festival in 2002.

Robbe-Grillet, Alain, French novelist, screenwriter, and motion-picture director (b. Aug. 18, 1922, Brest, France—d. Feb. 18, 2008, Caen, France), was a representative writer and leading theoretician of the *nouveau roman* (“new novel”), the French “antinovel” that emerged in the 1950s. His critical discourse *Pour un nouveau roman* (1963; *Toward a New Novel: Essays on Fiction*) was widely hailed as the embodiment of the genre’s theoretical foundations. Robbe-Grillet trained as a statistician and agronomist before turning to literature. Although his fiction raises questions about the ambiguous relationship of objectivity and subjectivity, his earliest novels also display elements of the traditional detective story. His first novel, *Les Gommages* (1953; *The Erasers*), deals with a murder committed by the man who has come to investigate it. *Le Voyeur* (1955; *The Voyeur*) examines the murder of a young girl, while in *La Jalousie* (1957; *Jealousy*), a mistrustful husband views the actions of his wife and her suspected lover through a *jalousie*, or louvered shutter. His later works include the novels *Dans le labyrinthe* (1959; *In the Labyrinth*), *La Belle Captive* (1975), *Djinn* (1981), *La Reprise* (2001; *Repetition*), and *Un Roman sentimental* (2007), as well as the autobiography, *Le Miroir qui revient* (1984; *Ghosts in the Mirror*). Robbe-Grillet’s techniques were dramatized in the films that he directed, among them *L’Immortelle* (1963). His best-known work in cinema, however, is the Oscar-nominated screenplay for Alain Resnais’s film *L’Année dernière à Marienbad* (1961; *Last Year at Marienbad*). Robbe-Grillet was elected to the French Academy in 2004.

Roderick, John, American journalist (b. Sept. 15, 1914, Waterville, Maine—d. March 11, 2008, Honolulu, Hawaii), was an illustrious foreign correspondent (1937–42 and 1945–84) for the Associated Press (AP) and won admiration for his reportage of the several months he spent living (1945–47) with the Chinese rebel army and revolutionary leader Mao Zedong in caves in Yan’an, the communist stronghold. The inveterate China watcher was subsequently posted (1959) to Japan until he reopened AP’s Beijing office in 1979. Roderick returned to Tokyo in 1980 as an AP special correspondent. In 1985, a year after his formal retirement, the Japanese government bestowed upon Roderick the Order of the Sacred Treasure.

Rogers, Ted (EDWARD SAMUEL ROGERS, JR.), Canadian businessman (b. May 27, 1933, Toronto, Ont.—d. Dec. 2, 2008, Toronto), was the founder of Rogers Communications Inc. (RCI), Canada’s premier media company. In addition to cable television and other media operations, RCI owned several leading Canadian magazines as well as the Toronto Blue Jays, a Major League Baseball team. Rogers was named for his father, a pioneering force in broadcasting who established several companies of his own. While still a law student in Toronto, Rogers, Jr., acquired an FM radio station. He continued over the years to build his RCI holdings, taking on considerable debt in the process. In 1994 Rogers made his biggest acquisition, purchasing communications company Maclean-Hunter. Over the years RCI’s debts were retired.

Russert, Tim (TIMOTHY JOHN RUSSERT, JR.), American journalist (b. May 7, 1950, Buffalo, N.Y.—d. June 13, 2008, Washington, D.C.), as the insightful moderator (1991–2008) of the television program *Meet the Press*—the long-running (since 1947) Sunday morning talk show that became a mainstay in American political discourse—established himself as a tough but evenhanded interviewer and became one of the most influential political commentators of his era. Russert studied political science at John Carroll University (B.A., 1972), University Heights, Ohio,

Journalist and moderator Tim Russert

Alex Wong/Getty Images

before earning a law degree (1976) from the Cleveland-Marshall College of Law. That same year he worked on the successful U.S. Senate campaign of Daniel Patrick Moynihan; Russert later served as Moynihan’s chief of staff. During the New York gubernatorial race of 1982, Russert joined the campaign staff of Mario Cuomo, and he continued to advise Cuomo after his election. Two years later Russert left the political arena to become an executive at the Washington Bureau of NBC, and in 1988 he was made its bureau chief. Russert was the recipient of numerous honours, including an Edward R. Murrow Award (2001) and an Emmy Award (2005). He was also the author of two best-selling books, *Big Russ and Me: Father and Son, Lessons of Life* (2004) and *Wisdom of Our Fathers: Lessons and Letters from Daughters and Sons* (2006).

Sabah, Sheikh Saad al-Abdullah al-Salim al-, Kuwaiti royal (b. 1929?, Kuwait—d. May 13, 2008, Kuwait City, Kuwait), as a member of the ruling Sabah family, served in a variety of government posts, including minister of the interior (1961–77), minister of defense (1965–77), and prime minister (1978–2003). As prime minister he headed a government-in-exile in Saudi Arabia during the 1990–91 Iraqi invasion of Kuwait. When Emir Sheikh Jabir al-Ahmad al-Jabir al-Sabah died on Jan. 15, 2006, Sheikh Saad immediately replaced him as emir in accordance with the constitution. A brief power struggle ensued, however, between the two branches of the Sabah family, and Sheikh Saad, then aged 76 and in extremely poor health, abdicated after only nine days. (On January 29 his cousin, Prime Minister Sheikh Sabah al-Ahmad al-Jabir al-Sabah, was sworn in as emir.) Sheikh Saad, the eldest son of Sheikh Abdullah al-Salim al-Sabah (who ruled Kuwait from 1950 to 1965), trained at the Hendon Police College in London and served as Kuwait’s deputy director of police (1959–61) until he joined independent Kuwait’s first cabinet. He was named crown prince in 1978.

Saint Laurent, Yves (YVES-HENRI-DONAT-MATHIEU SAINT LAURENT), French fashion designer (b. Aug. 1, 1936, Oran, Alg.—d. June 1, 2008, Paris, France), was regarded as one of the most influential designers in Paris and was especially noted for his popularization of women’s trousers for all occasions. After completing his secondary education

Philippe Wojazer—Reuters/Landov

Fashion designer Yves Saint Laurent

in Oran, Alg., Saint Laurent left for Paris to pursue a career in designing theatrical costumes and women's fashions. When a *Vogue* magazine executive showed Christian Dior some sketches by Saint Laurent, then aged 17, he was hired immediately as Dior's assistant. As Dior's protégé, the 21-year-old Saint Laurent was named the head of the House of Dior at Dior's death in 1957. Following the "little-girl" look and the A-line silhouette, he introduced more sophisticated, longer skirts and, in 1959, drastically shortened skirts. In 1960 he introduced the chic beatnik look of turtlenecks and black leather jackets edged with fur. After induction into the French army in 1960, Saint Laurent suffered a nervous collapse and was replaced at the House of Dior by designer Marc Bohan. In 1962 Saint Laurent opened his own fashion house. In addition to his celebrated trousers and innovative jumpsuits, metallic and transparent fabrics were prominent in his late '60s collections; in the 1970s, inspired by ethnic costume, he introduced the *haute* peasant look. During the 1960s and '70s his enterprises expanded to include ready-to-wear licenses, accessories, household linens, fragrances, and menswear. He sold the ready-to-wear business to Gucci for some \$1 billion in 1999 and shut down the couture house when he retired in 2002. Saint Laurent was made a grand officer of the Legion of Honour in 2007.

Salvador, Henri Gabriel, French entertainer (b. July 18, 1917, Cayenne, French Guiana—d. Feb. 13, 2008, Paris, France), enjoyed a lengthy career as a singer and songwriter, with a musical range that included French chansons, jazz, novelty songs, and children's songs. In the 1930s Salvador played guitar with jazz guitarist Django Reinhardt, and during World War II he toured in South America with bandleader Ray Ventura, which brought a South American influence into his work. In 1947 Salvador's first recording, "Maladie de l'amour," was a hit, and he enjoyed great popularity thereafter. One of his best-known songs from this period of his career was "Le Loup, la biche, et le chevalier (une chanson douce)." In the 1950s Salvador began writing and recording novelty rock-and-roll songs with Boris Vian, including "Rock and Roll Mops" and "Le Blues du dentiste." In the 1970s he concentrated on children's music, released on his own Rigolo label, but he returned to adult music late in the decade. In 2000 he topped the charts with the album *Chambre de vue*. Salvador was named a knight in the French Legion of Honour in 1988 and was elevated to commander in 2004.

Scheider, Roy Richard, American actor (b. Nov. 10, 1932, Orange, N.J.—d. Feb. 10, 2008, Little Rock, Ark.), was identified most closely with his role as the small-town police chief in the blockbuster *Jaws* films (1975 and 1978), but he earned Academy Award nominations for his supporting role as a policeman opposite Gene Hackman in the film *The French Connection* (1971) and for his starring role in *All That Jazz* (1979), in which he portrayed a character based on director-choreographer Bob Fosse. Other memorable films include *Klute* (1971), *The Seven-Ups* (1973), *Marathon Man* (1976), and *Blue Thunder* (1983). Scheider also appeared (1993–95) as the captain of a submarine in the television adventure series *SeaQuest DSV*.

Schoenfeld, Gerald, American producer and theatre owner (b. Sept. 22, 1924, New York, N.Y.—d. Nov. 25, 2008, New York City), led a revitalization of commercial theatre in New York City, bringing to Broadway such hits as *Equus*, *A Chorus Line*, and *The Phantom of the Opera* and transforming a run-down and sleazy neighbourhood into a gleaming attraction for audiences. His involvement in the Shubert

Organization began in 1957, when he became its lawyer. The following year he brought in Bernard Jacobs to work with him. Together they headed the organization from 1972; Jacobs died in 1996.

Schön, Mila (MARIA CARMEN NUTRIZIO), Italian fashion designer (b. 1917?, Trogir, Dalmatia, Austria-Hungary [now in Croatia]—d. Sept. 4, 2008, near Alessandria, Italy), created understated, impeccably tailored haute couture worn by such fashion icons as Jacqueline Kennedy Onassis, but it was Schön's high-end ready-to-wear collections and her innovations (notably her use of double-faced wool instead of nonwool coat linings) that put her at the centre of the Italian fashion world. Schön was an avid student of the fashion houses that she frequented as a client, and after separating from her wealthy husband, she opened (1958) an atelier in Milan. Many of her clothes were inspired by fine art and by the classic designs of Paris couturiers Dior and Balenciaga that she enjoyed wearing. She opened a chic Milan boutique in 1965, introduced menswear and the prêt-à-porter line in 1971, and later put her hand to luxury fashion accessories. Schön sold the company in 1993.

Scofield, (David) Paul, British actor (b. Jan. 21, 1922, Hurstpierpoint, Sussex, Eng.—d. March 19, 2008, West Sussex, Eng.), delighted audiences with his sonorous voice and powerful performances in Shakespearean and other stage roles. He had his greatest success, however, as Sir Thomas More in Robert Bolt's *A Man for All Seasons*, in which he appeared in London (1960) and on Broadway (1961–62), where he won (1962) the Tony Award for best actor in a drama; in 1967 he earned the Academy Award for best actor for the film version. Scofield trained at the Croydon Repertory Theatre School (1939) and at the Mask Theatre School (1940) in London. After touring with companies entertaining the troops during World War II, he joined the Birmingham Repertory Theatre and in 1946 moved to Stratford-upon-Avon, where he played the title characters in *Henry V* and *Hamlet*, among other Shakespearean roles. He had his first starring role in commercial theatre in Terence Rattigan's ill-fated *Adventure Story* (1949). Scofield's successes in the theatre included *King Lear* (1962), Chekhov's *Uncle Vanya* (1970), Ben Jonson's *Volpone* (1977), Salieri in the original production of Pe-

ter Shaffer's *Amadeus* (1979), and Ibsen's *John Gabriel Borkman* (1996). Scofield made his film debut in 1955. He later played Lear in Peter Brook's 1971 movie version, Tobias in Edward Albee's *A Delicate Balance* (1973), the French king in Kenneth Branagh's version of *Henry V* (1989), and Judge Thomas Danforth in a film adaptation of Arthur Miller's *The Crucible* (1996). Although Scofield declined a knighthood, he was made CBE in 1956 and was named a Companion of Honour in 2001.

Seamans, Robert Channing, Jr., American aeronautical engineer (b. Oct. 30, 1918, Salem, Mass.—d. June 28, 2008, Beverly Farms, Mass.), was a pioneer in the development of advanced systems of flight control, fire control, and guidance for modern aircraft. In 1941 Seamans became an instructor of aircraft instrumentation at the Massachusetts Institute of Technology (MIT) while still working on his master's degree. Under the instruction and guidance of American engineer C. Stark Draper, Seamans worked on fire-control systems for naval anti-aircraft guns. His doctoral work on the problems of control and guidance of high-speed aircraft proved valuable in the development of automatic flight control, automatic tracking equipment, homing systems for guided missiles, and intercontinental ballistic missile control systems. At MIT Seamans became assistant professor of aeronautical engineering in 1945 and associate professor in 1950. After working as chief engineer (1950–55) of Project Meteor, a naval guided-missile program, he became head of the Radio Corporation of America (RCA) Airborne Systems Laboratory, Boston. Three years later he became chief engineer of RCA's Missile Electronics and Controls Division. He was an associate administrator (1960–65) and deputy administrator (1965–68) of NASA before serving (1969–73) as secretary of the air force. Seamans was also president (1973–74) of the National Academy of Engineering and administrator (1974–76) of the Energy Research and Development Administration. He returned to MIT in 1977 as Luce Professor of Environment and Public Policy; the following year he was named dean of the MIT School of Engineering, a post he held until 1981. Seamans received the NASA Distinguished Service Medal in 1965 and 1969 and the Thomas D. White National Defense Award in 1980.

Sendler, Irena (IRENA KRZYZANOWSKA), Polish social worker (b. Feb. 15, 1910, Otwock, Russian Empire [now in Poland]—d. May 12, 2008, Warsaw, Pol.), rescued some 2,500 Jewish children from the Warsaw ghetto during World War II. Trained as a social worker, Sendler became (1942) a member of Żegota (Council to Aid the Jews), the Polish underground organization established to help save Jews from the Nazi occupiers. She used such creative means as coffins and ambulances to remove children to safety, supplied them with fake birth certificates with Aryan names, placed them in sympathetic Christian orphanages and convents, and buried jars containing lists of their real names for future reference. Even when she was captured and tortured (1943) by the Nazis, Sendler refused to reveal with whom she worked and the names of those she saved. Although sentenced to death, she escaped when other Żegota members bribed Gestapo officers to free her. In 1965 Yad Vashem, Israel's Holocaust Martyrs' and Heroes' Remembrance Authority, recognized Sendler as Righteous Among the Nations for her actions during the war. She was also awarded (2003) the Order of the White Eagle, Poland's highest honour.

Shakhlin, Boris Anfiyanovich, Siberian Soviet gymnast (b. Jan. 27, 1932, Ishim, Russia, U.S.S.R.—d. May 30, 2008, Kiev, Ukr.), set a career record of 10 individual titles in the world championships and won gold medals at three successive Olympic Games (1956–64); his tally of 13 Olympic medals (7 gold, 4 silver, and 2 bronze) placed him among the most-decorated Olympians. Shakhlin first competed internationally at the 1954 world gymnastics championships, winning the silver medal on the horizontal bar. At the 1956 Melbourne Olympic Games, he won a gold medal for the pommel horse and shared the team gold medal. At the 1960 Rome Olympics, he won a total of seven medals, including the individual all-around title, gold medals for the pommel horse (tie), the parallel bars, and the vault (tie), as well as silver medals for the rings and in the team competition and a bronze in the horizontal bar, despite a serious hand injury. At the 1964 Tokyo Games, he won the gold medal for the horizontal bar, silver medals in the individual all-around and as a member of the Soviet team, and a bronze in rings. Following

Champion gymnast Boris Shakhlin

his retirement in 1966 Shakhlin was (1968–92) an international official in gymnastics; he was inducted into the International Gymnastics Hall of Fame in 2002.

Shomron, Dan, Israeli military leader (b. 1937, Kibbutz Ashdot Ya'acov, British Palestine [now in Israel]—d. Feb. 26, 2008, Ra'anana, Israel), organized and led the daring rescue of more than 100 Israeli and other Jewish airline passengers who had been hijacked by Palestinian and German militants at the airport in Entebbe, Ugan., in July 1976. Shomron enlisted as a paratrooper in 1955 and fought in the Sinai

Military commander Dan Shomron

Keystone/Getty Images

after the Suez Crisis of 1956. During the Six-Day War in 1967, Shomron commanded a unit and was the first paratrooper to reach the Suez Canal. He was promoted to brigadier general in 1974. In 1979–83, as head of the army's southern command, he oversaw the withdrawal of Israeli forces from the Sinai Peninsula. He served as army chief of staff in 1987–91. Shomron was called out of retirement in 2006 to head a military inquiry into the Israeli war against Hezbollah militants in Lebanon; the report was critical of the conduct of the war.

Sills, Paul, American theatre director and teacher (b. Nov. 18, 1927, Chicago, Ill.—d. June 2, 2008, Baileys Harbor, Wis.), established improvisational comedy and cofounded (1959) The Second City theatre company in Chicago. His improvisation model for Second City and its spin-offs in other cities became the basis for the format used on *Saturday Night Live* and other comedy television programs. In 1955 Sills cofounded the Compass Players, but it was with Second City that he found long-lasting success. In 1968 he developed the story-theatre form, in which actors narrated and acted out folktales and legends. *Paul Sills' Story Theatre* debuted (1970) on Broadway and was nominated for a Tony Award in 1971. Using the story-theatre model, Sills helped create (1988) the New Actors Workshop in New York City, where he taught and directed until 2003.

Singh, V(ishwanath) P(ratap) Indian politician (b. June 25, 1931, Allahabad, Uttar Pradesh, British India—d. Nov. 27, 2008, New Delhi, India), was prime minister (Dec. 2, 1989–Nov. 10, 1990) of India at the head of a coalition government formed of parties that opposed the powerful Congress (I) Party. Singh studied at Allahabad and Pune (Poona) universities and in 1969 became a Congress Party member of the Uttar Pradesh Legislative Assembly. He won election to the Lok Sabha (lower house of Parliament) in 1971. He held several posts under Prime Minister Indira Gandhi, including deputy minister of commerce (1974), minister of commerce (1976–77, 1983–84), and chief minister (governor) of Uttar Pradesh (1980–82). Upon Gandhi's death in 1984, her son and successor as prime minister, Rajiv Gandhi, appointed Singh minister of finance. Singh's efforts to reduce governmental regulation of business and to prosecute tax fraud

attracted widespread praise. He was transferred to the post of minister of defense in January 1987, but he resigned later that year after his investigations of arms-procurement fraud were squelched. Soon afterward, Singh resigned from the government altogether and left Gandhi's Congress (I) Party. He assembled a coalition of centrist opposition parties called the National Front, which challenged Congress (I) in the 1989 general elections. As the leader of the victorious National Front, Singh formed a coalition government with two other major opposition parties, but the coalition was riven by disputes having to do with religious and caste issues. Less than a year later, he lost a vote of confidence in Parliament and resigned. He later was one of the forces behind the broad United Front coalition that governed the country in 1996–97.

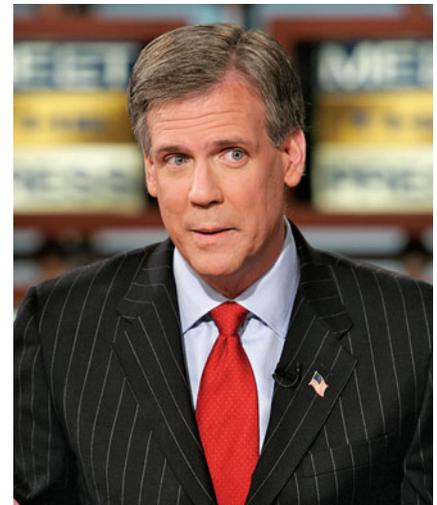

Sister Emmanuelle (MADELEINE CINQUIN), Belgian-born Roman Catholic nun and social activist (b. Nov. 16, 1908, Brussels, Belg.—d. Oct. 20, 2008, Callian, France), lived for more than two decades among the *zabbaleen*, the garbage scavengers in the slums of Cairo, where she established schools, clinics, and other social services. Her humanitarian work was often compared to that of Mother Teresa in India and Abbé Pierre in France. Sister Emmanuelle took her vows in about 1929/30 with the Congregation of Notre Dame of Sion and taught school in Turkey and other countries until 1971, when she was granted permission to live among the *zabbaleen*. In 1980 she founded the Sister Emmanuelle Foundation, which extended her work around the world. Sister Emmanuelle was an outspoken critic of some Roman Catholic doctrines, including the ban on contraception and the celibate priesthood. Her autobiography, *Confessions of a Nun*, which included candid reminiscences of her lifetime struggle against sexual temptation, was withheld from publication until after her death.

Smith, Mike (MICHAEL GEORGE SMITH), British singer and songwriter (b. Dec. 6, 1943, Edmonton, Middlesex, Eng.—d. Feb. 28, 2008, Aylesbury, Buckinghamshire, Eng.), was the lead singer and keyboardist for the Dave Clark Five (DC5), one of the most popular rock-and-roll bands of the British Invasion in the early 1960s. The DC5's hit songs included "Glad All Over," "Bits and Pieces," "Can't You See That

She's Mine," "Because," "Any Way You Want It," "Over and Over," "I Like It Like That," "You Got What It Takes," "Everybody Knows," and "Catch Us if You Can," which served as the title song of the group's 1965 rock movie. Their popularity, which briefly rivaled that of the Beatles, led to a record for a British band—12 appearances on TV's *The Ed Sullivan Show*, but the group fell out of favour in the late '60s and disbanded in 1970. Smith formed his own short-lived band before concentrating on songwriting and producing until an accident in 2003 left him severely paralyzed. He died less than two weeks before the DC5 was inducted into the Rock and Roll Hall of Fame.

Snow, Tony (ROBERT ANTHONY SNOW), American journalist (b. June 1, 1955, Berea, Ky.—d. July 12, 2008, Washington, D.C.), during his 16-month stint (May 2006–September 2007) as White House press secretary, was appreciated for his good-natured banter

Alex Wong/Getty Images

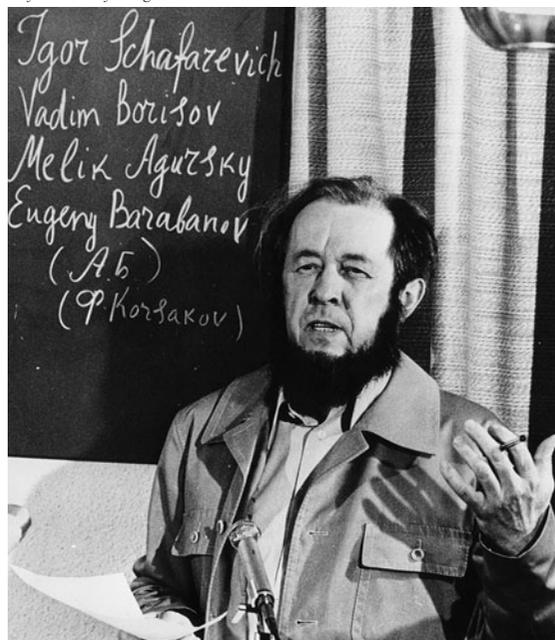

Former White House press secretary Tony Snow

with journalists, infusing energy into what many considered a lacklustre position. Although Snow became known as one of Pres. George W. Bush's staunchest advocates, he originally earned journalistic credibility as the host (1996–2003) of the television program *Fox News Sunday*, on which he often criticized Bush's policies. He wrote editorials for regional newspapers throughout the 1980s, worked as a speechwriter (1991–96) for Pres. George H.W. Bush, and later had a nationally syndicated newspaper column.

Solotaroff, Ted (THEODORE SOLOTAROFF), American literary critic (b. Oct. 9, 1928, Elizabeth, N.J.—d. Aug. 8, 2008, East Quogue, N.Y.), founded (1967) the *New American Review* (later *American Review*), a literary journal that appeared three times a year in paperback form and featured fiction and nonfiction works by such luminaries as Mordecai Richler, E.L. Doctorow, Gabriel García Márquez, Norman Mailer, and Philip Roth (who submitted a sampling of what would become his novel *Portnoy's Complaint* [1969]). Although it was a critical success, the magazine struggled financially and stopped publication in 1977.

Solzhenitsyn, Aleksandr Isayevich, Russian novelist and historian (b. Dec. 11, 1918, Kislovodsk, Russia—d. Aug. 3, 2008, Troitse-Lykovo, near Moscow, Russia), was awarded the Nobel Prize for Literature in 1970, but he declined to go to Stockholm to receive the prize for fear that the government would not readmit him to the Soviet Union upon his return. Although he lived for two decades (1974–94) in honoured exile in the West, he tended to favour the formation of a benevolent authoritarian regime based on Russia's traditional Christian values rather than Western emphases on democracy and individual freedom. Solzhenitsyn was born into a family of Cossack intellectuals; he attended the University of Rostov-na-Donu, graduating in mathematics, and took correspondence courses in literature at Moscow State University. After achieving the rank of captain of artillery during World War II, he was arrested in 1945 for having written a letter in which he criticized Joseph Stalin, and he spent eight years in prisons and labour camps and three more years in enforced exile. Rehabilitated in 1956, he became a mathematics teacher and began to write. Solzhenitsyn submitted his short novel *Odin den iz zhizni Ivana Denisovicha* (1962; *One Day in the Life of Ivan Denisovich*) to the leading Soviet literary periodical *Novy Mir* ("New World"). The novel, based on Solzhenitsyn's own experiences, was noted for its simple, direct language and the obvious authority with which it treated the daily struggles and material hardships of life in a forced-labour camp during the Stalin era. The book produced a sensation both abroad and in the Soviet

Keystone/Getty Images

Nobel Prize-winning author Aleksandr Solzhenitsyn

Union. After the publication of a collection of his short stories in 1963, however, he was denied further official publication of his work, and he resorted to samizdat ("self-published") literature. His most significant works of this period were *V krughe pervom* (1968; *The First Circle*), *Rakovy korpus* (1968; *Cancer Ward*), and *Avgust 1914* (1971; *August 1914*). In December 1973 the first parts of *Arhipelag Gulag* (*The Gulag Archipelago*) were published in Paris after the KGB had seized a copy of the manuscript in the Soviet Union. The work mingles historical exposition and Solzhenitsyn's own autobiographical accounts of the Gulag with the voluminous personal testimony of other inmates—histories that he collected and committed to memory during his earlier imprisonment. He was arrested and charged with treason on Feb. 12, 1974, and was exiled from the Soviet Union on the following day; in December he took possession of his Nobel Prize. The second and third volumes of *The Gulag Archipelago* were published in 1974–75. An extensively expanded and revised version of *August 1914* appeared in Russian in 1983 as the first part of a projected series. In 1989 *Novy Mir* published the first officially approved excerpts from *The Gulag Archipelago*. Solzhenitsyn's Soviet citizenship was officially restored in 1990, and he returned to Russia in 1994. Solzhenitsyn established (1997) an annual prize for writers contributing to the Russian lit-

erary tradition, and in 2007 he was awarded Russia's prestigious State Prize for his contribution to humanitarian causes.

Stafford, Jo Elizabeth, American singer (b. Nov. 12, 1917, Coalinga, Calif.—d. July 16, 2008, Century City, Calif.), possessed a strong, unwavering voice and flawless intonation, and during the 1940s and '50s she became a sensation, hosting and performing on the radio show *The Chesterfield Supper Club* and the television program *The Jo Stafford Show* (1954); she also recorded a succession of charted singles that included the number one hit "You Belong to Me" (1952), which sold two million copies. After singing lead for the Stafford Sisters, a trio formed with her siblings, she served as lead vocalist (1938–44) for the Pied Pipers, who began working in 1939 with the

Tommy Dorsey Orchestra and provided backup vocals for Frank Sinatra, notably for the hit single "I'll Never Smile Again" (1940). During her peak solo years (1944–55), Stafford sold some 25 million records and was a favourite among U.S. servicemen, who affectionately dubbed her "G.I. Jo" because of her tireless work with the USO. Stafford was presented (1960) with a Grammy Award for the best comedy performance for the album *Jonathan and Darlene Edwards in Paris*.

Stewart, John Coburn, American singer and songwriter (b. Sept. 5, 1939, San Diego, Calif.—d. Jan. 19, 2008, San Diego), rose to fame when he wrote the chart-topping hit single "Daydream Believer" (1967) for the pop-rock group the Monkees. Stewart was playing the guitar and banjo and had written his first song by the age of 10. While in high school he started up his own band, the Furies, which released the song "Rockin' Anna" on a local label. In 1958 Stewart formed the Cumberland Three (which recorded three albums), and in 1961 he joined Bob Shane and Nick Reynolds (*q.v.*) in the Kingston Trio when founding member Dave Guard left. He went solo after the latter group broke up in 1967. During his career Stewart wrote more than 600 songs and released dozens of albums.

Stubbs, Levi (LEVI STUBBLES), American singer (b. June 6, 1936, Detroit,

Mich.—d. Oct. 17, 2008, Detroit), was the lead vocalist for the Four Tops, one of Motown's most popular acts in the 1960s; his gruff, passionate vocals were set against gentler background harmonies and propelled the group to the pinnacle of fame with such songs as "Baby I Need Your Loving" (1964), "I Can't Help Myself (Sugar Pie, Honey Bunch)" (1965), "It's the Same Old Song" (1965), "Reach Out I'll Be There" (1966), and "Bernadette" and "Standing in the Shadows of Love" (both 1967). The group, which included Renaldo ("Obie") Benson, Abdul ("Duke") Fakir, and Lawrence Payton, formed after the quartet sang together at a party in 1953. The foursome called themselves the Four Aims until 1956, when they joined Chess Records as the Four Tops. During the next decade they performed primarily jazz-oriented material in clubs and released singles for a number of labels, which were poorly received. After signing with Motown (1963), the group saw its career soar. Though the Four Tops split with Motown in 1972 (when the label relocated to California), the foursome scored a major hit in 1973 with "Ain't No Woman like the One I've Got"; the Four Tops eventually returned for another five-year stint with Motown in the mid-1980s. The group's original lineup continued to tour and record together throughout the 1970s, '80s, and '90s. The Four Tops were inducted into the Rock and Roll Hall of Fame in 1990.

Stuhlinger, Ernst, German-born American rocket scientist (b. Dec. 19, 1913, Niederrimbach, Ger.—d. May 25, 2008, Huntsville, Ala.), was a member of the German team of scientists (led by Wernher von Braun) who developed the V-2 rockets used by the Nazis against the British during World War II and later helped build the American Saturn V rocket, which carried the first astronauts to the Moon in 1969. After the war, Stuhlinger and the rest of von Braun's team surrendered to the Americans and were taken to Fort Bliss, Texas, to work on the U.S. space program; the team was relocated to Huntsville in 1950. The timing device that Stuhlinger invented played a critical role in the success of the Explorer I satellite launch in 1958. He also helped develop the solar X-ray telescope used (1973–74) in the Skylab space station. Stuhlinger worked at the Marshall Space Flight Center in Huntsville as director of the Space Sciences Laboratory (1960–68) and associ-

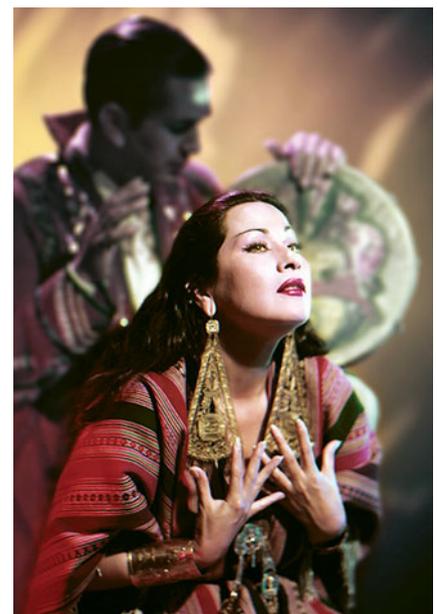

ate director for science (1968–75). After retiring in 1975, he taught at the University of Alabama. In 2005 the Electric Rocket Propulsion Society awarded him a medal for outstanding achievement in electric propulsion. Stuhlinger wrote the textbook *Ion Propulsion for Space Flight* (1964) and co-wrote the biography *Wernher von Braun: Crusader for Space* (1993). He became a U.S. citizen in 1955.

Suharto, Indonesian army officer and political leader (b. June 8, 1921, Kemusu Argamulja, Java, Dutch East Indies [now Indonesia]—d. Jan. 27, 2008, Jakarta, Indon.), pursued strongly anti-communist, pro-Western policies as president of Indonesia (1967–98); Suharto's three decades of uninterrupted rule gave his country much-needed political stability and sustained economic growth, but his authoritarian regime finally fell victim to an economic crisis and its own internal corruption. After graduating from high school and working briefly as a bank clerk, he joined the Dutch colonial army and then, after the Japanese conquest in 1942, switched to a Japanese-sponsored home defense corps. With Japan's surrender in 1945, he fought in the guerrilla forces seeking independence (1950) from the Dutch. Suharto rose steadily through the ranks of the Indonesian army, becoming a colonel (1957), a brigadier general (1960), and a major general (1962). On Sept. 30, 1965, a group of disgruntled left-wing army officers and some Indonesian Communist Party leaders tried to seize power in Jakarta. Suharto escaped assassination, led the army in crushing the coup, and directed a purge of communists and leftists in public life; his example was followed by vigilantes in a grand massacre of communists throughout the country in which hundreds of thousands lost their lives. Suharto took effective control of the government on March 12, 1966, though President Sukarno remained nominal head of state. In March 1967 the People's Consultative Assembly (the national legislature) appointed Suharto acting president, and in March 1968 it elected him president. His government-sponsored political party, Golkar, repeatedly scored landslide victories in elections to the Assembly, and that body in turn reelected Suharto unopposed to the presidency in 1973, 1978, 1983, 1988, 1993, and 1998. In 1997, however, Indonesia became caught up in a currency crisis sweeping across

Southeast Asia. Antigovernment demonstrations turned into rioting in May 1998, and Suharto was forced to resign on May 21.

Sumac, Yma (ZOILA AUGUSTA EMPERATRIZ CHAVARRI DEL CASTILLO), Peruvian-born American folk singer (b. Sept. 13, 1922, Cajamarca, Peru—d. Nov. 1, 2008, Los Angeles, Calif.), was internationally renowned for her extraordinary vocal range and for her interpretations of traditional South American songs. Known as the "Peruvian songbird" and the "nightingale of the Andes," Sumac possessed a soaring soprano voice that spanned at least four octaves. Most of her professional career was spent in the U.S., to which she moved in 1946. She became a sensation on the New York City nightclub and supper-club circuit before releasing her first album, *Voice of the Xtabay* (1950), which sold half a million copies. She also attracted widespread attention with her appearance in the 1951 Broadway musical *Flahooley*. A string of other albums followed, including *Legend of the Sun Virgin* (1952), *Mambo!* (1954), and *Fuego del Ande* (1959). Sumac made notable appearances in two films, *Secret of the Incas* (1954) and *Omar Khayyam* (1957). Although her popularity declined after the early 1960s, she continued to perform. The release of a 1992 documentary, *Yma Sumac: Hollywood's Inca Princess*, helped revive interest in her music, and many of her albums were

Folk singer Yma Sumac

Tom Kelley/Getty Images

subsequently reissued. She was awarded the Orden del Sol, Peru's highest honour for achievement, in 2006.

Svensson, Esbjörn, Swedish jazz pianist (b. April 16, 1964, Västerås, Swed.—d. June 14, 2008, off the coast near Stockholm, Swed.), led the jazz group the Esbjörn Svensson Trio (better known as e.s.t.) and was twice voted Swedish Jazz Musician of the Year (1995 and 1996). As a child Svensson took lessons in classical piano, and he later studied at the Royal College of

Miguel Vidal—Reuters/Landov

Swedish jazz pianist Esbjörn Svensson

Music in Stockholm and at Stockholm University, graduating with a degree in music. He played with bands specializing in various genres, including jazz, pop, rock, and funk, before joining (1993) drummer and childhood friend Magnus Öström and bassist Dan Berglund to form e.s.t. The group played jazz fused with other musical genres, ranging from classical to funk. Because of its unique sound, e.s.t. appealed to a diverse audience, especially younger fans unaccustomed to listening to jazz. The group produced 12 albums, first earning international acclaim with *From Gagarin's Point of View* (1999). The trio was named best international artist at the 2003 BBC Jazz Awards and garnered numerous other awards, including the Guinness Jazz in Europe Award for its album *Strange Place for Snow* (2002) and several Swedish Grammi Awards.

Takarli, Fu'ad al-, Iraqi jurist and writer (b. 1927, Baghdad, Iraq—d. Feb. 11, 2008, Amman, Jordan), was regarded as one of the best Iraqi writers of his generation. His first short story, "Al-'Uyun al-khudr" (published 1952) won him attention, as did his first short-story collection, *Al-Wajh al-akhar* (1960; "The Green Eyes"), which dealt with male-female relations in a patriarchal society. His first novel, *Al-Raj' al-ba'id* (1980; *The Long Way Back*, 2001), regarded by many as a masterpiece of Arabic literature, described life in Iraq during the last days of the regime of 'Abd al-Karim Qasim through the eyes of a family in Baghdad. Takarli spent many years working at the Iraqi Ministry of Justice, becoming a judge in 1956 and rising to the head of the Court of Appeals in Baghdad; he later emigrated from the country.

Teicher, Lou (LOUIS MILTON TEICHER), American pianist (b. Aug. 24, 1924, Wilkes-Barre, Pa.—d. Aug. 3, 2008, Highlands, N.C.), performed in the 1960s with pianist Arthur Ferrante, and the two (billed as Ferrante & Teicher) became a sensation with their florid renditions on twin pianos of the theme songs from such films as *The Apartment*, *Exodus*, *West Side Story* ("Tonight"), and *Midnight Cowboy*. Teicher and Ferrante both attended the Juilliard School of Music, New York City, and later joined its faculty. In 1947 they began a partnership, but their repertoire was limited to classical music and some experimental works until they moved with producer Don Costa from ABC Records to United Artists, which had interests in film. Costa offered them the score from the motion picture *The Apartment*, and the two became audience favourites with their lush touches at the keyboards. During their 50-year association, they toured widely and recorded dozens of singles and more than 150 albums; they sold more than 88 million records.

Teitelboim, Volodia (VALENTÍN TEITELBOIM VOLOSKY), Chilean writer and activist (b. March 17, 1916, Chillán,

Chile—d. Jan. 31, 2008, Santiago, Chile), exerted an extraordinary influence on Chilean life as a leading writer, literary critic, and member of the Politburo of the Chilean Communist Party and a founder of the CCP's daily newspaper, *El Siglo*. When Teitelboim published (with Eduardo Anguita) his first literary offering, *Antología de poesía chilena nueva* (1935), the anthology came under criticism because it did not include work by Gabriela Mistral, who later won the 1945 Nobel Prize for Literature. During the 1930s Teitelboim and poet Pablo Neruda (1971 Nobel literature laureate), who were fierce literary rivals but friends, persuaded Chilean Pres. Pedro Aguirre Cerda to accept some 2,400 Spanish Civil War refugees fleeing persecution from Gen. Francisco Franco. Teitelboim's activism resulted in numerous arrests during the 1940s and '50s. He was a key figure in the coalition government of Pres. Salvador Allende, who in 1970 became the first Socialist leader of the country. During the 1973 military coup in which Allende was toppled, Teitelboim was overseas, and he spent the next 17 years in exile in the Soviet Union, where he launched the twice-weekly broadcast *Escucha, Chile*, a radio program in which he derided the censorship and campaign of terror instituted by Chilean leader Gen. Augusto Pinochet. Teitelboim also founded and directed *Araucaria de Chile*, a vehicle for Chilean intellectuals living abroad. He secretly returned to Chile in 1987, and the following year he was elevated to secretary-general of the CCP, a post he held until 1994. In addition, Teitelboim founded (1954) the literary journal *Aurora*, and he turned out essays, biographies (of Chilean poets Neruda, Mistral, and Vicente Huidobro), political books, and a four-volume autobiography, *Antes del olvido* (1997–2004). In 2002 Teitelboim was awarded Chile's National Literature Prize.

Templeton, Sir John Marks, American-born British investor, mutual fund manager, and philanthropist (b. Nov. 29, 1912, Winchester, Tenn.—d. July 8, 2008, Nassau, Bahamas), was noted for his focus on global stock markets rather than shares in American companies and for his emphasis on shrewd contrarian investing, buying out-of-favour stocks at what he called "the point of maximum pessimism." Templeton's success as an investor and mutual fund manager brought him fame

and wealth, which he used to establish (1972) the Templeton Prize for Progress in Religion (from 2003 the Templeton Prize for Progress Toward Research or Discoveries About Spiritual Realities), to be awarded annually to a living person who demonstrated “extraordinary originality in advancing humankind’s understanding of God and/or spirituality,” and later (1987) the John Templeton Foundation, which awarded some \$70 million per year for research in the areas of science, religion, character development, and freedom. After working his way through Yale University (B.A., 1934), Templeton studied law at Balliol College, Oxford (M.A., 1936), on a Rhodes scholarship. He took a job on Wall Street in 1937, and two years later he borrowed \$10,000 to buy stocks selling for less than \$1 per share. After turning a profit on 100 of the 104 companies in which he invested, Templeton founded (1940) his own investment firm and then started (1954) Templeton Growth Fund, a global stock fund. He sold the Templeton fund group in 1992 to concentrate on the foundation, from which he stepped down as chairman in 2006. He also served for 42 years (12 as chairman) on the board of Princeton Theological Seminary, retiring in 1994. Templeton, who took British citizenship in 1968, was knighted in 1987.

Tendulkar, Vijay Dhondopant, Indian playwright and screenwriter (b. Jan. 6, 1928, Kohalpur, Maharashtra state, British India—d. May 19, 2008, Pune, India), wrote more than 30 full-length Marathi-language plays and numerous one-act plays, short stories, and movie scripts about controversial social themes, including violence, poverty, women’s rights, and corruption. Some of Tendulkar’s most famous plays include *Shantata! Court Chalu Ahe* (1967; “Silence! The Court Is in Session”) and *Sakharam Binder* (1971). *Ghashiram Kotwal* (1972; “Ghashiram the Constable”) was recognized as one of the longest-running plays in the world, with more than 6,000 performances staged internationally. Tendulkar began his career writing for newspapers and had a daily column in the *Maharashtra Times*. It was the play *Shrimant* (1956; “Affluent”), however, that made him a household name. In addition to his plays, Tendulkar wrote screenplays in both Marathi and Hindi. His script for *Manthan* (1976) won the National Film Award for best screenplay; for his literary accomplishments, Tendulkar received (1984) the Padma Bhushan

award, one of India’s highest civilian honours. In 1998 he won the lifetime contribution award from the Sangeet Natak Akademi Fellowship.

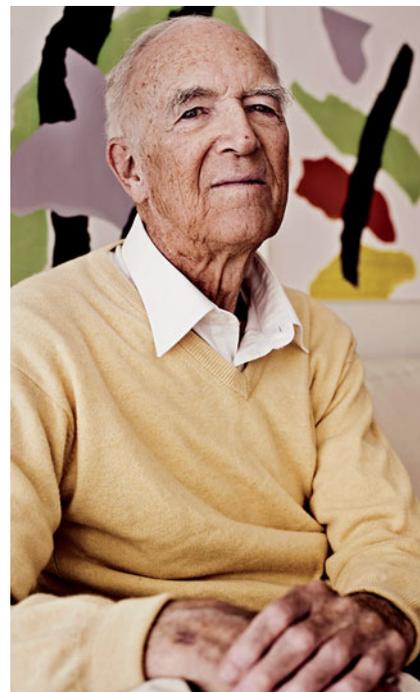

Terkel, Studs (LOUIS TERKEL), American author and oral historian (b. May 16, 1912, New York, N.Y.—d. Oct. 31, 2008, Chicago, Ill.), chronicled the lives of Americans from the Great Depression to the early 21st century. Terkel moved at age nine with his family to Chicago, where his parents ran a rooming house that brought him into contact with the wide range of working-class people who would later inspire his early oral-history collections. After Terkel finished his schooling at the University of Chicago Law School, he failed his first bar examination and decided not to pursue a career in law. In the 1930s, while holding down a job with the Works Progress Administration (WPA) Federal Writers’ Project, he embarked on a career as a radio actor, usually playing the tough-talking villain, and adopted his lifelong nickname, “Studs,” from Chicago-born author James T. Farrell’s *Studs Lonigan* trilogy. Terkel’s acting jobs led to other radio spots, including news commentator, sportscaster, and disc jockey. In 1945 he began his long association with Chicago radio by inaugurating *The Wax Museum*, a WENR program that showcased his knack for engaging people in impromptu interviews. *Studs’ Place*, Terkel’s nationally broadcast television show (1949–52), comprised songs and stories and used a fictional bar as its backdrop. Its cancellation was due to Terkel’s leftist leanings, which got him blacklisted in the early 1950s. He joined fine arts radio station WFMT in 1952 with a daily talk show that ran until Jan. 1, 1998. Though the program was originally intended as a forum for music, Terkel’s famous interviews came to dominate his broadcasts. In the late 1960s Terkel began to use a tape recorder to chronicle his conversations with people outside his radio show. In 1967 he published the best-selling *Division Street: America*, a book consisting of 70 conversations he had recorded with people in the Chicago area. He gained a wider audience with *Hard Times: An Oral History of the Great Depression* (1970), *Working: People Talk About What They Do All Day and How They Feel About What They Do* (1974), and *American Dreams, Lost and Found* (1980). *Working* was made into a stage musical. Terkel won a Pulitzer Prize

for “*The Good War: An Oral History of World War II* (1984). In 1992 Terkel published the daring *Race: How Blacks and Whites Think and Feel About the American Obsession*, which exposed a deep sense of disenchantment and even resentment among the interviewees. His other works include *Will the Circle Be Unbroken?: Reflections on Death, Rebirth, and Hunger for a Faith* (2001); *And They All Sang: Reflections of an Eclectic Disc Jockey* (2005), which gathered Terkel’s WFMT interviews with musicians; and two volumes of autobiography, *Talking to Myself: A Memoir of My Times* (1977) and *Touch and Go* (2007). *P.S.: Further Thoughts from a Lifetime of Listening* (2008) was published posthumously.

Tillion, Germaine Marie Rosine, French ethnologist and World War II Resistance activist (b. May 30, 1907, Allègre, France—d. April 19, 2008, Saint-Mandé, France), was one of only about 3,500 survivors liberated in April 1945 from Ravensbrück women’s concentration camp near Berlin; it was estimated that at least 50,000 women (including Tillion’s mother) and children died at Ravensbrück, in addition to thousands more who were transported from there to other death camps. Arrested in 1942 for her Resistance activities, Tillion was interned (1943–45) in Ravensbrück but managed to hide detailed notebooks of her observations on life in the camp. She later used the surviving notebooks as the basis for a satiric operetta, *Le Verfügar aux Enfers* (“The Campworker Goes to Hell”), but she refused to allow it to be performed until 2007, soon after her 100th birthday. After graduating (1932) with a degree in anthropology from the Ethnology Institute, Tillion traveled extensively throughout Algeria (researching the Amazigh [Berber] people and the territory’s relationship with France) until 1940, when she returned to Paris and joined a Resistance cell based at the Musée de l’Homme. In the 1950s Tillion, who vocally opposed the use of torture in Algeria, unsuccessfully sought to negotiate better relations between the independence-minded colony and France.

Truman, Margaret (MARY MARGARET TRUMAN DANIEL), American writer (b. Feb. 17, 1924, Independence, Mo.—d. Jan. 29, 2008, Chicago, Ill.), was the illustrious only daughter of U.S. Pres. Harry S. Truman and first lady Bess Truman and carved a literary niche for

Jens Astrup—AFP/Getty Images

Architect Jørn Utzon

herself as her parents' biographer (*Harry S. Truman* [1973] and *Bess W. Truman* [1986]) and as the author of a number of best-selling mysteries. Her first book was the autobiographical *Souvenir: Margaret Truman's Own Story* (1956), and her inaugural offering in her Capital Crimes series was *Murder in the White House* (1980). Subsequent titles were set in such locations as the Supreme Court, the Smithsonian Institution, the CIA, the National Gallery of Art, the Pentagon, and the opera. After a brief singing career, Truman turned to radio, where she hosted her own nationally syndicated interview show. She also appeared onstage and on television. In 1956, after she married newspaperman E. Clifton Daniel, Jr., Truman retreated from the show-business spotlight. Her other nonfiction works include *White House Pets* (1969) and *First Ladies* (1995).

Tucker, Ira B., American gospel singer (b. May 17, 1925, Spartanburg, S.C.—d. June 24, 2008, Philadelphia, Pa.), was for seven decades the arresting lead singer of the a cappella soul-gospel group the Dixie Hummingbirds, who enjoyed a flourishing career and influenced such performers as James Brown and the Temptations. Tucker, who joined the Hummingbirds in the late 1930s, was known for his passionate dancing, throaty screams, and skill at “trickering,” in which one singer would pick up a note where another left off. He also composed several of the group's most successful songs, including “Christian's Automobile,” “Who Are We?,” and “This Evening.” Although the group edged into the secular music scene as backup vocalists for Paul Simon's 1973 hit song “Loves Me like a Rock” (and received a Grammy Award that same year for their own version of the song), the Dixie Hummingbirds remained primarily a gospel group. They were inducted into the Grammy Hall of Fame in 2000 for their 1946 rendition of “Amazing Grace.”

Tuwhare, Hone, Maori poet (b. Oct. 21, 1922, Kaikohe, Northland, N.Z.—d. Jan. 16, 2008, Dunedin, N.Z.), made an international impression and became the first widely celebrated Maori poet with his initial collection, *No Ordinary Sun* (1964). Tuwhare's poetry, written in English, has a conversational tone and incorporates both Maori and biblical rhythms; the subjects range from the political to the personal and often powerfully evoke the beauties of na-

ture. *No Ordinary Sun* won Tuwhare a fellowship at Otago University in 1969. He published *Come Rain Hail* (1970) and *Sap-wood and Milk* (1972) and then helped organize the first Maori Writers and Artists Conference (1973). During the 1970s he was able to give up his job as a railroad boilermaker and devote himself to poetry. Of the many verse collections that followed, *Shape-Shifter* (1997) and *Piggy-Back Moon* (2001) won Montana New Zealand Book Awards. Tuwhare was poet laureate of New Zealand in 1999–2000, and in 2003 he, together with novelist Janet Frame and historian Michael King, received the inaugural Prime Minister's Awards for Literary Achievement.

Upshaw, Gene, American football player (b. Aug. 15, 1945, Robstown, Texas—d. Aug. 20, 2008, near Lake Tahoe, California), was a standout offensive lineman for professional football's Oakland Raiders, helping to lead the team to three Super Bowls (1968, 1977, 1981). After his retirement as a player, Upshaw served as the executive director (1983–2008) of the National Football League Players Association; he was particularly known for his leadership of the association through the 1987 players' strike and for his efforts in the negotiations that subsequently brought about the implementation of free agency and a salary cap. Upshaw played college football at Texas College of Arts and Industries (now Texas A&M University—Kingsville) and was drafted by the Raiders in 1967. One of the best left guards in the history of the sport, Upshaw started in 207 consecutive regular-season games between 1967 and 1981 and was selected to play in seven Pro Bowls (1968, 1972–77). He retired from the Raiders after the 1981 season and was inducted into the Pro Football Hall of Fame in 1987.

Utzon, Jørn, Danish architect (b. April 9, 1918, Copenhagen, Den.—d. Nov. 29, 2008, Copenhagen), was best known for his dynamic design for the iconic Sydney Opera House, which in 2007 was designated a UNESCO World Heritage site. Utzon studied (1937–42) at the Copenhagen School of Architecture and worked under Swedish architect Gunnar Asplund (1942–46) and Finnish architect and designer Alvar Aalto (1946) before founding (1950) his own firm in Copenhagen. Among Utzon's important early works were two houses in Denmark, his own at Hellebæk

(1952) and another at Holte (1952–53). In 1957 Utzon won the design competition for a new opera house in Sydney. Construction, however, posed a variety of problems, many resulting from the innovative nature of the design, a series of sail-like roofs. He resigned from the project in 1966, but construction continued under other architects until it opened in September 1973. In 1999 Utzon agreed to oversee an improvement project. He redesigned the reception hall—the only interior space that had been true to his original plans—and it opened in 2004 as the Utzon Room. Two years later a new colonnade was completed, marking the first alteration to the Opera House's exterior since 1973. Utzon was also noted for two housing estates, one near Helsingør (1956) and another in Fredensborg in northern Sjælland (1957–60), and for the Bagsværd Church (1976) in suburban Copenhagen, which has the appearance of clustered farm buildings. Utzon was awarded the Gold Medal of the Royal Institute of British Architects (1978) and the Pritzker Architectural Prize (2003).

Vo Van Kiet (PHAN VAN HOA), Vietnamese politician (b. Nov. 23, 1922, Trung Hiep, French Indochina [now in Vietnam]—d. June 11, 2008, Singapore), as Vietnam's prime minister (1991–97), strongly advocated *doi moi*

Charles Dharapak/AP

Vietnamese politician Vo Van Kiet

(renovation), the economic plan that encouraged entrepreneurial initiative and foreign investment. Under this policy he pushed for free-market reform and helped free the country from its economic isolation. Kiet fought in the French Indochina War as a member (1945–54) of the Viet Minh and later in the Vietnam War with the Viet Cong (1958–75). As Communist Party chief (1976–82) of Ho Chi Minh City, Kiet was charged with instituting socialist reforms in the city, but he favoured more gradual change and supported free enterprise. The party replaced him (1982), and he was transferred to Hanoi. In spite of his disagreements with the ruling Communist Party, Kiet was elected prime minister in 1991. During his time in office, he expanded diplomatic ties with foreign countries, and in 1995 he restored diplomatic relations between Vietnam and the U.S. Kiet also encouraged the Hanoi government to reconcile with dissidents, to listen to the opinions of opponents, and to support a free press. Even after resigning from office in 1997, Kiet remained a vocal critic of the Communist Party and its shortcomings. He retired from his position as adviser to the party's Central Committee in 2001.

von Bülow, Sunny (MARTHA SHARP CRAWFORD), American heiress (b. Sept. 1, 1931, Manassas, Va.—d. Dec. 6, 2008, New York, N.Y.), spent nearly 28 years in a coma after being found unconscious in a bathroom of her Newport, R.I., mansion on Dec. 21, 1980; in two sensational trials, her second husband, Claus von Bülow, was initially convicted but then acquitted of having attempted to murder her by injecting her with drugs. Sunny, as she was known from childhood, was the daughter of George Crawford, the multimillionaire founder of the Columbia Gas and Electric Co. Her first marriage, to Prince Alfred von Auersperg, ended in divorce in 1965. She married von Bülow the following year.

Wallace, David Foster, American novelist, short-story writer, and essayist (b. Feb. 21, 1961, Ithaca, N.Y.—found dead Sept. 12, 2008, Claremont, Calif.), produced dense works that provide a dark, often satiric analysis of American culture. Wallace received a B.A. (1985) from Amherst (Mass.) College. He was completing a master's degree in creative writing at the University of Arizona when his highly regarded debut novel, *The Broom of the System* (1987), was published. He later taught creative writing at Illinois State University and at Pomona College, Claremont. Wallace received a MacArthur Foundation “genius” grant in 1997. He became best known for his second novel, *Infinite Jest* (1996), a massive, multilayered novel that features a sweeping cast of

postmodern characters who range from recovering alcoholics and foreign statesmen to residents of a halfway house and high-school tennis stars. Presenting a futuristic vision of a world in which advertising has become omnipresent, *Infinite Jest* takes place during calendar years that have been named by companies that purchased the rights to promote their products. Wallace's short stories are collected in *Girl with Curious Hair* (1989), *Brief Interviews with Hideous Men* (1999), and *Oblivion* (2004). His essay collections include *A Supposedly Fun Thing I'll Never Do Again* (1997) and *Consider the Lobster, and Other Essays* (2005). *Everything and More: A Compact History of Infinity* (2003) is a survey of the mathematical concept of infinity. Wallace's death was an apparent suicide.

Wang Yung-ching, Taiwanese industrialist (b. Jan. 18, 1917, Hsin-tien, Taiwan—d. Oct. 15, 2008, Livingston, N.J.), was founder and chairman of the Formosa Plastics Group, Taiwan's largest manufacturing conglomerate. Wang established the group's flagship business, the Formosa Plastics Corp., in 1954 and built the company into one of the world's largest suppliers of polyvinyl chloride (PVC). Dubbed the “god of management” for his business acumen, Wang successfully expanded the group before stepping down as chairman in 2006. At the time of his death, *Forbes* magazine ranked him as the second richest person in Taiwan, with a fortune estimated at \$6.8 billion.

Weller, Thomas Huckle, American physician and virologist (b. June 15, 1915, Ann Arbor, Mich.—d. Aug. 23, 2008, Needham, Mass.), was in 1954 the corecipient (with John Enders and Frederick Robbins) of the Nobel Prize for Physiology or Medicine for the successful cultivation of poliomyelitis virus in tissue cultures. This breakthrough, which was announced to the public in 1949, made it possible to study the virus “in the test tube”—a procedure that led to the development of polio vaccines. After his education at the University of Michigan at Ann Arbor (A.B., 1936; M.S., 1937) and Harvard University (M.D., 1940), Weller became a teaching fellow (1940–42) at the Harvard Medical School; he served in the U.S. Army Medical Corps during World War II. Weller joined (1947) Enders's infectious diseases laboratory at the Children's Medical Center, Boston, and served (1949–55) as assistant director. He worked with Enders and Robbins and soon achieved the propagation of poliomyelitis virus in laboratory suspensions of human embryonic skin and muscle tissue. Weller was also the first (with the American physician Franklin Neva) to achieve the laboratory propagation of rubella (German measles) virus and to isolate chicken pox virus from human cell cultures. In 1954 Weller became professor of tropical public health at Harvard University, and he also served (1966–81) as director of the Center for the Prevention of Infectious Diseases at the Harvard University School of Public Health.

Westlake, Donald Edwin, American writer (b. July 12, 1933, New York, N.Y.—d. Dec. 31, 2008, San Tancho, Mex.), attracted a wide readership as well as great critical acclaim with his stylish crime novels, which numbered more than 100. Among the author's best-known characters was the hapless thief John Dortmunder, the protagonist of such novels as *The Hot Rock* (1970), *Bank Shot* (1972), *Why Me?* (1983), and *What's So Funny?* (2007). Writing as Richard Stark—one of numerous pseudonyms Westlake employed during his career—he also created a popular series of novels featuring another thief, a ruthless criminal known simply as Parker; among many other titles in the Parker series are *The Hunter* (1962), *The Outfit* (1963), *The Score* (1964), and *Slayground* (1971). Westlake earned an Academy Award nomination in 1991 for his screenplay for the film *The Grifters* (1990). He won the Mystery

Writers of America's Edgar Allan Poe Award three times, and the organization bestowed on him the title Grand Master—its highest honour—in 1993.

Wexler, Jerry (GERALD WEXLER), American record producer and music journalist (b. Jan. 10, 1917, New York, N.Y.—d. Aug. 15, 2008, Sarasota, Fla.), coined the term *rhythm and blues* (R&B) in 1949 while working as a reporter for *Billboard* magazine; four years later he became an executive for Atlantic Records and helped transform it from a relatively small independent label to a major record company. Throughout the 1950s and '60s, Wexler enthusiastically championed R&B music while guiding the careers of such classic performers as Ray Charles, Wilson Pickett, and Aretha Franklin. He also added a number of rock acts to the label's roster of artists, most notably signing (1969) the British group Led Zeppelin. After leaving Atlantic in 1975, he remained active as an independent producer, supervising Bob Dylan's Christian-themed recordings *Slow Train Coming* (1979) and *Saved* (1980) as well as albums by Dusty Springfield, Carlos Santana, Linda Ronstadt, and Dire Straits, among others. Wexler was inducted into the Rock and Roll Hall of Fame in 1987. A memoir, *Rhythm and the Blues*, co-written with David Ritz, appeared in 1993.

Wharton, William (ALBERT WILLIAM DU AIME), American novelist and painter (b. Nov. 7, 1925, Philadelphia, Pa.—d. Oct. 29, 2008, Encinitas, Calif.), was best known for his innovative first novel, *Birdy* (1979; filmed 1984), which blended autobiographical elements and fantastic characters and told the story of a man with a lifelong obsession with canaries. After sustaining serious wounds during service in World War II, Wharton (he used the pseudonym William Wharton throughout his writing career) studied painting and psychology at the University of California, Los Angeles. He then spent more than a decade teaching art in the public school system of Los Angeles. He and his wife and children began traveling in Europe in 1958 and after several years settled in Paris. The family divided time between several residences, including a houseboat, and subsisted on profits from his Impressionist-style paintings, which Wharton sold on the street. His second novel, *Dad* (1981; filmed 1989), chronicled the title character's life through the memories of his son and

grandson as they care for him in his old age. *A Midnight Clear* (1982; filmed 1992) mined Wharton's experiences in World War II, while *Scumbler* (1984) fantastically embroidered upon his experiences as an artist in Paris. Later novels—including *Pride* (1985), *Tidings* (1987), and *Last Lovers* (1991)—drew less attention than his early work.

Wheeler, John Archibald, American physicist (b. July 9, 1911, Jacksonville, Fla.—d. April 13, 2008, Hightstown, N.J.), was the first American involved in the theoretical development of the atomic bomb. He also originated a novel approach to the unified field theory and popularized the term *black hole*. Wheeler was educated at Baltimore (Md.) City College and Johns Hopkins University, Baltimore (Ph.D., 1933). He also studied with Niels Bohr at the University of Copenhagen. He and Bohr wrote “The Mechanism of Nuclear Fission” (1939), a seminal treatise that singled out uranium-235 for use in the development of an atomic bomb. Wheeler taught physics at the University of North Carolina before joining (1938) the faculty of Princeton University. He served (1966–76) as Joseph Henry Professor at Princeton before his appointment in 1976 as professor of physics at the University of Texas at Austin, where from 1979 he held the Ashbel Smith chair of physics and in 1981 became Blumberg Professor of Physics. Wheeler retired as professor emeritus in 1986. He helped develop (1949–51) the hydrogen bomb at Los Alamos, N.M., and at Princeton he was director (1951–53) of Project Matterhorn. For his work on nuclear fission and the technology of plutonium production, he was given (1968) the Fermi Award by the U.S. Atomic Energy Commission. From 1969 to 1976 he served as a member of the U.S. General Advisory Committee on Arms Control and Disarmament. In later years he turned his attention to the study of unified field theory, the space-time continuum, and gravitation. He was awarded the Niels Bohr International Gold Medal in 1982.

Whitney, Phyllis Ayame, American author (b. Sept. 9, 1903, Yokohama, Japan—d. Feb. 8, 2008, Faber, Va.), wrote juvenile fiction that consists primarily of serious accounts of growing up and of mystery-adventures; her adult fiction combines romance and mystery to great effect. In 1941 Whitney published her first novel, *A Place*

for *Ann*, and her later works include *Willow Hill* (1947), *Linda's Homecoming* (1950), and *Secret of the Stone Face* (1977). Two of her novels—*The Mystery of the Haunted Pool* (1960) and *The Mystery of the Hidden Hand* (1963)—won Edgar Allan Poe Awards from the Mystery Writers of America. *Emerald* (1983), *Dream of Orchids* (1985), and *The Ebony Swan* (1992) are among the 39 books she wrote for a mature audience. Her *Guide to Writing Fiction* appeared in 1982. Whitney was president of the Mystery Writers of America in 1975 and in 1988 received that organization's Grand Master Award for lifetime achievement.

Widmark, Richard, American actor (b. Dec. 26, 1914, Sunrise, Minn.—d. March 24, 2008, Roxbury, Conn.), became an overnight Hollywood sensation following his film debut in *Kiss of Death* (1947), in which he portrayed a maniacal gangster who giggles as he ties up an older woman in a wheelchair and shoves her down a flight of stairs; the role earned him his only Academy Award nomination. Widmark subsequently won top billing in villainous roles in two thrillers, *Road House* (1948) and *The Street with No Name* (1948), but he assumed a nice-guy persona in *Panic in the Streets* (1950) as a doctor tracking down a pneumonic plague-infected man. Over his almost six-decade-long career, Widmark's roles ranged from sinister to heroic, but his characterizations were always tinged with a sense of cynicism. Other films include *No Way Out* (1950), *The Alamo* (1960), *Two Rode Together* (1961), *Cheyenne Autumn* (1964), *The Bedford Incident* (1964), and *Madigan* (1968). He reprised the latter role in the television series *Madigan* (1972–73). Widmark was later the recipient (1990) of the D.W. Griffith Career Achievement Award.

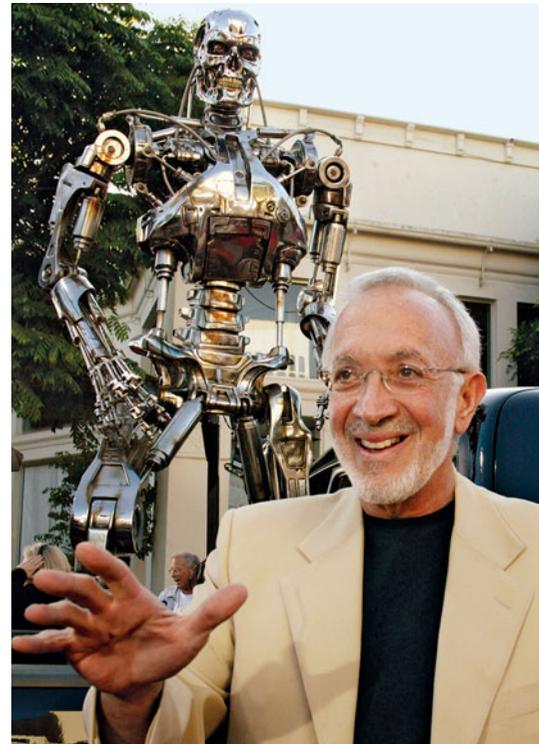

Wijetunga, Dingiri Banda, Sri Lankan politician (b. Feb. 15, 1916, Polgaha, Ceylon [now Sri Lanka]—d. Sept. 21, 2008, Kandy, Sri Lanka), brought stability to Sri Lanka as the country's head of state (May 7, 1993–Nov. 12, 1994) during the crucial period immediately following the assassination on May 1, 1993, of Pres. Ranasinghe Premadasa. Wijetunga joined the United National Party (UNP) in 1946 and twice (1956, 1960) ran unsuccessfully for Parliament before being elected in 1965. He lost his seat in 1970 but returned in 1977 as part of a

UNP electoral majority. Wijetunga held several ministerial portfolios and served a stint (1988–89) as governor of North Western Province. On March 3, 1989, Premadasa unexpectedly appointed him prime minister. This put Wijetunga in position to take over as acting president upon Premadasa's death, and Parliament quickly and unanimously elected him to complete the remainder of Premadasa's term. The unassuming Wijetunga eased restrictions and introduced economic and social reforms; he retired when the UNP lost the subsequent parliamentary and presidential elections in 1994.

Wilson, Sallie, American ballerina (b. April 18, 1932, Fort Worth, Texas—d. April 27, 2008, New York, N.Y.), as a leading dancer with American Ballet Theatre, had an intense stage presence that, coupled with her fine musicality and technique, gained her renown during the 1960s and '70s as one of the best American dramatic ballerinas. She was especially admired for her performances in the works of choreographer Antony Tudor—notably *Pillar of Fire*, *Jardin aux lilas*, *Dim Lustre*, and *Dark Elegies*—and in Agnes de Mille's interpretation of the story of Lizzie Borden, *Fall River Legend*. Most recently, Wilson had served as ballet mistress for the New York Theatre Ballet.

Winston, Stan (STANLEY WINSTON), American special-effects artist (b. April 7, 1946, Arlington, Va.—d. June 15, 2008, Malibu, Calif.), earned praise—and 10 Oscar nominations—for his adeptness at combining makeup, animatronic creatures, and computer-generated images to produce incredibly realistic on-screen special effects. Winston won Academy Awards for *Aliens* (1986; for visual effects), *Terminator 2: Judgment Day* (1991; one for makeup and another for visual effects), and *Jurassic Park* (1993; for visual effects); captured television Emmy Awards for his makeup designs for *Gargoyles* (1972) and *The Autobiography of Miss Jane Pittman* (1974); and in 2001 was the first special-effects artist to receive a star on the Hollywood Walk of Fame. Winston's other memorable creations included the infamous hands in *Edward Scissorhands* (1990) and the armored suits for *Iron Man* (2008). He also directed two movies, the horror film *Pumpkinhead* (1988) and *A Gnome Named Gnorm* (1990). After performing stand-up comedy for a short time, he began an apprenticeship at the Walt

Fred Prouser—Reuters/Landov

Special-effects artist Stan Winston

Disney Studios as a makeup artist. In 1972 he opened the Stan Winston Studio, which was initially headquartered in his garage. In 2001 he established Stan Winston Creatures to design toys based on the characters from *Creature Features*, an HBO cable TV series that he produced.

Woods, Abraham Lincoln, Jr., American civil rights activist (b. Oct. 7, 1928, Birmingham, Ala.—d. Nov. 7, 2008, Birmingham), led the protesters who staged (1963) the first sit-ins at a whites-only lunch counter in downtown Birmingham, a landmark event in the fight for civil rights; authorities blasted hundreds of black demonstrators with fire hoses, set police dogs upon them, and imprisoned them. Woods was jailed along with the Rev. Martin Luther King, Jr. (a friend from his Morehouse College days), who wrote the impassioned "Letter from Birmingham Jail," in which King justified acts of civil disobedience to protest discriminatory laws. While serving (1990–2006) as president of the Birmingham chapter of the Southern Christian Leadership Conference, Woods again took a leading role, this time in organizing (1990) the demonstrations against the whites-only Shoal Creek Golf and Country Club, which was to

host the Professional Golfers' Association championship that year. Woods's actions prompted the withdrawal of major advertising sponsors for the televised event. In response, the club decided to accept blacks as members. Woods, the pastor of St. Joseph Baptist Church, was also on the scene on Sept. 15, 1963, when a dynamite blast claimed the lives of four black girls at the nearby 16th Street Baptist Church. He was instrumental years later in fighting for a reinvestigation of that bombing (only one Ku Klux Klansman [Robert E. Chambliss] had been indicted in 1977). Owing to Woods's effort, two additional Klansmen were convicted—Thomas E. Blanton, Jr. (in 2001), and Bobby Frank Cherry (in 2002).

Wright, Rick (RICHARD WILLIAM WRIGHT), British singer-songwriter and keyboardist (b. July 28, 1943, Pinner, Middlesex, Eng.—d. Sept. 15, 2008, London, Eng.), was a founding member of the rock group Pink Floyd; his jazz-infused, atmospheric keyboard work became a central feature of the group's improvisational, psychedelic sound. Wright studied (1962–64) at London's Regent Street Polytechnic College, where he studied architecture, and then enrolled (1964) at the London College of Music while teaching himself jazz piano and keyboard. By 1965 he had joined with three friends to form a band—drummer Nick Mason, guitarist Roger Waters, and Syd Barrett, the lead guitarist and chief songwriter who dubbed the group Pink Floyd. Their dramatic debut album, *The Piper at the Gates of Dawn* (1967), brought them immediate success, but excessive use of LSD and other drugs pushed Barrett into a mental breakdown. After Barrett's departure in 1968, Pink Floyd released several acclaimed albums, notably *The Dark Side of the Moon* (1973)—for which Wright composed several songs, including "Time," "Us and Them," and "The Great Gig in the Sky"—and *Wish You Were Here* (1975). Wright had a falling out with Waters after *The Wall* (1979) and left to pursue a solo career, though he performed on all but one of the band's later albums. He formally rejoined Pink Floyd for a 1994 reunion tour and for the London Live 8 concert in 2005.

Xiao Ke, Chinese military official and writer (b. July 14, 1907, Jiahe county, Hunan province, China—d. Oct. 24, 2008, Beijing, China), was the last sur-

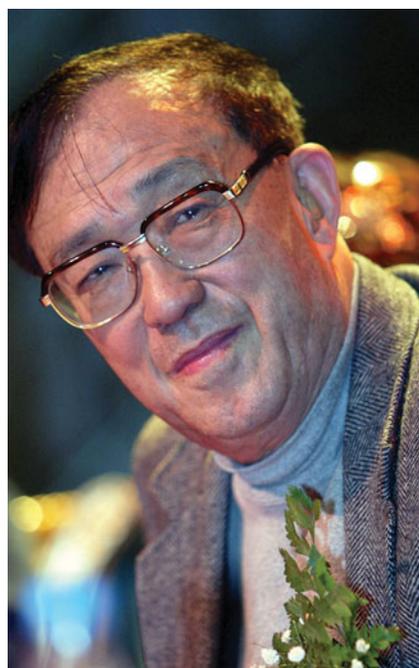

viving military leader of the Long March (1934–36), the epic 10,000-km (6,000-mi) trek of the Chinese communists into northwestern China. Xiao was the commander of the Red Army's Sixth Army group, which suffered the loss of some 6,000 of its 9,000 troops in an attack by Nationalist forces at the outset of the march. Xiao later served as Red Army field commander Lin Biao's chief of staff. Although named a general in 1955, Xiao was subsequently denounced by Mao Zedong and spent several years in rural exile before being rehabilitated in the 1970s. Xiao became a member of China's Central Military Commission and was a vice-chairman of the Fifth National Committee of the Chinese People's Political Consultative Conference. He was known for his opposition to the use of troops to suppress the pro-democracy demonstrations in Tiananmen Square in 1989—a position he refused to retract despite political pressure to do so. Xiao was also a notable writer; he received a Mao Dun Literature Prize in 1988 for his novel *Bloody Heaven*.

Xie Jin, Chinese film director (b. Nov. 21, 1923, Shaoxing, China—found Oct. 18, 2008, Shangyu, China), examined the consequences of China's Cultural Revolution (1966–76) in a series of epic motion pictures, including *The Legend of Tianyun Mountain* (1980), *The Herds-*

man (1982), and, most notably, *Hibiscus Town* (1986). Xie embarked on a career in the film industry in the mid-1940s and first attracted international attention as the writer and director of *Two Stage Sisters* (1964). Denounced and forced to work as a manual labourer during the Cultural Revolution, he was eventually rehabilitated and went on to chronicle the lives of the era's victims in much of his later work. Among Xie's other films were *Garlands at the Foot of the Mountain* (1983), *The Last Aristocrats* (1989), and *The Opium War* (1997).

Yen, Vivian Wu, Chinese-born Taiwanese businesswoman (b. December 1913, Wujin, Jiangsu province, China—d. Aug. 9, 2008, Taipei, Taiwan), was the tenacious chairwoman of the Yulon Group, the largest auto manufacturer in Taiwan; she became known as the "Iron Lady" after taking the reins and successfully expanding the conglomerate following the death in 1981 of her husband, Yen Ching-ling. In the 1950s the couple founded the textile and auto companies that eventually formed the core of the conglomerate. For most of her career, Yen focused on managing the textile business, but she proved herself to be an innovative leader in the auto industry as well after the board of directors elected her to succeed her husband as chairperson. In 2007 Yen turned over the chairmanship to her son, Kenneth K.T. Yen.

Zhang Hanzhi, Chinese diplomat and tutor (b. 1935, Shanghai, China—d. Jan. 26, 2008, Beijing, China) provided private English lessons to Chairman Mao Zedong in 1963 but fell out of favour during the early years of the Cultural Revolution, when she was forced to abandon her studies at the Beijing Foreign Studies University. In 1970, however, Mao summoned her back to work as a diplomat for the Foreign Ministry, and the following year during U.S. Secretary of State Henry Kissinger's confidential trip to China, she interpreted for Prime Minister Zhou Enlai. Zhang also served as an interpreter for U.S. Pres. Richard Nixon during his visit to China in 1972 for the signing of the Shanghai Communiqué. After Mao's death in 1976, Zhang was accused of having close ties with his fourth wife, Jiang Qing, and the Gang of Four, who were held responsible for causing social upheavals during the Cultural Revolution; Zhang was held under house arrest until 1980.

The Financial Crisis of 2008

by Joel Havemann

In 2008 the world economy faced its most dangerous crisis since the Great Depression of the 1930s. The contagion, which began in 2007 when sky-high home prices in the United States finally turned decisively downward, spread quickly, first to the entire U.S. financial sector and then to financial markets overseas. The casualties in the United States included a) the entire investment banking industry, b) the biggest insurance company, c) the two enterprises chartered by the government to facilitate mortgage lending, d) the largest mortgage lender, e) the largest savings and loan, and f) two of the largest commercial banks. The carnage was not limited to the financial sector; however, as companies that normally rely on credit suffered heavily. The American auto industry, which pleaded for a federal bailout, found itself at the edge of an abyss. Still more ominously, banks, trusting no one to pay them back, simply stopped making the loans that most businesses need to regulate their cash flows and without which they cannot do business. Share prices plunged throughout the world—the Dow Jones Industrial Average in the U.S. lost 33.8% of its value in 2008—and by the end of the year, a deep recession had enveloped most of the globe. In December the National Bureau of Eco-

Signs advertising residential property for sale line a street in south London in April.

nomics Research, the private group recognized as the official arbiter of such things, determined that a recession had begun in the United States in December 2007, which made this already the third longest recession in the U.S. since World War II.

Each in its own way, economies abroad marched to the American drummer. By the end of the year, Germany, Japan, and China were locked in recession, as were many smaller countries. Many in Europe paid the price for having dabbled in American real estate securities. Japan and China largely avoided that pitfall, but their export-oriented manufacturers suffered as recessions in their major markets—the U.S. and Europe—cut deep into demand for their products. Less-developed countries likewise lost markets abroad, and their foreign investment, on which they had depended for

growth capital, withered. With none of the biggest economies prospering, there was no obvious engine to pull the world out of its recession, and both government and private economists predicted a rough recovery.

Origins. How did a crisis in the American housing market threaten to drag down the entire global economy? It began with mortgage dealers who issued mortgages with terms unfavourable to borrowers, who were often families that did not qualify for ordinary home loans. Some of these so-called subprime mortgages carried low “teaser” interest rates in the early years that ballooned to double-digit rates in later years. Some included prepayment penalties that made it prohibitively expensive to refinance. These features were easy to miss for first-time home buyers, many of them unsophisticated in such matters, who were beguiled by

Fed lowers its interest rate from 4.25% to 3.5%.	Congress passes a fiscal stimulus bill to prevent recession. Bank of England (BOE) lowers its interest rate from 5.25% to 5%.	U.K. nationalizes Northern Rock.	Oil reaches \$103.95 a barrel, breaking the record set in 1980, adjusted for inflation.	News surfaces reporting that 7.9% of U.S. mortgages were in foreclosure or past due at year's end 2007.

the prospect that, no matter what their income or their ability to make a down payment, they could own a home.

Mortgage lenders did not merely hold the loans, content to receive a monthly check from the mortgage holder. Frequently they sold these loans to a bank or to Fannie Mae or Freddie Mac, two government-chartered institutions created to buy up mortgages and provide mortgage lenders with more money to lend. Fannie Mae and Freddie Mac might then sell the mortgages to investment banks that would bundle them with hundreds or thousands of others into a “mortgage-backed security” that would provide an income stream comprising the sum of all of the monthly mortgage payments. Then the security would be sliced into perhaps 1,000 smaller pieces that would be sold to investors, often misidentified as low-risk investments.

The insurance industry got into the game by trading in “credit default swaps”—in effect, insurance policies stipulating that, in return for a fee, the insurers would assume any losses caused by mortgage-holder defaults. What began as insurance, however, turned quickly into speculation as financial institutions bought or sold credit default swaps on assets that they did not own. As early as 2003, Warren Buffett, the renowned American investor and CEO of Berkshire Hathaway, called them “financial weapons of mass destruction.” About \$900 billion in credit was insured by these derivatives in 2001, but the total soared to an astounding \$62 trillion by the beginning of 2008.

As long as housing prices kept rising, everyone profited. Mortgage holders with inadequate sources of regular income could borrow against their rising home equity. The agencies that rank securities according to their safety (which are paid by the issuers of those securities, not by the buyers) generally rated mortgage-backed securities relatively safe—they were not. When the housing bubble burst, more and more mortgage holders defaulted on their loans. At the end of September, about 3% of home loans were in the foreclo-

In December, as the global financial crisis deepens, a store in New York City advertises that it is going out of business.

sure process, an increase of 76% in just a year. Another 7% of homeowners with a mortgage were at least one month past due on their payments, up from 5.6% a year earlier. By 2008 the mild slump in housing prices that had begun in 2006 had become a free fall in some places. What ensued was a crisis in confidence: a classic case of what happens in a market economy when the players—from giant companies to individual investors—do not trust one another or the institutions that they have built.

The Crisis Unfolds. The first major institution to go under was Countrywide Financial Corp., the largest American mortgage lender. Bank of America agreed in January 2008 to terms for completing its purchase of the California-based Countrywide. With large shares of Countrywide’s mortgages delinquent, Bank of America was able to buy it for \$4 billion on top of the \$2 billion stake that it had acquired the previous August—a fraction of Countrywide’s recent market value.

The next victim, in March, was the Wall Street investment house Bear Stearns, which had a thick portfolio of mortgage-based securities. As the value of those securities plummeted, Bear Stearns was rescued from bankruptcy

by JPMorgan Chase, which agreed to buy it for a bargain-basement price of \$10 per share (about \$1.2 billion), and the Federal Reserve (Fed), which agreed to absorb up to \$30 billion of Bear’s declining assets.

If the Fed’s involvement in the bailout of Bear Stearns left any doubt that even a conservative Republican government—such as that of U.S. Pres. George W. Bush—could find it necessary to insert itself into private enterprise, the rescue of Fannie Mae and Freddie Mac in September laid that uncertainty to rest. The two private mortgage companies, which historically enjoyed a slight edge in the marketplace by virtue of their congressional charters, held or guaranteed about half of the country’s mortgages. With the rush of defaults of subprime mortgages, Fannie and Freddie suffered the same losses as other mortgage companies, only worse. The U.S. Department of the Treasury, unwilling to abide the turmoil that the failure of Fannie and Freddie would entail, seized control of them on September 7, replaced their CEOs, and promised each up to \$100 billion in capital if the money became necessary to balance their books.

The month’s upheavals were not over. With Bear Stearns disposed of, the

markets bid down share prices of Lehman Brothers and Merrill Lynch, two other investment banks with exposure to mortgage-backed securities. Neither could withstand the heat. Under pressure from the Treasury, Merrill Lynch, whose “bullish on America” slogan had made it the popular embodiment of Wall Street, agreed on September 14 to sell itself to Bank of America for \$50 billion, half of its market value within the past year. Lehman Brothers, however, could not find a buyer, and the government refused a Bear Stearns-style subsidy. Lehman Brothers declared bankruptcy the day after Merrill’s sale.

Next on the markets’ hit list was American International Group (AIG), the country’s biggest insurer, which faced huge losses on credit default swaps. With AIG unable to secure credit through normal channels, the Fed provided an \$85 billion loan on September 16. When that amount proved insufficient, the Treasury came through with \$38 billion more. In return, the U.S. government received a 79.9% equity interest in AIG.

Five days later saw the end for the big independent investment banks. Goldman Sachs and Morgan Stanley were the only two left standing, and their big investors, worried that they might be the markets’ next targets, began moving their billions to safer havens. Rather than proclaim their innocence all the way to bankruptcy court, the two investment banks chose to transform themselves into ordinary bank holding companies. That put them under the respected regulatory umbrella of the Fed and gave them access to the Fed’s various kinds of credit for the institutions that it regulates.

On September 25, climaxing a frenetic month, federal regulators seized the country’s largest savings and loan, Seattle-based Washington Mutual (WaMu), and brokered its sale to JPMorgan Chase for \$1.9 billion. JPMorgan also agreed to absorb at least \$31 billion in WaMu’s losses. Finally, in October, the Fed gave regulatory approval to the purchase of Wachovia Corp., a giant North Carolina-based bank that was crippled

by the subprime-mortgage fiasco, by California-based Wells Fargo. Other banks also foundered, including some of the largest. In November the Treasury shored up Citigroup by guaranteeing \$250 billion of its risky assets and pumping an additional \$20 billion directly into the bank.

There were competing theories on how so many pillars of finance in the U.S. crumbled so quickly. One held the issuers of subprime mortgages ultimately responsible for the debacle. According to this view, when mortgage-backed securities were flying high, mortgage companies were eager to lend to anyone, regardless of the borrower’s financial condition. The firms that profited from this—from small mortgage companies to giant investment banks—deluded themselves that this could go on forever. Joseph E. Stiglitz of Columbia University, New York City, the chairman of the Council of Economic Advisers during former president Bill Clinton’s administration, summed up the situation this way: “There was a party going on, and no one wanted to be a party pooper.”

Some claimed that deregulation played a major role. In the late 1990s, Congress demolished the barriers between commercial and investment

banking, a change that encouraged risky investments with borrowed money. Deregulation also ruled out most federal oversight of “derivatives”—credit default swaps and other financial instruments that derive their value from underlying securities. Congress also rejected proposals to curb “predatory loans” to home buyers at unfavourable terms to the borrowers.

Deregulators scoffed at the notion that more federal regulation would have alleviated the crisis. Phil Gramm, the former senator who championed much of the deregulatory legislation, cast the blame on “predatory borrowers” who shopped for a mortgage when they were in no position to buy a house. Gramm and other opponents of regulation traced the troubles to the 1977 Community Reinvestment Act, an antiredlining law that directed Fannie Mae and Freddie Mac to make sure that the mortgages that they bought included some from poor neighbourhoods. That, Gramm and his allies argued, constituted a license for mortgage companies to lend to unqualified borrowers.

As alarming as the blizzard of buy-outs, bailouts, and collapses might have been, it was not the most ominous consequence of the financial crisis. That

occurred in the credit markets, where hundreds of billions of dollars a day are lent for periods as short as overnight by those who have the capital to those who need it. The banks that did much of the lending concluded from the chaos taking place in September that no borrower could be trusted. As a result, lending all but froze. Without loans, businesses could not grow. Without loans, some businesses could not even pay for day-to-day operations.

Then came a development that underscored the enormity of the crisis. The Reserve Primary Fund, one of the U.S.'s major money-market funds, announced on September 16 that it would "break the buck." Money-market funds constitute an important link in the financial chain because they use their deposits to make many of the short-term loans that large corporations need. Although money-market funds carry no federal deposit insurance, they are widely regarded as being just as safe as bank deposits, and they attract both large and small investors because they earn rates of return superior to those offered by the safest of all investments, U.S. Treasury securities. So it came as a jolt when Reserve Primary, which had gotten into trouble with its loans to Lehman Brothers, proclaimed that it would be unable to pay its investors any more than 97 cents on the dollar. The announcement triggered a stampede out of money-market funds, with small investors joining big ones. Demand for Treasury securities was so great that the interest rate on a three-month Treasury bill was bid down practically to zero. In a September 18 meeting with members of Congress, Fed Chairman Ben S. Bernanke was heard to remark that if someone did not do something fast, by the next week there might not be an economy to rescue.

If government policy makers had taken any lesson from the Great Depression, it was that tight money, high taxes, and government spending restraint could aggravate the crisis. The Treasury and the Fed seemed to compete for the honour of biggest economic booster. The Fed's usual tool—reducing short-term interest rates—did

not unlock the credit markets. By year's end its target for the federal funds rate, which banks charge one another for overnight loans, was about as low as it could get: a range of 0–0.25%. So the Fed dusted off other ways of injecting money into the economy, through loans, loan guarantees, and purchases of government securities. By December the Fed had pumped more than \$1 trillion into the economy and signaled its intention to do much more.

Treasury Secretary Henry Paulson asked Congress to establish a \$700 billion fund to keep the economy from seizing up permanently. Paulson initially intended to use the new authority to buy mortgage-based securities from the institutions that held them, thus freeing their balance sheets of toxic investments. This approach drew a torrent of criticism: How could anyone determine what the securities were worth (if anything)? Why bail out the large institutions but not the homeowners who were duped into taking out

punitive mortgages? How would the plan encourage banks to resume lending? The House of Representatives voted his plan down once before accepting a slightly revised version.

After the plan's enactment, Paulson, acknowledging that his approach would not encourage sufficient new bank lending, did a U-turn. The Treasury would instead invest most of the newly authorized bailout fund directly into the banks that held the toxic securities (thus giving the government an ownership stake in private banks). This, Paulson and others argued, would enable the banks to resume lending. By the end of 2008, the government owned stock in 206 banks. The Treasury's new stance appeared to open access to the bailout money to anyone suffering from the frozen credit markets. This was the basis for the auto manufacturers' plea for a piece of the pie.

Still, all that money did little, at least at first, to stimulate private bank lending. Everyone with money to lend

turned to the safest haven of all—Treasury securities. So popular were short-term Treasuries that investors in December bought \$30 billion worth of four-week Treasury bills that paid no interest at all, and, very briefly, the market interest rate on three-month Treasuries was negative.

The Bush administration did little with tax and spending policy to combat the recession. Sen. Barack Obama, who was elected in November to succeed President Bush as of Jan. 20, 2009, prepared a package of about \$1 trillion in tax cuts and spending programs that were intended to stimulate economic activity.

International Repercussions. Although the financial crisis wore a distinct “Made in the U.S.A.” label, it did not stop at the water’s edge. The U.K. government provided \$88 billion to buy

Traders at the Philippine Stock Exchange in Manila give the thumbs-down sign to indicate a sharply downward trend in stock prices on September 16.

banks completely or partially and promised to guarantee \$438 billion in bank loans. The government began buying up to \$64 billion worth of shares in the Royal Bank of Scotland and Lloyds TSB Group after brokering Lloyds’ purchase of the troubled HBOS bank group. The U.K. government’s hefty stake in the country’s banking system raised the spectre of an active role in the boardrooms. Barclays, telling the government “thanks but no thanks,” instead accepted \$11.7 billion from wealthy investors in Qatar and Abu Dhabi, U.A.E.

Variations played out all through Europe. The governments of the three Benelux countries—Belgium, The Netherlands, and Luxembourg—initially bought a 49% share in Fortis NV within their respective countries for \$16.6 billion, though Belgium later sold most of its shares and The Netherlands nationalized the bank’s Dutch holdings. Germany’s federal government rescued a series of state-owned banks and approved a \$10.9 billion recapitalization of Commerzbank. In the banking centre of Switzerland, the government took a 9% ownership stake in UBS. Credit Suisse declined an offer of government aid and, going the way of Barclays, elected to raise funds instead from the government of Qatar and private investors.

The most spectacular troubles broke out in the far corners of Europe. In

Greece street riots in December reflected, among other things, anger with economic stagnation. Iceland found itself essentially bankrupt, with Hungary and Latvia moving in the same direction. Iceland’s three largest banks, privatized in the early 1990s, had grown too large for their own good, with assets worth 10 times the entire country’s annual economic output. When the global crisis reached Iceland in October, the three banks collapsed under their own weight. The national government managed to take over their domestic branches, but it could not afford their foreign ones.

As in the U.S., the financial crisis spilled into Europe’s overall economy. Germany’s economic output, the largest in Europe, contracted at annual rates of 0.4% in the second quarter and 0.5% in the third quarter. Output in the 15 euro zone countries shrank by 0.2% in each of the second and third quarters, marking the first recession since the euro’s debut in 1999.

In an atmosphere that bordered on panic, governments throughout Europe adopted policies aimed at keeping the recession short and shallow. On monetary policy, the central banks of Europe coordinated their interest-rate reductions. On December 4 the European Central Bank, the steward of monetary policy for the euro zone, engineered simultaneous rate cuts with the Bank of England and Sweden’s Riksbank. A week later the Swiss National Bank cut its benchmark rate to a range of 0–1%. On fiscal policy, European governments for the most part scrambled to approve public-spending programs designed to pump money into the economy. The EU drew up a list of \$258 billion worth of public spending that it hoped would be adopted by its 27 member countries. The French government said that it would spend \$33 billion over the next two years. Most other countries followed suit, though Germany hung back as Chancellor Angela Merkel argued for fiscal restraint.

▲ 11/14/2008	▼ 11/17/2008	▲ 11/28/2008	▼ 12/1/2008	▲ 12/5/2008
The euro-zone economy shrank 0.2% in the third quarter and is officially in recession.	The Japanese economy fell for the past two quarters and is officially in recession.	The U.K. takes majority control of the Royal Bank of Scotland.	NBER reports that the U.S. has been in recession since December 2007.	533,000 U.S. jobs were lost in November, the largest monthly total since December 1974.

Asia's major economies were swept up by the financial crisis, even though most of them suffered only indirect blows. Japan's and China's export-oriented industries suffered from consumer retrenchment in the U.S. and Europe. Compounding the damage, exporters could not find loans in the West to finance their sales. Japan hit the skids in the second quarter of 2008 with a 3.7% contraction at an annual rate, followed by 0.5% in the third quarter. Its all-important exports plunged 27% in November from 12 months earlier. The government announced a \$250 billion package of fiscal stimulus in December on top of \$50 billion earlier in the year. Unlike so many others, China's economy continued to grow but not at the double-digit rates of recent years. Exports were actually lower in November than in the same month a year earlier, quite a change from October's 19% increase. The government prepared a two-year \$586 billion economic stimulus plan, and the central bank repeatedly cut interest rates.

The U.S., Europe, and Asia had this in common—car makers were at the head of the line of industries pleading for help. The U.S. Senate turned down \$14 billion in emergency loans; the car companies got into this mess, senators argued, and it was up to them to get out of it. President Bush, rather than risk the demise of General Motors (GM) and Chrysler, tapped the \$700 billion financial sector bailout fund to provide \$17 billion in loans—enough to keep the two companies afloat until safely after the Obama administration took over in early 2009. In addition, the Treasury invested in a \$5 billion equity position with GMAC, GM's financing company, and loaned it another \$1 billion. In Europe, Audi, BMW, Daimler, GM, Peugeot, and Renault announced production cuts, but European government officials were reluctant to aid a particular industry for fear that others would soon be on their doorstep. Even in China, car sales growth turned negative. As elsewhere, the industry held out its tin cup, but the government left it empty.

The pressures of the financial crisis seemed to be forging more new al-

University students and graduates seek employment at a job fair in Shanghai on November 22.

liances. Officials from Washington to Beijing coordinated interest rate cuts and fiscal stimulus packages. Top officials from China, Japan, and South Korea—longtime adversaries—met in China and promised a cooperative response to the crisis. Top-level representatives of the Group of 20 (G-20)—a combination of the world's richest countries and some of its fastest-growing—met in Washington in November to lay the groundwork for global collaboration. The G-20's deliberations were necessarily tentative in light of the U.S. presidential transition in progress.

By year's end, all of the world's major economies were in recession or struggling to stay out of one. In the final four months of 2008, the U.S. lost nearly two million jobs. The unemployment rate shot up to 7.2% in December from its recent low of 4.4% in March 2007, and it was almost certain to continue rising into 2009. Economic output shrank by 0.5% in the third quarter, and announced layoffs and severe cutbacks in consumer spending suggested that the fourth quarter saw a sharper contraction. It was doubtful that the worldwide economic picture would grow brighter anytime soon.

Forecast after forecast showed lethargic global economic growth for at least 2009. "Virtually no country, developing or industrial, has escaped the impact of the widening crisis," the World Bank reported in a typical year-end assessment. It forecast an increase in global economic output of just 0.9% in 2009, the most tepid growth rate since records became available in 1970.

Measured by its impact on global economic output, the recession that had engulfed the world by the end of 2008 figured to be sharper than any other since the Great Depression. The two periods of hard times had little else in common, however; the Depression started in the manufacturing sector, while the current crisis had its origins in the financial sector. Perhaps a more apt comparison could be found in the Panic of 1873. Then, as in 2008, a real estate boom (in Paris, Berlin, and Vienna, rather than in the U.S.) went sour, losing a cascade of misfortune. The ensuing collapse lasted four years.

The U.S. Election of 2008

President-elect Barack Obama waves to the crowd at a massive election night rally in Chicago's Grant Park on November 4. With him are (from left) his daughters, Sasha and Malia, and his wife, Michelle.

by David C. Beckwith

In a national election laden with historical significance, Barack Hussein Obama (*see* BIOGRAPHIES) captured a decisive majority in the 2008 balloting to become the 44th president of the United States; he was scheduled to be sworn into office on Jan. 20, 2009. Obama, a 47-year-old Democratic U.S. senator from Illinois, won the electoral college vote 365–173 over Republican John McCain (*see* BIOGRAPHIES), a 72-year-

old U.S. senator from Arizona. Obama prevailed 52.9–45.7% in the popular vote nationwide on November 4.

Though it seemed that every U.S. election had been hailed as historic, Obama's triumph was exceptional. He became the first African American elected as U.S. president and the first person of colour to head a country with a white-majority population. McCain, in a graceful concession speech, noted the pride that many Americans felt in that

development following the long United States record of slavery, segregation, and discrimination. The country, McCain said, is now “a world away from the cruel and prideful bigotry of that time.”

Obama's youth and charisma, and his relative political inexperience, provoked comparisons to U.S. Pres. John F. Kennedy. Obama was elected as the country approached crisis, and this prompted allusions to former presidents Franklin Delano Roosevelt and even

Abraham Lincoln. With an unpopular sitting president and the Republican establishment in disarray, Democrats were overwhelming favourites to win the presidency in 2008. After an exhaustive campaign, Obama ultimately made his case by demonstrating an unflappable eloquence that wore away doubts and prompted critics to say that he transcended both racial and partisan politics.

As the party nomination campaigns got under way in early 2007, neither Obama nor McCain was favoured. Obama, especially, was well behind New York Sen. Hillary Clinton; he had first come to national attention only in 2004, in a well-received speech at the Democratic National Convention. Public opinion polls showed that weariness with the U.S. intervention in Iraq was the top issue, but opinion was sharply divided over what should be done. Obama called for a quick withdrawal of U.S. troops, while McCain had long pushed for an escalation in hopes of a decisive military victory. Both approaches appealed to influential elements of their respective party bases.

A U.S. troop “surge” in Iraq approved by Pres. George W. Bush initially produced higher U.S. casualties in early 2007, and many Democrats declared the move a Vietnam-style failure. McCain’s campaign nearly collapsed in July when he came close to running out of funds and laid off half of his campaign staff. By late fall, however, it was obvious that the surge was succeeding, and McCain began mounting a notable resurgence. His main opponents—former New York City mayor Rudy Giuliani, former Arkansas governor Mike Huckabee, and former Massachusetts governor Mitt Romney—failed to catch fire, and a late bid by former Tennessee senator Fred Thompson fell short. By early 2008 McCain was the clear Republican front-runner. The Republican contest was officially over in early March, but McCain was favoured to win the nomination when he defeated Huckabee in a competitive South Carolina primary on January 19.

Obama had a far-more-difficult road. Although he attracted enthusiastic crowds and solid fund-raising totals

The Republican U.S. presidential nominee, Arizona Sen. John McCain (second from left), flanked by his wife, Cindy McCain (left), his vice presidential running mate, Alaska Gov. Sarah Palin (second from right), and her husband, Todd Palin, addresses supporters during a campaign rally in Virginia Beach, Va., on October 13.

from the start, he plodded through innumerable 2007 candidate joint appearances without distinguishing himself. Clinton’s campaign successfully portrayed her as the inevitable nominee, with a substantial early lead in establishment support, fund-raising, and public opinion polls. Clinton also had serious problems, however. Many Democrats feared that she and her husband, former president Bill Clinton, were polarizing figures and that she could not win a general election; in addition, her campaign staff fought internally and failed to produce a winning strategic plan.

Obama, by contrast, combined an uplifting speaking style with a smoothly functioning campaign that became known as “no-drama Obama.” While Clinton went for knockout victories in early deciding Democratic states, Obama played a longer game, seeking delegates by the ones and twos all over the country. His campaign tapped thousands of small contributors through the

Internet and then approached them repeatedly for more funding. To counter Clinton’s inside experience, Obama underscored his status as an outsider, promising “hope and change” and encouraging rally supporters to proclaim, “Yes we can.”

At the first real test of strength, in the Iowa caucuses on Jan. 3, 2008, Obama’s organization helped turn out more than 250,000 Iowan caucus goers—double the previous record turnout—and scored a decisive victory. Polls in New Hampshire, the site of the next primary event, showed Obama edging ahead, and it seemed likely that the nomination might be unexpectedly decided in January. Clinton scored a narrow New Hampshire victory, however, and as other candidates began dropping out, Obama and Clinton began a long ground war through the winter and spring.

Obama suffered several setbacks. The underperforming Clinton campaign produced a television ad, “Red Phone 3 AM,” that skillfully exploited widespread voter doubts about Obama’s readiness to handle an international crisis. Some critics began accenting his middle name, implying that he was Muslim, and hinting that he had

benefited from racial preferences. Obama eventually became enmeshed by ties to a series of Illinois allies, including former 1960s radical William Ayers, political fixer Tony Rezko, and the Rev. Jeremiah Wright, Obama’s longtime family pastor. Over several weeks, copies of Wright’s fiery sermons, laced with black nationalism, and his aggressive press statements put Obama on the defensive. A tape surfaced showing Wright blasting U.S. foreign policy after 9/11—“God damn America”—and Obama defensively claimed he was unaware of many of Wright’s views.

Obama confronted the matter head-on, delivering on March 18 a well-received speech on race in U.S. politics at the National Constitution Center museum in Philadelphia. He declared that America had long suffered from excessive attention to racial differences; the choice now was to remain there, preoccupied by a distraction, or alternatively to move on to resolving real American problems. While his remarks

While Biden had been carefully examined over the years and any shortcomings identified and discounted, Palin was largely unknown to the skeptical national press. She had been selected quickly and had little time to become immersed in federal issues, especially foreign affairs, and this caused critics to question her readiness to assume the presidency. Palin's initial national press interviews had shaky moments, and the news that the Republican National Committee had purchased for her \$150,000 in clothing and accessories largely offset her initial boost to the McCain ticket.

Obama made a key decision at midyear. During the primary, under prompting by McCain, Obama stated that he would accept public funding for the general election under a law that capped campaign expenditures. As his fund-raising success exceeded all previous records, however, Obama reversed field, declined federal funds, and eventually collected some \$745 million in contributions—double the total of any previous presidential candidate. McCain raised about \$320 million, including the \$84 million in public financing allotted to each candidate. That disparity allowed Obama to dominate the final months in both media and organization efforts across the country. McCain's camp protested that Obama's reversal on public financing received only modest criticism from news organizations and reflected media bias favouring the Democrat. Obama, again playing it safe and exploiting his financial advantage, later declined McCain's invitation to stage a series of 10 town-hall-style debates across the country.

Relevant election issues shifted over the campaign. With Iraq becoming more secure by the day, public concern over the costly war on terrorism eased, ironically moving a potentially potent McCain issue to the back burner. In the meantime, Obama toned down his early liberal issue positions, balancing his Iraq withdrawal stance by advocating that more U.S. troops be sent to the Afghanistan front. He also exploited a growing uncertainty over the economy by calling for a middle-class tax cut (he promised that 95% of working Americans would see a reduced tax bill) and universal health care for all Americans—to be achieved without a government takeover of the system.

With McCain running as a moderate and Obama tacking toward the centre

in the general election, issue distinctions between the candidates were minimized. For example, by mid-2008 voters were more concerned with rising energy prices (gasoline topped \$4 per gallon) than with any terrorist threat. On one key hot-button energy issue, however, both McCain and Obama were in agreement—they opposed oil and natural-gas exploration in the Arctic National Wildlife Refuge.

On September 15 the election took a decisive turn when the Lehman Brothers investment banking house collapsed into bankruptcy. As the contagion spread to brokerage and even insurance firms, public confidence in both the economy and government oversight plummeted, causing serious damage to McCain, a free-market advocate, and lending credibility to Obama's mantra for change. McCain's tenuous polling lead disappeared.

As Congress debated the economic situation in late September, McCain dramatically suspended his campaign, returned to Washington, and demanded a White House meeting on the crisis. The same day Lehman failed, he claimed that the "fundamentals of our economy are strong," but a few days later he compared Wall Street to a casino and promised to fire the nation's top securities regulator. He also threatened for a time to boycott the first scheduled debate, which was set to take place on September 26, claiming that action on the economy deserved priority. For his part, Obama joined the White House discussion but took a low-key approach and refused to call off the debate. When McCain could not persuade congressional Republicans to back an initial federal intervention idea, both his leadership and his judgment came under fire.

Obama's coolness in the face of the financial meltdown and McCain's erratic reaction likely sealed the election, eroding remaining doubts about Obama's relative ability to handle a crisis. As *Time* magazine recounted the episode later, "The assumption all year was that if the Furies delivered turmoil to the doorstep of this election, the country would retreat to the safe choice and not risk a rookie. It was Obama's triumph that the financial crisis that might have buried him actually raised him up, let voters judge his judgment in real time, the 3 AM phone call that came night after night."

The three presidential debates were largely uneventful. McCain, seeking to

counter opinion that he was too old, debated in an animated and forceful manner, but Obama, who typically avoided as much back-and-forth as possible, appeared calm and presidential by contrast. In mid-October a man hoping to buy a plumbing business challenged Obama during an unscripted campaign visit to an Ohio neighbourhood; the man claimed that small business would be hurt by Obama's plan to increase taxes on upper-income earners. Obama replied that "when you spread the wealth around, it's good for everybody."

The incident provided a final ray of hope for the McCain camp. Republicans implied that Obama's comments endorsed socialism, and at the final debate on October 15, McCain made repeated references to "Joe the Plumber" and the harm Obama's policies might inflict on a fragile economy. Cracks appeared in Joe's life story, however, and the Obama camp claimed that Joe might actually receive a tax cut under their overall plan. As a result, the final barrier to Obama's election faded away.

On election day, voter turnout topped 131 million, or 61.6% of eligible voters, the highest total percentage since 1968. Exit polls showed blacks, Hispanics, and young people voting in notably greater numbers. Obama carried 28 states (including 9 won in 2004 by President Bush), virtually sweeping the Northeast, the Midwest, and the West Coast and even making serious inroads into the Deep South and Mountain West areas that had been recent Republican redoubts. (See MAP.) Democrats also made decisive gains in congressional elections, gaining a net 21 House seats (for a 257–178 advantage) and picking up at least 7 Senate seats, or a 58–41 majority. A possible eighth Democratic gain, in Minnesota, was still under dispute at year's end.

Obama's success was based on a large number of factors: his personal charisma and eloquence, his well-organized and sure-footed campaign, voter weariness with a Republican White House, a struggling national economy, and his overwhelming advantage in fund-raising. Despite his best efforts, McCain could not separate himself from the status quo. In the end the American people were ready for change from politics as usual, and Obama had demonstrated that he was best able to provide it.

Citizen Journalism: A News [R]evolution

by Lawrence Albarado

Blogger Cynthia Liu shows her support for Democratic presidential nominee Barack Obama and his running mate, Joe Biden, as she poses in front of a computer screen showing a Web site frequented by politically active citizen journalists.

The phenomenon called “citizen journalism” expanded its worldwide influence in 2008 in spite of continuing concerns over whether “citizen” journalists were “real” journalists. Citizens in disaster zones provided instant text and visual reporting from the scene. People in countries affected by violence used a variety of technological tools to share information about hot spots. An unpaid, untrained volunteer journalist broke news about a U.S. presidential candidate and in doing so became news herself. Swirling in the background of these developments was a debate over whether the term *citizen journalism* was itself accurate.

The term *citizen journalism* derived from South Korean online entrepreneur Oh Yeon Ho’s declaration in 2000 that “every citizen is a reporter.” Oh and three South Korean colleagues

started an online daily newspaper in 2000 because, he said, they were dissatisfied with the traditional South Korean press. Unable to afford the costs of hiring professionals and printing a newspaper, they started OhmyNews, a Web site that used volunteers to generate its content. In a speech on the site’s seventh anniversary, Oh, the firm’s president and CEO, noted that the news site began with 727 citizen reporters and had grown to 50,000 contributors reporting from 100 countries by 2007.

Since OhmyNews’s adoption of “Every citizen is a reporter” as its motto, the Internet had spawned thousands of news sites and millions of bloggers (individuals who keep regular online journals called blogs, short for Web logs). Traditional news organizations, while battling declining readership and viewership, leapt into the fray with their own Web sites and blogs by their own

journalists, and many newspapers invited readers to contribute community news to the papers’ Web sites. Citizens started their own “hyperlocal” online news sites to cover happenings in their neighborhoods or specialized topics of interest that were not reported by larger media organizations.

Among those who studied and nurtured citizen journalism, the term often went by other names. In a 2007 article for *Online Journalism Review* (www.ojr.org), Senior Editor J.D. Lascia called it “participatory journalism,” though he described it as “a slippery creature. Everyone knows what audience participation means, but when does that translate into journalism? Alas, there’s no simple answer.” Dan Gillmor, founder and director of the Center for Citizen Media (<http://citimedia.org>)—a nonprofit affiliated jointly with the Walter Cronkite School of Journalism and Mass Communication at Arizona State University and the Berkman Center for Internet & Society at Harvard University Law School—and author of the book *We the Media: Grassroots Journalism by the People, for the People* (2004), also rejected any single definition for the transformation in news that began taking place in the late 1990s. “It’s a time of incredible exploration,” because of the democratization of access to inexpensive and ubiquitous publishing tools, said Gillmor. New York University journalism professor and online media thinker Jay Rosen came close to a unified theory of citizen journalism in a July 14, 2008, post on his PressThink blog (<http://journalism.nyu.edu/pubzone/weblogs/press-think/>): “When the people formerly known as the audience employ the press tools they have in their possession to inform one another, *that’s* citizen journalism.”

People around the world participated in this phenomenon. Earthquake victims in China’s Sichuan province in May 2008 took up cellular telephones to send

Amanda Michel, director of the HuffingtonPost Web site's online blog OffTheBus, sits in her New York City office. A citizen journalist on the popular political blog triggered controversy in April when she reported a statement made by Democratic presidential candidate Barack Obama at a private fund-raiser.

text messages and images from the disaster zone to the world. When the Kenyan government shut down traditional media outlets in the violent aftermath of disputed national elections in late 2007, Africa-based bloggers encouraged citizens to use their cell phones to report incidents of violence by voice, text messages, and images. Citizens by the thousands did exactly that. Within the first two weeks of 2008, some of those bloggers created www.Ushahidi.com, which combined Google maps and a “crowdsourced” database of violent incidents to give readers a near real-time visual glimpse of where outbreaks were occurring. In late November 2008 some bystanders used social networking Web sites such as Twitter and Flickr to upload live reports, digital photos, and video of the terrorist attacks in Mumbai (Bombay), while others used their cell phones to send updated reports to more traditional news services or to transmit text messages to people trapped inside the hotels under attack.

An experiment in “hybrid” citizen journalism at www.HuffingtonPost.com generated controversy during the 2008 U.S. presidential campaign when Mayhill Fowler, an amateur writer and supporter of candidate Barack Obama, reported in April 2008 that the Democrat had described working-class Pennsylvanians as “bitter.” The incident, buried in a longer post on the site’s OffTheBus blog, gave Republicans and some of Obama’s Democratic rivals ammunition to call him an “elitist.” Fowler’s report drew criticism from other media. Some attacked as unethical her reporting of remarks made at a private fund-raiser that had excluded traditional journal-

ists. Rosen, cocreator with Arianna Huffington of the blog, defended Fowler. Rosen wrote in a post on PressThink that he and Huffington “felt that participants in political life had a right to report on what they saw and heard themselves, not as journalists claiming no attachments but as citizens with attachments who were relinquishing none of their rights.” Traditional journalists disagreed vehemently with Rosen’s position, citing the long-held ethical belief that journalists should remain independent from those whom they cover. Most traditional news organizations, in fact, prohibited political involvement by their reporters.

Several groups in 2008 offered training to individuals who wanted to improve their reporting skills and learn how to make ethical decisions. For example the Knight Citizen News Network (www.kcnn.org) sponsored J-Learning (www.j-learning.org). Both KCNN and J-Learning offered textbooks, guides to legal issues from the Electronic Frontier Foundation, and links to other programs, such as online training offered by the Florida-based Poynter Institute at www.newsu.org. The Society of Professional Journalists (www.spj.org), which was preparing to celebrate its 100th year in 2009, began a traveling program in 2008 called Citizen Journalism Academy that provided skills training, information about legal issues, and guidance regarding the society’s Code of Ethics.

Jan Schaffer, executive director of J-Lab: The Institute for Interactive Journalism, said that she preferred the term “citizen media makers instead of citizen journalists because we need to under-

stand that the kinds of things we’re seeing have their own value propositions, and those may be very different from the values we associate with conventional journalism. Most citizen media makers don’t aspire to be ‘journalists’ and I think we need to be careful not to require them to be members of a tribe that they don’t necessarily want to belong to.”

Beginning in 2005, J-Lab, based in Washington, D.C., provided start-up funds to 40 citizen media projects through an incubator program called New Voices. The 10 projects that received funds in 2008 included a proposal by Kent (Ohio) State University to train student journalists and general aviation enthusiasts to write about Ohio’s 166 public airports, 772 private airfields, and 18,000 pilots for online publication and for newspapers, public radio, and television. Another New Voices-funded project planned to start a digital neighbourhood newspaper using citizen reporters and aimed at building a sense of community across racial, ethnic, and income divisions in Lexington, Ky.

In 2008 Schaffer cited many examples of the variety of citizen-journalism efforts: networked sites, such as NowPublic.com and Helium.com, that sought to aggregate citizen photos, video footage, and articles from around the world; conventional media that attracted citizen-generated content, including CNN’s iReport.com and the Denver-based YourHub.com; microlocal community news sites such as NewCastleNow.org and ForumHome.org that were founded by ordinary citizens to fill an information vacuum; and microlocal sites that were founded by former journalists, such as Baristanet.com, MinnPost.com, NewHavenIndependent.com, and HuffingtonPost.com. Bloggers in Third World countries often filled in when the media were government-controlled or absent with sites such as GlobalVoices Online.org, or they used cell phone text messages to report on crisis hotspots. For its efforts, Ushahidi.com won one of J-Lab’s 2008 Knight-Batten Awards for Innovations in Journalism. As Schaffer said, “We began to see clearly how citizen media is not just one big phenomenon, but the onset of many different niches being occupied by various citizen media makers.”

Lawrence Albarado is Projects Editor for the Arkansas Democrat-Gazette and a member of the board of directors for the Society of Professional Journalists.

Skyrocketing Food Prices: A Global Crisis

by Janet H. Clark

As the year 2008 got under way, upwardly spiraling food prices became of increasing concern to international organizations and relief agencies, national governments, and consumers everywhere. UN officials speculated that the crisis could add an additional 100 million hungry people to the billion already living on less than a dollar a day, the common measure of absolute poverty. The impact of rising food prices was greatest in less-developed countries (LDCs), where spending on food accounted for 40–60% of income, compared with about 15% in industrialized countries.

Even in industrialized countries, poor families were being severely affected by a general rise in prices, especially when combined with an economic downturn and higher unemployment. Food prices in the 30 Organisation for Economic Co-operation and Development (OECD) member countries rose by 7.2% year on year in both July and August, the biggest increases since 1990, and in the U.S. the Department of Labor reported that grocery-store food prices rose by 6.6% in 2008, the largest increase since 1980.

With spiking food costs came a growing threat to food security, which provoked political repercussions in many LDCs. In Haiti, for example, food riots led to the ousting on April 12 of Prime Minister Jacques-Édouard Alexis, and the lack of a replacement until July left the government in a state of paralysis while social and economic conditions continued to deteriorate.

Prices of staple foodstuffs escalated alarmingly on world markets. In the first half of the year, the price of internationally traded food commodities, led by grains, rose by 56%. In the first quarter alone, the prices of wheat and

A government-funded store in Lahore, Pak., sells sacks of flour to a crowd of women. Soaring prices left many families across the world dependent on such subsidized food relief.

corn (maize) rose by 130% and 30%, respectively, over the same period a year earlier, while the cost of rice climbed 10% in both February and March. By midyear the price of corn, wheat, and soybeans had more than doubled, while that of rice had tripled.

A number of factors contributed to the increases in food prices. One was the economic emergence of China and India, whose populations were becoming increasingly affluent and thus boosting their food consumption; in China annual per capita consumption of meat rose to 54 kg (about 119 lb) from 20 kg (44 lb) in 1985. Another major factor was the increased output of biofuels made from grains and oil seeds in the U.S. and the European Union, where there were generous—and controversial—tax concessions or direct financial support for producers, retailers, or users of biofuels. In July an OECD report strongly criticized these incentives as costly and ineffective and recommended that governments refocus their policies. Partially associated with this was the restrictive and trade-

distorting effect of a high level of government support to farmers in many OECD countries, which in 2007 amounted to \$258 billion, or 23% of farm incomes. A surge in petroleum prices led to increased fertilizer and transport costs. In many countries adverse weather led to crop failure, speculation on commodity markets, and hoarding. When Cyclone Nargis struck Myanmar (Burma) on May 2, it generated a 4-m (12-ft)-high storm surge that devastated the rice-producing Irrawaddy Delta. During August–September, Haiti, already suffering from food shortages, was battered by four successive hurricanes. The depreciation of the U.S. dollar against the euro and other currencies early in the

year contributed to the rise in dollar-denominated commodity prices. The International Food Policy Research Institute (IFPRI) estimated that 15–27% of the increase was from the dollar's decline. At the same time, countries in Asia and the Middle East that linked their currencies to the weakening dollar experienced overheated economies and suffered higher prices than countries with more flexible exchange rates.

The World Food Programme (WFP) was the main distributor of emergency food relief, with activities in more than 75 countries. In March, however, the organization announced that it was short of money because of the soaring price of cereals and other foodstuffs. At the June UN heads of government meeting, the WFP reported that it had received \$1.2 billion in aid, including an unexpected \$500 million from Saudi Arabia. Among 60 low-income food-deficit countries surveyed early in the year by the Food and Agriculture Organization (FAO), the most widespread response was to remove or reduce import tariffs on food. This was especially

true in South and East Asia, the Middle East, and North Africa. Given that tariff levels on cereals and vegetable oils were already relatively low, however, at 8% and 14%, respectively, only small proportions of the price rises were offset.

In the Middle East drought reduced the summer harvest, and many major wheat-producing countries, including Iran, Iraq, and Syria, were forced to increase imports. In Saudi Arabia the inflation rate soared to 10.6% in the year to June, its highest rate in 30 years, and wheat production was extremely costly because of huge farm subsidies. The Saudi government decided in August that it would make economic sense to outsource its farming and was considering the purchase of rice farms in Thailand through a new investment fund set up to buy agricultural land overseas. United Arab Emirates investors looking for land for agricultural development favoured Pakistan, Kazakhstan, and The Sudan.

In early May, Prime Minister Samak Sundaravej of Thailand (the world's biggest rice producer) proposed the formation of a cartel of Southeast Asian rice-producing countries (including Vietnam, Myanmar, Laos, and Cambodia) to be set up along the lines of OPEC. Laos and Cambodia favoured the idea, but there were strong protests in the Philippines, the world's biggest rice importer. In August, Thailand announced plans to boost rice production

In July a farmer in Myanmar (Burma) plows his flooded rice field outside Yangon (Rangoon). Myanmar suffered severe food shortages after Cyclone Nargis devastated rice-producing regions in May.

by leasing 160,000 ha (395,000 ac) of unused state land to poor farmers and agribusiness for biofuel crops, sugar cane, palm, and rice. A more novel way of easing food shortages was proposed in July by scientists at the National Autonomous University of Mexico; they asserted that insects, which were nutritious and already provided part of the diet in 113 countries, should be consumed more widely. Thailand, where cricket rearing for food was already practiced by many families, hosted an FAO conference to examine the benefits of insects as a food option.

At an EU summit in July, member countries were divided on trade reform and the need to remove agricultural subsidies and reduce protectionism. For the first time, in 2008 the EU did

not use the portion of its agricultural budget designated for buying and stockpiling surplus produce. The resulting unused funds, expected to reach €1 million (about \$1.4 million), were to be given to farmers in LDCs. Cut-price discount stores, which were already popular in the U.S., were proliferating in Europe and putting pressure on the more costly chains. The search for cheaper food was gathering momentum even in U.S. cities, where there was a resurgence of freegans who scavenged through supermarket garbage bins and other sources of discarded food. (See Special Report on page 184.)

Despite the widespread fear of a continuing rise in global inflation and the number of people needing food aid, the failure to reach agreement on trade liberalization left agricultural producers in LDCs at a continuing disadvantage. The IFPRI calculated that if export bans by some 40 food-exporting countries were lifted, cereal prices would be 30% lower on average. Two small signs of hope emerged in September. Corporate and government leaders attended the first UN Private Sector Forum on Food Sustainability and the Millennium Development Goals. At the same time, the WFP unveiled Purchase for Progress (P4P), an initiative by which governments and private foundations (notably the Bill & Melinda Gates Foundation and the Howard G. Buffett Foundation) would finance WFP purchases of foodstuffs from small farmers in LDCs, which would thus encourage local food production and offer small farmers better access to world markets.

Amid riots in Lebanon in May, a protester brandishes a sign condemning the rising cost of basic foodstuffs, including the bread that he holds in his other hand. In Chiang Mai province, Thai., a woman prepares fried bamboo worms. Thailand was a leader in the campaign to increase the use of insects for food.

The Freegans—the Ultimate Recyclers

by Mary Grigsby

In 2008 widespread media attention gave the little-known freegan (*free + vegan*) movement greater visibility in mainstream culture. Freegans—the majority of whom lived in cities in relatively affluent countries—believed that global capitalism created a consumerist lifestyle that encouraged and was dependent on conspicuous consumption and waste, was unstable and unsustainable, and was destructive to the environment and to human and animal well-being. The movement advocated dropping out of the economy, for example, by avoiding paid work, by not buying food or consumer goods, and by conserving resources. Freeganism overlapped to some extent

with other movements, including the environmental, social-justice, antiglobalization, anarchist, animal rights, and simple-living movements.

The term is believed to have been first used in 1995 by Keith McHenry, one of the founders of the organization Food Not Bombs. McHenry reported that as he and some colleagues walked by a Dumpster, he noticed that a large piece of cheese had been thrown out. He said, “Let’s be freegan,” and suggested taking the cheese to eat. Food Not Bombs (www.foodnotbombs.net), which established chapters around the world, was founded on the belief that feeding the hungry should be a global priority ahead of military spending. Local chapters prepared donated or found vegetar-

ian food to share with anyone; they also participated in disaster relief by providing meals. Although Food Not Bombs focused on the destructive effects of militarism, in 2008 McHenry in an interview confirmed that freeganism was very compatible with his group’s ideas.

Many freegans considered their manifesto to be an essay from 1999 titled “Why Freegan?: An Attack on Consumption, in Defense of Donuts.” It has been posted, usually anonymously, on numerous Web discussions of freegan principles. In an interview in 2008, Warren Oakes, the drummer in the punk rock band Against Me!, described having written the piece while he was working as an activist among youth in Venice, Fla. The essay, signed “Koala,”

A group of freegans share a rooftop feast in New York City. As an act of resistance to consumerism, freegans try to use only food obtained at no cost or grow their own produce in abandoned lots or community gardens.

Oakes's nickname at the time, touched on the values, beliefs, and practices of freeganism. The values derived in part from an anarchist ideology that advocated finding ways to live outside the capitalist system, including the avoidance of work for wages. Other expressed goals included care for the environment and social justice. Practices advocated in the document included Dumpster diving, getting donations from stores or qualifying for food stamps, table diving (i.e., eating off plates left behind on restaurant tables), wild foraging, gardening, bartering, returning goods found in the trash to stores for cash refunds, eating at restaurants but paying only a gratuity, avoiding individual car ownership, bicycling, and living in abandoned buildings (squatting).

Some freegans, as the term suggests, were vegans, people who avoid eating and using animal products. Other freegans used discarded or donated animal products. Some ("meagans") also ate meat, if it had been thrown out. Philosophically, freeganism differed from veganism, however. Vegans sought to protect animals from exploitation, but they might otherwise participate in the prevailing economy. Freegans were especially critical of those vegans who consumed products developed for the vegan market. The freegans instead confronted the exploitation of workers, environmental destruction, and the alienation produced by the work-and-spend cycle promoted by current economic and cultural structures.

The ideas and practices adopted by freegans were available in the broader culture, but freegans used them in distinctive ways. Media reports often focused on freegan Dumpster diving—which freegans prefer to call by other names, such as urban foraging or gleaning—as an arresting image and intriguing practice. Less often reported was the principle of obtaining food and goods for no money as a statement of opposition to the capitalist economy and its allied waste. Other avenues for retrieving and offering food and useful items included "freecycling" (the act of offering items to others, usually via certain Web sites), free stores, and free-exchange venues; freegans pointed to these as collective alternatives to the market economy. Rather than pay for housing, some freegans took up residence in abandoned buildings, reasoning that

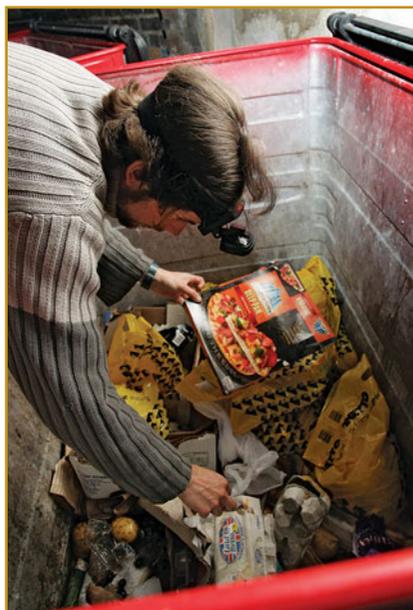

A scavenger retrieves a discarded painting from a Dumpster outside a New York University dormitory building. The "dorm dive" is one of the ways that freegans obtain household goods.

squatting resisted capitalism through subverting the private ownership of property. Some freegans also advocated planting gardens in abandoned lots ("guerrilla gardening") or participating in community gardens to collectively grow vegetables and fruit and provide green space in urban settings.

Although the freegan movement was very loosely structured, freegans used the Internet extensively for networking, sharing information, and organizing. Some of the examples of freegan Web sites include New York-based Freegan.info (www.freegan.info), UK Freegans (www.freegan.org.uk), and

A freegan in London searches through supermarket bins for food. By such foraging, freegans both avoid being wasteful and challenge consumerism.

the Australian-originated Live4Free (www.live4free.org) Web site and blog. Numerous YouTube clips showed freegans in action; among the clips were videos taken on Dumpster-diving outings, giving tips for the novice, and showing the preparation of food obtained from the trash.

Freegans have run into roadblocks and dangers. Squatting, for example, was illegal nearly everywhere, and people who lived in abandoned housing could be forced to move at any time. Gardening on vacant property was also a tenuous proposition, subject to actions by property owners. Even Dumpster diving was not without its dangers, and many cities passed laws against the practice. (Such laws might be justified as protection from identity theft or trespassing.) Hostile retailers poured bleach on discarded food; friendlier business owners, however, put goods carefully in the trash so that they might be recovered.

All movement participants adopted lifestyles that to one degree or another involved getting things for free instead of buying them and bartering and sharing goods and services outside the market economy. Critics charged that the freegan lifestyle was in fact dependent on the capitalist system that it claimed to want to undermine, since participants relied on the system's waste. In response, freegans noted that they would welcome less waste. Meanwhile, they were glad to bring attention to the excesses of the culture.

Mary Grigsby is Associate Professor of Rural Sociology at the University of Missouri at Columbia and the author of Buying Time and Getting By: The Voluntary Simplicity Movement.

The Precepts of Traditional Chinese Medicine

by Nan Lu

In one of the spectacles for the opening ceremonies of the XXIX Olympiad in Beijing on Aug. 8, 2008, more than 2,000 performers appeared to float onto the performance area while carrying out the graceful movements of *taijiquan*. Many spectators in the global audience outside China may have been familiar with *taijiquan* (or tai chi, as it is commonly called) as one of the internal martial-arts practices. Most, however, were probably unaware that *taijiquan* is used as a treatment for chronic illness or in rehabilitation for pain in traditional Chinese medicine (TCM). Modern research has also recognized this practice as effective for improving a number of health conditions, such as high blood pressure and poor balance. During the Olympics, television viewers worldwide were introduced to various other aspects of TCM, including

acupuncture—the most familiar TCM treatment modality in the West.

Traditional Chinese medicine is one of the oldest continuously practiced medical systems in the world. Elements of the system have been in existence for at least 5,000 years. Despite the general lack of knowledge about TCM in the United States, as of 2005 there were more than 22,000 practitioners of AOM (acupuncture and Oriental medicine) licensed to practice in the U.S. (About one-third of these practitioners were in California.) In addition, there were about 7,000 students enrolled in AOM colleges, and about 60 colleges and other institutions were accredited with the Accreditation Commission for Acupuncture and Oriental Medicine, a not-for-profit organization founded in the U.S. in 1982.

What Is Special About TCM? TCM is a by-product of the Eastern spiritual practice

of *qigong* (pronounced “chee gung”), or “energy work,” which serves to strengthen the mind-body-spirit connection and to help the body operate as one harmonious system. Although the underpinnings of TCM are sometimes considered to be a system of philosophy, TCM practitioners understand that this comprehensive medical system is rooted in natural law and see its principles and theories operating in the physical world. One key principle is yin yang. It states that two types of complementary energies make up the whole of everything physical and nonphysical. Whenever yin or yang energy is out of balance, problems will arise. Applied to human health, imbalances of yin and yang within the body are manifested through different kinds of health disorders.

Whereas Western medicine focuses primarily on disease and disease management, TCM works to achieve health

A patient at the Huangzhiguo Traditional Chinese Massage and Acupuncture Clinic in Shanghai is shown receiving moxibustion treatment, in which the herb moxa is being burned atop needles. The clinic is the largest private clinic for Chinese traditional massage and acupuncture in Shanghai.

through balance and harmony of the body as a whole in which complementary energies seamlessly intertwine and move together as one. It strives to return the body to an internal state of balance, after which the body will automatically regulate itself to maintain its harmony within. For that purpose TCM employs six major healing techniques: acupuncture, acupressure, *qigong*, herbal therapy, healing foods, and Chinese psychology.

The Role of Qi and Meridians. An essential aspect of TCM is an understanding of the body's qi (life force, or energy), which flows through invisible meridians (channels) of the body. This energy network connects organs, tissues, veins, nerves, cells, atoms, and consciousness itself. Generally speaking, there are 12 major meridians, each of which connects to one of the 12 major organs in TCM theory. Meridians are also related to a variety of phenomena, including circadian rhythms, seasons, and planetary movements, to create additional invisible networks.

In acupuncture, thin needles are inserted into specific points along the meridians. The needles stimulate the meridians and readjust the flow of qi to balance the body's yin and yang. In place of needles, massage (acupressure) can also be used to stimulate the acupuncture points. Acupuncture is sometimes accompanied by moxibustion, the burning of small cones of an herb (typically *Artemisia moxa*) at acupuncture points. Not only can the meridian network be used to alleviate symptoms; it can also endow TCM with the ability to change consciousness in those who receive treatment.

A TCM practitioner uses smell, hearing, voice vibration, touch, and pulse diagnosis to discover the source of an unbalanced health condition, which organ it is related to, and which meridians are affected. In addition, the practitioner typically makes use of what is known as the five-element theory. By observing natural law in action, ancient healers recognized five basic elements in the world—wood, fire, earth, metal, and water—and found that these elements have myriad correspondences, both visible and invisible. This framework helps skilled TCM practitioners to identify unbalanced relationships. For instance, one key correspondence relates to time of day. If an individual always gets a headache at 4 PM, this signals that Bladder qi is unbalanced, since the Bladder (of the TCM Kid-

In a Singapore TCM pharmacy, members of the staff arrange and wrap various herbs and roots used in herbal therapy.

ney/Bladder organ pair) is in charge of maintaining the body's functions at that time. Using the five-element theory, the practitioner can create a healing plan that might contain such components as acupuncture, herbs, lifestyle changes, and foods for healing. It might also include Chinese psychology, which shows how the energy of unbalanced emotions can affect proper organ function.

Chinese Herbal Therapy. TCM makes use of herbs and herbal formulas to strengthen organ function and support good health. An understanding of the essence of various herbal components gives the TCM practitioner a way to create a healing effect that reaches beyond the chemical composition and physical properties of the herbs. The practitioner chooses the herbal formula whose essence, or signature energy vibration, correctly stimulates or adjusts the body's own energy vibration.

Chinese herbal formulas, some in use for about two thousand years, are composed of ingredients chosen to function in combination with each other. In Western medicine, medications are usually prescribed individually for a specific effect. In classical TCM herbal formulas, each herb has a different purpose or role to help the body achieve harmony. For a plant to have been included in the Chinese apothecary, each of its parts had to be identified for a different healing purpose. TCM also looks at the healing properties of foods in the same way. Different foods carry different energies that can go directly to specific organs to help them heal.

TCM Developments. Various Western scientific disciplines have conducted studies to learn how Chinese medicine works, but it is difficult to use a Western yardstick to measure Eastern medicine. Many studies on acupuncture, for example, involve research that attempts to prove that this modality can eliminate or reduce pain or alleviate certain conditions. This elementary approach, however, ignores the deeper insight and experience of Chinese medicine that the human body has unlimited healing power and that the complementary energies of health and disease reflect the yinyang principle within the body. For example, the yinyang principle can be applied to a genetic disease such as inherited breast cancer and its associated genes *BRCA1* and *BRCA2*. According to this principle, if either of these genes is activated, somewhere in another part of the genetic code there also exists a gene to fix the action of the cancer gene, because there is an opposite energy to the one that produced the disease. There must be complementary programs running—one for developing the disease and one for healing it. At present, scientific research is directed only toward exploring the disease aspect of the program, but this is only one-half of the genetic code. We have yet to begin the far-more-promising exploration of the healing aspect of the genetic code. In the future this uncharted territory could yield tremendous healing benefits.

A Serious Fracture in the Anglican Church

by R. Scott Appleby

In 2003 the American Episcopal Church opened a rift in the worldwide Anglican Communion (Church of England) by consecrating the first openly gay bishop, the Right Rev. V. Gene Robinson. Reflecting the challenges of maintaining unity across the diverse cultural landscapes contained within a global church, the controversy rose to a fever pitch in 2008, prior to the decennial conference of the Anglican bishops, held July 16–August 3 in Canterbury, Eng. The Anglican bishops of Africa, Asia, and South America, whose collective following vastly outnumbered communicants in Great Britain and North America combined, strenuously objected to the consecration, calling it both an abomination and an abandonment of doctrine. Prelates and priests from these conservative wings cited Old Testament texts prohibiting sodomy and accused the progressive wing of the church of being “culturally deaf.”

The rift handed Rowan Williams, archbishop of Canterbury and head of the Anglican Communion since 2002, the most significant crisis of his tenure. Williams, however, remained silent for the most part, refraining from taking sides. He neither explicitly endorsed nor condemned the appointment of Bishop Robinson, but his calls for restraint by both sides largely went unheeded. In stark contrast, Archbishop Peter Akinola of Nigeria and Archbishop Henry Luke Orombi of Uganda were outspoken critics of what they judged to be the liberal drift of the Anglican Church on matters of sexuality and gender, citing the official “tolerance” of homosexuality, the sanctioning of

Bishops from around the world file out of Canterbury Cathedral in July following a service to mark the opening of the Anglican Communion's decennial Lambeth Conference.

same-sex marriages (in parts of Canada and the U.S.), and the ordination of women to the clergy. Conservative elements of the church in Great Britain and North America rallied to the support of these dissenting bishops, who called for the establishment of a separate conservative section of the communion with its own governing bishops. Shortly there appeared the early signs of a full-blown schism dividing the Anglican Communion into separate churches.

The looming possibility of a schism could not be explained by examining religious issues in isolation from their historical, demographic, geographic, and political contexts. For example, the rift reopened historical arguments about the location of governing authority in the communion. Historically, the archbishop of Canterbury, embodying the unity of the church, has exercised supreme doctrinal and organization authority over its various congregations. The enduring controversy over sexuality is thus also a challenge to the traditional seat of Anglican governance and calls into question the viability of the whole Anglican Church as a communion.

Demographic trends likewise argue in favour of a shift in the location of authority away from Canterbury. Membership in the church has been growing rapidly in Africa, where more than half of all Anglicans worldwide now reside, while membership in the Global North—Britain and North America—has been steadily declining. Hence, Africa and Asia are aware that they represent the future of the church, and their bishops and pastors are increasingly unwilling to obey the “dictates” of the Global North. These self-proclaimed “traditionalists”

locate authority for their pronouncements not in a particular episcopal see but rather in a strict reading of scriptural passages. Archbishop Akinola has been especially vocal on this point, and his language has often been incendiary. He has declared that he and his followers “will not abdicate our God-given responsibility and simply acquiesce to destructive modern cultural and political dictates.”

The conservative insurgency was be-deviled by its own internal fractures,

however, which stalled momentum toward a formal schism. A relatively small, hard-line subset of the larger conservative movement issued its formal declaration of a schism. Calling on the U.S. Episcopal Church to repent and rescind Bishop Robinson's ordination, the hard-liners issued a declaration of beliefs, titled "The Way, the Truth and the Life," which was partly authored by Archbishop Akinola. "We want unity, but not at the cost of relegating Christ to the position of another 'wise teacher' who can be obeyed or disobeyed," the statement read. "We earnestly desire the healing of our beloved Communion, but not at the cost of re-writing the Bible to accommodate the latest cultural trend. . . . This very Communion has already been broken by the actions of the American and Canadian Churches."

This declaration of a formal schism failed to be supported, however, by a larger gathering of conservative clerics who, meeting in Jerusalem a month prior to the Lambeth Conference, convened to state their positions formally. The Jerusalem conference, known as GAFCON (Global Anglican Future Conference), drew back from declaring a formal schism but nevertheless produced some divisive pronouncements, most significantly the establishment of a fellowship of conservative Anglicans within the communion, to be governed by its own separate group of archbishops. GAFCON also repudiated the archbishop of Canterbury's authority to decide who is or is not Anglican. Archbishop Williams condemned the move, asserting that "the new body has no legal standing and challenges Christian teachings of tolerance."

The alliance between conservatives in the Global South and conservatives in the Global North is an alliance of convenience. "Traditionalists" in the Global South support a hard-line position on the issue of homosexuality because of specific political circumstances. Unlike conservatives in the Global North, however, they support liberal positions on global warming and multilateral interventions for security and humanitarian causes. In Africa, especially in Nigeria, bishops such as Akinola feel compelled by political necessity to take a hard-line position on issues such as homosexuality. Christian churches in Nigeria compete with Islam for converts and fear being characterized as "soft on homosexuality" in contrast to Islam's uncompromising condemnation. In addition, an intolerant attitude toward

Although barred from attending the Lambeth Conference, the Right Rev. V. Gene Robinson, the Anglican Church's first openly gay bishop, tours an area outside the meeting where various Christian organizations run booths and display signs.

homosexuality is a legacy of British colonial law.

Philip Jenkins, professor of religious studies and history at Pennsylvania State University, notes that the Old Testament, read with exacting devotion to its (presumed) literal meaning, is the sacred text of choice in the Global South. Not least, African and some Asian Christians, struggling to survive in agrarian societies still plagued by drought, disease, famine, and other hardships, find resonance in the biblical accounts of the plight of the Israelites. As these regions are likely to be severely affected by climate changes and global warming, members of the church community in the Global South take more liberal positions on international political issues—but not on social issues. The plagues visited upon the Israelites are remote for most Anglicans of the West, who prefer an allegorical reading of the way the Bible relates to the lives of wealthier Christians. As a consequence, interpretations of scripture by Global North conservatives tend to stand apart from, or even undermine, the hermeneutics, or strategies of interpretation, favoured by conservatives of the Global South. Nonetheless, some parishes in the Global North (in Virginia, Pennsylvania, and South Carolina, for example) and in Australia placed themselves under the authority of bishops in Africa to protest what they view as an excessively progressive home church—thereby violating the "one territory, one church" rule.

Further evidence of the possibility of a permanent schism arrived with the announcement, in early December 2008, that conservatives alienated from the Episcopal Church were founding their own rival denomination, known as the Anglican Church in North America. In a history-making departure from tradition, the province is to be defined not by geography but by theological orientation. Bishop Robert Duncan of Pittsburgh, a conservative who led his diocese out of the Episcopal Church in October, was named the archbishop and primate of the North American church, which said that it would have 100,000 members (compared with 2.3 million in the Episcopal Church). The conservatives intend to seek the approval of leaders in the global Anglican Communion for the new province. If they should receive broad approval, their effort could lead to new defections from the Episcopal Church, the American branch of Anglicanism. In short, the bonds of the family of churches in the Anglican Communion have weakened significantly; the conservative faction is powerful and growing in numbers, especially in the Global South; and the dissidents will doubtless be a force in determining the future course of the Anglican Church.

Turkey's Secular/Islamic Conundrum

In early February head-scarf-wearing demonstrators in Istanbul show their support for a constitutional amendment that would lift the ban on the Muslim head scarf at Turkish universities.

by Metin Heper

By the summer of 2008, there was an urgent need in Turkey for a consensus on the true meaning of laicism (secularism) between the secularist establishment (primarily the military, the Constitutional Court, and members of the opposition Republican People's Party [CHP]) on the one hand and the centre-right, religiously oriented Justice and Development Party (AKP) government led by Pres. Abdullah Gul and Prime Minister Recep Tayyip Erdogan on the other. Turkey's ability to solve this conundrum was proving to be rather difficult; members of the secularist establishment believed that the

country was in danger from political Islam and thus subscribed to a kind of didactic laicism for keeping Turkey a secular country, while the AKP government did not accept that Turkey faced such an existential threat and insisted on democratic laicism for advancing liberal democracy in the country.

According to its 1924, 1961, and 1982 constitutions, Turkey was defined as a "laic" (secular) republic. This very concept of laicism, however, had been a matter of bitter conflict since 2002, when the AKP won a majority of seats in the Grand National Assembly and Erdogan formed the party's first government. The secular establishment per-

ceived laicism as an overall way of life. In this view the state has the authority to dictate the manner in which Muslim citizens of the country are allowed to practice their religion; this includes the enforcement of a dress code that forbids the wearing of the Muslim head scarf by female students at primary and secondary schools and at universities. The AKP argued that the state should only ensure that religion is not used for political purposes but should otherwise remain indifferent to the religious preferences of the people and the manner in which they live their faith.

The secular establishment in Turkey adopted a didactic approach apropos of religion because it viewed Islam as a dogmatic threat to the country's secular foundations. In order to render legitimate their self-designated role as guardians of this particular conception of Islam, representatives of this group presented themselves as "Ataturkists." Kemal Ataturk, founder of the Republic of Turkey, was still held in high esteem by a great majority of the Turkish people, although not all of them necessarily had a similar take on their religion.

For those in the secular establishment, Islam should be only an apolitical religious belief and, at most, an ethical system. Thus, the wearing of a Muslim head scarf took on symbolic importance; for many devout Muslims it was regarded as central to the expression of their religious beliefs, while secularists perceived it as a way of injecting Islam into the communal life and politics and thus as part of an organized effort for doing away with the laic republic. Although many people both in Turkey and in other countries disagreed, the secular establishment assumed that the practicing Muslims in the AKP government had a hidden agenda to bring back a

state based on Islam. The issue returned to the forefront when Gul was elected president in 2007 and his wife, Hayrunnisa, insisted on appearing in public wearing a head scarf, despite its having been banned at all official functions.

With these views in mind, the CHP took the lead to prevent the AKP from pursuing what the secular opposition considered antilaic policies. Unable to defeat the AKP at the voting booth, the CHP covertly called upon the military to take a stand against the “Islamist stance on the part of the AKP government” and applied to the Constitutional Court in order to have the AKP’s “anti-laic” legislation annulled by that court. One such annulment concerned a constitutional amendment passed in February 2008 that lifted the ban on the wearing of head scarves at Turkish universities. The Constitutional Court in early June overturned that legislation, effectively reinstating the ban.

After the 2002 election Pres. Ahmet Necdet Sezer frequently vetoed “suspicious” legislation initiated by the AKP government and/or referred these laws to the Constitutional Court, which often annulled the contested legislation. Meanwhile, the military leadership from time to time made public announcements and advised caution to the government on matters related to laicism. On the eve of the 2007 presidential election, an e-memorandum appeared on the military’s official Web

site and registered its opposition to Gul’s assuming the office of president. To what extent the e-memorandum really conveyed the views of the military High Command became a matter of debate, however, because the manner in which it was written and the fact that it was made public rather late at night differed from earlier memorandums.

The secular establishment’s strongly held reservations about the AKP also derived from the way in which previous religiously oriented political parties and their leaders had conducted themselves. The impetus for the founding of the National Order Party (NOP), Turkey’s first religiously oriented party, came from Mehmet Zait Kotku, a sheikh of the Nakshibandi religious order, who said that Turkey was in need of moral development based on Islam. Necmettin Erbakan, the leader of the NOP as well as two pro-Islamic successor parties (the Welfare Party and the Felicity Party), argued that there was an inherent contradiction between Islam and secularism and that religiously oriented people would eventually come to power, although it was not certain whether it would be “a bloody or bloodless” affair. When the Welfare Party formed a coalition government with the secular True Path Party in July 1996 and Erbakan became Turkey’s first Islamist prime minister, the first country that he visited was Iran. The secularist establishment took this and

similar developments and statements as harbingers of worse to come.

When the AKP won the 2002 election, it presented itself as a conservative-democratic party and, on the whole, acted as such. Not unlike other post-1980 governments, the AKP pursued pro-market policies, maintained Turkey’s pro-Western foreign-policy stance, and, among other things, succeeded in getting accession negotiations started with the European Union. Domestically, the government tried to maintain harmonious relations with other political parties and with such state institutions as the military and the Constitutional Court. For instance, when the AKP faced stiff opposition to its efforts to enable the graduates of Muslim prayer leader and preacher high schools to compete equally for university admission with the graduates of other high schools, the government quickly put that project on the back burner.

In the 2007 general elections, the AKP won 46.6% of the vote (up from 34.3% in 2002) and 341 of the Grand National Assembly’s 550 seats (a drop of 22). The CHP became the official opposition after finishing second with 20.9% and 112 seats, and the right-wing Nationalist Action Party was third with 14.3% of the vote and 71 seats. Having now obtained a clear mandate from the people, the AKP government selected Gul as president, initiated the constitutional amendment to drop the head scarf ban, and prepared a draft constitution that, if adopted, would take away some of the powers enjoyed by the military and the Constitutional Court. In March 2008 a prosecutor filed a lawsuit accusing the AKP of antisecular actions and demanding that AKP leaders be banned from further political activities for five years. The Constitutional Court on July 30 narrowly ruled that the AKP had not violated Turkey’s secular principles to the point that it should be banned but that it had veered too far in an Islamic direction and therefore its public funding had to be cut in half. Although the ruling left the elected AKP government in power, it remained to be seen whether a delicate balance between pro-Islamists and the secular establishment could truly be achieved in Turkey.

Metin Heper is a founding member of the Turkish Academy of Sciences and Dean of the Faculty of Economics, Administrative and Social Sciences at Bilkent University, Ankara, Turkey.

A secularist student waves a flag bearing a portrait of Kemal Ataturk, the founder of the Republic of Turkey, as part of a counterdemonstration against those showing support for lifting the country’s ban of Muslim head scarves on university campuses.

Terror in Mumbai

by Dr. Shanthie Mariet D'Souza

Beginning on the evening of Nov. 26, 2008, multiple terrorist attacks in Mumbai (Bombay), India's financial epicentre and the capital of western Maharashtra state, turned much of the city into a war zone for more than 60 hours. The attacks resulted in the deaths of at least 174 people, including 20 security force personnel and 26 foreign nationals. More than 300 persons were injured.

A group of 10 terrorists carried out the attacks, using automatic weapons and hand grenades as they targeted civilians at numerous sites in the southern part of the city, including the Chhatrapati Shivaji railway station, the popular Leopold Café, two hospitals, and a theatre. While most of the attacks ended within a few hours after they began at around 9:30 PM, the terror continued to unfold at three locations where hostages were taken—the Nariman House, where a Jewish outreach centre was located, and the luxury hotels Oberoi Trident and Taj Mahal Palace & Tower. By the time the standoff ended at the Nariman House on the evening of November 28, six hostages as well as two gunmen had been killed. At the two hotels, dozens of guests and staff were either trapped by gunfire or held hostage. Indian security forces ended the siege at the Oberoi Trident around midday on November 28 and at the Taj Mahal Palace on the morning of the following day. Nine of the 10 terrorists were killed, and one was arrested.

Amid speculation regarding the identity of the terrorists, an unknown group calling itself Mujahideen Hyderabad

An Indian soldier takes cover outside the Taj Mahal Palace on November 29 as security forces prepare to launch a final push to end the nearly three-day terrorist siege, in which nearly 175 persons lost their lives and 300 were injured.

Deccan claimed responsibility for the attacks in an e-mail; however, the e-mail was later traced to a computer in Pakistan, and it became obvious that no such group ever existed. The way the terrorists had reportedly singled out Western foreigners at both of the luxury hotels and at the Nariman House led some to believe that the Islamic militant group al-Qaeda was possibly involved, but this appeared not to be the case after the lone arrested terrorist, Mohammad Ajmal Amir, provided substantial information regarding the planning and execution of the attacks. Amir, a native of Pakistan's Punjab province, told investigators that the 10 terrorists underwent prolonged guerilla-warfare training in the camps of the Pakistani-based terrorist organization Lashkar-e-Taiba. He further revealed that the team of terrorists had spent time at the headquarters of a second and related organization, Jamaat-ud-Dawa, in the city of Muridke before traveling from Punjab to the port city of Karachi and setting out for Mumbai by sea. After first traveling aboard a Pakistani-flagged cargo ship, the gunmen hijacked an Indian fishing boat and killed its crew; then, once they were near the Mumbai coast, they used inflatable dinghies to reach Badhwar Park and the Sassoon Docks, near the city's Gateway of India monument. At that point the group of terrorists split into small teams and set out for their respective targets.

The November attacks exposed loopholes in the security system that India had in place to deal with this "new brand" of terrorism—urban warfare characterized by symbolic attacks, multiple targets, and high casualties. Subsequent reports indicated that several intelligence warnings by Indian as well as U.S. sources had preceded the attacks but that authorities, citing the lack of "actionable intelligence," had ignored them. Moreover, there was an inordinate delay in the deployment of India's elite National Security Guards, whose commandos reached the besieged hotels only some 10 hours after the first shootings took place on November 26. The lack of coordination between authorities in the Indian capital of New Delhi and officials in Maharashtra state also weakened the immediate crisis response. India's interior minister, Shivraj Patil, who was widely criticized in the aftermath of the attacks, tendered his resignation on November 30, declaring that he took "moral responsibility" for the assault.

With evidence pointing to the attacks' having originated within Pakistan's territory, India on November 28 requested the presence of Lieut. Gen. Ahmed Shuja Pasha, director general of Pakistan's intelligence agency, as its investigation process got under way. Pakistan at first agreed to this request but subsequently backpedaled, offering to send to India a representative for the director general instead of Pasha himself.

The immediate impact of the attacks was felt on the ongoing peace process occurring between the two countries. Alleging inaction by Pakistani authorities on terrorist elements, Pranab Mukherjee, India's external affairs minister, stated, "If they don't act, then it will not be business as usual." India later canceled its cricket team's tour of Pakistan that had been scheduled for January–February 2009.

India's attempt at pressuring Pakistan to crack down on terrorists within its borders was strongly supported by the international community. U.S. Secretary of State Condoleezza Rice and British Prime Minister Gordon Brown toured both India and Pakistan following the attacks in Mumbai. In a flurry of diplomatic activity that was essentially viewed as an exercise in "conflict prevention," U.S. officials and others urged Pakistan's civilian government to take action against those suspected of involvement in the attacks. The danger that tensions might escalate between the two nuclear-armed neighbours ran high. India, however, refrained from amassing troops at the Pakistani border as it had following the Dec. 13, 2001, attack on India's Parliament, which had also been carried out by Pakistani-based militants. Instead,

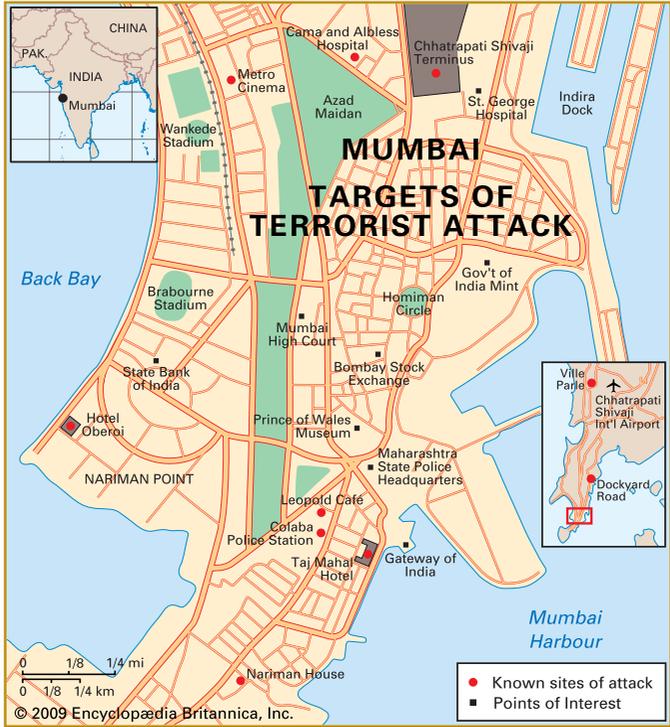

India focused on building international public support through various diplomatic channels and through the media. India made a plea to the UN Security Council for sanctions against Jamaat-ud-Dawa, contending that the group was a front organization for Lashkar-e-Taiba, which had been banned by Pakistan in 2002. Acceding to India's request, the Security Council imposed sanctions on Jamaat-ud-Dawa on December 11 and formally declared the group a terrorist organization.

Pakistan claimed to have arrested Zaki-ur-Rehman Lakhvi, a senior leader of Lashkar-e-Taiba and the suspected

mastermind of the Mumbai attacks, on December 8. Pakistani security forces carried out raids on the Jamaat-ud-Dawa offices across the country. This crackdown, however, lasted only a few days, after which the security cordons that had been placed around Jamaat-ud-Dawa offices were relaxed. In explanation, Pakistani Prime Minister Yousaf Raza Gillani stated that the activities of Jamaat-ud-Dawa should not be blocked, since "thousands of people are benefiting" from what he described as the group's "welfare activities." Pakistan further maintained that India did not provide it with sufficient evidence against a number of suspected terrorists and that any action against these suspects was possible only after such evidence had been provided "through diplomatic channels instead of the media." Pakistan refused India's demand that it extradite 20 persons for their alleged involvement in several terrorist attacks on Indian territory.

The terrorist attacks in Mumbai prompted the Indian government to introduce important new institutions as well as legal mechanisms to fight terrorism. On December 17 the Indian Parliament consented to the creation of the National Investigation Agency, a federal counterterrorism group whose functions would be similar to many of those of the U.S. Federal Bureau of Investigation. Parliament also approved amendments to the Unlawful Activities (Prevention) Act that incorporated stringent mechanisms to contain and investigate terrorism. Although myriad comparisons were made between the Sept. 11, 2001, attacks in the U.S. and those that occurred in Mumbai, the latter outbreak of terrorism was of a much more limited scale, in terms of both casualties and financial implications. The Mumbai attacks did, however, evoke a similarly strong national and international outcry against such violence and renewed calls to increase efforts to deal with the menace of terrorism.

Dr. Shanthie Mariet D'Souza is an Associate Fellow at the Institute for Defence Studies and Analyses in New Delhi.

Employees and guests of the Taj Mahal Palace & Tower—one of the sites of the multiple terrorist attacks that rocked Mumbai in late November—use curtains to escape the top floor of the luxury hotel.

Games of the XXIX Olympiad

by Melinda C. Shepherd

During Aug. 8–24, 2008, Beijing, along with six other cities in China (Qingdao, Hong Kong, Tianjin, Shanghai, Shenyang, and Qinhuangdao), opened the Middle Kingdom to the world as the host of the Games of the XXIX Olympiad. A record 204 National Olympic Committees (NOCs)—including first-time participants Marshall Islands and Tuvalu and separate teams for Montenegro and Serbia—sent about 11,000 athletes to the Games. Since 2001, when the International Olympic Committee (IOC) selected Beijing as host city, China had invested huge sums of money in urban renewal, expanded infrastructure, and construction of Olympic facilities in the seven cities. In the lead-up to the Games, journalists complained about restricted access to some international Web sites from within China, and pro-Tibet demonstrators interrupted the Olympic torch relay, especially in some European cities. Air pollution was less of an issue than had been expected, though heat and rain interfered with some events. Overall, the Games were well received, and the architecturally stunning facilities, notably the Bird's Nest stadium and Water Cube swimming facility, were deemed outstanding.

Five new events were added to the Olympic schedule in Beijing: BMX motocross cycling (for men and women), 10-km open-water swimming (for men and women), and women's 3,000-m steeplechase in track and field (athletics). Competitors set 132 Olympic records (66 in swimming), including 43 world records (25 in swimming).

A record 87 NOCs earned at least one of the 958 medals awarded (302 gold) in the 28 sports, with 68 winning more than one medal. Afghanistan, Mauritius, Tajikistan, and Togo earned their first-ever medals, while Bahrain, Mongolia, and Panama took home their first golds. China, with a total of 100 medals,

Fireworks shoot high above the Bird's Nest, Beijing's National Stadium, during the spectacular Olympic closing ceremony on August 24. The striking Water Cube aquatic facility (left) was where American swimmer Michael Phelps captured a record eight gold medals during the 2008 Olympic Games.

won the most golds (51), but the U.S. captured the most medals overall, 110 (36 gold). Russia finished third with 72 (23), followed by Great Britain with 47 (19) and Australia with 46 (14).

Among the individual athletes, 132 were multiple medalists, led by American swimming icon Michael Phelps, who captured a record eight gold medals and seven world records (plus one additional Olympic record) in his eight finals and thus broke the record for a single Olympics set by swimmer Mark Spitz of the U.S. at the 1972 Munich Games. Phelps's 8 golds, added to the 6 he earned in Athens in 2004, made him the most outstanding Olympian in history, while his career total of 16 medals put him second only to Soviet gymnast Larisa Latynina, with 18 career medals (9 gold). Phelps's teammate Natalie Coughlin was the top woman competitor in Beijing, with six medals (one gold), while American gymnast Anastasia (Nastia) Liukin (*see* BIOGRAPHIES) earned five, including gold in the women's individual all-around competition.

On the track, Jamaica's Usain Bolt (*see* BIOGRAPHIES) accomplished a sensational hat trick, taking gold in all three of his events in world-record time: the 100- and 200-m sprints and the 4 × 100-m relay. China won seven of the eight diving gold medals, including two more for defending double champion Guo Jingjing (*see* BIOGRAPHIES). Other standouts included Scottish cyclist Chris Hoy (*see* BIOGRAPHIES), whose three gold medals helped to lead Great Britain to its best Olympics in 100 years; American Dara Torres, who confounded the naysayers by taking three swimming medals (all silver) at age 41; Italy's five-time foil fencing world champion Valentina Vezzali, who won her third straight individual Olympic gold (plus the bronze for team foil); and three-time beach volleyball world champions (and defending Olympic champions) Misty May-Treanor and Kerri Walsh of the U.S. (*see* BIOGRAPHIES).

Thai demonstrators loyal to exiled former prime minister Thaksin Shinawatra surround the parliament in Bangkok on December 30.

Sakchai Lalit/AP

Anthropology and Archaeology

Researchers described the oldest-known **HOMININ** remains in Europe and the oldest evidence for human occupation in the Americas. Unique finds shed light on **PRE-COLUMBIAN DIETS**, and an 11,500-year-old **SANCTUARY** complex was revealed in Turkey.

ANTHROPOLOGY

Among the key developments in 2008 in the field of physical anthropology was the discovery by a large interdisciplinary team of Spanish and American scientists in northern Spain of a partial mandible (lower jaw) with several teeth still in place and an isolated lower premolar from the same individual. A combination of three different dating techniques indicated that the remains were 1.1 million–1.2 million years old, which made them the oldest-known hominin fossils in Europe by at least 250,000 years. The mandible was associated with 32 simple stone artifacts, including chert flakes, and with animal remains that clearly showed evidence of human processing. The site, Sima del Elefante, was located near Gran Dolina and several other sites in the Sierra de Atapuerca that had yielded many pre-*Homo sapiens* fossils. The new material was provisionally assigned to *Homo antecessor*, the supposed ancestor of *Homo heidelbergensis*. (*H. antecessor* was the same taxon to which previously reported remains from Gran Dolina had been assigned.) Similarities to earlier mandibular material from Dmanisi, Georgia, dated to 1.77 million years ago led to the following speculative scenario: hominins that emerged from Africa about 1.8 million years ago settled in the Caucasus and eventually evolved into *H. antecessor*, which in turn populated western Europe by 1.3 million years ago. Europe would therefore have been inhabited by hominins much earlier than previously thought and from migrations that originated in western Asia rather than directly from Africa.

A new study by two American paleoanthropologists confirmed that the six-million-year-old taxon *Orrorin tugenensis* was the oldest upright bipedal hominin in the fossil record. These Kenyan fossils, which were discovered in 2000, had been a source of controversy in terms of their supposed hominin affinities and locomotor capabilities. Previously, the oldest certain evidence for hominin bipedalism came from the 3.9-million–4.2-million-year-old Kenyan and Ethiopian fossils known as *Australopithecus anamensis*. The new analysis of *Orrorin* demonstrated that its femur (thighbone) most strongly resembled those of the australopithecines, including specimens from *Australopithecus afarensis* and members of the genus *Paranthropus*. *Orrorin* also shared distinctive hip biomechanics with the australopithecines that clearly distinguished their bipedalism from the structurally and function-

This partial lower jawbone, unearthed from a cave in northern Spain, showed that hominins lived in Europe at least 1.1 million years ago.

Jordi Mestre, EIA—Reuters/Landov

ally distinctive bipedalism characteristic of the genus *Homo*. Thus, the type of bipedalism characteristic of the australopithecines persisted for a period of at least four million years until adaptations specific to *Homo*, such as a shorter neck on the femur and a weaker mechanical advantage for the gluteus muscle, combined to produce a new kind of bipedalism. Since *Orrorin* differed so much from *Homo* in these analyses, the direct evolutionary connection that had once been proposed for these two taxa was considered highly unlikely.

An interdisciplinary team of Indian and American scientists discovered four tiny posterior teeth of the oldest-known Asian member of the Anthroipoidea, the group that contains monkeys, apes, and humans. The fossil teeth, found in a lignite mine in Gujarat state in western India, were dated to about 54 million–55 million years ago by associated age-diagnostic marine-plankton fossils. The teeth, assigned to *Anthrasimias gujaratensis*, extended the fossil record of Asian anthropoids back 9 million–10 million years to the beginning of the Eocene. *Anthrasimias* was a very small primate, weighing only about 75 g (2.6 oz) and about the size of a modern mouse lemur. Its diet probably contained both fruit and insects. An analysis of the evolutionary history of 75 taxa and 343 craniodental and postcranial traits placed *Anthrasimias* at the base of the eosimiid clade (family Eosimiidae),

an extinct group of primates. This analysis also supported the placement of *Altiatlasius*, known from 58-million-year-old Moroccan fossil teeth, in the Eosimiidae family (and Anthroipoidea), contrary to previous studies. As a consequence, the authors speculated that the origin of the order Primates probably occurred much earlier than these two genera, either in the early Paleocene or—as had been indicated previously by numerous molecular genetics studies—even in the preceding Cretaceous.

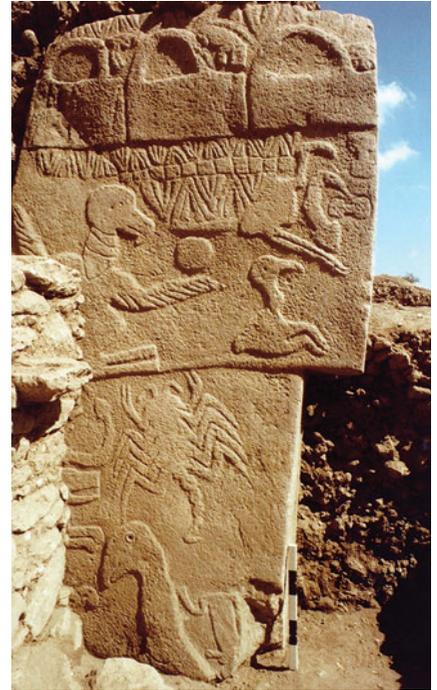

A team of human evolutionary geneticists extensively revised the standardized human Y-chromosome evolutionary tree, which was first published by the Y Chromosome Consortium in 2002. The new study, published

Prof. Dr. Klaus Schmidt

The excavation (left) uncovered one of a number of circles of stone pillars at Gobekli Tepe, a site in southeastern Turkey that was believed to have been a temple complex. Animal carvings (right) were found on another pillar at the site.

Prof. Dr. Klaus Schmidt

in May 2008 in *Genome Research*, more than doubled both the number of genetic markers (599) and the number of resulting haplogroups (311) and led to four major structural changes in the tree. Each marker was an identifiable paternal DNA variation that was inherited by the male descendants of the person in which the variation first occurred. The markers therefore revealed genetically related groupings of Y chromosomes, or haplogroups, which in turn helped show the migratory patterns of humans and how various populations were related to one another. The original standardized Y-chromosome tree had 18 major clades (branches), which corresponded to the major haplogroups designated A through R. The revised tree had two additional clades (haplogroups S and T), which were formerly part of haplogroup K. The deepest unresolved multiple branching in the tree was addressed by the discovery of a new genetic marker. The resulting supercluster of haplogroups was not typically found in sub-Saharan Africa and might have been carried out of Africa early in the modern human diaspora 65,000–70,000 years ago. The low level (about 2%) of homoplasy (marker duplication from independent identical mutations) that had been found in the Y-chromosome tree implied that it contained more accurate phylogenetic information than the maternally based human mitochondrial-DNA tree. Mitochondrial DNA had

much higher levels of homoplasy owing to its frequent recurring mutations. The estimated ages for 11 major clades in the Y-chromosome tree ranged from 68,900 to 18,500 years. (STEPHEN L. ZEGURA)

ARCHAEOLOGY

Eastern Hemisphere. Two female figurines carved out of mammoth tusk some 22,000 years ago were among the finds that came to light in 2008 at the Upper Paleolithic site of Zaraysk, 155 km (96 mi) southeast of Moscow. The figurines, unearthed from a pair of storage pits, appeared to have been ritually buried. According to archaeologists Hizri Amirkhanov and Sergey Lev of the Russian Academy of Sciences, each figurine had been placed atop deposits of light, fine-grained sand and red ochre before being covered with a mammoth scapula and buried in earth.

An unusual carved chalk figure, thought to represent a hedgehog or a pig, was found in a child's grave that was unearthed in 2008 during archaeological excavations at Stonehenge, near Salisbury, Eng. According to Joshua Pollard of the University of Bristol, Eng., the small sculpture, which was dated to between 800 and 20 BC, might have been made for the baby or placed in the grave as an offering in memory of the child. The excavations were being conducted along a 6-m (19.5-ft)-high timber wall-and-ditch

system built to the east of the Stonehenge core about 1,500–2,000 years after the well-known megaliths were erected (about 2,000 BC). The burial suggested that the site had continued to serve an important religious function later than previously believed.

The tomb of the Roman general Marcus Nonius Macrinus, a confidant of Roman emperor Marcus Aurelius (ruled AD 161–180), was found during construction work on the Via Flaminia on the east bank of Rome's Tiber River. Among the ruins of the 15-m (50-ft)-long column-lined mausoleum, a team led by archaeologist Daniela Rossi documented about one dozen biographical inscriptions that detailed the career of the Brescia-born general, who had served as a police commissioner and magistrate before playing a key role in the emperor's campaigns against the Germanic tribes of the North.

Hailed as the earliest-known temple in the world, the sanctuary complex of Gobekli Tepe in southeastern Turkey was unveiled to the public after more than a decade of investigations led by Klaus Schmidt of the German Archaeological Institute. The hilltop sanctuary, dated to about 9500 BC, contained numerous T-shaped limestone pillars that stood in circles that ranged from 10 to 30 m (33 to 100 ft) across. Twenty such circles had been located with ground-penetrating radar, and seven had been excavated to date. The pillars, up to

4 m (13 ft) in height, were thought to be highly stylized anthropomorphic figures, and many of them were carved with the images of animals, including boars, birds, snakes, foxes, lions, and scorpions. Residential architecture had yet to be found at the site, which underscored its role as a cult centre. Built by seminomadic hunter-gatherers in an age before the wheel, pottery, or domesticated plants and animals, Gobekli Tepe predated Mesopotamia's first cities by more than 5,500 years. Prior to its discovery, it was believed that such monumental sites could have been constructed only by the complex civilizations that arose after the adoption of agriculture.

Also in southeastern Turkey, the remains of a Neo-Assyrian governor's palace were unearthed during rescue excavations at Ziyaret Tepe, where the Assyrian king Ashurnasirpal II (ruled 883–859 BC) established his provincial capital of Tushhan in 882 BC. In addition to rooms with colourful wall paintings and tiled baths that would have had running water, excavations at the site revealed five cremation burials in the palace courtyard. Two of the burials were filled with opulent offerings—bronze vessels, stone and ivory objects, seals, and pearls. According to Dirk Wicke of the Johannes Gutenberg University, Mainz, Ger., the site would likely be inundated following the construction of the controversial Ilisu Dam.

The remains of a 5,000-year-old altar found in Greece atop Mt. Lykaion, one of several mythical birthplaces of Zeus, suggested that the site was in use as a cult centre 1,000 years before worship of the Greek deity began. According to David Gilman Romano of the University of Pennsylvania Museum of Archaeology and Anthropology, the site, which was near Olympia, also yielded abundant pottery, the remains of animals that may have been sacrificed there, and a rock-crystal seal that bore the image of a bull. The seal dated to the Late Minoan period (1400–1100 BC) and suggested a possible early connection between the Minoan civilization of Crete and the mainland.

The oldest-known sample of Hebrew writing was unearthed at Khirbet Qeiyafa, a 3,000-year-old fortified site 30 km (20 mi) southwest of Jerusalem. The five lines of script in proto-Canaanite, a precursor to Hebrew, were found on a potsherd at the two-hectare (five-acre) site and, according to project director Yosef Garfinkel, contained the words for *judge*, *slave*, *king*, and an

early form of the Hebrew verb *to do*. A carbon-14 date obtained from olive pits and other pottery fragments at the site placed the writing of the text between 1000 and 975 BC—the time, said Garfinkel, of the legendary Israelite king David.

A section of the stone wall that encircled the city of Jerusalem 2,100 years ago reemerged during excavations on Mount Zion by Yehiel Zelinger and a team from the Israel Antiquities Authority. Although the structure had been uncovered by archaeologists in the 19th century, it was soon reburied. The mortarless wall, which dated to the so-called Second Temple Period, might represent ancient Jerusalem at its greatest extent. Early fertility figurines were recovered at the site in addition to objects that were left behind by the 19th-century excavators—beer bottles, a gas lamp, and a shoe. A second wall that was built during the Byzantine period was found in the upper levels of the excavation.

Evidence of mass killings was found at the 5,800-year-old site of Tell Majnuna, near Syria's border with Iraq and Turkey. Three mass graves were excavated by Augusta McMahon of the University of Cambridge. They contained the bones of 222 individuals—mostly young men of fighting age who were probably killed in local skirmishes or early invasions of the area by southern Mesopotamian city-states. The arrangement of the bones—skulls and long bones piled in separate heaps—and the absence of hands and feet suggested that the corpses had been left to decay for weeks or even months before they were buried, and broken pottery and cattle bones found in the upper levels of one grave were seen as evidence of a postkilling celebration.

In April a diamond-mining company that was building a seawall along Namibia's Skeleton Coast uncovered the remains of a 16th-century Portuguese trading ship, or *nau*, which had been carrying a cargo of copper, tin ingots, and ivory. Among the large number of recovered artifacts from the 30-m-long ship were cannon, cannonballs, and swords to fend off pirates; Oriental ceramics; pewter plates and jugs; rare navigational instruments; and more than 2,400 gold and silver Portuguese and Spanish coins, some of which had been minted in 1525. According to chief archaeologist Bruno Werz of the Southern African Institute of Maritime Archaeology, the vessel likely foundered while attempting to

navigate the treacherous currents along this area of the African coastline.

A team of archaeologists found a 19-m (62-ft)-long statue of the Buddha in a sleeping position buried in the ground in Afghanistan's Bamiyan valley not far from where two enormous 1,500-year-old standing figures of the Buddha were destroyed by the Taliban regime in 2001. The statue—dated to the 3rd century AD—was badly damaged except for the neck and right hand. The archaeologists, led by Afghan-born Zmaryalai Tarzi, also recovered coins and ceramics that had been left by Buddhist pilgrims. Caves at the site yielded mid-7th-century-AD murals rendered in oil paint, which predated the first known use of the medium in Europe by more than 100 years.

In Jiangxi province in eastern China, archaeologist Changqing Xu unearthed a 2,500-year-old grave that contained 47 coffins and the remains of 28 people—likely servants sacrificed to accompany a provincial potentate into the afterlife. Among the hundreds of artifacts that were found in the burials, which dated to the late Spring and Autumn Period (770–476 BC), were elaborate silk textiles, gold and bronze pieces, and a lacquer sword decorated with a painted dragon design in gold, black, and red.

(ANGELA M.H. SCHUSTER)

Western Hemisphere. A report published in 2008 analyzed DNA from human coprolites (fossilized feces) that a team of excavators led by University of Oregon archaeologist Dennis Jenkins had unearthed several years earlier in the Paisley Caves of south-central Oregon. The DNA study identified genetic signatures that were associated with founding groups of Native Americans. The coprolites had been radiocarbon dated to 14,340 years ago, and they provided the earliest evidence for human occupation of the Americas. The date agreed well with the few other established dates for early settlement in North America and was more than 1,000 years earlier than the Clovis Paleo-Indian culture found throughout North America.

Terry Jones of California Polytechnic State University and colleagues showed that early humans in the Americas might have had less of a role in wiping out species of game than was once thought. *Chendytes lawi* was an extinct flightless sea duck that once flourished along the Pacific coast. The duck was a defenseless creature that was easily hunted by humans, and near Daisy Cave on San Miguel Island off the southern California coast, it was hunted

as early as 9000 BC. For years it had been assumed that the ducks became extinct in a relatively short time, as many large Ice Age animals in the Americas did. The researchers, however, recovered *Chendytes* bones that dated to as recently as 500 BC. The species managed to survive in the face of human predation for more than 8,000 years, which suggested that if large Ice Age animals in the Americas were killed off through hunting, their extermination would have occurred over an extended period of time.

American and Russian archaeologists uncovered evidence that whaling in the Bering Strait took place 1,000 years earlier than previously suspected. The Un'en'en site, on the shore of Russia's Chukotka Peninsula, dated to about 1000 BC and was a community of semisubterranean dwellings with wooden roofs. There whale hunters watched for juvenile bowhead or gray whales in the strait and then harpooned them from open boats. An ivory carving found in one of the houses depicted men hunting whales, dragging what appeared to be a carcass to shore, and shooting arrows at a bear. This important find shed new light on the origins of northern Pacific whaling, a subsistence activity that became all-important in later times.

Cerén in El Salvador was a small Mayan community that was buried under 5 m (16.5 ft) of ash when a nearby volcano erupted in AD 600. Payson Sheets of the University of Colorado at Boulder and co-workers excavated well-preserved houses in which they discovered furnishings, domestic artifacts, and the remains of meals that the inhabitants apparently abandoned as they fled. As in other Mayan communities, the local farmers cultivated a wide variety of crops, including maize (corn) and beans. In 2007 excavators were digging in what they thought was an ancient cornfield when they discovered perfectly preserved cassava (manioc, or yuca) roots under the volcanic ash. This unique find was the first evidence that the ancient Maya cultivated cassava—one of the basic staples of other ancient Native American farmers, especially in South America.

A well-preserved prehistoric site with a central plaza came to light in southern Puerto Rico during preparations by the U.S. Army Corps of Engineers for a new dam. The site, which may date between AD 600 and 1500, was used by

David Mercado—Reuters/Landov

An archaeologist works in a Tiwanaku burial in Bolivia near Lake Titicaca. The burial contained a gold pendant and headband (lower right).

pre-Taino or Taino Indians, Arawak people who lived on the islands before European settlement. The plaza measured 40 × 49 m (130 × 160 ft) and yielded petroglyphs that included the figure of a person with masculine features and frog legs. Archaeologists also recovered several graves in which the bodies were facedown and the legs bent at the knees.

In AD 700 Tiwanaku was the most powerful kingdom in the southern Andes, with domains that extended throughout areas of Bolivia, Argentina, Chile, and Peru. The burial of a high-status individual was found in a niche under the Akapana pyramid. Located in the vicinity of Lake Titicaca, the pyramid was one of the largest structures known from ancient South America. The corpse was buried with a llama, a fist-sized gold pendant, and a golden headband. The deceased, a 25-year-old man, had suffered from malnutrition as a child. Bolivian archaeologists believed that he had been an important member of society, perhaps a priest. The llama might have been included in the burial as a status symbol or perhaps as a source for food in a journey to the afterlife.

In a discovery based upon laboratory studies, researchers determined that Inca children who had been selected for ritual sacrifice were fattened up with high-protein diets before their death. Andrew Wilson of the University of Bradford, Eng., and colleagues analyzed strands of hair from four child mummies that were found high in the Andes in the 1990s. Chemical tests showed what the children had eaten in the time leading up to their deaths. One of the mummies, known as the Lulluillaco Maiden, was named after the Argentinian peak on which she was found in 1999, and the remains were dated to the

period AD 1430–1520. Her hair was 25 cm (9.8 in) long and represented two years of growth. The analysis of the hair indicated that at first she was raised on a protein-poor diet of potatoes. Twelve months before her death, however, her diet became much richer in protein, an indication that she might have begun to be fed a diet of llama meat and maize normally reserved for the nobility. When the time came, she embarked on an arduous journey up the mountain, was drugged, and then was sacrificed.

A shipwreck discovered lying in 3 m (10 ft) of water off Catalina Island in the Dominican Republic was investigated by Charles

Beeker of Indiana University at Bloomington and colleagues. They suggested that it was the *Quedagh Merchant*, which William Kidd captured in the Indian Ocean in 1698. The ship had been laden with gold, silver, silk, and other goods. Kidd, who was known as Captain Kidd, had been a British privateer—someone commissioned by Great Britain to attack enemy ships. In 1699 Kidd left the *Quedagh Merchant* in the Caribbean and traveled to New York City in an attempt to clear himself of piracy charges. The crew scavenged the ship and then set it afire, leaving it to drift down the Rio Dulce into the ocean. The ship was in superb condition, in water too shallow to be reached by treasure-hunter boats equipped with magnetometers. Numerous iron cannons lay stacked atop multiple anchors, an unusual layout that had been described by Kidd. Captain Kidd was eventually hanged in London for piracy, but several centuries later his ship was to become part of an underwater reserve.

In 1864 Confederate sailors captured the Union gunboat *Water Witch* in a bloody midnight attack in the Vernon River south of Savannah, Ga. Divers located what Georgia archaeologists believed to be the *Water Witch* under 3 m of mud at the location where an 1865 map indicated that Confederate soldiers had burned the ship to prevent it from falling into the hands of Gen. William Sherman's army. At the site, in an area 60 m (200 ft) long, a magnetometer detected large iron objects, which might include the 50-m (165-ft) ship's steam engine. The *Water Witch* served on both sides of the Civil War, but because of the Union blockade, she never went back to sea after her capture. (BRIAN FAGAN)

Architecture and Civil Engineering

Impressive new buildings in **BEIJING** were completed for the 2008 **OLYMPIC GAMES**. Innovative design in **ART MUSEUMS** was a continuing trend in many countries, and a prominent structure from the **MODERN MOVEMENT** in architecture was restored.

ARCHITECTURE

Beijing was the centre of the world of architecture for two weeks in August 2008, when several spectacular new buildings housed the Olympic Games. People all over the world were able to witness the daring new architecture during the television coverage of the events. Most notable was the National Stadium, designed by the Swiss architects Herzog & de Meuron. The stadium—called the Bird's Nest because its steel beams appeared to be woven together like the twigs of a nest—held 91,000 persons and accommodated the major Olympic ceremonies as well as the track and field events. After the Games it was to be used for association football (soccer) and other sports. Another remarkable Olympic venue was the National Aquatics Centre, which was called the Water Cube. Its roof and walls were made of more than 4,000 plastic pillows that were stitched together like a quilt. The pillows resembled soap bubbles, and, like bubbles, they were translucent. During the day they allowed daylight to illuminate the swimming competitions. At night the whole building, lit from within, glowed like a huge tent in a watery aqua colour. (For photograph see Special Report on page 194.) The architect was an Australian firm called PTW.

Not an Olympic venue but equally impressive was the new Terminal 3 at Beijing Capital International Airport. Terminal 3 was an immense building about 3.2 km (2 mi) long, with 130 ha (320 ac) of floor area. The architect was the British firm Foster + Partners. Like the Bird's Nest and the Water Cube, the terminal was designed in collaboration with Chinese architects.

As was usually true with daring or experimental architecture, structural engineers were just as important as the architects. The international firm Arup served as engineer for all three of the Beijing buildings. Widely considered an ambitious effort by China to be viewed as a major player on the world architecture scene, the Olympic architecture was a sensational success.

Awards. The 2008 winner of the Pritzker Prize was French architect Jean Nouvel (see Biographies), who was best known for having designed buildings in a diversity of styles. The Pritzker citation commended “his courageous pursuit of new ideas” and added, “His inquisitive and agile mind propels him to take risks in each of his

projects, which, regardless of varying degrees of success, have greatly expanded the vocabulary of contemporary architecture.” Among Nouvel's most notable buildings were the Cartier Foundation for Contemporary Art in Paris; a Cultural and Conference Center in Lucerne, Switz.; the Agbar Tower (Torre Agbar), a cigar-shaped office high-rise in Barcelona; the Guthrie Theater in Minneapolis, Minn.; and the Quai Branly museum in Paris. In November 2007 the Museum of Modern Art in New York City announced plans for a 75-story tower that was to be designed by Nouvel and built on a site adjacent to the museum. In drawings the building seemed to wave back and forth as it rose to a point at the top and was to be occupied by the museum, a hotel, and condominium apartments.

Australian architect Glenn Murcutt was the recipient of the 2009 Gold Medal of the American Institute of Architects (AIA), the organization's highest award. Murcutt, who usually worked without a staff, was known for designing modernist houses that responded to local climate conditions and were sometimes influenced by the vernacular architecture of Maori culture. Although he practiced exclusively

Madrid's Prado Museum addition (right), designed by Rafael Moneo, was built within a confined space bordered by the Church of San Jerónimo (left).

The Museum of Islamic Art by I.M. Pei was built on an artificial island a short distance from shore in Doha, Qatar.

in Australia, he taught and lectured in other countries, and his longtime interest in creating an architecture in harmony with nature had a profound impact on architects around the world. The AIA presented its 25-Year Award—given to a building that had proved its merit over time—to the Athenaeum, a visitors' centre in New Harmony, Ind., that was designed by American architect Richard Meier. The AIA also announced the winners of its annual Honor Awards for outstanding American buildings. The best known of the 13 honourees included Olympic Sculpture Park in Seattle by Weiss/Manfredi, the Shaw Center for the Arts in Louisiana by Schwartz/Silver, the Nelson-Atkins Museum of Art in Kansas City, Mo., by Steven Holl, and the restoration of the Griffith Observatory in Los Angeles by Pfeiffer Partners.

Álvaro Siza of Portugal received the Gold Medal of the Royal Institute of British Architects. Although Siza was not widely known, he was much admired by other architects. Most of his work was in his native Portugal.

Notable Buildings. As an international economic boom came to an end in 2008, a large number of remarkable buildings were completed. Continuing a trend of recent years, most of the buildings that were interesting architecturally were built for cultural purposes, especially as art museums.

Spanish architect Rafael Moneo designed an addition to one of the world's most famous museums, the Prado in Madrid. Tucked modestly next to a church behind the old Prado, Moneo's extension was built of red brick with bronze trim and provided space for a

cafeteria, a store, cloakrooms, and an auditorium.

In Doha, Qatar, Chinese-born American architect I.M. Pei designed a new Museum of Islamic Art. He designed a building of simple bold white shapes that heaped up to a loose pyramid. The structure was built on an artificial island about 60 m (200 ft) from shore on Doha Bay in the Persian Gulf. One critic wrote that the "colossal geometric form has an ageless quality" that was "brought to life by the play of light and shadow under the gulf's blazing sun."

Far to the north, in Oslo, the firm Snøhetta created an amazing building that was both an opera house and a landscape (*see* photograph on page 445).

Members of the public could walk up the building's gently sloping ramps, walls, and roofs to a plaza at the top with a fine view of the city's harbour. From across the harbour, the opera house looked rather like a big white iceberg. Inside were facilities for the Norwegian Opera and Ballet, including a horseshoe-shaped auditorium (with 1,360 seats and a rotating stage) and two smaller theatres. Snøhetta won the job of designing the opera house in a competition involving 240 architects.

In New York City the firm Allied Works transformed the former Huntington Hartford Museum on Columbus Circle, built in 1964 by architect Edward Durrell Stone, into a new venue for the Museum of Arts and Design (formerly the American Craft Museum). The change sparked a controversy in which some architects and others argued that Stone's original building, although long abandoned, should have been restored to its original form as an example of the romantic, Arab-influenced architecture that he admired.

In Seattle a steep waterfront site was transformed into the Olympic Sculpture Park, which zigzagged its way down a hill to the harbour's edge and crossed above streets and a railroad line along the way. The park, which displayed works of sculpture, was designed by architects Weiss/Manfredi.

In San Francisco a new California Academy of Sciences, sited in Golden Gate Park, debuted to replace a building that had been destroyed by an

(continued on page 208)

The undulating roof of Renzo Piano's California Academy of Sciences in Golden Gate Park, San Francisco, contained many skylights and was covered with a field of native plants.

Notable Civil Engineering Projects (in work or completed, 2008) continued

Name	Location	Year of completion	Notes	
Highways				
		Length (km)		
Interoceanic Highway	Iñapari (at Brazilian border)–Ilo/Matarani/ San Juan de Marcona, Peru	c. 3,100	2010	To be paved road for Brazilian imports/exports from/to Asia via 3 Peruvian ports; some construction is at c. 4,000 m
"East-West Economic Corridor"	Danang, Vietnam–Moulmein, Myan. (via Laos and Thailand)	1,450	2008	All-weather gravel road linking the Pacific and Indian oceans; considered to be virtually complete in July 2008
East-West Highway (across northern Algeria)	Tunisian border (near Annaba)– Algerian border (near Tlemcen)	1,216	2010	To facilitate economic development and trade across North Africa
Egnatia Motorway	Igoumenitsa–Kipoi, Greece	670	2009	First Greek highway at int'l standards; 76 tunnels, 1,650 bridges
A2 Motorway ("east to west expressway across Poland")	Polish border near Frankfurt an der Oder; Ger.–Brest, Belarus (via Warsaw)	610	2011	Construction began in 2001; 252 km completed in 2008; will link to German autobahn
Transylvanian Motorway	Brasov–Bors, Rom.	415	2013	To link Romania and Hungary and open Transylvania to tourism
Trans-Labrador Highway (phase III)	Happy Valley–Goose Bay to Cartwright Junction, Labrador, Can.	280	2009	Final phase of all-weather gravel road near timberline wilderness; 64% complete by end of 2007–08 construction season
"North-South Economic Corridor" Laotian link (National Route 3)	Boten–Houayxay, Laos	228	2008	Opened March 31; final link of 1,150-km highway network from Kunming, China, to Bangkok; former opium-smuggling route across northwest Laos is now a 2-lane paved road
Canals and Floodgates				
		Length (m)		
Arabian Canal	Dubai	75,000	2010	Largest civil engineering project in the history of the U.A.E.; 150-m-wide waterway to turn arid interior into exclusive waterfront property
St. Petersburg Flood Protection Barrier	Gulf of Finland embankment, Russia (Gorskaya–Bronka via Kotlin Island)	25,400	2010	To protect city from tidal surges; navigation channel opened October 2008; begun 1980, halted 1987, resumed 2003
New Orleans Surge Barrier	Gulf Intercoastal Waterway–Mississippi River Gulf Outlet, New Orleans	2,283	2011	Central component of 3-km-long project to prevent storm-surge flooding using barrier walls and floodgates
South to North Water Diversion Project	Yangtze River–south of Beijing	—	2011	To bring crucial irrigation and drinking water from the Yangtze River in the south to the dry plains of north China over 2 routes totaling 2,423 km
Project Moses (flood-protection plan)	lagoon openings near Venice	—	2012?	Rows of 79 20-m-wide submerged gates in 3 lagoon openings will rise in flood conditions; controversial plan was begun in 2003
Panama Canal Expansion	between Panama City and Colón, Pan.	—	2014	Will include new wider and longer 3-chamber locks, doubling the canal's capacity and allowing the passage of world's biggest container ships
Railways (Heavy)				
		Length (km)		
Benguela Railway (rehabilitation; closed by civil war 1975–2002)	Benguela–Luau, Angola (at DR Congo border)	1,314	2011	Reopening to Huambo (423 km) by end of 2008 is expected; will enable resumption of copper exports from DR Congo and Zambia
Sena Railway (destroyed during 1976–92 civil war)	Moatize–Beira, Mozambique	665	2010	Rehabilitation began in 2005; declared free of land mines in 2006; important for coal export
Xinqiu–Bayan Ul Railway	Xinqiu, Liaoning–Bayan Ul, Inner Mongolia, China	487	2010	To be important for coal transport; future link to Mongolia expected
North-South Railway (in part)	Araguaína, Tocantins–Palmas, Tocantins, Braz.	361	2009	Rail exports of agriculture, forestry, and mineral products from vast area of interior of north Brazil is expected
Kashmir Railway	Udhampur–Baramula, Jammu and Kashmir, India	292	2012	80% bridges or tunnels in mountainous terrain; 66-km Rajwansher–Anantnag section opened on Oct. 11
KATB rail project	Baku, Azer.–Kars, Tur. (via Georgia)	258	2011	Caspian Sea to Turkey link, bypassing Armenia; 98 km of new rail, remainder modernized; new transport outlet for Georgia
Lhasa–Xigaze railway	Lhasa–Xigaze, Tibet, China	254	2010	Extension of the world's highest railroad will link Tibet's two largest cities; future extension to Nepal is a possibility
North Luzon Railway System project	Caloocan (north Metro Manila)– Clark international airport, Philippines	84	2011	To accelerate development of central Luzon
Railways (High Speed)				
		Length (km)		
Beijing–Shanghai Express Railway	Beijing–Shanghai	1,318	2013	To halve travel time between capital and financial centre
Spanish high speed	Madrid to France (via Barcelona)	719	2009	Madrid to Barcelona link opened Feb. 20
Turkish high speed	Ankara–Istanbul	533	2010	To connect capital with largest city
Italian high speed	Milan–Bologna section	210	2008	Opened Dec. 13; entire line from Turin to Naples scheduled for completion in 2009
Bothnia Line (Botniabanan)	Nyland–Umeå, Swed.	190	2010	Along north Swedish coast; difficult terrain with 25 km of tunnels
HSL–Zuid	The Hague/Amsterdam–Belgian border	125	2009	To enable high-speed links with Brussels, London, and Paris
Beijing–Tianjin high speed	Beijing–Tianjin, China	113	2008	Opened Aug. 1; world's fastest intercity train, available for 2008 Olympic Games
Gautrain	Johannesburg–Pretoria	80	2010	To link the capital with the commercial centre
Subways/Metros/Light Rails/ Commuter Rails				
		Length (km)		
Shanghai Metro	Shanghai	199.1	2009/2010	120.5 km = length of 4 lines/extensions (7, 8, 9, and 11) expected to become operational in 2009
New Mexico Rail Runner Express (commuter rail service)	Belen–Santa Fe, N.M. (via Albuquerque)	c. 141	2008	Operational in Albuquerque area in 2006; final c. 67-km extension to Santa Fe in service from Dec. 17
Delhi Metro	Delhi	124.8	2010	Many extensions of lines under construction between 2008 and 2010
Dubai Metro (Red/Green lines)	Dubai, U.A.E.	69.7	2009/2010	To be world's longest fully automated driverless transport system
Beijing Metro	Beijing	57.7	2008	Length of 3 lines opened on July 19 prior to Olympics
Circle MRT	Singapore	33.3	2010	To connect 3 existing MRT lines
Namma Metro	Bengaluru (Bangalore), India	33.0	2011	2 lines to be built; construction began in 2007
Valley Metro Rail	Phoenix–Tempe–Mesa, Ariz.	32.2	2008	Opened Dec. 27; Arizona's first light-rail system
Santo Domingo Metro (Line 1)	Santo Domingo, Dom.Rep.	14.5	2008	Opened to general public on Dec. 22
Métro d'Alger (Line 1, phase 1)	Algiers	9.0	2009	Mainly underground near the city centre and eastward
Nürnberg Metro U3 ("Line 3," phase 1)	Nürnberg, Ger.	6.1	2008	Service began June 15; first metro service in the world to operate driverless trains on same route (in part) with manned (U2) trains
Metro de Lausanne (m2) (crosses city north to south)	Lausanne, Switz.	6.0	2008	Began operation Oct. 27; very steep gradient—replaces 1877 funicular (in part); world's smallest city with metro
Tunnels				
		Length (m)		
Apennine Range tunnels (9)	Bologna, Italy–Florence (high-speed railway)	73,400	2009	Longest tunnel (Vaglia, 18.6 km); tunnels to cover 93% of railway
Marmaray railroad project tunnels	connecting European and Asian portions of Istanbul	13,600	2011	To include 1.4-km-long bored tunnel, world's deepest sunken-tube tunnel (56 m under the Bosphorus strait)
East and West tunnels of A86 ring road	western outskirts of Paris	10,000/7,500	2010	Two tunnels under Versailles and nearby protected woodlands
Kallang–Paya Lebar Expressway tunnels	Singapore	8,500	2008	Expressway opened Sept. 20; longest underground expressway in Southeast Asia
Eiksund Undersea	Ørsta–Håreidlandet (Herøy Island), Nor.	7,765	2008	Opened to traffic Feb. 23; world's deepest underwater tunnel (287 m under water surface)

1 m=3.28 ft; 1 km=0.62 mi ¹Length of entire causeway. ²Length of each span. ³Construction of 2 Moscow buildings (the Russia Tower [to be the world's second tallest building] and the East Tower of Federation Tower [to be Europe's tallest building with the spire]) was halted in late 2008.

(continued from page 205)

earthquake in 1989. Designed by noted Italian architect Renzo Piano, the building was a science museum, with exhibits and displays of different kinds of habitats from around the world. Its most notable feature was the roof, a hilly green surface on which a variety of local California plants grew.

A new art museum by Álvaro Siza, the Iberê Camargo Museum, opened in Porto Alegre, Braz. It was built of white concrete in a sculptured style. The building's exhibition spaces were arranged on three floors around a central atrium, and visitors walked from floor to floor on ramps in asymmetrical enclosures that projected from one side of the building.

Among commercial buildings, the most widely noted was probably Piano's 52-story tower for the offices of the *New York Times* in New York City. Piano wrapped the building in a lacy screen made of thin ceramic tubes. The screen gave the tower a soft, almost misty appearance and acted as a sunshade that reduced sun glare inside the building while allowing people to look out. The ground floor included a performance hall that looked onto an interior garden.

Another commercial building that drew considerable attention was the BMW Welt ("World") in Munich. Designed by a firm of architects from Vienna that called itself Coop Himmelb(l)au, it was mostly a very large space for the display of BMW cars. Like the work of some other contemporary architects, this space had few straight lines or right angles but was freely formed with dramatically curving and sloping ramps, walls, and roof. Such free forms had first emerged some years earlier in the work of American architect Frank Gehry. They were made possible by advances in methods of construction and engineering and especially by new computer technology.

Exhibitions, Preservation, and News Events. A number of major exhibitions of architecture appeared during the year. The Museum of Modern Art in New York City presented "Home Delivery: Fabricating the Modern Dwelling." It covered the history of prefabricated houses. As part of the show, five complete premanufactured houses for visitors to wander through were erected adjacent to the museum.

In 2008 the Biennale exhibition held annually in Venice was devoted to architecture. Entitled "Out There: Architecture Beyond Building," the interna-

The Austrian firm Coop Himmelb(l)au designed this building, called the BMW Welt, to house showrooms and a museum for BMW automobiles in Munich.

tional exhibition included a display of thousands of architectural drawings, photos, and models. A theme addressed in many of the works was the need to conserve energy by means of so-called green architecture.

"Eero Saarinen: Shaping the Future," at the Cranbrook Art Museum in Bloomfield Hills, Mich., presented the work of one of the leading architects of the mid-20th century. Finnish-born American architect Saarinen designed such notable buildings as Dulles Airport in Washington, D.C., and the Gateway Arch in St. Louis, Mo. "Richard Rogers + Architects: From the House to the City" displayed the life work of the noted British architect. It opened at the Centre Pompidou in Paris, a building Rogers designed in 1977 when he was in partnership with Piano. At the Hammer Museum in Los Angeles was "Between Earth and Heaven: The Architecture of John Lautner," with photos and models of modern houses that the architect designed in the mid-20th century. He was known for creating dramatic spaceship-like houses, many of them perched in the Hollywood hills with views out over the cityscape of Los Angeles.

One preservation success in the growing effort to save works of the modern movement in architecture was the complete restoration of the Yale School of Art and Architecture. It was a masterpiece by the noted modernist architect Paul Rudolph, who built with rough-surfaced concrete in the architectural style sometimes called New Brutalism. The building was to be named Rudolph Hall. Several houses by Rudolph, however,

were either demolished or in danger, and a Rudolph high school in Sarasota appeared to be doomed despite a major effort by preservationists. In the United Kingdom a battle rose over whether to demolish another New Brutalist structure, the Robin Hood Gardens affordable-housing complex of 1972 by noted architects Alison and Peter Smithson.

The year also had its disappointments. After seven years nothing had yet been completed on the site of the former World Trade Center in New York City, and in New Orleans, despite many efforts, little had been done to replace the housing lost in the Hurricane Katrina floods of 2005. In Berlin a new U.S. embassy, by California architects Moore Ruble Yudell, opened in July to criticism by some Europeans that it appeared to be a security-conscious fortress.

Deaths. Ettore Sottsass, a major figure in Italian design, died at age 90. He created houses and interiors but was better known for the ordinary objects such as typewriters and fibreglass chairs that he designed in a bold, colourful, often witty manner. Other prominent members of the architectural community who died during the year were Julian de la Fuente, 76, for many years the chief assistant to the great architect Le Corbusier; Walter Netsch, 88, a former partner in the firm of Skidmore, Owings & Merrill and the designer of the Air Force Academy chapel in Colorado Springs, Colo.; and Ralph Rapson, 93, the dean of the University of Minnesota College of Architecture for 30 years and the architect of U.S. embassies in Denmark and Sweden. (ROBERT CAMPBELL)

Art and Art Exhibitions

The art world could not avoid the **ECONOMIC STORMS** of 2008, yet **RECORD PRICES** were fetched in several sales. Works in **MIXED MEDIA** and huge **OUTDOOR INSTALLATIONS** drew attention in Europe and the United States. The Olympics brought **CHINESE** artists into the spotlight, and photographic **COMMEMORATIONS** of the events of 1968 abounded.

ART

The art market enjoyed an astonishing run of record-breaking sales through the first nine months of a volatile 2008. In May Lucian Freud's *Benefits Supervisor Sleeping* (1995), a candid portrayal of a corpulent female nude slumbering on a flowered divan, sold by Christie's in New York City for \$33.6 million, surpassing by almost a third the record for a living artist set by Jeff Koons's *Hanging Heart* in the previous year. Another record fell the next day at Sotheby's in London with the \$86.3 million sale of Francis Bacon's *Triptych, 1976*. This large, ambitious figurative allegory, inspired by the ancient Greek myth of Prometheus, exceeded its price estimate by more than \$16 million, marking the top auction price for a contemporary work. Other contemporary artists, including Gerhard Richter, Gilbert and George, Bridget Riley, Rachel Whiteread, and Antony Gormley, broke their own previous sales records. Sotheby's September studio sale, "Beautiful Inside My Head Forever," which featured 223 works (2006–08) by Damien Hirst, blurred the distinctions between auction house and gallery. New works brought in top prices—*The Golden Calf*, a formaldehyde-preserved bull embellished with gold-tipped horns, hooves, and a golden disk sold for more than \$18 million—and Hirst's final total of \$200.7 million set an all-time record for an artist in a solo sale.

The fall's international financial crisis had an immediate effect on all sales. The highly anticipated auction of works by Banksy and other street artists at Lyon & Turnbull's in London moved only one-third of its lots; partial blame was placed on Banksy's refusal to authenticate his

work. Shrinking sales and prices were predicted in all areas with the exception of the rare masterwork, such as the June sale of Claude Monet's *Water Lily Pond* (1919) at \$80.4 million, double the price estimate. Some of the highest sales of the year, including the works by Bacon and Freud, went to Russian and Middle Eastern collectors; this trend was expected to continue. China displaced France as the third most influential market for contemporary art, after the United States and the United Kingdom. Major Western galleries were seeking locations in Asia; for one, the Beijing branch of New York City's PaceWildenstein Gallery opened in August. In October the Russian Mercury group purchased the London-based auction house Phillips de Pury & Co.

Benefits Supervisor Sleeping (1995), a life-size painting by Lucian Freud, sold for \$33.6 million, setting a record for a work by a living artist.

Akira Suemori/AP

Market volatility exacerbated the ongoing controversy over blurred boundaries between art exhibitions and commercial endeavours. In the spring "©Murakami," a retrospective of the works of Takashi Murakami at the Brooklyn Museum, incorporated a Louis Vuitton boutique that sold handbags designed by the artist. In the fall Hirst opened Other Criteria, a shop in London's Marylebone district that marketed cheap collectibles such as T-shirts and postcards alongside expensive artist-designed wallpapers and plates. However, the Richard Prince retrospective at the Serpentine Gallery drew critical fire for placing works for sale in a publicly funded venue. Chanel's "Mobile Art" installation, in a chic pavilion designed by Zaha Hadid, took up temporary residence in New York City's Central Park in October to display and sell works inspired by Chanel's classic quilted, gold-chained handbag commissioned from international artists such as Yoko Ono, Pierre & Gilles, and Daniel Buren. Chanel even provided designer hard hats to the workers who constructed the pavilion.

The new branch of the Haunch of Venison gallery, which was opened by Christie's International (The Group) in New York City in September, ignited hot debates over blurring the line between

An installation by Swiss artist Sylvie Fleury appears inside Chanel's "Mobile Art" pavilion during its stop in Tokyo in May; architect Zaha Hadid designed the pavilion to resemble Chanel's iconic 1955 quilted handbag.

gallery and sales room. The inaugural exhibition, "Abstract Expressionism—a World Elsewhere," which featured works by Jackson Pollock, Clyfford Still, Willem de Kooning, and David Smith, received lukewarm reviews but raised suspicions about the use of a gallery as a potential bulwark for the auction house in a tumbling market. Robert Fitzpatrick, Haunch's international managing director, countered that none of the works on exhibition was for sale, but the gallery's proximity to the auction house's Midtown Manhattan headquarters, as well as the heavy representation of dealers' loans in the exhibition, did little to quiet the controversy. Critics planned to see how the gallery's role in the primary market of discovering and promoting new artists would interact with the auction house's control of the secondary market through setting prices for recognized work.

The installation by Olafur Eliasson (see BIOGRAPHIES), *New York City Waterfalls*, provided a summerlong critically acclaimed public spectacle. On four sites along the East River, Eliasson constructed aluminum towers about 27–37 m (90–120 ft) in height to support cascading sheets of water. Monumental in concept, Eliasson's *Waterfalls* was designed to be temporary and environmentally sensitive. To facilitate removal and avoid defacement of the site, the scaffolds were anchored in concrete bases that sat on "bond breakers" of sand and stone dust contained within sheets of plastic. The water, pumped up from the river at a rate of about 132,500

litres (35,000 gal) per minute, was channeled through "intake filter pools" to protect aquatic life by preventing it from entering the pools; in response to fears that the saltwater spray would damage adjacent plant life, Eliasson reduced the scheduled running hours by half. The shimmering falls' dynamic motion captured every nuance of the evanescent season, reflecting changes in light, shifts of wind, and the effects of illumination—natural and artificial—over the course of day into night. The fireworks display at the Beijing Olympics opening ceremonies also thrilled the public. Designed by Cai Guo-Qiang (see BIOGRAPHIES), whose self-styled specialty was "explosive works," the exhibition over the Birdcage stadium culminated with vast flashing footprints striding across the city; television viewers around the world were disappointed to discover, however, that the pyrotechnics had been computer enhanced for broadcast. Also during the summer, Anish Kapoor (see BIOGRAPHIES), in collaboration with structural engineer Cecil Balmond, unveiled his design for the colossal sculpture *Temenos*, the first of *The Tees Valley Giants* planned for five locations in northeastern England. *Temenos*—which was planned to be some 50 m (164 ft) high and 110 m (361 ft) long and to consist of a taut volume of shaped steel mesh, stretched between two huge rings (one circular and the other oval) and secured by a steel pole—was expected to be a powerful presence in the Middlesbrough landscape.

The overlap of art and other disciplines marked a dominant trend. Inspired by logarithmic equations and the Lobmeyr chandeliers (1965) at the Metropolitan Opera House in New York City, Josiah McElheny explored the big bang theory in *The End of the Dark Ages*, which positioned gas and electric lights around a chrome core. Mark Dion, the winner of the Smithsonian American Art Museum Lucelia Artist Award, described his work as "pseudoscientific," combining the taxonomic methods of natural history with the installation of found and altered objects. The short list for the 24th Turner Prize, released in May, showcased innovation in mixing media. Those honoured included Runa Islam, whose films exposed the technical process behind aesthetic expression; Mark Leckey, for installations that fused film, sound, and performance; Goshka Macuga, who positioned the artist as a collector-curator creating mixed-media environments; and Cathy Wilkes, whose diarist approach featured found objects and ready-mades as well as paintings. In December the prize was awarded to Leckey, who received £25,000 (about \$37,500)—five times as much as each of the runners-up. In the United States, Brazilian artist Cildo Meireles (see BIOGRAPHIES) received the biennial Ordway Prize, given in recognition for midcareer achievement, for his installation and performance pieces celebrating resistance to political and military oppression. Among the MacArthur fellows in 2008 were two artists, Tara Donavon, a Brooklyn-based sculptor who transformed mundane materials, such as drinking straws and Styrofoam cups, into transcendent site-specific organic installations, and Mary Jackson, a Charleston, S.C.-based fibre artist whose coiled vessels made of palmetto and bulrush preserved and transformed regional traditions of sweet-grass basketry.

Art museums turned away from the recent practice of seeking directors with business backgrounds, preferring instead candidates with academic and curatorial accomplishments. After 31 years as the director, Philippe de Montebello left the Metropolitan Museum of Art; his successor, tapestries expert Thomas P. Campbell, had been a member of the museum's Department of European Sculpture and Decorative Arts for 13 years. Thomas Krens stepped down as director of the Solomon R. Guggenheim Foundation in New York City; to replace him, Richard Armstrong left the helm of the Carnegie Museum of

Art in Pittsburgh. Nicholas Penny, senior curator of sculpture at the National Gallery of Art in Washington, D.C., took over the directorship of London's National Gallery from Charles Saumarez Smith, who left to become the secretary and chief executive of the Royal Academy of Arts. (DEBRA N. MANCOFF)

ART EXHIBITIONS

Existential questions rather than aesthetic issues dominated the debates surrounding the biennials and art fairs of 2008. In a year of staggering auction prices, critics and dealers alike repeatedly wondered whether the huge art festivals had outgrown their function and outlived their purpose. These concerns were reflected in the restrained installation of the 74th Whitney Biennial in New York City, curated by Henriette Huldisch and Shamim M. Momin. More than 80 artists were featured on three floors of the museum and in the Park Avenue Armory, but the biennial was smaller, more focused, and more reflective in its outlook than those of recent years. Site-specific installations, performance works, and the moving image dominated the curatorial selections, including M.K. Guth's *Ties of Protection and Safekeeping*, which featured a 152.4-m (500-ft)-long braid of flannel ribbon and hair that

grew to more than three times its length through "therapeutic braiding"—viewers wrote messages on ribbons, which were added, along with hair, throughout the installation—and Coco Fusco's video docudrama *Operation Atropos* (2006) of the experience of the artist and six other women as they underwent a rigorous training program in resisting interrogation. Found objects marked another trend, seen in Jedediah Caesar's *Helium Brick aka Summer Snow* (2006), which was made of studio debris such as paper cups and plywood scraps encased in eerily beautiful resin blocks, and Olaf Breuning's *The Army*, a slyly whimsical light installation using teapots topped with lava lamps. Political statements added to the conversation; for example, works by Adler Guerrier and Omer Fast addressed cultural displacement, and Daniel Joseph Martinez's quietly powerful installation *Divine Violence* (2007) inscribed on plaques the names of organizations that promoted violence.

The fifth Berlin Biennial, "When Things Cast No Shadow," featured the work of more than 110 international artists, including Daniel Guzmán, Goshka Macuga, and Ahmet Ogut, at four very different venues: Mies van der Rohe's sleekly elegant Neue Nationalgalerie, the KW Institute for Contemporary Art, the Schinkel Pavillon, and the 62 vacant lots known as Skulpturenpark Berlin_Zentrum, located in the once-derelict district that had separated East and West Berlin. The innovative program, designed by curators Adam Szym-

czyk and Elena Filipovic, divided the events into "Day"—focused upon viewing the works—and "Night"—a dense and varied schedule of lectures, workshops, films, and performances. The 39th Art Basel (Switz.), which encompassed more than 300 galleries and 2,000 artists, followed the conventional formula. As always, the festival emphasized contemporary and modern masters; satellite venues featured the work of emerging artists. Although dealers and critics questioned whether the large number of fairs and festivals reduced the quality of works exhibited, the year's schedule was a full one and included the 16th Biennale of Sydney, the 2nd Singapore Biennale, the 2nd Art Dubai (U.A.E.), the 7th SITE Santa Fe (N.M.) International Biennial ("Lucky Number Seven"), and Prospect.1 New Orleans.

Museums offered an impressive range of international contemporary artists in monographic exhibitions. Cai Guo-Qiang's retrospective "I Want to Believe" at the Guggenheim Museum in New York City traced his career-long fascination with explosive materials and pyrotechnics as well as his embrace of modern physics, Daoist cosmology, Buddhist philosophy, and Chinese myth and medicine. (See BIOGRAPHIES.) His spectacular installation *Inopportune: Stage One* (2004), a simulation of a car bombing using sequenced lighting and nine autos that appear to tumble through space, filled the central rotunda of the museum in a destabilizing convergence of appalling violence and breathtaking

Olaf Breuning's The Army, an installation made up of teapots and lava lamps, was displayed from March to June as part of the 74th Whitney Biennial in New York City.

Ruby Washington—The New York Times/Redux

beauty, and his *Fetus Movement II: Project for Extraterrestrials No. 9* (1991) featured exploded gunpowder and ink on paper; the work was mounted on wood to create an eight-panel screen. “Past, Present, Future” at the Institute of Contemporary Art in Boston featured 14 serenely monumental sculptures by Anish Kapoor. (See BIOGRAPHIES.) In London comprehensive surveys shed new light on the work of Peter Doig at Tate Britain and of Cy Twombly at Tate Modern. “©Murakami” at the Brooklyn Museum demolished the already-crumbling barrier between art and commodity in an overview of Takashi Murakami’s anime- and manga-influenced paintings, videos, and marketable designs such as handbags and phone caddies; in contrast, Olafur Eliasson’s solo show “Take Your Time” at the Museum of Modern Art (MoMA) in New York City emphasized a deep engagement with nature and sustainable living. (See BIOGRAPHIES.)

The Museum of Contemporary Art (MCA) in Chicago hosted the largest traveling exhibition since the 1990s of the work of Jenny Holzer. Her signature LED (light-emitting diode) signs filled the galleries, and projected light works illuminated the exteriors of historic buildings around the city, including the Merchandise Mart, the Civic Opera House, and the Tribune Tower, as well as the museum’s facade. The MCA also presented a selective survey of Jeff Koons’s best-known works, but far more controversial was the installation of 17 of his sculptures in eye-popping colours, including his grand-scale *Balloon Dog (Magenta)*, on the grounds and in the palace at Versailles, France. As the first contemporary art retrospective presented at the chateau, “Jeff Koons Versailles” polarized public and critical opinion about the suitability of the elegant venue for Koons’s often cartoonlike creations.

New York City museums provided perspectives on the historic art of the 20th century. “Action/Abstraction: Pollock, de Kooning, and American Art,” curated by Norman L. Kleeblatt at the Jewish Museum, investigated post-World War II painting and sculpture from the diametric positions of rival critics Harold Rosenberg and Clement Greenberg. Postwar art was also the subject of “Color Chart: Reinventing Color, 1950 to Today,” curated by Ann Temkin at MoMA. In “Buckminster Fuller: Starting with the Universe” at the Whitney Museum in New York City, curators Michael Hays and Dana Miller presented the

breakthrough designs of one of the most visionary thinkers of the 20th century. Fuller—who was known for his desire to do “more with less,” as well as for his hallmark Dymaxion car and geodesic dome—appeared prescient in his concerns with homelessness and diminishing resources. “Art and China’s Revolution” at the Asia Society and Museum presented the first critical overview of revolutionary sentiment under the regime of Chairman Mao Zedong. Curators Melissa Chiu and Zheng Shengtian (who was a young artist during Mao’s rule) gathered works ranging from traditional ink scroll paintings to posters and other ephemera, as well as characteristic large-scale oil paintings, such as Chen Yanning’s *Chairman Mao Inspects the Guangdong Countryside* (1972).

Three interlinked exhibitions in Paris explored Pablo Picasso’s response to iconic works of European art history. “Picasso and the Masters” at the Grand Palais traced Picasso’s enduring engagement with his Spanish forebears El Greco, Diego Velázquez, and Goya, as well as his admiration for French modernists, including Eugène Delacroix, Manet, Gauguin, and Cézanne. The Louvre displayed Picasso’s variations (1954–55) on Delacroix’s *Women of Algiers in Their Apartment* (1834), and Picasso’s invention (1962) upon Manet’s *Déjeuner sur l’herbe* (1863) was featured at the Musée d’Orsay.

In an unprecedented loan exhibition, “The Impressionists: Master Paintings

The sculpture Balloon Dog (Magenta) by American artist Jeff Koons was on view in the palace at Versailles, France, from September to December as part of a controversial retrospective.

Benoit Tessier—Reuters/Landov

from the Art Institute of Chicago,” 92 hallmark works by painters such as Monet, Renoir, Gustave Caillebotte, Van Gogh, Gauguin, and Cézanne, traveled to the Kimbell Art Museum in Fort Worth, Texas. An exhibit seen only at the Art Institute, “Watercolors by Winslow Homer: The Color of Light,” curated by Martha Tedeschi, defined the central importance of Homer’s mastery of the luminous medium to his life and career through a close investigation of more than 100 works within a technical and critical context.

Several major artists died, including American modernist Robert Rauschenberg, American sculptors Robert Graham and George Brecht, and the witty British painter Beryl Cook. (See OBITUARIES.) Other losses included those of groundbreaking Iraqi painter Naziha Salim; John Russell, longtime critic for the *New York Times* and *The Times* (London); Anne d’Harnoncourt, director of the Philadelphia Museum of Art; and art scholar Michael Baxandall.

(DEBRA N. MANCOFF)

PHOTOGRAPHY

The year 2008 marked the 40th anniversary of a series of global upheavals that came to define 1968: the student riots in Paris, the Tet Offensive of the Vietnam War, the assassinations of U.S. Sen. Robert F. Kennedy and the Rev. Martin Luther King, Jr., and the Prague Spring, which culminated in the invasion of Czechoslovakia (now the Czech Republic and Slovakia) by the Soviet Union. Each of these anniversaries was remembered with exhibitions across Europe and North America. The international agency Magnum Photos went farther than most by launching a Web site dedicated to the year (www.magnum1968.com).

In other notable news, in a merger agreement private equity firm Hellman & Friedman in February paid \$2.4 billion for Getty Images. British photographer Vanessa Winship captured headlines when she won the \$25,000 top prize at the inaugural Sony World Photography Awards.

Magnum’s 1968-themed exhibitions began with “1968 on Record: A Year of Revolution,” which was mounted (February 8–June 20) at the British Library, London, featuring photographs by Bruno Barbey and Philip Jones Griffiths. Sadly, Griffiths died during the exhibition (see OBITUARIES).

In New York City “Invasion 68: Prague,” a collection of photographs

Tomas Hudcovic—isifa/Getty Images

Peter Dubcek—son of Alexander Dubcek, Czechoslovakia's leader during the Prague Spring of 1968—visits a photographic exhibit commemorating the period on August 21 in Bratislava, Slvk.

taken by Josef Koudelka during the Soviet invasion of Prague, was cohosted by the Aperture Gallery (September 4–October 30) and the Pace/MacGill Gallery (September 4–October 11). New York was an appropriate location for the exhibit; Koudelka's negatives had first surfaced there after being smuggled out of Prague soon after the invasion.

New York also became the final destination in December 2007 of the mysterious "Mexican Suitcase," which contained an archive of more than 3,500 negatives made during the Spanish Civil War (1936–39) and believed lost for many years. The negatives—the work of Magnum cofounders Robert Capa and David Seymour and of colleague Gerda Taro—had been abandoned by Capa when he left Paris for the United States in 1939. The International Center of Photography in New York City was given the task of restoring and digitizing the archive for eventual posting on the Magnum Web site.

George Rodger, another Magnum cofounder, was the subject of a major show marking the centenary of his birth. "Contact: George Rodger's War Photographs," on view (February 9–April 27) at the Imperial War Museum North, Manchester, Eng., featured 100 prints from the World War II era, including images of the London blitz and the liberation of the Bergen-Belsen concentration camp.

On a more intimate scale, Wexford Arts Centre, Cornmarket, Ire., hosted (March 3–April 12) an evocative series of black-and-white images by Michael Snoek. "Portraits of the Artist as an Old Man" focused on Johnny Whitty, an oc-

togenarian blacksmith working near the village of Ballymitty, County Wexford. The dramatic impact of globalization on the landed peasantry and the working classes in China infused Tokyo-based American photographer James Whitlow Delano's exhibition "Empire: Impressions from China." This large collection of black-and-white images, which were taken over a 10-year period (1994–2004) and had been on view in several other countries, drew vast crowds (May 17–June 18) at the m97 Gallery in the heart of Shanghai.

Modern Chinese society was ably illustrated by contemporary Chinese photographer Chen Chunlin, who was awarded his first solo exhibition (June 28–August 21) at the m97 Gallery. His show, "Lessons Learned in One Day," comprised a series of giant 3 × 1.8-m (about 118 × 71-in) photographs from different Chinese cities, each showing dozens of separate portraits of members of the public taken in one day at the same location.

An exhibition in China of work by a modern Chinese photographer would have been unheard of even 10 years ago, a point made plain earlier in the year by the show "New Photo—Ten Years," held (February 9–March 16) at the Carolina Nitsch Project Room in New York City. The exhibition, which originated in Beijing and later traveled to Houston, commemorated the underground Chinese magazine *New Photo*, which published (1996–98) just four issues. With print runs of 20–30 copies, the magazine still circulated widely enough to provide China's growing legion of modern photographers a vehi-

cle at a time when there were few outlets for their work.

Among the most striking exhibitions of colour photography in 2008 was "Ernst Haas: Total Vision," shown (September 23–November 1) at the Atlas Gallery, London. Haas was one of the first photojournalists to use colour successfully, paving the way for other photographers; the exhibition also revealed his mastery of black and white.

British photographer Martin Parr further cemented his reputation for making arresting flash-lit colour images of contemporary society with his latest show, "Parrworld," at the Haus der Kunst, Munich (May 7–August 17), among other venues. The exhibition demonstrated Parr's usual mix of irony and social extremes—for example, juxtaposing his images of the 2007 Moscow Millionaire Fair with a 2005 Mark Neville print of working-class revelers enjoying their Christmas party at Port Glasgow Town Hall. (Unlike other exhibitions, "Parrworld" was notable for revealing something of the photographer's influences, in this instance displaying a selection of Parr's own collection of photography, postcards, books, and souvenirs.)

In France the sale of a nude portrait taken in 1993 by Michael Comte of former Italian model Carla Bruni (who married French Pres. Nicolas Sarkozy in February) made news on April 10 when it fetched \$91,000 at auction at Christie's New York. The portrait sold for more than 20 times its asking price. At the same auction, Irving Penn's 1996 image of British model Kate Moss sold for \$97,000. They were both outsold, however, by Richard Avedon's 1959 study of actress Brigitte Bardot, which went for \$181,000.

France mourned the loss on September 3 of war photographer Françoise Demulder, age 61, who in 1977 had become the first woman to win the coveted World Press Photo of the Year Award. Her black-and-white image of a Palestinian woman pleading with a Christian Phalangist militiaman in Beirut during Lebanon's civil war was quickly adopted by the Palestine Liberation Organization as a symbol of its struggle for a homeland in the Middle East. In October William Claxton, an American photographer best known for his portraits of jazz musicians and actors, died at age 80. Other losses included Cambodian photojournalist Dith Pran and American *Life* magazine photographer Cornell Capa. (See OBITUARIES.)

Business Overview

The prices of **OIL**, **GOLD**, and other commodities **SPIKED** at midyear. High fuel prices and tight credit markets **DEVASTATED** American automakers and **PRESSURED** airlines and aircraft manufacturers. The **CREDIT-MARKET CRISIS** also embroiled the **FINANCIAL SECTOR** and utilities and contributed to a **SLUMPING ECONOMY**.

Automobiles. The American automotive industry began 2008 in precarious condition, and as the year unfolded, the situation went from bad to worse. First, gasoline prices of \$3.50 to \$4 per gallon throughout much of the United States during the spring and summer of 2008 crushed the already-declining demand for sport-utility vehicles (SUVs), pickup trucks, and minivans. Then the credit markets dried up, which affected both automakers, whose borrowing costs spiked, and consumers, who faced tighter lender standards and a reduction in available leases. In June alone, automobile sales in the U.S. fell 18% year on year, and in October they fell 31.9%. By late in the year, facing the prospect of running out of cash, the heads of the Big Three automakers testified before the U.S. Congress to request billions of dollars in government-provided loans to stay afloat. Although the Senate turned down the companies, in mid-December U.S. Pres. George W. Bush drew on a fund primarily intended to help bail out the financial sector to provide General Motors and Chrysler up to \$17.4 billion in emergency loans with strict conditions, such as a requirement to cut labour costs. Ford, in the best financial shape of the Big Three companies, opted not to take any federal assistance, but it supported the loans since a failure of either GM or Chrysler would also threaten Ford's suppliers. The ongoing worldwide economic crisis helped push vehicle sales in the U.S. down more than 35% in December year on year, and total sales for 2008 were the lowest in about 50 years.

Although Ford experienced record quarterly losses on the heels of a \$2.7 billion loss in 2007, it had a line of credit

of about \$11 billion that it had negotiated in 2006, and in March 2008 Ford completed the sale of its Jaguar and Land Rover units to India's Tata Motors, which netted Ford \$2.3 billion. CFO Don Leclair and two board members abruptly left Ford in October, which suggested to analysts that the Ford family (which controlled 40% of shareholder votes) was attempting to tighten control over the automaker.

Since the late 1990s General Motors had bet heavily on the SUV for its profits, so when the sale of SUVs collapsed, GM was left stranded. In late 2007 its primary SUV plant, in Janesville, Wis., produced 20,000 SUVs per month, but a year later the monthly output was only about 3,000 SUVs, and the plant was slated to be closed. GM posted a loss of \$15.5 billion in the second quarter, and by late in the year the company was losing cash at a pace of more than \$1 billion per month. After pre-

liminary merger discussions with Ford collapsed in September, GM considered merging with its other Big Three rival, Chrysler. The deal would in theory create a new automaker with \$250 billion in annual revenue, a 30% share of the American market, and—most important—about \$30 billion in cash reserves. It would also likely entail massive layoffs and downsizing, since GM and Chrysler had several overlapping brands and competing production facilities. The proposed merger soon hit a wall, however; when GM and Cerberus Capital Management, Chrysler's owner, said that they were unable to find investors and banks to provide financing for the deal. As GM struggled to become profitable, it received the first \$4 billion of its federal assistance on December 31.

For Chrysler the proposed GM merger came when it also was running out of options. The automaker, which Cerberus had acquired in the spring of 2007, had cut production costs in anticipation of a market slowdown in 2008. The breadth of the market's collapse, however, left Chrysler reeling, and the company said that it would lay off 25% of its white-collar employees by the end of the year. Over the first eight months of 2008, Chrysler lost \$400 million as sales slipped by 24%. In September Cerberus approached Chrysler's former owner, Daimler, about purchasing Daimler's remaining 19.9% stake in Chrysler, and it later entered into ne-

Reed Saxon/AP

gotiations with Japan's Nissan and France's Renault to form a manufacturing and development alliance, but no agreements were reached. Chrysler announced in mid-December that it was idling all 30 of its North American manufacturing plants for at least a month to save cash, and at year's end the company anticipated soon receiving its initial \$4 billion of federal assistance.

Japanese automaker Toyota profited from the stumbles of its American rivals and was set to outsell GM for the year and become the world's largest automaker. Through June Toyota sold about 300,000 more vehicles than GM worldwide. Nevertheless, Toyota was far from immune to the collapse of the American market, and in December its vehicle sales in the U.S. were down almost 37%. By the end of the year Toyota forecast that it would report its first-ever annual operating loss.

Thanks to sales of passenger cars such as the Civic and Accord sedans, Honda's sales in the U.S. were up 1.7% in the first eight months of 2008, but by year's end it also had recorded a decline in sales, with a drop of 8.2% for the year.

Many European carmakers were hit with declining revenue as buyer demand worsened in the second half of the year. France's Peugeot-Citroën experienced a 5.2% drop in its third-quarter sales and said that it would slash its European car production by 30%. Sweden's Volvo's net profit fell 37% in the third quarter, and the company noted that it had almost as many order cancellations as it did new orders.

The most dramatic growth potential in terms of new-car production and sales was in India and China. India swiftly emerged as a major production hub for small cars, including the Nano, introduced by Tata Motor's chairman, Ratan Tata, in January. (See BIOGRAPHIES.) Among the manufacturers that were operating plants in India were Nissan and Suzuki from Japan and Hyundai from South Korea. In China overall car sales rose 7.3% for the year to about 6.8 million. China's passenger-car sales shot up 24% in March alone, after foreign automakers introduced 13 new models in the first quarter. In three years China's domestic car sales had expanded by more than half.

Airlines. For 2008 the aviation industry was buffeted on one side by sky-

Robert Sorbo—Reuters/Landov

On September 3 Boeing machinists in Washington march to their union hall to vote on a company contract offer. Boeing workers rejected the offer and initiated a strike that lasted until November 1.

rocketing energy prices and on the other by a souring economy with diminished ridership. At least 25 global airlines either were sold or went bankrupt in 2008, and the remainder struggled to keep solvent with a combination of higher fares, reduced flights, and new fees (such as fuel surcharges and checked-bag surcharges). At the start of the decade, an average 15% of the cost of an airline ticket paid for jet fuel, but by the summer of 2008, as the price of oil peaked, the figure had risen to 40%. With the higher ticket costs, ridership was down; the U.S. Federal Aviation Administration (FAA) estimated that about 2.7 million fewer people would fly in the summer of 2008 than in the previous summer. (As fuel prices subsequently declined through autumn, many airlines removed their fuel surcharges only to raise their base fares by about the same amount.)

Delta Air Lines and Northwest merged to form a carrier with more than \$35 billion in revenue and a fleet of 800 aircraft. UAL (the parent of United Airlines) spent much of the year in negotiations with U.S. Airways and floated the idea of acquiring Continental, but no deals were reached.

In the United States, energy costs leveled the playing field between legacy carriers and newer discount airlines. A combination of spiraling fuel bills and a decreased ability to tap the capital markets led to the shutdown or bankruptcy of more than a half dozen discount airlines, including Frontier, Skybus, Aloha, and ATA. The once fiercely

independent JetBlue Airways sold off a 19% stake to Lufthansa. Even Southwest Airlines, formerly the best performer of the sector, encountered turbulence. In March the airline was forced to ground 38 of its planes because it could not determine whether safety inspections had been performed adequately, a controversy that led the FAA to fine Southwest \$10.2 million and to propose new safety rules that affected about 1,200 wide-body jetliners.

European airlines also suffered. Ryanair posted only its second quarterly loss as a public company in June. Silverjet, a British business-class-only airline, shut down in May after only 18 months of service. Alitalia, which had not reported a net profit since 2002, was placed in bankruptcy in August. CAI, a consortium of Italian investors, agreed in December to purchase the airline's main assets.

Aircraft. Aircraft manufacturers in 2008 faced a number of challenges, from the impact of high oil prices to operations that were shut down by strikes. Although industry leaders Boeing and Airbus had compiled a backlog of 7,000 aircraft orders over the previous few years, they faced the potential of cancellation of up to one-third of their bookings as airlines downsized in the face of the declining economy. In February Boeing lost out on a \$40 billion air force contract for aerial refueling tankers to a partnership that included Airbus and Northrop Grumman. Boeing, aided by the finding by the U.S. Government Accountability Office that the air force had improperly run the bidding process, pushed to reenter the bidding, and a new competition was set for 2009. About 27,000 Boeing machinists walked off the job in September after talks broke down for a new three-year contract. The strike, which lasted until November 1, was driven in part by machinists' discontent with the delays in Boeing's 787 Dreamliner program, which was kept to a slow pace partly owing to missed deadlines by Boeing's outsourced suppliers. Airbus spent the year trying to reduce costs, with its parent EADS pushing to cut costs by €2.1 billion (about \$3.25 billion) by 2010. The measures would include the elimination of 10,000 jobs.

Both Boeing and Airbus also had to contend with a new potential rival. In

(continued on page 217)

The Future of Fossil Fuel

During the first half of 2008, prices of fossil fuels—petroleum (oil), natural gas, and coal—rose steeply. Crude-oil prices, for example, set record highs on a regular basis and soared for a short time to more than double the average price of crude oil in 2007. Because fossil fuels were crucial sources of energy worldwide, the rapid rise in prices spurred debate about the accessibility of global fossil-fuel supplies, the extent to which producers would be able to meet demand in decades to come, and the potential for alternative sources of energy to mitigate concerns about energy supply. The debate focused in particular on petroleum, globally the most important fossil fuel and the primary source of fuel for transportation.

How much oil does the Earth have? The short answer to this question is, "Nobody knows." In its 2000 assessment of total world oil supplies, the U.S. Geological Survey (USGS) estimated that about 3 trillion bbl of recoverable oil originally existed on Earth and that about 710 billion bbl of that amount had been consumed by 1995. The survey acknowledged, however, that the total recoverable amount of oil could be higher or lower—3 trillion bbl was not a guess but an average of estimates based on different probabilities. This caveat notwithstanding, the USGS estimate was hotly disputed. Some experts said that technological improvements would create a situation in which much more oil would be ultimately recoverable, whereas others said that much less oil would be recoverable and that more than one-half of the world's original oil supply had already been consumed.

There was ambiguity in all these predictions. When industry experts spoke of total "global oil reserves," they referred specifically to the amount of oil that was thought to be recoverable, not the total amount remaining in the Earth. What was counted as "recoverable," however, varied from estimate to estimate. Analysts made distinctions between "proven reserves"—those that could be demonstrated as recoverable with reasonable certainty, given existing economic and technological conditions—and reserves that might be recoverable but were more speculative. The Oil & Gas Journal estimated in late 2007 that the world's proven reserves amounted to roughly 1.3 trillion bbl. To put this number in context, the world's population consumed about 30 billion bbl of oil in 2007. At this rate of consumption, disregarding any new reserves that might be found, the world's proven reserves would be depleted in about 43 years.

The world's oil is not distributed evenly by region. The overwhelming majority of proven oil reserves are located in the Middle East. As of 2007 the Middle East region (including Iran but not North Africa) laid claim to about 56% of the world's total proven reserves—that is, more than the rest of the world combined. Following the Middle East were Canada and the United States, Latin America, Africa, and the region occupied by the former Soviet Union. Each of these regions contained less than 15% of the world's proven reserves.

The amount of oil a given region produces is not always proportionate to the size of its proven reserves. As of 2007 the Middle East contained most of the world's proven reserves but accounted for only about 30% of global oil production (though this was still more

than any other region). The United States, by contrast, laid claim to only about 1.5% of the world's proven reserves but produced about 10% of the world's oil.

Crude oil is a mixture of hydrocarbons (compounds composed of hydrogen and carbon) with small amounts of other chemical elements, and it exists in a liquid state both when underground and at the Earth's surface. Crude oil accounts for most global oil reserves. Global oil-supply figures typically also include liquid hydrocarbons from other sources, such as (1) condensates and natural gas liquids, which exist underground as gases but naturally condense into liquids as they are brought to the surface, (2) tar sands, which contain a highly viscous form of oil that is expensive to extract, and (3) oil shale, a type of sedimentary rock that can be used to produce an oil substitute called kerogen. Other factors that can enter into global oil-supply figures include refinery gain (volume expansion through the refining process) and supplies of oil substitutes, which can satisfy oil demand. In 2008 about 15% of the global oil supply was made up of liquid hydrocarbons other than crude oil. The percentage was increasing, and some analysts expected that 50% of oil-production growth between 2008 and 2020 would come from alternative forms of oil and from oil substitutes.

The rise in oil prices in early 2008 sparked discussion over whether the world was beginning to run out of oil. It was clear that the Earth had a finite amount of oil and that global demand was expected to increase. In 2007 the National Petroleum Council, an advisory committee to the U.S. secretary of energy, projected that demand for oil would rise from 86 million bbl to as much as 138 million bbl per day in 2030. Yet experts remained divided on whether the world would be able to supply so much oil. Some argued that the world had reached "peak oil"—its peak rate of oil production. The controversial theory behind this argument drew on studies that showed how production from individual oil fields and from oil-producing regions tended to increase to a point in time and then decrease thereafter. (Oil production in the continental United States increased steadily through the early and mid-20th century until it peaked in 1970; by 2008 it had declined by almost 50%.) Peak-oil theory suggested that once global peak oil had been reached, the rate of oil production in the world would progressively decline, with severe economic consequences to oil-importing countries.

A more widely accepted view was that, through the early 21st century at least, production capacity would not be limited by the amount of oil in the ground but could be limited by other factors, such as geopolitics or economics. One concern was that the growing dominance by nationalized oil companies, as opposed to independent oil firms, could lead to a situation in which countries with access to oil reserves would limit production for political or economic gain. A separate concern was that nonconventional sources of oil—such as tar-sand reserves, oil-shale deposits, or reserves that are found under very deep water—would be significantly more expensive to produce than conventional crude oil unless new technologies were developed that reduced production costs.

(LEE HUDSON TESLIK)

(continued from page 215)

May the Chinese government launched Commercial Aircraft Corp. of China (CACC). Aircraft manufacturers expected that China would require up to 2,800 new planes in the next 20 years, and CACC was founded to ensure that Chinese manufacturers secured a substantial share of that market.

Metals. The fortunes of metals producers through the first half of 2008, from steel to copper, depended in great part on the impact of rising commodity prices. Producers walked a thin line between welcoming price inflation, since it boosted their business's bottom lines, and fearing it, since inflation meant increased energy-related costs and, ultimately, lessened demand.

Steelmakers, for example, saw general improvements in their balance sheets over the summer as months of steel-price increases helped reduce the pain of increasing raw material and energy costs. (Global prices rose 40% to 50% between December 2007 and May 2008.) U.S. Steel posted second-quarter net income of \$668 million, a more than 100% increase year on year. Luxembourg's ArcelorMittal, the world's largest steelmaker in terms of production, earned a record \$13.09 billion in the first half of 2008 and was on pace to match that amount in the second half. As the year waned, however, there were signs of flattening demand.

There was also growing tension between miners and producers. Australian top mining companies Rio Tinto and BHP Billiton pushed for massive increases in their benchmark prices. In early summer, for example, they demanded and received an 85% increase for iron ore in negotiations with China's biggest steelmakers. As demand decreased in the summer and fall, however, China's steel mills began postponing iron-ore deliveries, and analysts predicted that the slowdown could reduce sales by 10% by year's end. BHP spent much of the year attempting to carry out a \$130 billion hostile takeover of Rio Tinto.

Other metal sectors also faced dwindling demand. Copper hit a three-year low of \$2 per pound in October after Chinese demand waned. The price further fell to below \$1.30 per pound in mid-December. From July to September aluminum prices fell more than 20% to \$2,500 per metric ton, while producer inventories increased by 40%. By the end of the year, prices dropped to less than \$1,500 per metric ton. China, which experienced electric-

power shortages, was forced to cut aluminum output by 10%. Even Russia's RUSAL, the world's largest aluminum producer, considered shuttering some of its high-cost smelters. The largest American producer, Alcoa, was slammed by increased costs of production and raw materials and declining demand from automakers and other manufacturers. In the third quarter Alcoa posted a 52% profit decline and said that it would reduce capacity and halt all nonessential capital projects.

Even gold, once considered a safe haven in times of economic volatility, was unpredictable. By March gold futures contracts had reached \$1,000 per troy ounce. In the summer, however, with demand collapsing (jeweler demand for gold fell 24% in the second quarter alone), gold prices began to deflate, and by August gold futures had given up all of the year's accumulated gains. Even more frustrating to gold investors, the commodity's price was wildly volatile in the third and fourth quarters, bouncing up to \$986 per troy ounce and down to about \$700.

Chemicals. The leaders of the global chemicals industry in 2008 largely managed to keep a steady pace as the economic turmoil began, thanks to a combination of price hikes and increased diversification. Dow Chemical posted a 6.2% gain in third-quarter net income, since it was able to use two major across-the-board price hikes in the summer to offset increased energy costs, which rose by 48% during the third quarter alone. Dow hoped that its acquisition of specialty-chemicals maker Rohm and Haas would help widen its profit margins. In December, however, Dow said that it would be reducing its workforce by about 11%, or 5,000 jobs. DuPont was also managing to keep afloat despite the slump in automobiles and housing, and it posted an 18% increase in first-half earnings. The company had sought product diversification with moves into areas such as biofuels, but it also reduced its workforce late in the year, cutting 2,500 jobs.

Petroleum and Natural Gas. In 2008 the global energy sector both benefited and suffered from the caprices of energy prices. For much of the first half of the year, oil and gas prices were at record highs. Oil peaked at \$147 per barrel in early July. By August, however, indications of a global recession had appeared, and prices began to collapse. Much of the drop was the result of declining consumption—the U.S. Department of Transportation said that the to-

tal distance driven in the U.S. in August fell by 5.6% year on year, the biggest drop reported since 1942, the year data began to be collected. Crude oil fell to \$120 per barrel in August and to less than \$70 per barrel by the end of October. The price drop prompted OPEC to slash its output by 1.5 million bbl per day, but the price continued to fall, and in late December it slipped to as low as \$36 per barrel.

Many analysts expected a wave of consolidation among oil and gas producers, in part because the "supermajor" oil companies such as ExxonMobil and BP and the "superindependents" such as Occidental Petroleum had massive cash reserves. (The five largest Western oil companies had \$72.6 billion in cash at the end of second quarter 2008.) Their likely targets included newer companies such as Petrohawk Energy that relied on a mix of debt and equity to finance their growth. With the banks essentially shuttered in terms of lending in the latter months of 2008, such companies faced difficulty in finding capital to keep their wells active.

The top global energy companies also began to address a long-simmering problem—the fact that their production and their oil and gas holdings were leveling off or declining, which left much of the world's untapped oil reserves in the hands of state-owned energy companies. The 10 largest holders of petroleum reserves in the world were all state-owned companies, including Russia's goliath Gazprom, whose daily crude-oil and gas production was greater than that of Saudi Arabia. By contrast, even at the height of the oil-price boom in the second quarter, ExxonMobil said that its production of oil and gas fell by 7.8%.

Oil- and gas-rich countries flexed their muscles, often at the expense of the former top oil producers and would-be competitors. In February Venezuela's state-owned oil company, Petróleos de Venezuela, cut off sales of oil and gas to ExxonMobil in retaliation for a legal dispute. Russia forced top global producers to beg for scraps: Total and StatoilHydro agreed to stringent terms with Gazprom (they would not own the gas and would have to sell all the gas they produced to Gazprom) in order to have access to the Shtokman gas field. Moreover, the Russian government tightened its grip on BP's Russian joint venture, TNK-BP, and several top executives of TNK-BP resigned. The loss of control over its half of TNK-BP could prove catastrophic for BP, since the joint venture had come to account for nearly one-

fifth of BP's reserves and about one-quarter of its oil production.

Utilities. The global utilities market endured a turbulent year marked by wild price swings. As the year ended, utilities braced for an anticipated massive wave of industry consolidation. In October Exelon made a \$6.2 billion unsolicited bid to buy NRG Energy, a combination that would create the largest American power company, with \$68.8 billion in assets.

Driving the potential of consolidation was the fact that many power companies that sold electricity in deregulated markets were crushed by the stock market collapse in September and October. For example, the market capitalization of Reliant Energy (Houston) fell by 75% in a single month, and the shares of several other major utilities sold at a fraction of the actual value of their power plants, let alone their companies. The credit-market crunch also hurt utilities, many of which relied on the debt markets to finance at least one-half of the costs of building power plants.

Other blockbuster deals included Warren Buffett's Berkshire Hathaway's \$4.7

billion purchase of Constellation Energy Group (Baltimore, Md.), which outbid the French utility Électricité de France (EDF). EDF in turn agreed to buy the British Energy Group for \$23 billion, a deal that could spur the revival of the British nuclear power industry. EDF said that it intended to build up to five nuclear reactors in Britain.

Pharmaceuticals. In 2008 drug manufacturers readied themselves for a future of limited promise. Top manufacturers, whose profits had been under siege by generic-drug manufacturers, faced within a few years the end of patent protection to more than three dozen of the industry's top-selling drugs, a change that could wipe out \$67 billion of annual sales by 2012. Unhappy with the lack of new drug prospects, top manufacturers began downsizing their research and development (R&D) units. GlaxoSmithKline said in October that it would eliminate up to 850 jobs in R&D, about 6% of its R&D staff, and that it would likely increase its use of outside research units. Merck announced that it planned to gut 12% of its workforce and said that it would shutter three research

sites as part of the downsizing. Pfizer disclosed that it would abandon research into heart disease (which had resulted in its cholesterol-lowering drug Lipitor), obesity, and bone health to focus on more profitable areas such as cancer research.

Leading manufacturers spent 2008 looking for stopgap solutions to their longer-term woes. GlaxoSmithKline, for example, worked to modify and find new uses for the drugs it already sold, a strategy that had accounted for 27% of its sales growth over the previous seven years. Pfizer extended the profitable life of its blockbuster Lipitor drug by cutting a deal with Indian generic manufacturer Ranbaxy Laboratories. Ranbaxy agreed to keep its generic version of Lipitor off the U.S. market until late 2011. The arrangement would provide Pfizer 20 additional months of exclusivity to Lipitor, which generated \$13 billion in revenue annually. In return, Ranbaxy was granted the right to sell a generic version of Pfizer's Caduet seven years before the expiration of its patent.

Tobacco. As they had for much of the previous decade, tobacco manufacturers spent 2008 contending with declining American smoking trends and looking to expand into emerging markets and diversifying their product lines. Manufacturers were betting on continued growth in less-developed countries such as China and India. Philip Morris International, which became a stand-alone company in March (separating from its parent Altria Group), began an aggressive global push of its products in countries such as Pakistan (where smoking had increased 42% since 2001) and Ukraine. By contrast, Altria's American cigarette-manufacturing operation, Philip Morris USA, faced declining domestic cigarette sales of 2.5% to 3% annually.

Finance. The credit crisis that began in 2007 and the failure of several large banks and other financial institutions, combined with soaring oil and food prices, pushed the world economy into a global recession in 2008. (See Special Report, on page 170.) Stock markets fell throughout the year, with all major bourses down by at least 30% and some plummeting 50% or more. In the U.S., the Dow Jones Industrial Average closed at 8776.39, a drop of 33.8% for the worst annual loss since 1931, and a plunge of 37.7% from the all-time high of 14,087.55 set in October 2007. (For Selected Major World and U.S. Stock Market Indexes, see TABLE.)

Microsoft hinted that its much-criticized Windows **VISTA** might be replaced early. **INTERNET VIDEO** raised questions about **DATA-DOWNLOADING LIMITS**, while the amount of TV content distributed through the Internet was increasing.

Smartphone: The New Computer. The market for the smartphone—in reality a handheld computer for Web browsing, e-mail, music, and video that was integrated with a cellular telephone—continued to grow in 2008. According to research firm Gartner, in the second quarter, worldwide smartphone unit sales increased at a rate of 15.7% year-on-year. The fastest-growing market was North America, with 78.7% sales growth. Sales in Western Europe were up 29.3%.

The rise in sales was fueled in part by Apple's introduction in July of the iPhone 3G (the 3G referred to third-generation wireless networks, which sent and retrieved data more rapidly). The iPhone 3G was in high demand; one million iPhone 3Gs were purchased during its first three days on the market. There were early technical problems, which included dropped calls and poor connections, but it was unclear whether the problems were primarily the responsibility of Apple or of AT&T, the only American network on which the iPhone could be used.

The iPhone and a similar device, called iPod Touch, created a new market for third-party applications software, such as games, that could be downloaded from Apple's online App Store. Apple claimed that consumers downloaded more than 100 million applications, some free and some for purchase, in the first 60 days that they were offered.

Google's first smartphone, a model from Taiwan-based cell-

phone maker HTC called the G1, used Google's Android operating software. Like the iPhone, the G1 was controlled by a touch screen, but unlike the iPhone, it had a physical keyboard rather than a virtual one on the screen. The G1 was initially available only from T-Mobile in Europe and in the U.S., where it initially cost \$179 with a two-year cell-phone contract, slightly less than the iPhone. The consensus was that the Google phone had broken little new ground and thus was simply a competitive phone introduced after the iPhone and the BlackBerry, from Research in Motion.

The popularity of smartphones was aided by another technological trend in the United States: more Americans than ever before were giving up their traditional landline telephones for cellular telephones. In a survey of Internet

T-Mobile introduced its G1 smartphone, based on Google's Android OS, in October. The display panel was designed to slide open to provide access to a keyboard (as shown).

Dan Steinberg/AP

users by Jupiter Research, 12% said that they did not subscribe to a landline-telephone service, and another 12% said that they planned to switch from a landline to a cellular telephone in the next year. Another study, by market researcher Nielsen, said that 17% of all American homes relied exclusively on cellular telephones rather than landline telephones.

Wi-Fi Service. While the cellular telephone networks continued to serve a growing demand for data, short-range Wi-Fi (wireless fidelity) found in homes, hotels, restaurants, airports, and other public places continued to spread as a common wireless alternative for Internet access. The telecommunications industry began looking ahead to a new wireless standard, called 4G (fourth generation), that would transmit laptop and smartphone data faster than present-day cellular networks while greatly extending the range of its signals. Two competing wireless technologies—WiMax and LTE (Long Term Evolution)—were expected to form the basis of the new standard. In tests by T-Mobile and Nortel Networks, LTE was able to download data at speeds of up to 170 million bits per second and upload data at speeds of up to 50 million bits per second from a car that was traveling about 67 km (42 mi) per hour.

Philadelphia, the first American city to commit to a citywide public Wi-Fi network, tried to reinvigorate the plan after EarthLink abandoned the project in the wake of complaints about weak signals. The Wi-Fi network, which was 80% complete, was being taken over by local investors under the name Network Acquisition Co. Its plan was to sell Wi-Fi service to local businesses and use that revenue to pay for free public Wi-Fi in outdoor locations. The new network operators also hoped to generate Wi-Fi revenue through advertising and transaction processing, such as handling the sale of entertainment tickets.

The automobile manufacturer Chrysler said that it would offer Wi-Fi connections with Internet access as an option on its 2009-model vehicles. Called UConnect

Web, the service was to be offered as entertainment for backseat passengers.

Companies. In October the 2008 revenue forecast for the semiconductor industry was reduced from 4% to 3.5% by research firm iSuppli, which noted that strong sales of desktop and notebook computers could help buffer the computer-chip manufacturers from the worldwide economic woes. A worsening worldwide economic crisis, however, drove sales downward 7.2% from October to November, according to the Semiconductor Industry Association, and in mid-December research firm Gartner forecast that for the year the semiconductor industry worldwide would post a 4.4% decline in revenue.

Computer-chip firm AMD said early in the year that it would eliminate 1,650 jobs, or about 10% of its workforce, because of deteriorating business conditions. By October the firm had announced that it would split into two companies, one that designed computer chips and another that manufactured them. AMD was to retain the design portion and own 44.4% of the manufacturing arm in partnership with the Advanced Technology Investment Co., which was owned by the government of Abu Dhabi, U.A.E., and included two investment funds. In November the company said that it was laying off 500 more employees.

Hewlett-Packard Co. said that it would eliminate 24,600 jobs over the following three years as part of its recently completed \$13.9 billion acquisition of Electronic Data Systems Corp. Layoffs had been expected, but the magnitude of the cutbacks, nearly 8% of HP's 320,000 employees, surprised Wall Street.

Intel filed a lawsuit against the European Commission (EC) in which it claimed that it had not been permitted a fair defense against charges that it violated antitrust regulations by giving discounts to retailers. The commission, the EU's antitrust regulator, accused Intel of giving retailers rebates in exchange for their promise not to sell PCs that used chips from Intel competitor AMD. The EU regulator and Intel had been sparring over antitrust complaints since 2001, when AMD complained about Intel's conduct. In a separate incident, South Korea ordered Intel to pay \$25.4 million for having allegedly violated fair-trade regulations by offering South Korean computer firms rebates to hinder sales of AMD chips.

The EC fined Microsoft a record \$1.35 billion in 2008 for failure to make

changes that the EC had ordered in 2004 when it found that Microsoft had abused its position of market dominance. The latest fine brought to \$2.3 billion the total amount that the commission had fined Microsoft in the long-running dispute. Microsoft was fined more than \$600 million in 2004 for the initial finding of wrongdoing and was fined more than \$350 million in 2006 for failing to license networking technology as required in the 2004 ruling.

June marked Bill Gates's departure as a full-time employee of Microsoft, which he cofounded in 1975 after dropping out of Harvard University. He did not exactly leave the company, however. Gates was expected to spend some of his time working on future Microsoft products and services while remaining chairman and Microsoft's largest shareholder. He also planned to devote time to his charitable organization, the Bill & Melinda Gates Foundation.

Apple's stock was adversely affected by persistent rumours that CEO Steve Jobs was seriously ill, something Jobs said was not true. Jobs had appeared unusually thin at the company's Worldwide Developers Conference in June, and it was a widely known fact that Jobs had been treated for pancreatic cancer a few years earlier. The stock reaction was tied to Jobs's perceived key role in determining Apple's strategy and products.

In 2008 Google settled two copyright lawsuits filed in 2005 that had resulted from its plans to digitize and share short excerpts from copyrighted books without official permission. The company agreed to pay \$125 million to settle a class-action suit by authors and the Authors Guild and a suit by five members of the Association of American Publishers. The settlements, however, did not resolve whether Google had violated copyright law by its unauthorized scanning of the books in question.

Microsoft, Yahoo!, and Google Interactions. In what would have been the merger of the year in the computer industry, Microsoft sought to acquire all or part of Yahoo! Microsoft, the world's largest software company, pursued separate deals with Yahoo!, but no agreement was reached. Microsoft initially sought to acquire all of Yahoo! and made an offer of \$44.6 billion, which was subsequently raised to \$47.5 billion. The merger would have put Microsoft in a much better position to compete with Google, the leader in Internet search and increasingly a threat to Microsoft in the new market for In-

ternet-based software applications known as "cloud computing." (In cloud computing, large data centres handle computing applications for PCs, smartphones, and other devices with an Internet connection.) After withdrawing its bid, Microsoft approached Yahoo! about a more limited financial deal—one reportedly worth about \$1 billion annually in new operating income for Yahoo! Under that proposal, Microsoft would have owned 16% of Yahoo!, acquired Yahoo!'s search business, and shared revenue for searches that originated with Yahoo! Stating that the sale of its search business to Microsoft was not a good long-term strategy, Yahoo! broke off the second round of talks.

Following the failed talks with Microsoft, Yahoo! turned to Google for a partnership. Google was to place ads next to some search results on Yahoo!'s American and Canadian Web sites. Yahoo! and Google said that the deal would make Yahoo! a more viable business at a time when advertisers wanted to preserve online advertising competition and Yahoo! had fallen behind Google in search advertising. Microsoft opposed the Yahoo!-Google deal, and it was not alone. A group that represented about 18,000 newspapers worldwide, the World Association of Newspapers, opposed the search-advertising partnership between Yahoo! and Google as anticompetitive.

The U.S. Department of Justice (DOJ) showed interest in examining the Yahoo!-Google agreement for possible antitrust implications. The start-up of the partnership was delayed at midyear and again in October to give the department more time to review potential antitrust ramifications. Faced with a postponement in the advertising partnership, Yahoo! said that it would lay off about 10% of its 15,000 employees to reduce expenses. In early November the DOJ indicated that it would block the agreement despite last-minute concessions from both companies, and Google withdrew from the deal. Less than two weeks later, Yahoo! cofounder Jerry Yang announced that he would resign as CEO of the company, although he would retain a role in developing corporate strategy.

Mergers and Acquisitions. Samsung Electronics made an unsolicited \$5.85 billion offer for data-storage producer SanDisk, which rejected the proposal because it believed that it undervalued the company. Samsung later withdrew its offer, citing the global financial crisis and SanDisk's worsened financial

circumstances related to lowered demand and falling flash-memory prices.

Electronics retailer Best Buy acquired Napster, a digital-music service, for \$121 million. Napster, with about 700,00 subscribers to its online music catalog, bore little relationship to its namesake, the free and illegal music-distribution system created by Shawn Fanning and shuttered by a 2001 court decision. Napster had about one-half of the digital-music subscription market, and Best Buy was seeking a way to deal with declining CD sales and compete against Apple's iTunes.

Time Warner said that by early 2009 it would separate AOL's advertising business from its dial-up Internet-access business, which observers said could be a prelude to selling one or both of the units. AOL had been a financial drag on its parent company, and the dial-up portion had been considered a declining business as dial-up customers moved to higher-speed broadband connections.

The Internet. A survey conducted in the second quarter of 2008 found that twice as many people as a year before (an estimated 63% of American consumers) watched streaming video on their computers, primarily as a result of a wider range of content and an increase in the number of broadband users, said market researcher ABI Research. Although nonprofessional video from Web sites such as YouTube accounted for much of that viewing, there also was growing interest in watching TV shows and movies as streaming video over the Internet, the research firm said. Some shows and movies could be viewed through TV-network Web sites, the online video service Hulu.com, and YouTube (in a partnership with MGM). Netflix, whose main business was delivering movies on DVD via postal mail, also offered Internet streaming movies directly to PCs and indirectly to TVs via Internet-linked set-top boxes from a number of manufacturers. They included the Netflix Player from Roku, Blu-ray high-definition DVD players from LG and Samsung, the Xbox 360 videogame console from Microsoft, and a TiVo digital video recorder.

Sending video over the Internet consumed a large amount of bandwidth, whether it was being transmitted to users from commercial Web sites or—perhaps illicitly—from peer-to-peer networks. A new lobbying group called Arts + Labs, which represented content owners (such as Viacom), Internet-technology firms (such as Microsoft),

and the Songwriters Guild of America, said that it wanted to promote the idea that Internet service providers (ISPs) had the right to block file sharing that took up too much bandwidth on their networks. It was unclear whether such a video-blocking policy would run afoul of much-discussed but as-yet-nonexistent government rules on net neutrality, a concept under which ISPs would be prohibited from favouring specific content that traveled over their networks.

At one point ISP Comcast acknowledged that it had slowed down traffic from peer-to-peer networks to prevent bandwidth hogging, but the U.S. Federal Communications Commission ordered the company to stop doing so on the grounds that it was an unreasonable restriction on some Internet users. Other ISPs, including Time Warner Cable, discussed metering Internet use to prevent some users from gobbling up too much bandwidth.

As an alternative to restricting only peer-to-peer traffic on its Internet-access network, Comcast said that it would limit all customers' monthly downloads and uploads of text, graphics, music, movies, photographs, and other information—although the company said that it set the limit so high that fewer than 1% of its customers were likely to be affected. Comcast reserved the right to terminate service to any residential customer who disregarded company warnings and twice violated a monthly limit of 250 gigabytes. Comcast said that the average customer used only about two to three gigabytes per month. Prior to the announcement, there had been no specific monthly limit.

Telephone company Verizon Communications said that it was benefiting from its decision to change the infrastructure of residential Internet and video-delivery services. The firm had made a \$23 billion investment to lay fibre-optic cable directly to American homes. In 2008, four years after Verizon's FiOS (fibre-optic service) project began, the firm said that there was strong demand for its services, which included high-speed Internet, high-definition TV, and telephone. About 24% of the homes with FiOS had signed up for the Internet service, which was up to five times faster than normal cable-modem Internet-access speeds, the company said. Some industry observers commented, however, that it was still too early to know whether there would be a sufficient number of new customers to repay Verizon's big investment.

In what was called a sweeping change in the Internet address system, a large number of new Web-address suffixes (such as .news and .sports) were voted into existence by the Internet Corporation for Assigned Names and Numbers, or ICANN. The so-called top-level domain names would include city abbreviations and brand names and were expected to sell for hundreds of thousands of dollars. Multiple requests for the same name would be settled by auction. Some critics predicted that the new system of domain names would confuse Internet users and be expensive for businesses that had to protect their trademarks by registering new domain names such as .coke. The familiar .com, .edu, .gov, .net, and .org domain names were created in the 1980s; new domain names such as .biz, .info, and .name were introduced in 2001 and 2002. Over time, domains also were added for country abbreviations, such as .uk for United Kingdom.

Social networking continued to thrive on Web sites such as Facebook, MySpace, and Flickr, where consumers could share text, pictures, video, and, in a limited way, music with an ever-growing circle of friends and extended common-interest groups. Twitter, one of the newest entrants in the social-networking sphere, was a combination of blogging and text messaging. The Web-based service allowed several million people to send brief but frequent messages detailing their whereabouts and activities to groups of people on the Twitter service who were interested in such minute details of daily life. Users followed the daily routines of others on the service through constant updates, called tweets.

Among users of cellular-telephone data services, Facebook and MySpace were the most popular social networking sites. About 46% of all social networking users had connected to them via a mobile phone, according to ABI Research. In 2008 Facebook settled a lawsuit against the company and founder Mark Zuckerberg that had alleged that Zuckerberg misappropriated the Facebook concept from three fellow Harvard University students who founded ConnectU, a Facebook competitor. The terms of the settlement were not disclosed.

Bloggers, people who wrote personal reports on the Web about events both significant and inconsequential, played a bigger role in the 2008 U.S. political conventions in comparison with previous presidential election years. More than 100 bloggers were admitted to

cover the conventions alongside the mainstream media in the belief that bloggers' moment-by-moment live accounts—often partisan and aimed at niche audiences—would supplement TV viewing for a growing segment of the Internet-user population. The importance of bloggers in the political campaign followed the prominent use of the Internet for political fund-raising. (See Special Report on page 180.)

The Wall Street Journal's Web site (which, unlike most major newspaper sites, made most of its content available only to paid subscribers) tried to combine social-networking features with traditional journalism. In addition to being able to comment online about individual stories, a feature found on other news Web sites, the *Journal's* Web site allowed readers to e-mail each other and create personal profiles that allowed others to view their activities on the *Journal's* Web site.

E-Commerce. The music industry—which had previously adopted piracy-prevention efforts that had included suing individuals caught sharing songs online—experimented with free advertising-supported online music through MySpace. MySpace Music, a joint venture between MySpace and the four largest music firms—the Warner Music Group, the EMI Group, Sony BMG, and the Universal Music Group—was to be a free online jukebox capable of streaming several million different songs to MySpace users. Streaming allowed a user to listen to songs but not record or keep them. With the new service, MySpace users would be able to create multiple streaming-music playlists of their own and share a playlist with other users by posting it on a MySpace profile. To move the music to a digital music player or another computer, however, a user would have to buy downloadable copies of the same music.

In other action that signaled change in the online music business, the four music labels behind MySpace Music all agreed to deals that permitted subscriber-service Napster and the online store Amazon MP3 to sell songs that did not have digital-rights-management (DRM) software. DRM restricted the devices on which music could be played, and Napster and Amazon MP3 became the first online music companies to sell unprotected music from all four major music firms.

The motion-picture industry complained that the music industry's online piracy problems—a direct result of easy

file copying—were about to afflict it as well. Several Hollywood studios—Paramount Pictures, 20th Century Fox, Universal Studios, Warner Brothers, Columbia Pictures, Walt Disney, and Sony—sued RealNetworks, a digital-media company that had introduced a DVD-copying program that could duplicate movies onto more than one personal computer. The suit sought a temporary restraining order to prevent the software from being sold. RealNetworks was also suing several movie studios, seeking a court judgment that the product was legal. DVD movies normally could not be copied because of encryption software; the inability of consumers to copy disks had helped protect the movie industry's \$16 billion in annual DVD sales. The \$30 RealDVD program for Windows PCs, however, allowed users to make a single copy of a movie (except high-definition movies) on the computer that copied the DVD. It was possible to transfer the copy to up to five other PCs, provided they also had the RealDVD software. The copies made by RealDVD also were encrypted to prevent further copying.

Previously, legal action by the movie industry had kept software for copying DVD movies off the market on the grounds that it infringed the movie industry's copyrights on content. Several movie studios and the Motion Picture Association of America had won a court victory in 2004 over 321 Studios, which had marketed a program called DVD X Copy. In that case, the court said that the DVD X Copy program violated the Digital Millennium Copyright Act. In 2007 the DVD Copy Control Association (an alliance of film distributors) was unsuccessful when it sued Kaleidescape, a firm that sold computer servers capable of copying and storing movies. While the Kaleidescape case was under appeal, RealNetworks concluded from the initial ruling in the case that it could legally sell a DVD-copying program.

Equal access to the Internet was also an issue. Target Corp. paid \$6 million to settle a class-action lawsuit that claimed that visually impaired people had been blocked from using the Target.com Web site in 2006 by technical problems that the company declined to solve. The suit was filed by the National Federation of the Blind on behalf of California residents. Visually impaired customers could access Web sites by using software that read text aloud and identified technical features such as animated buttons or drop-down menus.

The suit alleged that problems with the Web site made it impossible for the software to read the "checkout" button needed to make online purchases.

Computer Security and Crime. A potentially huge Internet security problem that would have enabled hackers to misdirect Web traffic to phony Web sites was uncovered and fixed before it became a major problem. The security flaw allowed an attacker to take control of a domain name server, a computer that helped transfer a computer user to a requested Web page. That in turn enabled the attacker to redirect the unsuspecting user to a bogus Web site in an effort to steal information or commit fraud. In one incident some Internet users were sent to a false Google site where programs automatically clicked on certain ads to make money for hackers, who then claimed the profits from the advertising activity.

An activist cyber-monitoring group, the Citizen Lab at the University of Toronto, and American firms such as Arbor Networks said that the Russian invasion of Georgia in August was accompanied by cyberwarfare designed to disable the Georgian Internet infrastructure. The reports seemed to confirm long-held suspicions that cyberwarfare would increasingly be utilized as part of conventional wars.

In one of the largest online crime sprees of its type, federal charges were filed in the U.S. against 11 persons from five countries in the theft of more than 41 million credit-card and debit-card numbers. The numbers were gained through tapping into the wireless computer networks of major brick-and-mortar retailers, including OfficeMax, Barnes & Noble, the Sports Authority, and T.J. Maxx. U.S. federal authorities in Boston said that the hackers electronically identified wireless networks with security flaws simply by driving past stores. Hackers then used "sniffer programs" to capture transaction information such as card numbers. The stolen numbers were either sold online or encoded in the magnetic strips of blank cards that could be used to withdraw money from automated teller machines (ATMs). The total amount of money stolen as a result of the card-number thefts was unclear.

In a separate incident, a computer break-in allowed hackers to steal an undisclosed number of customer PINs, or personal identification numbers, from a network of ATMs operated by Citibank at convenience stores. The theft was notable because PINs were

protected by encryption that should have rendered them unreadable. It appeared that some PINs were unprotected while being sent between the ATMs and the remote computers that handled ATM transactions.

A gang of malicious programmers who were apparently based in Russia launched a new type of attack on American computers with software tools that were typically used by computer network administrators. By secretly installing their malicious software in legitimate data centres that ran programs for customer companies, the attackers were able to take control of about 100,000 other computers and capture their user information, such as passwords and bank records.

MySpace won a record \$230 million in damages in a Los Angeles federal court against two purveyors of spam, or junk e-mail, although it was in doubt whether it could collect such a large award. The pair allegedly used MySpace accounts—their own and those of others—to send spam e-mail to other MySpace members in an effort to lure them to marketing-oriented Web sites.

In an unrelated case, a U.S. Federal Trade Commission (FTC) investigation resulted in an international spam operation's being shut down by a U.S. federal court under the CAN-SPAM Act of 2003. In what the FTC said was one of the largest spam operations foiled to date, the group sent billions of spam messages over a 20-month period in an effort to sell purported luxury products, bogus drugs, and pornography. Federal officials said that criminal charges might eventually be filed against the spammers.

Some brick-and-mortar retailers sought legislation that would force eBay and other online sellers to police whether people were selling stolen merchandise through their Web sites. The legislation would force online marketplaces to remove merchandise listings when there was sufficient evidence that the goods had been stolen. It also sought to make selling stolen merchandise on the Internet a felony.

Government Issues. Congressional hearings in 2008 on Internet-privacy issues—in particular, the extent to which Web sites captured personal information and the way the information was used to aim advertisements at specific groups of consumers—generated concern but no new privacy legislation. Some Internet firms told Congress that they had used targeted advertising on consumers, based on the consumers'

personal information, without clearly saying that they were doing so.

In a new twist on Viacom's 2007 copyright-infringement lawsuit against Google and YouTube, which sought more than \$1 billion in damages, a U.S. federal judge ordered Google to provide Viacom with records of which of its users watched YouTube videos. That raised privacy concerns, since the court order potentially could have revealed the viewing choices of millions of YouTube users, but Google and Viacom said they would try to protect users' identities during the lawsuit. The situation was a reminder that the vast amounts of user data collected by many Web sites could be disclosed as a result of a lawsuit.

The open-source software movement won a significant legal victory when a U.S. federal appeals court ruled that free software could be protected by open-source licensing terms. The case revolved around a company that sold commercial software for model trains but did not disclose that its software contained code from a competing open-source program, even though the open-source license required acknowledgement of the code's use and a description of how it had been modified. The ruling also was expected to boost the use of free software by large organizations that previously had worried about the code's legal standing.

Computer Games. Video games, once aimed solely at boys and men, continued to draw a growing female audience, a trend that had begun in recent years. By 2008 girls and women made up 40% of the game-playing popula-

tion, said the Entertainment Software Association, a trade group. With worldwide sales reaching \$9.5 billion in 2007, the video-game industry sought further growth by increasing investment in games and game machines that might attract women. Nintendo was a leader in appealing to women customers, first with its handheld DS game machine and then with the Wii console, both of which featured general-interest games and required less button-pushing expertise than other consoles.

Music games proved to be a category that attracted both men and women. The music industry and game industry jointly succeeded with video games such as *Guitar Hero* from Activision and *Rock Band* from MTV Games. *Guitar Hero* allowed users to "play along" on simplified versions of guitars that essentially mimicked the rhythm of a song. The games were accessible to casual game players, and they provided the music industry with a new way to license its songs.

Microsoft cut the price of its Xbox 360 video-game console in September; the company said that the cut would stimulate demand because there was a broader market for a console that cost less than \$200. The Xbox 360's base price was lowered from \$279 to \$199 at a time when the \$249 Nintendo Wii was clearly the top-selling video-game machine and sales of Sony's \$400 PlayStation 3 appeared to be slightly ahead of Xbox 360 sales. The Wii's success was linked to Nintendo's decision to focus the console and its games on novice or casual game players rather

A Nintendo Wii video-game console gets a workout from a member of a Wii bowling team at an assisted-living facility in Hopkinsville, Ky.

Kentucky New Era—Emily Parrino/AP

John Macdougall—AFP/Getty Images

than so-called hard-core gamers. The video-game industry's traditional audience, hard-core gamers demanded sophisticated and increasingly difficult-to-master games, including online games in which thousands of consumers participated.

New Technology. Microsoft's Windows Vista was greeted by consumers and businesses with little enthusiasm—the operating system (OS) was blamed for software crashes and slowing down PCs, and some businesses decided to skip upgrading to it. Microsoft sought to repair both the technical and public-relations damage. Much of the technical problem was related to the need for new drivers, the computer software that made equipment work with Vista. Battered by a successful Apple advertising campaign based largely on Vista's alleged unpopularity, Microsoft began talking about future versions of Windows less than two years after Vista's introduction. Details remained sketchy, but a successor OS tentatively called Windows 7 was expected to be commercially released in 2009 or 2010. Another new version of Windows, which was rumored to be called Windows Strata, was expected to emphasize cloud computing.

Google introduced its first Web browser, Chrome, to compete with Microsoft's Internet Explorer and Mozilla's Firefox. The introduction of Chrome brought Google into another level of competition with Microsoft; the two companies already clashed in the areas of Web search, Internet advertising, cell-phone operating systems, productivity software (such as spreadsheets), and Web-based e-mail. The Google browser also was seen as another step in Google's transition to Web-based applications software.

The netbook, or nettop—a tiny no-frills computer for Web browsing and light computing—gained popularity with prices as low as \$300. It was a commercialized version of the low-cost PC that the nonprofit organization One Laptop per Child developed for use in less-developed countries, and more than 20 models had become available. Netbooks were not suited to tasks such as editing photos or watching high-definition video and had limited storage space because they used small disk drives or relied on small quantities of flash memory. Advocates said that they were less expensive and lighter than

Among the handheld electronic reading devices that were shown at the 2008 Frankfurt (Ger.) Book Fair were two iRex Digital Readers (at left and right) and a Bookeen Cybook (centre).

laptops; critics said that they were overpriced for their limitations and ran too slowly. Research firm Gartner predicted that as netbooks became more advanced, they would begin to take some sales away from laptops; it said that netbook shipments could climb from 5.2 million in 2008 to as many as 50 million by 2012.

The ongoing battle between Sony's Blu-ray and Toshiba's HD DVD formats for high-definition discs appeared to come to an end in February when Toshiba announced that it was abandoning the format that it had developed. In January Warner Brothers—the last major studio to support both formats—had announced that it would be using only the Blu-ray format, and major retailers had said that they would stop selling HD DVD players and movies. By year's end streaming video over the Internet and other online delivery methods were hindering Blu-ray DVD sales, which still lagged far behind those of standard DVD movies.

Apple's iPod continued to dominate the digital music player market. Although there were many alternative players with much smaller market shares, Microsoft's Zune was seen as the only competitor trying to add new features at the same rate as Apple. By late 2008 Apple had added to various iPod models a feature that readjusted the picture on an iPod's screen for vertical or horizontal viewing, depending on which way the player was held. The feature made use of an accelerometer, and on a new iPod Nano model, the device also allowed the user to shake the device to change songs. The Zune had Wi-Fi capabilities that allowed a user to

listen to songs streamed from its online site or to purchase songs and download them. The Zune also had a built-in FM radio, and a user could tag a song heard on the radio for later purchase.

Another way to purchase music was introduced during the year, but it was unclear whether it would be a hit. SanDisk, which made computer-chip-based flash memory for computers, cellular telephones, cameras, music players, and keychain-sized flash drives, said that it would issue music albums on a microSD flash memory card that was designed to fit into a cellular telephone or digital music player. The card then provided the music-player software in the device with prerecorded songs. The initiative, called slotMusic, would provide a USB-port adapter so that the card could also be read by a computer.

Seagate Technology, one of the world's largest manufacturers of disk-drive data-storage devices, said that it would develop products using flash memory, a competing technology that had the advantage of having no moving parts to break or wear out but the disadvantage of being more expensive. The worldwide demand for disk drives continued to grow, however, and Seagate predicted that the drives would be vitally important for years to come.

The search continued for a handheld electronic reading device, or e-reader, that could take the place of printed books or printed newspapers. Because newspapers were increasingly being viewed online, several e-readers that sought to make reading Internet news easier gained attention in 2008. Among them were the iRex Digital Reader 1000, the Amazon Kindle, and the Sony Reader, all costing several hundred dollars. Key considerations for the wireless devices were weight, battery life, screen size, and the ability to read the screen even in bright light (a difficult task with most portable computer screens).

According to research firm Gartner, there were more than one billion personal computers in use in the world in 2008. Given the current growth rate, it was estimated that there would be two billion PCs in use by 2014, the firm said. About 58% of the world's PCs were located in mature PC markets such as the U.S., Western Europe, and Japan, even though those areas had only 15% of the world's population.

GEOLOGY AND GEOCHEMISTRY

The theme of the 33rd International Geological Congress, which was held in Norway in August 2008, was “Earth System Science: Foundation for Sustainable Development.” It was attended by nearly 6,000 scientists from 113 countries. In addition to the standard symposia, there were seven sessions—on such topics as geohazards, resources (water, minerals, and energy), and climate change—that highlighted the relevance of geology to society. The OneGeology global project was officially launched during the meeting. The project was a breakthrough in international scientific cooperation, with more than 90 countries participating to create a global database of geologic map data that could be accessed on the World Wide Web.

Not only was human society dependent upon geology, but humans had become a significant force in geologic processes. Members of the stratigraphy commission of the Geological Society of London published a paper that explored the idea that the Earth had entered a new geologic epoch—the Anthropocene—characterized by a global environment dominated by human activity. With the beginning of the Industrial Revolution, as global population exploded, agricultural and industrial activities began to leave distinctive stratigraphic signatures that included novel sedimentary, geochemical, biotic, and climatic changes. One such

change was the dramatic increase in erosion and denudation of the continents that by the 21st century had exceeded the natural production of sediments by an order of magnitude. Population growth with industrialization had disrupted the biogeochemical carbon cycle by leading to the burning, within a few hundred years, of fossil carbon fuels that had accumulated within rocks through hundreds of millions of years. The resultant carbon emissions were causing significant changes in global temperature, ocean

This bedrock from northern Quebec was dated to 4.28 billion years ago.

Jonathan O'Neil

acidity, and the geochemistry of the biosphere.

Going back in geologic time, Jonathan O'Neil of McGill University, Montreal, and coauthors published the geochemistry of geologically complex rocks from a portion of bedrock in northern Quebec. Their analysis of the rocks' content of neodymium and samarium, two rare-earth elements, indicated that the rocks were 4.28 billion years old and suggested that they might represent the oldest preserved crustal rocks on Earth. The most ancient rocks known previously were about 4.03 billion years old. (4.36-billion-year-old zircon crystals had also been identified but only as tiny mineral grains embedded in younger rock.)

Despite society's influence (and dependence) on geology and geochemistry, humans remained vulnerable to the power of geologic processes, as demonstrated by the earthquake of moment magnitude 7.9 that devastated Sichuan province, China, on May 12, 2008. (See *Geophysics*, below.) This earthquake had not been expected on the basis of standard geophysical criteria. In a report published in July, Eric Kirby of Penn-

sylvania State University and coauthors described how their geomorphic analysis of these mountains had identified locations of active rock uplift indicating seismic risk. Tectonic signatures for active displacements included dramatic changes in the steepness of river profiles in the rugged margins of the mountain ranges that coincided precisely with faults. They concluded that the Sichuan earthquake provided compelling evidence that the landscape contained much information about rates of tectonic activity. Quantitative geologic analyses of similar information in other locations could become a useful tool for refinement of potential earthquake risk that was not recorded by satellite measurements of displacement rates.

Rebecca Flowers and colleagues at the California Institute of Technology changed the widely accepted interpretation for the uplift history of the Colorado Plateau and its incision by the Colorado River to form the Grand

Canyon. The accepted interpretation had been that the plateau began to rise to its present elevation of about 2,100 m (7,000 ft) some 6 million years ago, with the river cutting downward as the land rose. The new results demonstrated that the uplift process began more than 55 million years ago. Between about 550 million and 250 million years ago, the layers of sediments forming the Colorado Plateau accumulated beneath a sea. The sediments increased in temperature as they became deeply buried but then cooled as they later were uplifted slowly while erosion stripped away the overlying rocks. The researchers used a new geochemical technique to analyze and date the mineral apatite that existed in trace amounts within the sediments. The helium-uranium-thorium dating procedure determined when the apatite crystal in the heated rock cooled to about 70 °C (160 °F). The crystal typically reached that temperature when the buried rock had risen to about 1.6 km (1 mi) beneath the eroded surface. By dating the apatite minerals from within canyons and across the plateau surface, the researchers were able to correlate through time the elevations of sediments in different locations. For example, they found that sediments at the bottom of an eastern part of the canyon had the same apatite-derived age—55 million years ago—as the sediments on the plateau above. This demonstrated that a canyon had already been carved through a plateau that existed at that time. The study revealed many historical complexities, including the unexpected result that while the canyon was being cut deeper (through 1,500 m [5,000 ft] of rock), the adjacent plateau sediments were also being eroded away.

Geologic and geochemical studies of sediments could yield many historical records, including temperature change through time. Jean-Noel Proust and other members of a France–New Zealand research program presented some initial results from 31 sediment cores recovered from the Tasman Sea near New Zealand. The objective was “to disentangle the impact of tectonics and climate on the landscape evolution of New Zealand over the past million years. . . relating to events such as earthquakes, tsunamis, and cyclones.” New Zealand is associated with active tectonic plate boundaries, mountain building, and earthquakes. It occupies a unique position in the system of global ocean currents and in the westerly atmospheric wind belt. During the past one million years, it experienced drastic

glacial-interglacial climatic changes. Large amounts of sediment were deposited into the adjacent seas because of this confluence of tectonic and climatic conditions, and these sediments reflected the conditions of erosion, transportation, and submarine deposition. The high sedimentation rates permitted high-resolution chronological studies in steps as small as 100 years, and preliminary results confirmed complex interactions between tectonics and climate.

Achim Brauer of the German Research Centre for Geosciences and coauthors provided the precise date for a sudden episode of cooling, called the Younger Dryas, that occurred about 12,700 years ago. From their analyses of annually laminated sediments below a deep volcanic lake in Germany, they defined and dated (using carbon isotopes) thin layers that spanned a 230-year period around the start of the episode. Their microscopic and geochemical studies of minerals and fossils carried out to a resolution of 50 microns permitted interpretation of lake level and wind speed from year to year and even between seasons. Following a series of annual and decadal oscillations, a final abrupt increase in winter storminess occurred in 12,679 BP. The researchers suggested that the event marked a shift in the North Atlantic westerly winds, which caused the climate to topple within one year into a completely different mode—one of extreme cooling.

Mark Schaefer and six other former officials from a variety of U.S. federal agencies proposed that the U.S. Geological Survey (USGS) and the National Oceanic and Atmospheric Administration (NOAA) be merged to form a new Earth Systems Science Agency (ESSA). The sciences of geology and geochemistry extend from solid rock through the hydrosphere and into the atmosphere and thereby overlapped the domains of the USGS and NOAA. Under the proposal, ESSA would build a strong collaboration with the Earth Science programs of NASA, especially its space-based Earth Observing Systems. The authors made the case that this reorganization would be more efficient and effective in meeting the future threats to the economic security of the United States and other countries. The threats were represented by risks concerning geologic resources (such as minerals, fossil fuels, and water supply) and the environment (such as natural disasters and climate change).

(PETER J. WYLLIE)

GEOPHYSICS

A devastating earthquake occurred on May 12, 2008, near the town of Wenchuan in Sichuan province, China. The earthquake, which had a moment magnitude of 7.9, involved a 280-km (174-mi) rupture along the Longmenshan fault and a relative motion of as much as 10 m (33 ft) between the two sides of the fault. More than 87,000 people were killed and 300,000 were injured, with about 5,000,000 left homeless. Shaking from the earthquake triggered many landslides in the mountainous area, and 34 temporary lakes were created by debris that clogged rivers and streams. The economic loss associated with the earthquake was estimated at \$86 billion. Although the Wenchuan earthquake occurred in the interior of the Eurasian tectonic plate, it was directly related to the ongoing collision between the Indian and Eurasian tectonic plates. The northward motion of India had strongly deformed Eurasia and created the Himalayan mountains and Tibetan Plateau. This region, however, had reached its upper topographic limit in terms of gravitational stability, and the continuing northward motion of the Indian plate was being accommodated by the east-west extension and extrusion of the Eurasian lithosphere. This process, known as escape tectonics, had caused the compression that led to the Wenchuan earthquake.

In February 2008 seismologists from the Japan Meteorological Agency reported on the initial results of an earthquake early warning (EEW) system that had become fully operational in October 2007 after several years of preliminary work. The system was designed to locate and estimate the size of a local earthquake very quickly. Although damaging seismic waves from an earthquake travel at a speed of several kilometres per second, alerts sent immediately by electronic communication (such as radio or television) to neighbouring regions that were expected to have strong shaking could provide a warning up to tens of seconds in advance of the seismic waves. This short warning time could greatly reduce damage and injuries associated with an earthquake. For example, it was enough time for people to take shelter under a desk away from windows, for elevators to stop at the nearest floor and open its doors, or for doctors to halt surgical procedures. During a two-year trial run, the EEW system issued 855 alerts, and of these only 26 were false alarms. The Japanese EEW system relied on data

One of the many major landslides that was triggered by the Wenchuan (China) earthquake on May 12 blocked this river in the mountainous area near Beichuan. Engineers dug channels to drain water from the lake that rose behind the debris.

taken by over 1,000 seismometers that were spaced at intervals of about 20 km (12 mi) and continuously recorded the movement of the ground across Japan.

Measuring the state of stress in the Earth's crust is an important goal of geophysicists, primarily because earthquakes occur when the stress along a fault zone crosses some critical threshold. Traditionally, instruments called strainmeters have been used to measure the deformation near the Earth's surface and to infer details about the stress regime. Fenglin Niu of Rice University, Houston, and colleagues announced the development of a new, indirect type of strainmeter that was potentially more precise than previous instruments. Using two holes that had been drilled into the San Andreas Fault Zone to depths of about 1 km (about 0.62 mi), the researchers placed a seismometer in one hole and a piezoelectric sound emitter in the other. Over the course of two months, the seismologists repeatedly measured the time it took for the seismic waves produced by the emitter to travel to the seismometer with a precision of about one ten-millionth of a second. The travel time was not constant but varied according to changing geologic conditions. The variation was directly related to the opening and closing of minuscule cracks (called microcracks) in the rock between the two holes, which in turn was related to changes in the ambient stress level in the rock. The scientists found that most of the variation was caused by daily tem-

perature changes, but two large excursions from the normal measurements occurred at the time of the two small nearby earthquakes. Remarkably, the stress anomalies began hours before the earthquakes took place. If these results could be verified and expanded to other regions where earthquakes occur, seismologists would possess a powerful new tool for forecasting earthquake hazard.

It was well known that small earthquakes occur in association with the flow of magma in volcanic areas. Although the precise mechanism by which such quakes are produced was controversial, it had generally been assumed that they occur in the rock that surrounds the underground conduits of magma. In two papers on the phenomenon published in May, Yan Lavallée of Ludwig-Maximilians University (Munich), Hugh Tuffen of Lancaster (Eng.) University, and their colleagues presented some surprising results. The two research groups found that when silicic magmas were heated and deformed according to real-world conditions, the magmas produced acoustic emissions. In other words, the fluid magma deformed in a brittle manner that was similar to the way in which normal rock fails during a tectonic earthquake. The magma behaved in this way because it had high viscosity, and the rapid changes in strain expected to occur in volcanic systems caused it to act as a solid. The pattern of acoustic emissions, also known as microseismicity, changed markedly as strain rate was in-

creased, so these results may help volcanologists better understand eruptive processes. In particular, the results may change how the material failure forecast method was being applied to dome-building eruptions.

Understanding the origin of the Earth's magnetic field continued to be one of the most difficult problems in geophysics. Because of the great complexity of the geomagnetic dynamo (the magnetohydrodynamic system that generates the Earth's magnetic field), computer simulations of the process had to use stringent approximations of some of the governing parameters. A breakthrough in this area was reported in August by Akira Kageyama and co-workers at the Japan Agency for Marine-Earth Science and Technology (Yokohama). They used a supercomputer known as the Earth Simulator to model the geomagnetic dynamo for a period of 2,000 simulated years. The calculation used 4,096 microprocessors and took several months to run. By using such tremendous computing power, the researchers achieved the most realistic simulation of the geomagnetic dynamo to date. Interestingly, they found that the shape of the flow of molten material in the Earth's liquid outer core took the form of elongated sheets that emanated outward from the Earth's rotation axis. This structure was very different from the classical model of columnar flow parallel to the rotation axis. Nevertheless, the sheetlike flow was able to generate a magnetic field. (KEITH D. KOPER)

METEOROLOGY AND CLIMATE

In 2008, the year after the United Nations panel of experts on global change completed its Fourth Assessment Report, the U.S. government issued a report—"Weather and Climate Extremes in a Changing Climate"—that focused on climate change in North America. The report, which was released by the U.S. Climate Change Science Program and the Subcommittee on Global Change Research, provided the first comprehensive study of observed and projected changes in North American weather and climate extremes. Citing human activity as the primary cause of global warming over the past 50 years, the U.S. study indicated that weather and climate extremes were likely to become more commonplace as human-induced increases in the concentration of carbon dioxide and other greenhouse gases in the atmosphere continued. More specifically, the report stated

that it was “very likely” that in the 21st century most areas of North America would see more frequent hot days and nights and heat waves and that many areas would see more frequent and intense heavy downpours. Although there had been no overall average change in the area affected by drought in North America during the past 50 years, in the southwestern United States and parts of Mexico and the Caribbean, the area affected by drought was likely to increase. Regarding the issue of hurricane intensity, the report indicated that more intense hurricanes were likely but that the linkage of human activity to observed changes in hurricanes required further study in order to make a confident assessment.

Another report from the Climate Change Science Program examined the impacts of climate change on agriculture and land resources in the U.S. The growing season—the period between the last spring freeze and first autumn freeze—had increased by 10 to 14 days over the previous 19 years across temperate latitudes. The study also found that elevated CO₂ concentrations would spur the growth of weeds and that young forests on fertile soils would achieve higher productivity. Rising temperatures would also increase the risk of crop failures, particularly if precipitation decreased or became more variable.

The debate on the link between global warming and tropical-cyclone intensity and frequency was accentuated by the billions of dollars of damage in the United States and the hundreds of deaths in the Caribbean that hurricanes caused in 2008. A report published in *Natural Hazards Review* by Roger Pielke, Jr., of the Center for Science and Technology Policy Research (Boulder, Colo.) and colleagues found that hurricane damage in the United States had been increasing because of growing population, infrastructure, and wealth along coastlines and not as the result of any spike in the number or intensity of hurricanes. The study showed that damage caused by hurricanes in the U.S. had been doubling every 10 to 15 years and that future economic losses might be far greater than previously thought if people continued to move to coastal areas. Research by Chunzai Wang and Sang-Ki Lee of the National Oceanic and Atmospheric Administration (NOAA) challenged the idea that warming oceans might lead to more tropical cyclones. They showed that in the primary region in the Atlantic where tropical cyclones develop, the warming

On September 14 a single home stands after a storm surge from Hurricane Ike swept away most of the seaside town of Gilchrist, Texas.

of the oceans was associated with a long-term increase of vertical wind shear (changes in wind speed or direction with altitude). Wind shear is the enemy of cyclone development, since it suppresses the concentration of the heat energy that fuels the storms, and the increased shear coincided with a decrease in the number of hurricanes that made landfall in the United States. Another study, however, indicated that the strongest tropical cyclones were increasing in intensity. James Elsner of Florida State University and colleagues used wind-speed data derived from an archive of satellite records to examine global trends in the intensity of tropical cyclones for the years 1981–2006. All areas where hurricanes develop, with the exception of the South Pacific Ocean, showed increases in the highest maximum wind speeds attained by the strongest storms. The greatest increases occurred for storms over the North Atlantic and northern Indian Ocean.

During the 2008 hurricane season, NOAA scientists made abundant use of a variety of observing technologies to collect data that might be of use in predicting the intensity of tropical cyclones. As part of the NOAA Intensity Forecast Experiment, three aircraft flew a total of 65 missions and logged 605 hours to gather data in a number of such storms, including Hurricanes Dolly, Gustav, and Ike. The aircraft deployed a total of 453 airborne expendable bathythermographs to obtain ocean temperatures from the surface

down to a depth of 200 m (656 ft), and the data were used to initialize and verify ocean models for studying hurricane development. During Hurricanes Gustav and Ike, aircraft transmitted three-dimensional analyses of Doppler-radar data for use by forecasters.

The El Niño/Southern Oscillation (ENSO) phenomenon, which is associated with the warming and cooling of the equatorial Pacific Ocean, plays a major role in climate variability. The ENSO influences temperature patterns and the occurrence of drought and floods in many parts of the world, but changes in the ENSO over very long time scales were not well understood. Geli Wang of the Chinese Academy of Sciences (Beijing) and Anastasios Tsonis of the University of Wisconsin at Milwaukee studied the record from a sediment core retrieved from Laguna Pallcacocha, a lake in southern Ecuador. From variations in the sedimentation, the scientists were able to create a time series of El Niño and La Niña events that spanned the past 11,000 years. They found that El Niño events had been more frequent and stronger during the past 5,000 years than in the previous 6,000 years, when La Niña was dominant, and they suggested that these long-lasting extremes may have had serious consequences for many cultures in the past. For example, drought associated with persisting El Niño events 3,500–3,000 years ago may have contributed to the demise of the Minoan civilization on the island of Crete. (DOUGLAS LE COMTE)

Education

Noteworthy **INTERNATIONAL** news in education in 2008 included an **IMPROVEMENT** in primary-school enrollment; positive moves toward **GIRL-BOY PARITY**; official acknowledgment of **DISCRIMINATION** against minorities and the poor; continuing conflicts between **RELIGIOUS PRACTICE** and secular schooling; the rapid growth of U.S. **BRANCH CAMPUSES** in the Middle East; and the expansion of **STANDARDIZATION** in higher education.

PRIMARY AND SECONDARY EDUCATION

The Global Monitoring Report issued by UNESCO in 2008 reported progress toward the worldwide goal, adopted in 2000, of universal free and compulsory primary education by 2015. The agency found that more children were starting primary school than ever before and that the number of out-of-school children dropped sharply from 96 million in 1999 to 72 million in 2005. “At this midway point, our assessment leans towards the positive but much more remains to be done if the goals are to be met by their target date,” said Nicholas Burnett, UNESCO assistant director general for education.

Even regions that had the smallest proportions of their children in school—sub-Saharan Africa, South Asia, and West Asia—made progress. From 1999 to 2005 countries in sub-Saharan Africa increased their primary-school enrollment by 36%, and countries in South and West Asia enrolled an additional 22% of their children in school. Unfortunately, sub-Saharan enrollment declined when in October 2008 the government of Zimbabwe announced that it had closed its schools to 4.5 million students.

Achieving gender parity in education was another of the goals of UNESCO. The 2008 report established that 63% of the world’s countries enrolled equal numbers of boys and girls at the primary level, including Ghana, Senegal, Malawi, Mauritania, and Uganda. At the secondary level, 37% of the countries enrolled equal numbers of boys

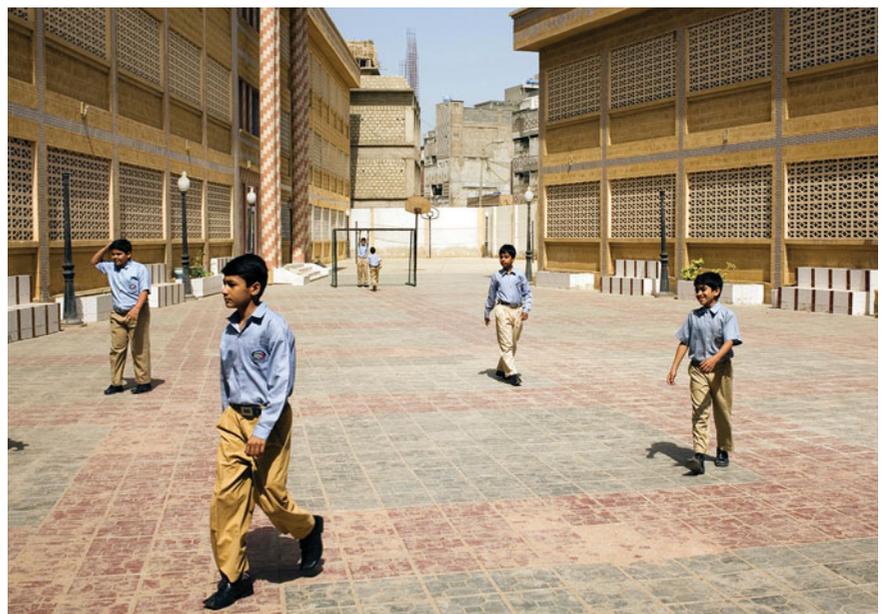

and girls; Bolivia, Peru, and Vietnam made the list for the first time. Although UNESCO projected that roughly half of countries would miss the target of gender parity by 2015, the agency noted that in parts of the Americas and Western Europe, fewer boys than girls were enrolled in secondary schools.

The education of girls remained problematic in parts of the Islamic world. According to the UNESCO report, girls made up 60% of the out-of-school group in the Arab states, and they accounted for 66% of those who were not enrolled in South and West Asia. Coincidentally,

after the report was issued, attacks were mounted against schools in Pakistan and Afghanistan, particularly those in which girls were enrolled; the aggression appeared to be the work of radical Islamists who vehemently opposed the education of girls. In the same region, support for the education of girls was demonstrated in several efforts that were publicized during 2008. The much-translated worldwide best-selling book *Three Cups of Tea*, by Greg Mortenson and David Relin, told the story of Mortenson, a mountaineer whose life was saved by impoverished Pakistani tribesmen. In gratitude he began building schools, eventually establishing dozens. Another effort to educate poor Pakistani boys and girls in a number of schools was reported in a *New York Times* story about a Turkish foundation that aimed to demonstrate that schooling could preserve Islamic values while embracing Western science.

Questions of how to expand access to education and to what extent to accommodate cultural differences in government schools continued to challenge a number of countries. In southern Wales in July, for example, the British High Court ruled in favour of a Sikh teenager who had been suspended from

Students in Karachi in April cross the courtyard of a PakTurk school, part of a network of schools in Pakistan that promote a vision of a moderate and flexible Islam that does not oppose the West.

Carolyn Drake—The New York Times/Redux

school for wearing a *kara*, an arm bangle required of adherents to the faith, in violation of the school's policy against jewelry.

In May the Slovak legislature passed a law expressly prohibiting discrimination and segregation in education. Shortly thereafter, however, Amnesty International (AI) reported that Roma (Gypsy) children continued to be separated from other children, primarily by being placed in schools that offered a simplified curriculum for children with cognitive disabilities. (An estimated 80% of the country's special-school population was Roma, although the group made up only about 10% of the entire population.) AI, in reporting that many of the Roma students were not assessed for disabilities nor had their parents given informed consent for the school placement, called on the Slovak government to end its discrimination against Roma children. Other European countries had smaller Roma minorities than Slovakia, but they also discriminated against the Roma in schools.

In February the Australian government apologized to its Aboriginal population for having continued the practice through much of the 20th century of taking children from their own families and sending them to live with white families. Taking a cue from Australia, the Canadian government formally apologized in June for having segregated—in the interest of assimilation—about 150,000 native children in church-operated residential schools far from their homes; the policy was perpetuated from the late 19th century until, in a few cases, the 1990s. Canada began financial reparations and instituted a formal truth and reconciliation commission to evaluate past abusive treatment of the children.

In India the issue of access to schooling was hotly debated as the legislature considered a right to education bill that would, among other measures, require all private and independent schools to reserve 25% of their seats for poor children from their neighbourhoods. That mandate was opposed by the private school lobby. Another issue addressed by the Indian bill was the quality of teaching, particularly as it related to the use of low-paid and often unqualified contract teachers who made up a large part of the teaching force. The bill required that all teachers be qualified and salaried. The bill appeared set for passage after gaining the approval of a group of ministers charged with re-

Impoverished children study in July at a roadside school in Hyderabad, India. Rudimentary education may help them avoid being exploited as child labour.

viewing it and after being cleared in late October by the Indian cabinet.

The UNESCO report (*see above*) found that upwards of 50% of the teaching force in sub-Saharan Africa consisted of such contract teachers. UNESCO also reported that 18 million new primary-school teachers would be needed by 2015. Governments around the world were paying more attention to the quality of instruction—not only teaching but also curriculum, materials, and governance.

In December 2007 the results of the 2006 PISA (Program for International Student Assessment), given to 400,000 15-year-olds in 57 jurisdictions, were released. The literacy tests for reading, mathematics, and science, as well as more general competencies, were administered every three years beginning in 2000 by the Paris-based Organisation for Economic Co-operation and Development. As in earlier administrations, students in Finland ranked first in 2006 in using information to solve problems. As a result, delegations from 50 countries headed to Finnish schools to study their methods. According to one principal interviewed by *The Wall Street Journal*, “We don’t have oil or other riches. Knowledge is the thing Finnish people have.”

PISA’s report also described the ways in which participating countries’ education systems differed. Educators worldwide debated whether Finland’s success was derived from applying national standards to all students, from maintaining a high-quality corps of teachers, or from granting principals autonomous control of school budgets.

In addition, the PISA report noted that countries that separated students into different academic tracks before age 15 tended to have greater disparities of achievement between students from different socioeconomic groups while faring no better overall on the exams. Prompted by that finding, which had been noted in earlier PISA reports as well, Poland raised by a year (between the 2000 and 2003 PISA test administrations) the age at which academic segregation took place. National average test scores rose, and much of the improvement came among lower-performing students.

Because of the improvement, Poland outperformed the United States for the first time. The relative position of the United States was one of the concerns Americans expressed in the national debate on how to improve schools. The matter became more urgent as the federal government began requiring high schools to report graduation data in a new way—i.e., based on how many of the students who began high school finished four years later. According to the new calculations, U.S. schools graduated only 70% of their students in the standard number of years; by previous methods, estimates had been greater than 85%. Because graduation rates in other countries increased, the new figures meant that the United States had dropped in yet another international ranking: percentage of population completing secondary education.

U.S. federal education policy continued to spark controversy—particularly the effort to hold primary and secondary schools accountable for their re-

Distance Learning—Education Beyond Buildings

By 2008 distance learning was an established part of the educational world. In U.S. higher education alone, by 2006 more than 20% of total enrollment was online. More than 3.5 million college students enrolled in at least one online course in the autumn of 2006, up from 1.6 million in 2002. In the 2005–06 school year, approximately 700,000 primary- and secondary-school students took at least one online or blended course. Higher education administrators reported in 2007 that the demand for online course work would continue to grow.

Students and institutions embraced distance education with good reason. Universities benefited by adding students without having to construct classrooms and housing, and students reaped the advantages of being able to work where and when they chose. Public-school systems offered specialty courses such as small-enrollment languages and Advanced Placement classes without having to set up multiple classrooms. In addition, home-schooled children gained access to centralized instruction.

Various terms have been used to describe the phenomenon. Strictly speaking, distance learning (the student's activity) and distance teaching (the teacher's activity) together make up distance education. Common variations include e-learning or online learning, used when the Internet is the medium; virtual learning, which usually refers to courses taken outside a classroom by primary- or secondary-school pupils (and also typically using the Internet); correspondence education, the long-standing method in which individual instruction is conducted by mail; and open learning, the system common in Europe for learning through the "open" university.

Many U.S. states committed resources to the facilitation of distance learning. For example, Iowa built an extensive fibre-optic network, called the Iowa Communications Network (ICN), to connect more than 700 classrooms at every level, from kindergarten through university. The ICN facilitated live video for instruction, allowed for extensive Internet-based courses, and served as a high-speed link to the Web. Similarly, South Dakota created the Digital Dakota Network (DDN), which connected more than 400 schools and colleges and enabled the delivery of thousands of courses and events each year. Network Nebraska was established to serve distance learning in the state's schools, colleges, and universities.

An increasing number of colleges provided distance-learning opportunities. A pioneer in the field was the University of Phoenix, which by 2008 had more than 300,000 students. Capella University (owned by Capella Education Co. and headquartered in Minneapolis, Minn.) offered many graduate programs at a distance; Nova Southeastern University's Fischler School of Education and

Human Services (its campus was located in North Miami Beach, Fla.) enrolled more than 14,000 masters and doctoral students; and Western Governors University (a nonprofit online university founded by the governors of 19 states) served thousands of students.

Four characteristics distinguished distance education. First, distance education was by definition carried out through institutions; it was not self-study or a nonacademic learning environment. The institutions might or might not offer traditional classroom-based instruction as well, but they were eligible for accreditation by the same agencies as those employing traditional methods.

Second, geographic separation was inherent in distance learning, and time might also separate students and teachers. Accessibility and convenience were important advantages of this mode of education. Well-designed programs could also bridge intellectual, cultural, and social differences between students.

Third, interactive telecommunications connected the learning group with each other and with the teacher. Most often, electronic communications, such as e-mail, were used, but traditional forms of communication, such as the postal system, might also play a role. Whatever the medium, interaction was essential to distance education, as it was to any education. The connections of learners, teachers, and instructional resources became less dependent on physical proximity as communications systems became more sophisticated and widely available; consequently, the Internet, cell phones, and e-mail had contributed to the rapid growth in distance education.

Finally, distance education, like any education, established a learning group, sometimes called a learning community, which was composed of students, a teacher, and instructional resources—i.e., the books, sound, video, and graphic displays that allowed the student to access the content of instruction. Social networking on the Internet promoted the idea of community building. On sites such as MySpace, Facebook, and YouTube, users constructed profiles, identified members ("friends") with whom they shared a connection, and built new communities of like-minded persons. In the distance-education setting, such networking could enable students' connections with each other and thereby reduce their sense of isolation.

The most commonly expressed concern about distance learning and teaching was whether the process was as effective as traditional education. Research into the question produced clear results: if all factors were taken into account, the learning outcomes were equivalent. Factors such as course organization, teacher involvement, class interaction, and feedback were critical to the effectiveness of instruction, whether in a classroom or at a distance.

(MICHAEL SIMONSON)

sults on achievement tests, as called for in the Elementary and Secondary Education Act (which was first passed in 1965 and was revised and reauthorized as the No Child Left Behind Act [NCLB] of 2001). The nonpartisan Center for Educational Progress reported that since the passage of NCLB, aggregate reading and mathematics achieve-

ment scores had increased modestly and the enduring difference in scores between middle-class white students and low-income and African American students had narrowed somewhat. Although the act's Democratic cosponsors, Rep. George Miller of California and Sen. Edward Kennedy of Massachusetts, had vowed to renew the bill

in 2008, the likelihood of further action diminished as the U.S. presidential campaign took the stage and as it was discovered that Senator Kennedy had a brain tumour. A group that called itself Ed in '08 (and was funded in part by the Bill and Melinda Gates Foundation and the Eli and Edythe Broad Foundation) paid for public-service announcements

to publicize the country's loss of position internationally, hoping to keep education in the forefront as an issue in the election season, but other matters captured voters' attention.

HIGHER EDUCATION

Higher education in the United States continued to thrive and to garner enormous respect internationally. The endowments in early 2008 of 136 institutions totaled \$1 billion or more, and tuitions continued to rise faster than the rate of inflation. The U.S. Congress took notice of the disparity between some universities' vast resources and the difficulty families had in keeping up with tuition costs.

U.S. students borrowed from private lenders even when lower-cost federal loans were available, a situation that led to investigations by the U.S. Congress and the attorney general of New York state. In some cases it appeared that lenders provided payments or other benefits to the colleges or college administrators in exchange for steering students their way. In its reauthorization of the Higher Education Act, Congress incorporated a strict code of conduct for institutions, as well as a requirement for more transparency in the student-loan process. The law also increased federal tuition aid to low-income students.

According to the Institute of International Education, enrollment by international students in U.S. colleges and universities finally rose after a sharp decline following the Sept. 11, 2001, attacks on the World Trade Center. In a report issued in late 2007, the institute said that international enrollment had expanded by 3% in the 2006-07 school year, to a total of 582,984. The largest number of international students were enrolled at the University of Southern California, with 7,115, and Columbia University (New York City), with 5,937. India and China sent the most students to the United States—almost 84,000 and 68,000, respectively. Enrollment from the Middle East grew by 25%, driven in part by a large increase to 7,886 students from Saudi Arabia, which in 2005 had launched a government scholarship program to help students study abroad.

The Saudi government announced additional partnerships with three major U.S. universities to help staff the King

Abdullah University of Science and Technology (Kaust), a graduate-level research university set to open in 2009 with a \$10 billion endowment. The mechanical engineering department at the University of California, Berkeley, the Institute for Computational and Mathematical Engineering at Stanford University, and the Institute for Computational Engineering and Sciences at the University of Texas at Austin announced that they would develop curriculum and choose faculty for Kaust. Each of the American universities would receive \$10 million for research at its home campus, \$5 million for research at Kaust, and another \$10 million in unrestricted funds. Albert Pisano, the chair of Berkeley's mechanical engineering department,

Programme, *Building a Knowledge Society*, which identified the region's "knowledge deficit" as a barrier to progress. Cornell University (based in Ithaca, N.Y.) graduated its first Qatar-trained physicians in 2008, and Virginia Commonwealth University's satellite campus in Qatar, which had been open only to women, admitted its first men. Both branches, along with outposts of Georgetown University (Washington, D.C.), Carnegie Mellon University (Pittsburgh), and Texas A&M University (College Station), were part of Education City, a 1,012-ha (2,500-ac) campus near Doha that was entirely supported by the Qatari government. (In addition, Northwestern University, Evanston, Ill., announced plans to begin a journalism program there.) In Dubai, Michigan State University and Rochester (N.Y.) Institute of Technology opened campuses in the fall of 2008.

Turkey was in turmoil for much of the year as the officially secular country and newly powerful Islamist political parties struggled over church-state issues. In February the ruling Justice and Development Party (AKP) passed legislation that overturned a ban on the wearing of head scarves on public university campuses; the law was later reversed by the Constitutional Court. In March the state prosecutor indicted the AKP for violating the country's commitment to secularism. Turkey's Constitutional Court declined to ban the AKP, but it did affirm the principles of secularism. The ruling permitted all sides to claim some piece of victory. (See Special Report on page 190.)

International efforts toward standardization in postsecondary education expanded in 2008. Originally, an initiative of the European Union known as the Bologna Process was intended to make credentials interchangeable among European countries. Asian countries joined in 2008, and comparable projects were undertaken in Canada, Australia, Latin America, and Africa. Vocational education and training were the next area to be addressed in the EU, and in 2008 the EU proposed a credit system that would recognize Europeans' knowledge and skills in a standard way. Other work in the EU focused on setting standards for transferable credits in universities so that students and scholars could gain more freedom to move. (KARIN CHENOWETH)

Students on June 4 demonstrate at one of a series of protests in Santiago against a proposed national education bill. Opponents argued that the bill encouraged private education at the expense of the poor.

told the *New York Times*, "We're going to work on projects that are good for the Middle East and for California, like energy sources beyond petroleum, improved water desalination, and solar energy in the desert."

Kaust, a self-styled "new paradigm" in education, brought together prominent scientists from major institutions around the world to produce research and train the next generation of scientists, not only from Saudi Arabia but also worldwide. It remained unclear whether women and Jews would feel comfortable working and studying in Saudi Arabia, although the country's restrictions, especially those pertaining to the movements of women, were not expected to apply in the new campus city being built by the Red Sea.

Other Middle Eastern countries also reached out to U.S. and other universities, partly in response to a 2003 report by the United Nations Development

The Environment

The **COMPLIANCE PERIOD** for the Kyoto Protocol began as the world's major **GREENHOUSE-GAS-EMITTING COUNTRIES** debated a new agreement and doubts concerning the benefits of **BIOFUELS** increased. Surveys of **GREAT APES** both raised new **CONCERNS** and brought welcome **SURPRISES**.

INTERNATIONAL ACTIVITIES

On Jan. 23, 2008, the European Commission (EC) proposed measures aimed at asserting EU global leadership in climate policy. The EC proposed 2020 renewable-energy targets, which ranged from 10% for Malta to 49% for Sweden. It also suggested that transport fuels should contain 10% biofuels. (EU ministers later said that the 10% figure included all renewable energy sources.) Within two years new power stations could be routinely fitted with technologies for carbon capture and storage. By 2020 these measures would reduce EU greenhouse-gas emissions to 20% below 1990 levels. Ahead of the announcement, the European Trade Union Confederation said that it feared that up to 50,000 steel workers might lose their jobs if EU plans drove away the steel industry to countries that had less-stringent regulations, and BusinessEurope said that companies would

lose competitiveness if they were forced to buy all their rights to emit carbon dioxide. In response, certain industrial sectors, including steel and papermaking, were withdrawn from the emissions-trading scheme.

The UN Environment Programme published its fourth global environment outlook assessment in late 2007. It warned that climate change, the loss of biodiversity, and land degradation were among the greatest challenges facing the world. UNEP director Achim Steiner said in a statement that “the systematic destruction of the Earth’s natural and nature-based resources has reached a point where the economic viability of economies is being challenged—and where the bill we hand on to our children may prove impossible to pay.”

NATIONAL DEVELOPMENTS

Australia. The country’s first facility for storing carbon underground opened in early April in Victoria. The facility,

which was 2 km (1.2 mi) belowground in an old natural-gas field near War-ranmbool, had a capacity of 100,000 metric tons (1 metric ton = about 2,205 lb) of carbon dioxide.

United Kingdom. On January 10 the government released a White Paper that endorsed the construction of nuclear power plants to help reduce greenhouse-gas emissions and enhance energy security. The paper said that licensing procedures would be streamlined.

After an eight-day trial in September, a group of six Greenpeace activists were found not guilty of having caused more than \$50,000 of criminal damage in 2007 when they painted the word “Gordon” on the chimney of a coal-fired power plant under construction at Kingsnorth, Eng. They had intended to paint “Gordon bin it,” which they meant as a critical message to Prime Minister Gordon Brown, but they were arrested before they could complete it. The energy company E.ON, owner of the plant, brought the case against the activists, who argued that they had damaged property in order to prevent damage to the planet.

China. Beginning June 1, shops throughout China were forbidden to supply free plastic shopping bags, and the production and sale of very thin plastic bags—those that were less than 0.025 mm (0.001 in) thick—were banned. The aim was to reduce pollution.

It was reported in January that in response to public pressure, Deputy Environment Minister Pan Yue had ordered

To help gauge the visual impact of offshore wind turbines, this seashore view was prepared with images of a typical wind turbine modified to show its appearance at various distances from the shoreline.

© Deepwater Wind Holdings, LLC

the relocation of a planned chemical plant away from the seaport of Xiamen, in southeastern China. Construction of the plant, owned by Dragon Aromatics, had begun in November 2006, and the plant was to produce 800,000 metric tons of paraxylene annually for making plastics and polyester. Widespread protests led Pan Yue to call for an independent environmental-impact assessment of both the plant and the Xiamen urban-development plans. The resulting report criticized the company for repeatedly breaching emissions limits and for disregarding requests to remedy the problem.

The Netherlands Environmental Assessment Agency reported in June that China's carbon dioxide emissions increased by 8% in 2007 and amounted to 24% of the world total. This made China the world's largest emitter, ahead of the U.S. with 21%.

Kenya. In early March people living in Kipevu, near Mombasa, complained of feeling ill because of chemicals leaking from dumped containers of nitric acid that belonged to Kasese Cobalt Co. Ltd., a Ugandan mining company. Phillip Mwabe of Environmental and Combustion Consultants, who was contracted to clean up the site, said that the containers had probably been leaking for a month. When Uwitije Venna, a director of Southern Enterprise, the Ugandan shipping company that transported the containers, failed to appear in court, Mombasa magistrates issued a warrant for his arrest.

United States. In October 2007 greenhouse-gas detection systems began to be installed in metropolitan areas of California. The first sensors, which measured gas concentrations in the atmosphere twice a day, were placed on Sutro Tower in San Francisco and Richland Tower in Sacramento. The detection systems formed part of the California Greenhouse Gas Emissions Project, a collaboration between federal and state agencies and universities. Under the plan, sensors would eventually be installed in 10 locations. The data would help officials determine whether the state was achieving its goal of reducing greenhouse-gas emissions into the atmosphere.

In June 2008 a bill that was aimed at capping greenhouse-gas emissions and introducing a carbon-trading scheme to the United States failed in the U.S. Senate. The climate-change bill was introduced by Sen. Barbara Boxer and sponsored by Senators John Warner and Joseph Lieberman. After three and

Workers in protective gear inspect a cloud of toxic acid that was leaking from its container near Mombasa, Kenya, in March.

a half days of debate, however, a motion to bring the bill to a final vote failed, and the bill was shelved.

When Hurricane Ike struck the Texas and Louisiana coasts in September, its winds and waves damaged oil platforms, pipelines, and storage tanks, which released at least 1.9 million litres (500,000 gal) of crude oil into the Gulf of Mexico and coastal marshes. The Coast Guard, the U.S. Environmental Protection Agency (EPA), and state organizations dealt with more than 3,000 pollution reports. None of the spills caused major damage, but in the aftermath of the storm, about 1,500 sites required cleaning.

In December, Florida water-district officials approved a \$1.34 billion deal to buy from U.S. Sugar, the country's largest sugar producer, most of its extensive land holdings to the south of Lake Okeechobee. The area, about 730 sq km (280 sq mi), would be taken out of production and used to help restore the Everglades. Although the deal had been scaled back from an initial \$1.75 billion agreement spearheaded by Florida Gov. Charlie Crist in June, completion of the sale remained uncertain given the cost and other concerns.

ENVIRONMENTAL ISSUES

Climate Change. The five-year compliance period stipulated in the Kyoto Protocol commenced on Jan. 1, 2008. During this period participating coun-

tries needed to meet targeted reductions in greenhouse-gas emissions but could also trade emissions credits with each other. Countries were expected to make most of their emission reductions within their own borders, but they could buy leftover credits from other countries and earn supplemental credits through projects to reduce emissions in other developed countries and in less-developed countries (LDCs). In October UN officials announced that the infrastructure and interconnectivity required for trading in these flexible mechanisms on a global scale had been completed. Any country that by the end of the period exceeded its agreed-upon emission target would be required to reduce its emissions to 30% below the target level during a nominal second commitment period that would begin in 2013, and all noncompliant countries would be suspended from emissions trading.

A meeting of the UN Framework Convention on Climate Change (UNFCCC), held in Bali, Indon., in December 2007, ended with an agreement that set the stage for negotiations aimed at forming a new global climate policy to be accepted at a meeting in Copenhagen in 2009. Delegates agreed that the UNFCCC should be the body responsible for approving projects to be funded by the adaptation fund, which was generated by a 2% levy on all transactions between parties engaging in carbon trading and was to be used to help the

Seed Banks—Preserving Crop Diversity

On Feb. 26, 2008, the most ambitious seed-bank facility ever constructed was inaugurated in Svalbard, a Norwegian archipelago in the Arctic Ocean only about 1,000 km (620 mi) from the North Pole. The Svalbard Global Seed Vault (SGSV), built by the Norwegian government into the side of a permafrost-covered mountain on the island of Spitsbergen, is designed to store in deep freeze the seeds of hundreds of thousands of plant varieties from crops grown on every part of the globe. This high-security “doomsday” conservancy, built far from unrest and civil war, seeks to protect the world’s agricultural inheritance against disaster, be it from rising sea levels, an asteroid strike, pestilence, or even the unforeseen consequences of an excessive reliance on crops with single-source genetic modifications. (See photograph on page 15.)

Established as a backup facility, the SGSV accepts only seed samples that are already held by other seed banks. The deposits are managed by the Global Crop Diversity Trust, an independent international organization that was established in 2004 by the UN Food and Agriculture Organization and the Consultative Group on International Agricultural Research, which operates international seed banks for the most important staple food crops. Seed samples for the SGSV are delivered and stored in sealed boxes and remain the property of the country or organization that deposits them. By late 2008 about 320,000 distinct seed samples, consisting of about 220 million seeds from about 2,900 plant species in more than 200 countries, had been placed in storage. The vault’s storage chambers are able to hold 4.5 million seed samples, for a total of 2.25 billion seeds.

Since the SGSV safeguards duplicate seed collections, it is not intended to replace any of the roughly 1,400 seed banks that exist worldwide. They include national and international institutions, organizations focused on particular types of crops, and regional facilities. In general, these seed banks are intended to preserve the genetic variety of plants, and for this reason they are also referred to as gene banks. Conserving crop varieties and related wild species provides genetic variations that can be useful for developing new varieties with essential traits, such as tolerating new pests or climate conditions.

Among the most important global seed banks is the Millennium Seed Bank (West Sussex, Eng.), which is managed by the Royal Botanic Gardens, Kew. Opened in 2000, the Millennium Seed Bank has succeeded in preserving virtually all of Britain’s 1,400 native plants and, in collaboration with seed banks in various other parts of the world, seeks to conserve a total of more than 24,000 plant species.

Seed banks that specialize in particular crops include the International Rice Genebank at the International Rice Research Institute (IRRI), based in Los Baños, Phil., and the International Potato Centre (IPC), based in Lima. The IRRI, which was established in 1960, estimates that it has conserved about 100,000 varieties of rice. The IPC, which was established in 1971 and subsequently expanded to include other tubers of Andean origin, counts in its collections about 150 wild potato species.

An example of a regional seed bank is Native Seeds, which was founded in 1983 in the southwestern United States to help Native Americans locate seeds for growing traditional crops. One of the oldest crop conservancies in North America, it aims in part to make poor communities nutritionally self-sufficient. The organization’s seed collectors, often traveling to isolated areas by foot or muleback, have recovered seeds for some 2,000 varieties of plants, including amaranth, once widely used for food and fibre in Mexico; tepary beans, a favourite food of the desert peoples of the Southwest; orach, or “mountain spinach,” grown in the Rio Grande uplands of New Mexico; panic grass, once a rich source of grain and protein for the Indian peoples of southern California and northern Mexico; and a sunflower grown in the Grand Canyon by the Havasupai Indians—one that is completely resistant to a rust disease that has ravaged commercial sunflower crops.

By selecting single hybrids, industrial agriculture (the source of the stock advertised in most commercial seed catalogs) has diminished the number of varieties of food plants available in the United States and other countries to all but a devoted handful of farmers and experimental gardeners. In the early 1900s, for example, more than 7,000 varieties of apples were grown commercially in the United States; today only a couple of dozen varieties are available to most consumers. The planting of monoculture crops, which increase standardization and efficiency, has replaced traditional crops in plots where they had been grown and bred for centuries. As a consequence, traditional crops, which had acquired the traits that are most suitable for the soils and climate of a given location, have been steadily lost. The preservation of this diversity of crops will help safeguard the future of the food plants upon which humans depend. Seed banks can directly address the concerns raised by a diminishment of genetic diversity among common food crops, and as plant scientists recover varieties of native food plants across the world, they add colour to a sadly washed-out genetic palette.

(GREGORY MCNAMEE)

poorest countries adapt to climate change. During the conference, 100 prominent scientists from 18 countries issued an open letter to UN Secretary-General Ban Ki-moon to argue that the conference should focus on measures to help countries adapt to climate change rather than on efforts to prevent global climate change, because in their opinion such efforts would ultimately fail.

Signatories to the letter included more than 40 university professors and emeritus professors, as well as three IPCC reviewers. In 2008 additional UNFCCC meetings were held in Bangkok, Bonn (Ger.), Accra (Ghana), and Poznan (Pol.) in preparation for the Copenhagen meeting.

In January, at the invitation of U.S. Pres. George W. Bush, representatives

from 16 of the world’s largest economies (Australia, Brazil, Britain, Canada, China, France, Germany, India, Indonesia, Italy, Japan, Mexico, Russia, South Africa, South Korea, and the U.S.), together with officials from the EU and UN, held a Major Economies Meeting in Honolulu to discuss climate policy. No commitment was made on emission restrictions, but

delegates welcomed a new sense of openness in discussing climate. At a subsequent meeting held in Paris for two days in April, delegates failed to agree on an approach to cutting emissions, and both Japan and the U.S. stated that it was too early to set numbers for future emission curbs.

At a three-day meeting of the Group of Twenty (G20) held in Chiba, Japan, in March, Japan won little support for its call for LDCs to formulate national goals based on improving industrial energy efficiency as a means of reducing greenhouse-gas emissions. LDCs urged developed countries during the meeting to transfer wealth and technology to them to help them meet the challenge. The meeting ended with no sign of a consensus.

At a Group of Eight summit held in Toyako, Japan, in July, the G8 countries pledged that by 2050 they would cut greenhouse-gas emissions by one-half, but they did so without specifying dates or amounts of intermediate emission reductions. They also agreed that any meaningful program needed to involve the industrializing LDCs such as China and India, that real progress would depend on technological advances, and that the benefits of action had to justify the consequent slowing of economic growth. The agreement brought the G8 into line with the position of the U.S. administration, but China and India—together with Brazil, Mexico, and South Africa—categorically rejected any measures that would undermine their economic growth.

The Heartland Institute, a Chicago-based organization that championed free-market solutions to social and economic problems, and more than 50 cosponsoring groups hosted the International Conference on Climate Change in New York City on March 2–4. The conference issued the Manhattan Declaration on Climate Change, which stated that global warming did not constitute a crisis and asserted that “there is no convincing evidence that carbon-dioxide emissions from modern industrial activity has in the past, is now, or will in the future cause catastrophic climate change.”

Biofuels. A study published by the Nature Conservancy in February found that biofuel production, which was seen as a way of reducing the accumulation of carbon dioxide in the atmosphere, was likely to have the opposite effect when biofuel crops were grown on land converted from other uses. According to the study, the conversion of

rainforest, peatland, savanna, or other grassland to biofuel production in Brazil, Southeast Asia, and the United States released up to 420 times more carbon dioxide than the reduction in emissions achieved by using biofuels instead of fossil fuels. Another study, by the German Marshall Fund of the United States, found that when land-use change was taken into account, the development of corn-based ethanol production would double greenhouse-gas emissions over 30 years.

On July 5, at the end of a three-day informal meeting in Paris, EU environment and energy ministers said that an earlier EC proposal on biofuels that would have required an increase in the share of biofuel usage to 10% by 2020 had been misinterpreted. They explained that the 10% requirement also included hydrogen and renewable power sources and that there would be no plans to increase the share of biofuels in road transport to 10%.

Air Pollution. China made great progress in 2008 in improving urban air quality. An air-pollution target of 245 “blue sky days” that had been set for Beijing for 2007 was achieved on Dec. 28, 2007, according to the Beijing Municipal Bureau of Environmental Protection. The authorities then set a target of 256 such days for 2008. On March 1, 2008, new car-emission standards, which were in line with those in the EU, came into force in Beijing, the city of Tianjin, Shandong province, and Inner Mongolia. In addition, beginning in July the use of private cars in Beijing and Tianjin was restricted so that cars with odd or even license-plate numbers were allowed on the streets only on alternate days. During the Olympic Games one-third of Beijing’s cars were taken off the streets and industrial activity was curtailed in order to satisfy the air-quality requirements of the International Olympic Committee. The dramatic improvement in air quality—a 50% reduction in air pollution—proved so popular with the citizens of Beijing that when the regulations ended September 20, the authorities introduced a set of milder restrictions for a trial period through April 2009. Under the new rules the number of government vehicles on the streets at any one time would be reduced by 30%, and beginning in late October every car would be banned from the streets on one day each week, which was designated on the license plate. Employers were also asked to stagger working hours to reduce peak traffic flows.

On January 1 the German cities of Berlin, Cologne, and Hanover introduced environmental zones within which every vehicle had to display a green, yellow, or red sticker. The colour indicated the kind of the pollutants it emitted, and drivers of vehicles that entered one of the zones without a sticker would be fined €40 (about \$60). The stickers were issued by the vehicle registration authority for a one-time charge of €5–€15, and the requirement applied to all vehicles, including those of foreigners.

In September the EPA finalized a program to reduce air pollution from small land-based spark-ignition engines that delivered less than 25 hp (19 kW) and from marine spark-ignition engines. The program included lawn-mower engines, small generators, and outboard and other marine engines. The emission limits would come into force between 2010 and 2012, depending on engine size, and they were intended to reduce emissions by about 600,000 tons of hydrocarbons, 130,000 tons of nitrogen oxides, and 1.5 million tons of carbon monoxide, which amounted to a 35% or 70% reduction overall, depending on the type of engine. Manufacturers planned to use catalytic converters to meet the new emissions requirements.

Toxic Waste. In late June government ministers from about 170 countries attended a five-day meeting in Bali on waste management. The meeting of signatories to the Basel Convention focused on the impacts of the large-scale exportation—primarily to LDCs—of hazardous waste, particularly in discarded mobile telephones, computer components, and other forms of “e-waste.” The attendees agreed to promote further cooperation and planning and to share technologies for the sound management of hazardous wastes.

It was reported in early July that Able UK, based in Billingham, Eng., had overcome environmental concerns and was planning to start work later in the year recycling the 238-m (781-ft)-long former French aircraft carrier *Clemenceau* at its Hartlepool facility. The *Clemenceau* had originally been sent to India to be scrapped. It was refused entry, however, over concerns about the 700 metric tons of asbestos it contained, and in 2006 the ship returned to France.

Marine Pollution. On Nov. 15, 2007, at a meeting of HELCOM (the Baltic Marine Environmental Protection Commission) in Krakow, Pol., environment ministers from countries that bordered

the Baltic Sea adopted the final version of an action plan to reduce marine pollution and restore the sea to “good ecological status” by 2021. The plan covered four topics: eutrophication, toxic chemicals, shipping, and biodiversity. Coastal states agreed to develop targets to reduce discharges of nitrogen and phosphorus; restrictions were introduced on the use of nine organic substances and two heavy metals; and new recommendations were to be issued on maritime safety and limitations on pollution from ships. The Baltic Sea plan was widely seen as a pilot for the regional plans that would be required for all the seas around Europe as part of the forthcoming EU marine-protection strategy.

At a meeting in London in April, the marine environment committee of the International Maritime Organization (IMO) decided to reduce the sulfur-content cap of all marine fuels to 0.5% by 2020—down from the existing limit of 4.5%.

An international ban on the use of organotin antifouling paints came into force on September 17. The measure had been adopted by members of the IMO in 2001 and ratified in 2007. By the end of 2008, all organotin compounds on hulls needed to be removed or coated with a sealant.

Freshwater Pollution. The Spanish Nuclear Safety Council confirmed in January a Greenpeace claim that for six years potentially very harmful amounts of radioactive material had been leaking from a landfill into the River Tinto at Huelva, Spain. The landfill held approximately 6,000 metric tons of waste that contained cesium-137 that had been removed from the Acerinox steel plant following an accident in 1998 and subsequently buried in 2001.

Chernobyl. On Nov. 20, 2007, the UN General Assembly adopted a resolution stating that the “emergency phase” in the areas affected by the 1986 accident at the Chernobyl nuclear plant was over and that the next 10 years would be “a decade of recovery and sustainable development.” It said that the recovery efforts in the region should focus on addressing the poverty, poor health, and fear that the accident and its aftermath had induced. The resolution followed a report by the World Health Organization that found that the health impact of the accident had been much less severe than was feared initially and that radiation levels in most of the affected areas were close to natural back-

ground levels. The General Assembly called on the secretary-general to report on recovery efforts in 2010.

AWARDS

The 2008 Tyler Prize for Environmental Achievement, administered by the University of Southern California, was awarded to James Galloway, professor of environmental sciences at the University of Virginia at Charlottesville, and Harold Mooney, professor of environmental biology at Stanford University. Galloway investigated the environmental effects of chemically reactive nitrogen compounds released into the atmosphere from fertilizer and other sources, and Mooney helped start many major environmental programs, including the Global Invasive Species Program, the Ecosystem Functioning of Biodiversity program, the Global Biodiversity Assessment, and the Millennium Ecosystem Assessment.

The 2008 Zayed Prize for the Environment had five recipients in three categories. Corecipients in the category of environmental action leading to positive change in society were Tierramérica (a Latin American information service concerned with the environment and development and produced by the Inter Press Service news agency) and the Environment Development Action in the Third World (a nongovernmental organization in Senegal). The recipient for global leadership in the environments was Gro Harlem Brundtland of Norway, UN special envoy for climate change and former director general of the World Health Organization. Jane Lubchenco of Oregon State University and V. Ramanathan, a climate researcher at the Scripps Institution of Oceanography at the University of California, San Diego, received the prize for scientific and technological achievement.

Claude Lorius and José Goldemberg won the 2008 Blue Planet Prize for lifetime contributions in ad-

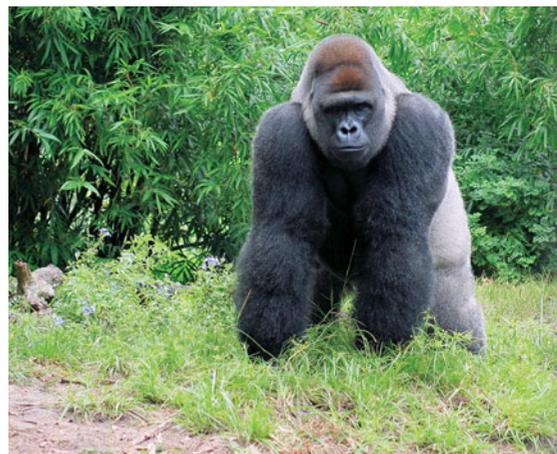

ressing global environmental problems. Lorius, director emeritus of research at the French National Center for Scientific Research, was honoured for work dating from the 1950s on calculating ancient levels of atmospheric carbon dioxide from Antarctic ice cores. Goldemberg, of the University of São Paulo, helped launch Brazil’s bioethanol program in the 1970s and pioneered the policy by which an LDC “leapfrogs” development based on conventional fuel sources by moving directly to the adoption of renewable-energy technologies.

(MICHAEL ALLABY)

WILDLIFE CONSERVATION

Primates—great apes in particular—featured widely in the news and in published research in 2008. In February the Democratic Republic of the Congo (DRC), Rwanda, and Uganda launched a 10-year initiative to conserve the mountain gorilla, *Gorilla beringei beringei*, of which only about 720 still

A Sumatran orangutan (top) and a lowland gorilla (bottom) gaze intently into the camera. These great apes were the focus of population assessments in 2008.

(Top) Binsar Bakkara/AP; (bottom) © Donald Gargano/Shutterstock.com

remained in the forested mountains that spanned the three countries. In September, however, renewed conflict was reported between rebel forces and the DRC army on the outskirts of Virunga National Park, where most of the gorillas were located. A report released in October, about a year after the killing of a number of mountain gorillas in the park, revealed that the gorilla population was stable. Although rebels had taken control of virtually all the Virunga gorilla habitat, wildlife guards had been able to resume monitoring the gorillas.

In June, in a move that could have a significant influence on future great-ape conservation, the environmental committee of the Spanish parliament approved resolutions that urged Spain to comply with the Great Ape Project. The initiative was conceived by a group of scientists and philosophers to promote the idea that great apes deserved rights that previously had been recognized only for humans, such as freedom from capture, torture, and unnecessary death.

The orangutans, the only great apes found in Asia, were the focus of a new comprehensive assessment published in July. The study found that there were about 6,600 *Pongo abelii* remaining on Sumatra and at least 54,000 *P. pygmaeus* on Borneo. Although the Sumatran orangutan was in rapid decline and could become extinct, there were more and larger populations of Bornean orangutans than had previously been known.

The first comprehensive review in five years of the world's 634 primate taxa, released in August at the International Primatological Society Congress in Edinburgh, reported that about one-half of the taxa were in danger of becoming extinct. The major threat to primates was the burning and clearing of tropical forests, followed by hunting and illegal trade. The review considered reclassifying the mountain gorilla from critically endangered to endangered but postponed doing so both because of the gorilla killings that occurred in 2007 and because of the continuing political turmoil in its habitat. A more positive note during the congress was the release of a census of

Thousands of stray logs from logging operations washed up on African beaches, where they disrupted nesting attempts by endangered marine turtles.

the critically endangered western lowland gorilla, *G. gorilla gorilla*. It showed that populations were faring better than expected, with a total of 125,000 individuals in two northern areas of the Republic of the Congo. The census showed densities of up to 8 gorillas per square kilometre (about 21 per square mile), one of the highest ever recorded. Long-term management of the Republic of the Congo's protected areas, remoteness and inaccessibility of some of the locations where the gorillas were found, and a food-rich habitat accounted for the high numbers.

A global map of human impact on marine ecosystems published in February indicated that no marine area was unaffected by human influence and that 41% of marine areas were strongly affected by multiple factors such as coastal runoff and pollution, drilling for oil and gas, and fishing. Only 4% of marine areas were relatively pristine, but many of these areas were in polar regions, which were

at risk from the effects of climate change.

In March it was reported that logging in central African rainforests posed an indirect threat to nesting marine turtles, especially the critically endangered leatherback turtle *Dermochelys coriacea*. Logs lost during transport downriver floated out to sea and then washed ashore, where they accumulated on beaches used by nesting turtles. About 11,000 lost logs were counted along the coastline of Gabon's beaches, with up to 250 logs per kilometre (400 per mile). The logs had a detrimental effect on the turtles; at one beach they caused 8–14% of nesting attempts by the turtles to be aborted or disrupted.

An interim report, entitled *The Economics of Ecosystems and Biodiversity*, was released in May at the 9th Conference of the Parties to the Convention on Biological Diversity. The report found that living standards among the poor might be severely lowered as ecosystems started to disintegrate and that existing rates of biodiversity loss might lead to a reduction in global GDP by about 7% within 45 years, largely because of deforestation. The effects of the loss would be felt disproportionately

by the world's 1.5 billion who lived in poverty, since they were the major beneficiaries of intact ecosystems.

A separate study published in July confirmed that deforestation continued unabated and at the same rate as in the 1990s. The researchers analyzed satellite data for 2000–2005 and found that during this period 27.2 million ha (67 million ac) of tropical rainforest were cleared, which constituted 2.36% of the world's tropical rainforest cover. Most of the clearing occurred within localized areas, and Brazil accounted for most of the loss (47.8%), followed by Indonesia (12.8%).

In late July, Brazil launched the international Amazon Fund to raise \$21 billion over 13 years to finance conservation and sustainable development in the Amazon rainforest. In September, Norway pledged \$1 billion for the fund through 2015, with as much as \$130 million beginning in 2009 if Brazil could show that deforestation had been reduced during the year.

(MARTIN FISHER)

Fashions

CHEAP became **CHIC** as the fashion-conscious in established markets looked to discount merchants in a time of **ECONOMIC UNCERTAINTY**, but some designers flourished, especially those whose creations incorporated a more international flavour. The **HOLLYWOOD GLAMOUR** “factory” shut down at a crucial time as a writers strike hobbled the awards season, and the styles adopted by women in the **POLITICAL SPHERE** were closely watched.

The faltering global economy determined the direction of fashion during 2008. Initially, the euro’s significant appreciation against the dollar proved a boon to style-conscious travelers who, visiting the U.S. from abroad as the year commenced, took advantage of the favourable exchange rate and purchased luxury goods in copious quantities. In the autumn, as the banking industry went into free-fall, Anya Hindmarch, whose eponymous accessories label was valued at £20 million (about \$32.2 million), predicted a “new era of austerity” and said that the “luxury fashion market is going to shrink.”

In a special September edition devoted to the “business of style,” *Fortune* magazine reported that summer sales had begun earlier than usual. Mickey Drexler, the CEO of J. Crew (formerly CEO at Gap), claimed that the depressed retail environment was the worst in his 40 years’ experience. *Fortune* noted, however, that luxury groups “LVMH, Gucci, Tiffany, Coach, Burberry and Richemont . . . all showed solid revenue growth in the first half of the year,” and “newly affluent customers in China, Russia, and other emerging markets would more than compensate for any softness in consumer spending.” Christian Dior, for example, reported double-digit growth in China. At July’s Paris couture shows, Karl Lagerfeld claimed that Chanel had Russian clients who each season acquired 30 to 35 pieces of the stratospherically priced handmade finery. Meanwhile, the August opening in New Delhi of Emporio—a

nearly 30,000-sq-m (320,000-sq-ft) five-story luxury shopping mall complete with boutiques operated by Dior, Dolce e Gabbana, Fendi, Giorgio Armani, Versace, and Vuitton—heralded the cessation of India’s restrictions on

A model shows a Gucci creation from the fall-winter 2008–09 collection in February in Milan. Many designers courted Russian and East Asian customers by using luxurious ethnic touches in their lines.

Luca Bruno/AP

Western luxury goods and was regarded as another positive sign that the luxury sector would thrive, despite the economic downturn. By October, however, the largest luxury chains and retailers were announcing double-digit drops in sales. The November–December Christmas shopping season did not show improvement, despite steep price cuts. Deep discount stores such as Wal-Mart, however, posted small gains.

In an effort to attract customers in emerging markets, designers presented ready-to-wear directly inspired by the new business territories. At Hermès, Jean Paul Gaultier displayed an Indian-themed brightly hued collection complete with Nehru jackets, turbans, and sari-inspired toga dresses; Lakshmi Menon—the Bangalore-born 27-year-old Ford model—flaunted Gaultier’s clothes in the Hermès advertising campaign. Similarly, Alexander McQueen’s 2008 winter men’s wear collection—featuring trousers and coordinating shoes both made from sheeshedar, the mirrored Indian fabric, paired with a shaggy poncho—was motivated by a trip he made through the Indian states of Kerala, Bihar, and Rajasthan. Frida Giannini (see BIOGRAPHIES) created for Gucci commercially successful autumn-winter ‘08 collections for men and women that were embellished with coins, velvet, fur trim, and “folk-art” prints redolent of the opulence of tsarist Russia.

Accessible sartorial trends proved popular and made the leap from designer runways to the street. Vibrant floral prints launched by Balenciaga’s Nicolas Ghesquière, Prada, and Dries Van Noten for spring-summer, as well as the perky plaid separates presented for autumn-winter by Ralph Lauren, House of Holland, and D&G, became best sellers and were adapted by chain stores, which successfully sold inexpensive mass-market copies. The dramatic autumn-winter evening wear made by Prada from Swiss lace in gold and in black was classified by *T Magazine* as the “most photographed collection of the season.”

Michael Kors’s conservative-chic, retro-inspired autumn-winter collection included camel topcoats, suits with pencil skirts, romantic floral-print dresses, and cashmere sweaters. The

Joel Ryan—PA Photos/Landov

Model Agnès Deyn wears a plaid creation by House of Holland during London Fashion Week in February.

look was inspired by *Mad Men*, the critically acclaimed cable television series about the advertising world in the 1960s, and the show in turn contributed to the New York designer's continued success. Kors CEO John Idol predicted that the luxury label would reach a billion [dollars] in sales within three years, in part because Kors had raised his profile through weekly appearances as a judge on the reality television series *Project Runway*.

As a crisis mode dominated the economy, the fashionable set turned to comfortable clothes and accessories, including men's drawstring pajama pants designed by Miu Miu and Veronique Branquinho. The vest (or waistcoat) proved an alternative to a blazer for men and women. Young men on the street flaunted sloppy ski hats of the type actor Will Smith sported in the film *Hancock*. Meanwhile, music influenced the direction of footwear. Rightly anticipating demand, Nike, Converse, Lanvin, Dior, and Gucci produced metallic high-top sneakers similar to those worn by Jay-Z in the video for Rihanna's "Umbrella." "Jazz

lace ups"—functional dance-inspired footwear preferred by top models Kate Moss, Natalia Vodianova, and Agnès Deyn—eclipsed ballet slippers. The platinum blonde boyish crop that hairstylist Sam McKnight conceived for Mancunian Deyn became a British beauty craze as it was emulated by young men and women.

Shorts suits were favoured in summer by men and women as an alternative to trouser suits. Highlighting the best looks, *Vogue* paired thigh-grazing shorts by Vivienne Westwood, Marc Jacobs, and Balenciaga, among others, with blouses and jackets in a photo shoot called "Keep It Short." In a newspaper article titled "Shorts Crack the Code," the *New York Times* featured photographs of male executives in New York City wearing Bermuda shorts and blazers; the article noted that "fashion-besotted" hockey star Sean Avery appeared in a shorts suit "that showcased his athletic calves" while fulfilling a summer internship at *Vogue*.

"Statement" jewelry—bold costume pieces such as cocktail rings, bejeweled necklaces, brooches, and swiny chandelier earrings—proliferated on the autumn-winter runways of Balenciaga, Burberry, Lanvin, Missoni, and Yves Saint Laurent and evolved to rival handbags for supremacy in the accessories category. Knockoffs of designer baubles were made widely available at innovative retailers such as Topshop in the United Kingdom and Forever 21 in the United States.

Inexpensive clothes acquired cachet, thanks to endorsements by trend-setting celebrities and canny retailers. Patrick Robinson, the California-raised designer who had worked for Anne Klein, Giorgio Armani, Perry Ellis, and Paco Rabanne, brought new gloss to the ailing Gap retail chain; his first collection as the retailer's head designer was introduced during the high-profile New York Fashion Week in February. Robinson's critically acclaimed and inventive bohemian autumn-winter casuals included flared chinos and high-heeled crepe-soled desert boots conceived for Gap by Paris shoe designer Pierre Hardy.

Opening Ceremony, the cutting-edge boutique operated in New York City and Los Angeles by Humberto Leon and Carol Lim, sold affordable hip garb alongside avant-garde ready-to-wear. In one month the boutique sold 6,000 pairs of \$60 skinny jeans by the Swedish brand Cheap Monday. Barneys New York followed the example

of Opening Ceremony (which in 2007 had sold a capsule collection that Proenza Schouler produced for Target) and peddled the spring-summer line that New York City designer Rogan Gregory had created for Target. The collection, which was priced from \$15 to \$45 and featured wrap dresses and tank tops, sold 1,000 pieces within two hours when it debuted in May at the Madison Avenue Barneys in New York City.

Just prior to the release of fashion blockbuster *Sex and the City: The Movie*, Sarah Jessica Parker appeared at a May film premiere in a strapless leaf-print Bitten sundress that had cost \$8.98 at the "perpetually mobbed" sweeping Manhattan outlet of discount clothing chain Steve & Barry's. (Despite the firm's popularity, in July the retailer filed for bankruptcy, and it was subsequently rescued by investment firms Bay Harbour Management and York Capital Management.) *Sex and the City's* costumer, Patricia Field, launched a 35-piece affordable women's fashion collection, including "disco dresses," for British retailer Marks & Spencer. As the firm's executive chairman, Sir Stuart Rose, explained: "We all need a bit of fun right now—something to lift us out of the gloom."

Designer Michael Kors drew inspiration from the 1960s for these ensembles from his fall-winter 2008–09 collection.

Fashion's annual red-carpet season turned sombre when January's Golden Globe Awards were canceled. Because the Screen Actors Guild (SAG) was on strike, its members refused to attend the event, which traditionally inaugurated Hollywood's series of fashion-rich winter award shows. Though the SAG awards ceremony and the Academy Awards show went ahead as scheduled, the dress code at both affairs was decidedly muted. Julie Christie wore a tuxedo as she accepted the SAG best-actress award, and Tilda Swinton clutched her Oscar in a black velvet floor-length Lanvin gown. The shortage of traditional celebrity glamour thrust a range of eccentrically clad personalities into the spotlight, including Amy Winehouse (see BIOGRAPHIES), whose "sky high" beehive and black eye makeup adorned models who appeared in a London showing of Chanel's 2008 *Métiers d'Art* collection. Karl Lagerfeld, in summing up Chanel's expensive assortment of dark separates, christened the collection "sophisticated punk for the rich."

High-profile women in the political sphere became the most prominent fashion leaders. On her first official visit to England in March, Christian Dior-clad Carla Bruni-Sarkozy—the supermodel-turned-folk-singer wife of French Pres. Nicolas Sarkozy—made international headlines. In the mid-1990s Bruni-Sarkozy appeared on 250

magazine covers, was a regular on top designers' runways, and starred in the advertising campaigns of Dior, Chanel, and Gianni Versace. Applying her style know-how to her new role, Bruni-Sarkozy acquired a newly demure im-

Toby Melville—Reuters/Landov

age. She opted for chic flat shoes so as not to tower over her diminutive husband, and on their London visit her Christian Dior couture wardrobe featured items such as a pillbox hat reminiscent of the iconic Halston hat associated with U.S. first lady (1961–63) Jacqueline Kennedy. Bruni-Sarkozy, posing with ease next to her husband—as well as solo for *Vanity Fair's* prestigious September cover—boosted his international profile. American *Vogue* observed, "She is the most sparkling embodiment of fashion's transformative power since Princess Diana."

The nomination of Gov. Sarah Palin of Alaska (see BIOGRAPHIES) as the Republican (GOP) vice presidential candidate set off a huge demand for her preferred style of rimless eyewear, which were custom-made and based on a style by Japanese industrial designer Kazuo Kawasaki. Orthodox Jewish women in New York City had their wigs styled to copy Palin's signature hairdo. Near the end of the campaign, however, a makeover of Governor Palin backfired when the story surfaced that the Palin family's \$150,000 luxury shopping spree had been financed by the GOP.

Michelle Obama, wife of Democratic President-elect Barack Obama (see BIOGRAPHIES), wore A-line dresses and a slick flipped hairstyle reminiscent of Jacqueline Kennedy's look. The clothing Obama wore on the campaign trail ranged from a Moschino floral shirt-dress to a blue-and-white-plaid Gap sundress to perky J. Crew separates. Maria Pinto, the creator of many of Obama's campaign dresses (including the purple sleeveless shift she wore on the night her husband claimed the Democratic nomination), opened her first boutique in Chicago in August. The following month, during New York Fashion Week, *ES Magazine* reported that Thakoon Panichgul had become the "talk of the town" after Obama wore one of his designs—a black-and-red floral kimono dress—for the occasion of her husband's nomination speech.

In June the industry mourned the passing of designer Yves Saint Laurent, who modernized fashion by introducing trousers to the female wardrobe and by pioneering the concept of ready-to-wear. Other deaths include those of fashion designers Mila Schon, who made her mark in Italy, and Riitta Immonen of Finland; costume designer Kermit Love; models Katoucha Niane and Dorian Leigh; and Hollywood tastemaker Mr. Blackwell. (See OBITUARIES.) (BRONWYN COSGRAVE)

Health and Disease

Food and drug **CONTAMINATION** triggered public health emergencies. American **HIV** infection rates were revised upward, while worldwide **MALARIA** rates were revised downward. Experimental advances included a **STEM-CELL TECHNIQUE** for improved **ORGAN TRANSPLANTATION** and a heart-encircling mesh to treat **HEART FAILURE**.

Food and Drug Safety. In 2008 the contamination of infant formula and related dairy products with melamine in China led to widespread health problems in children, including urinary problems and possible renal-tube blockages and kidney stones. According to the World Health Organization (WHO), by late 2008 the contamination had led to four infant deaths and the hospitalization of more than 14,000 infants. Melamine, a chemical compound with many industrial uses, had no approved use in food, but according to health officials, it was sometimes added to foods illegally to inflate their apparent protein content as measured with standard tests. Following inspections conducted by China's national inspection agency, at least 22 dairy manufacturers across the country were found to have melamine in some of their products. The Chinese government responded to the public health crisis by announcing a major shake-up in the dairy industry to improve safety all along the supply chain for dairy products, and it said that it would establish a tracking system to record their flow and delivery.

Several countries reported finding melamine in exported Chinese dairy products, including liquid milk and frozen yogurt dessert. All of these products had likely been manufactured with ingredients made from melamine-contaminated milk, according to WHO. Although there had been no reports of illness from contaminated Chinese milk products in the United States, in November the U.S. Food and Drug Administration (FDA) ordered that imported Chinese milk products be held at the border until tests proved that they were not contaminated. Recalls of

melamine-tainted products occurred in Australia, Britain, Hong Kong, New Zealand, Singapore, and Thailand. American consumers had become aware of the deadly effects of melamine contamination in 2007 when tainted pet food from China killed more than 4,000 dogs and cats in the U.S.

Contaminated lots of the blood-thinning drug heparin were blamed for having caused allergic-type reactions—such as a drop in blood pressure and shortness of breath—in hundreds of persons in the United States from late 2007 through early 2008. The adverse reactions were initially linked to heparin marketed by Baxter, which recalled its heparin products. The contaminant was subsequently identified as a heparin-like synthetic substance called oversulfated chondroitin sulfate

(OSCS), and the FDA urged all American suppliers of heparin products to use sophisticated screening to determine whether their products were free of the contaminant. In April the agency said that OSCS-contaminated heparin had been found in 11 countries, including the U.S., and that it had been traced to a number of Chinese companies that were involved in heparin manufacture. The FDA tallied at least 81 death reports in the U.S. of persons who had been administered heparin of any kind and had experienced an adverse reaction. Many were patients who had been undergoing surgery or had underlying life-threatening conditions, and the specific cause of death was difficult to determine. A study published in *The New England Journal of Medicine* in late December showed conclusively that OSCS-contaminated heparin caused adverse reactions in patients but did not establish it as a cause of death.

HIV and AIDS. In late 2007 a campaign that had been launched by WHO four years earlier to bring antiretroviral therapy to HIV-positive people in less-developed countries reached its goal of treating three million individuals. Although the milestone was achieved two years after its targeted date, a report on the initiative noted that improved access to the therapy was expected to proceed at a greater pace.

Workers at a dairy in Wuhan, China, were watched as they disposed of melamine-contaminated milk in November.

In the United States, researchers at the CDC reported that the number of Americans newly infected with HIV each year was, and had long been, higher than previously assumed. This conclusion was the result of an improved calculation method that distinguished recent HIV infections from older ones. Using the new formula, the CDC said that about 56,300 new HIV infections occurred in the United States in 2006, 40% more than the previous estimate of 40,000. In addition, the CDC reported that new diagnoses of HIV infection across 33 states increased by 12% annually between 2001 and 2006 among young gay and bisexual men. The report said that the rise was especially significant among young black men aged 13 to 24 who had sex with men. The annual rate of new HIV diagnoses for this group increased by 15% annually, compared with an increase of 9% and 8% annually among their white and Hispanic peers.

In another development, scientists found evidence that HIV arose decades earlier than previously believed. According to a study by Michael Worobey, an assistant professor of ecology and evolutionary biology at the University of Arizona in Tucson, and colleagues, HIV began spreading in sub-Saharan Africa between 1884 and 1924, about the time urban centres were established in west-central Africa. Scientists had believed that HIV originated in about 1930. Previous studies had shown that HIV spread to humans from chimpanzees in southeastern Cameroon. Worobey believed that the growth of cities and high-risk behaviours for HIV infection among city dwellers might have been a principal cause of the subsequent spread of the virus.

Polio. The Global Polio Eradication Initiative (GPEI) announced in March that Somalia was polio-free once again. Somalia, which had wiped out the disease in 2002, became reinfected in 2005 by poliovirus that originated in Nigeria. The new eradication effort in Somalia had been particularly challenging because of widespread armed conflict, shifting populations, and the lack of a functioning government infrastructure in the war-torn country. The effort involved more than 10,000 Somali volunteers and health workers, who vaccinated more than 1.8 million children under the age of five.

Although polio remained endemic in only four countries—Afghanistan, India, Nigeria, and Pakistan—through 2008 the GPEI reported confirmed cases of infection by wild poliovirus in 13 other countries, including 7 countries that had reported no cases in 2007. Health officials reported a resurgence of polio in Nigeria's northern states, where more than 20% of children remained unimmunized. From 2003 to 2006, poliovirus of Nigerian origin spread to 20 countries, with outbreaks that reached as far as Indonesia.

Avian Influenza. In April Egypt confirmed its 50th human case of bird flu—in a two-year-old boy. Bangladesh confirmed its first human case in May, and two new cases of human infection were reported in Indonesia in December. Out of a total of 139 human cases in Indonesia since 2004—the highest total reported by any country—113 had been fatal.

A study published in *The New England Journal of Medicine* said that scientists had developed a whole-virus bird-flu vaccine, Celvapan. It appeared to be safe and more effective than bird-flu vaccine that was currently approved for human use. The study was conducted by Baxter, Celvapan's manufacturer, and found that 75% of volunteers produced antibodies against the virus after having received a second dose of the vaccine, compared with only 45% in the currently approved vaccine. The study's author said that Celvapan pro-

vided protection from several bird-flu virus strains, that it could be produced in less than one-half the time of traditional methods, and that it did not require an additive to boost an immune response. Baxter was seeking approval of the vaccine for use in Europe and the United States.

Other Infectious Diseases. A report published in February found that the rate of incidence of multidrug-resistant tuberculosis (MDR-TB) was at its highest ever and that extensively drug-resistant tuberculosis, which was considered virtually untreatable, had been recorded in 45 countries. The report, entitled *Anti-tuberculosis Drug Resistance in the World*, represented the largest survey on the extent of drug resistance in cases of tuberculosis and was based on data collected from 90,000 TB patients in 81 countries from 2002 to 2006. The

report also found a link between HIV infection and MDR-TB. Surveys in Latvia and Ukraine found about two times the level of MDR-TB among TB patients with HIV compared with patients who were free of HIV. On the basis of the survey data, WHO estimated that there were about 500,000 new cases of MDR-TB annually—about 5% of the total of 9,000,000 new cases of TB of all types. The highest rate was recorded in Baku, the capital of Azerbaijan, and about one-fourth of all new TB cases in Baku were multidrug-resistant. Although new vaccines could potentially prevent TB, the removal of one strain might allow a previously suppressed strain to succeed, according to research from the University of Bristol, Eng. A vaccination program could therefore result in the proliferation of strains more likely to be, or become, drug resistant.

As a consequence of using improved computational statistical techniques, WHO reported in September that there were many fewer cases of malaria in the world than had been thought. In its 2008 annual malaria report, WHO said that there were about 250 million cases of malaria in the world annually, with about 880,000 deaths in 2006. Previous official estimates had ranged from 350 million to 500 million cases and more than 1 million deaths. Nevertheless, WHO called for continued aggressive efforts to attack the disease. The number of estimated cases in Africa—where 91% of malaria deaths occurred—had

Jorge Adorno—Reuters/Landow

In Paraguay army medics immunized residents against yellow fever in the outskirts of Asunción.

remained relatively unchanged. The number of cases in Asia had been overestimated, however, because they were derived from population and vegetation maps that dated to the 1960s. Since that time, millions of Asians had migrated to cities, and large regions had been deforested, which, according to the report, reduced mosquito habitat. Moreover, countries such as India had grown wealthier and had improved health care and mosquito control.

In February Paraguay declared a public health emergency following an outbreak of yellow fever. In response, an initial one million yellow-fever vaccination doses were supplied by Brazil, Peru, and other Latin American countries, and an additional two million were supplied by UNICEF. Officials reported at least 66 suspected cases of yellow fever. Of those, 15 were confirmed and 7 people died. Of the suspected cases, 26 were located in urban centres close to Asunción. Meanwhile, Brazil also reported cases of yellow fever in six states.

The Ministry of Health of Guinea-Bissau battled to control a cholera epidemic that began in May and quickly spread across the country. As of November, 14,129 persons in the country had contracted cholera, and 221 had died. In addition to providing \$750,000 in aid, UNICEF as-

sisted with the disinfection of Bissau's water system and traditional wells and coordinated hygiene and public health initiatives. Elsewhere on the African continent, Zimbabwe declared a national emergency in early December in the wake of a cholera epidemic that had resulted in more than 560 deaths since August, according to the United Nations. By year's end, health officials in Zimbabwe had reported more than 1,500 deaths from a total of about 26,000 cases of cholera.

In May China reported a fast-spreading outbreak of hand, foot, and mouth disease (which was unrelated to the foot-and-mouth disease of livestock). The outbreak killed 22 children and sickened about 4,500 others in Anhui province. All of the fatalities were children younger than six years of age, and most were younger than two. The outbreak was caused by a strong intestinal virus known as enterovirus 71. Symptoms began with a fever and typically included mouth ulcers and blisters on the hands, feet, and buttocks. Most patients recovered in a week without treatment. In severe cases, however, brain swelling led to paralysis or death. There was no vaccine or known cure for the disease.

Cancer. Researchers for the first time sequenced the entire genome of a cancer patient—a woman who had acute

myelogenous leukemia. In a paper published in November in *Nature*, the researchers reported that they had found 10 mutations in the woman's cancer-cell DNA compared with the DNA from her normal skin cells and that 8 of the mutations had not been previously linked to her disease. In April the International Cancer Genome Consortium was formed by research organizations from around the world to produce high-quality genomic data on up to 50 types of cancer. Each consortium member planned to conduct a comprehensive high-resolution analysis of the full range of genomic changes in at least one specific type or subtype of cancer, and each analysis was expected to involve specimens from at least 500 patients and to cost an estimated \$20 million.

A study presented in September at the American Society of Clinical Oncology's 2008 Breast Cancer Symposium in Washington, D.C., highlighted progress in making diagnoses. An experimental screening technique known as molecular breast imaging, which used an injected radioactive tracer, detected three times as many breast cancers as conventional scanning techniques in women who had dense breasts and who were at a higher risk of developing the disease.

In a study published in August in *The New England Journal of Medicine*, Jane J. Kim and Sue J. Goldie of Harvard University analyzed the cost-effectiveness of vaccination programs for immunizing women against viruses that caused cervical cancer and evaluated the implications of their findings for vaccination guidelines. As the result of the success of clinic trials and subsequent national vaccination programs, within just a few years tens of millions of girls and women had received doses of Gardasil or Cervarix, vaccines that targeted two strains of the human papillomavirus that together caused an estimated 70% of cervical cancers. The authors concluded that the vaccines would be cost-effective if they proved to protect women for a lifetime and if current methods for screening for cervical cancer by means of Pap smears could be safely adjusted to reduce costs. In an accompanying editorial, Charlotte J. Haug, editor of *The Journal of the Norwegian Medical Association*, observed that

Children in Harare, Zimb., collect available water for their home. Amid water-supply breakdowns, a cholera epidemic swept Zimbabwe late in the year.

Tsvangirayi Mukwazhi/AP

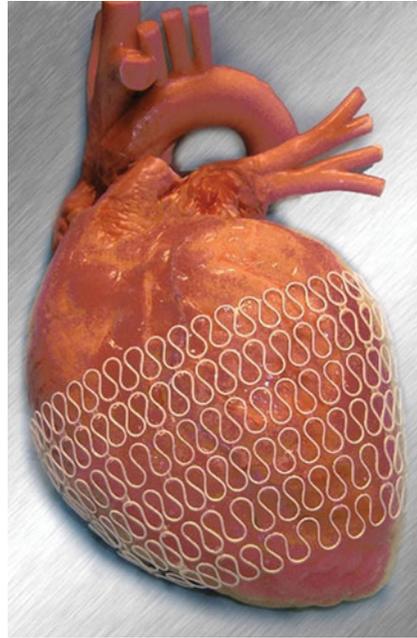

many uncertainties remained concerning the vaccines, such as how long the immunity would last or whether eliminating some strains of cancer-causing virus might decrease the body's natural immunity to other strains. She urged that clinical trials and follow-up studies be continued to test unproven assumptions about the two vaccines.

A study published in October in the *Journal of Clinical Oncology* found that persons with pancreatic cancer were more likely than those without the disease to have been previously infected with the hepatitis B virus. Lead author James L. Abbruzzese from the M.D. Anderson Cancer Center in Houston noted that although the study had shown an association between hepatitis B and pancreatic cancer, it did not prove a cause and effect. (Hepatitis B was known to cause liver cancer in some patients.) Though uncommon, pancreatic cancer was among the deadliest forms of cancer, and a vaccine existed to prevent hepatitis B.

Cardiovascular Disease. The American Academy of Pediatrics in July recommended that some children as young as eight years of age take cholesterol-fighting drugs to ward off potential future heart problems. The academy also recommended low-fat milk for one-year-olds, as well as more cholesterol testing. Stephen Daniels, of the academy's nutrition committee, said that the advice was based on mounting evidence that the cardiovascular damage that leads to heart disease begins early in life. He added that the recommendation for the cholesterol-fighting drugs stemmed from recent research that showed that they were generally safe for children. In general, the drug treatment would be targeted for children at least eight years old who had too much LDL, or "bad," cholesterol as well as risky conditions such as obesity and high blood pressure. The new recommendation prompted debate among pediatricians, with critics saying that there was no evidence that giving statins to children would prevent heart attacks later in life and that there were no data on the potential side effects of taking the drugs for decades.

More than 100 heart patients took part in clinical trials to test the effectiveness of the HeartNet Ventricular Support System to stop advanced heart failure. The system used an elastic metallic-alloy mesh that was wrapped around the heart through a minimally invasive implant procedure. According to HeartNet's developer, Paracor Medical, the mesh exerted a mild pressure on the

Image courtesy of Paracor Medical, Inc.

The HeartNet, a mesh that surrounds the heart, was undergoing clinical testing for the treatment of advanced heart failure.

heart and was designed to slow or stop the enlargement of the heart that was associated with heart failure. The HeartNet device was first implanted in 2006.

Alzheimer Disease. Research to develop drugs that could cure or halt the progression of Alzheimer disease experienced setbacks during 2008. To date there were only medications to treat the symptoms of the disease, such as memory loss and confusion. During the year, Myriad Genetics announced that Flurizan, a drug that it had developed to treat Alzheimer disease, failed in a late-stage clinical trial. Flurizan was one of the first drugs to reach late-stage testing that worked by trying to prevent the buildup in the brain of toxic amyloid plaques, which had been thought to cause the disease. Moreover, a study published in July in *The Lancet* said that a once-promising experimental vaccine called AN1792 failed to prevent the progression of Alzheimer disease, even though it cleared amyloid plaques in the brain.

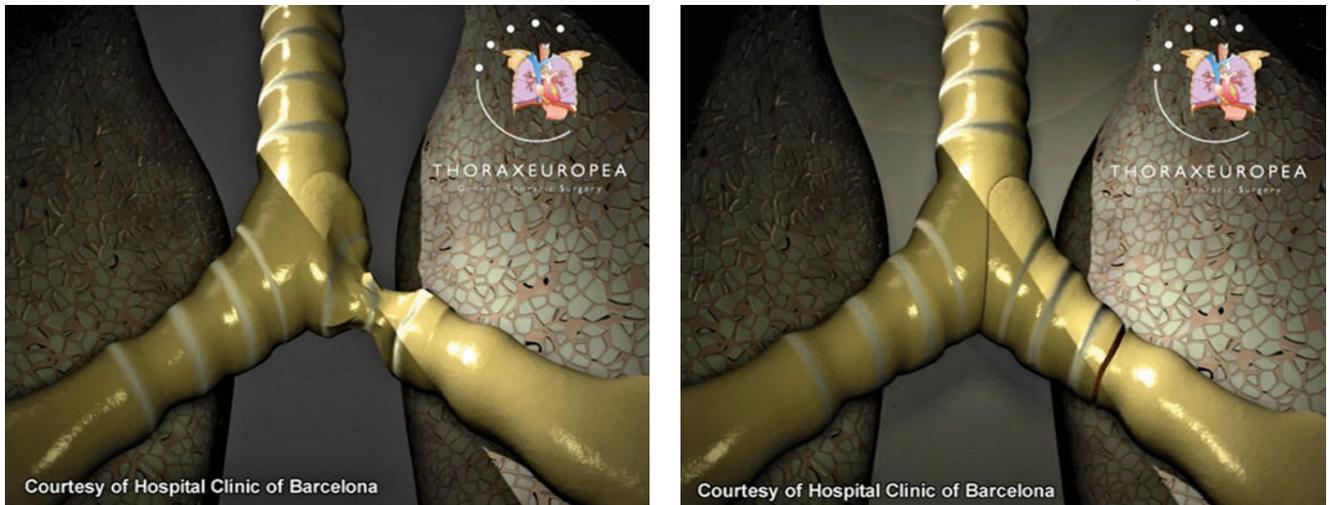

On the positive side, another study published in *The Lancet* in July reported that an older drug called dimebon significantly helped Alzheimer symptoms. Rachele S. Doody, at Baylor College of Medicine in Houston, and colleagues studied the effects of dimebon on 183 patients in Russia with mild to moderate Alzheimer disease.

The drug was not being marketed and had been previously used in Russia as an antihistamine. Doody's team found that patients on dimebon had a significant increase in cognitive ability, compared with those who received a placebo. Treated patients also showed improvement in thinking abilities, behavioral symptoms, and daily skills.

At the International Conference on Alzheimer disease in August, John Ronald, of the University of Western Ontario, and his colleagues reported that they had identified the brain plaques associated with the disease by using magnetic resonance imaging. Previously, Alzheimer disease could be distinguished with certainty from other dementias only by postmortem examination. The imaging advance was expected to make it easier to identify people with the disease and thus start treatment early.

Vaccines. Public health officials had expressed concern in recent years that some parents, fearful about vaccine safety, were declining to get their children vaccinated, which consequently made the children more likely to catch and spread preventable childhood diseases. In September, however, the CDC reported that in the preceding year record numbers of toddlers in the U.S. had received the vaccinations recommended by the CDC's Advisory Committee on Immunization Practices. According to the CDC, a record 77.4% of children aged 18 months to three years old received the full recommended series of vaccinations, and 90% of children got all but one of the six individual vaccines in the series (the exception was the four doses of the vaccine for diphtheria, tetanus, and pertussis [whooping cough]). The report was issued one day before another study was released that concluded there was no link, as had been claimed by critics, between autism and the vaccine for measles, mumps, and rubella.

The CDC reported significant progress toward the introduction and use of *Haemophilus influenzae* type b (Hib) vaccine in less-developed countries. The CDC estimated that Hib disease annually caused three million cases of meningitis (swelling of the membranes surrounding the brain and spinal cord) and severe pneumonia and about 386,000 deaths worldwide in children five years of age and younger. Hib vaccines had been widely used in developed countries for almost 20 years but had been relatively unavailable in the world's poorest countries.

These images depict the damaged windpipe (left) that was repaired (right) in an operation in Barcelona with tissue grown from the patient's stem cells. The windpipe is shown where it branches to the two lungs, which appear in the background.

Pharmaceuticals. Prostate-cancer specialists reported that the drug finasteride could reduce men's risk of developing the disease by 30%. Finasteride already was used by millions of men to shrink the prostate. As many as 100,000 cases of prostate cancer could be prevented annually by taking the drug, according to Eric Klein of the Cleveland Clinic. The discovery arose from an analysis of a large American study of finasteride. Nevertheless, it was debated whether men should take the drug to prevent prostate cancer, which in a given individual might or might not be dangerous because the cancer was relatively slow-growing and often not lethal. On the one hand, doctors said many men diagnosed with prostate cancer chose to be treated, which could potentially leave them impotent or incontinent. On the other hand, men who considered taking finasteride would need to weigh the risk of unanticipated side effects that might emerge years later from taking the drug even if they avoided developing prostate problems.

Other Developments. For the first time, doctors performed a human trachea (windpipe) transplant by using tissue that was grown from the recipient's own stem cells—a procedure intended to prevent the immune system from rejecting the new organ. Doctors from four European universities performed the surgery in Barcelona on a 30-year-old woman who suffered from a severely collapsed lung owing to tuberculosis. In preparation for the transplant, a donor's trachea was first stripped of cells that would have been rejected when transplanted. Stem cells from the woman's

bone marrow were then used to create cartilage and tissue cells to cover and line the trachea. Details of the procedure were published in *The Lancet*, which reported that the woman did not require immune-suppressing drugs and was doing well months after the surgery. Although the surgery was considered an important advance in stem-cell technology, scientists said that the ability to grow entire organs with stem cells remained only a far-off possibility.

A newly passed U.S. law required insurance companies to provide equal coverage for mental and physical illnesses. As a result, more than one-third of all Americans were expected to receive better coverage for mental health treatments. Many insurers set higher co-payments and deductibles and stricter limits on treatment for addiction and mental illnesses. The new law would make it easier for people to obtain treatment for a wide range of conditions, including depression, autism, schizophrenia, eating disorders, and alcohol and drug abuse. Federal officials said that the law would improve coverage for 113 million persons, including 82 million in employer-sponsored health plans that were not subject to state regulation. The effective date for most of the plans would be Jan. 1, 2010.

Taiwanese researchers reported in June that the already high worldwide rate of chronic kidney disease (CKD) was increasing and that because it raised the risk of death, addressing the disease should be a public health priority. The study, which analyzed data from 462,293 persons, found that the 12% of people with CKD were 83%

more likely to die from any cause and twice as likely to die from cardiovascular causes, compared with those without CKD. About 40% of deaths in the CKD group occurred before age 65. Of the deaths in the entire study group, 10.3% were attributable to CKD, but this figure increased to 17.5% among people with low socioeconomic status. The researchers also found that people who regularly used Chinese herbal medicines had a 20% increased risk of developing CKD. The study was published in *The Lancet*.

Rates of childhood obesity, which had been rising for more than two decades, appeared to have hit a plateau in 2006. The finding, based on data gathered from 1999 to 2006 by the CDC, was published in May in the *Journal of the American Medical Association*. The study said that it was unclear whether the slowdown in childhood weight gain was permanent or the short-term result of public antiobesity efforts such as curbing junk food and increasing physical activity in schools. Even if the trend held, 32% of American schoolchildren remained overweight or obese, doctors noted. The data came from thousands of children who had taken part in the National Health and Nutrition Examination Surveys, which had been compiled by the National Center for Health Statistics at the CDC since the 1960s. The plateau followed years of weight gain among American children. In 1980, 6.5% of children from ages 6 to 11 were obese, but by 1994 that number had climbed to 11.3%. The rate had jumped to 16.3% by 2002 and in 2006 had stabilized at about 17%. (KEVIN DAVIS)

Life Sciences

Scientists discovered moths and frogs that use **ULTRASONIC** communication, studied the effects of **CLIMATE CHANGE** on animals and plants, grew a date palm from a **2,000-YEAR-OLD SEED**, described 14-million-year-old **FREEZE-DRIED FOSSILS** of moss in Antarctica, and sought to explain the widespread loss of **HONEYBEE COLONIES**.

ZOOLOGY

In 2008 several zoological studies provided new insights into how species' life-history traits (such as the timing of reproduction or the length of life of adult individuals) are derived in part as responses to environmental vagaries. The findings had implications for both short- and long-term evolutionary responses of animals to global climate change, harsh natural environments, and infectious disease. Anne Charmantier of the University of Oxford and colleagues reported on their examination of the behavioral adjustments of a wild-bird population of great tits (*Parus major*) that had been studied since 1961. The long-term data set included information on seasonal temperature changes, the timing of the emergence of a vital prey (larvae of the European winter moth, *Operophtera brumata*) for the birds' young, and the reproductive success of the bird population. By 2008 the average date on which the female birds laid eggs had shifted to about two weeks earlier than in the 1970s, a gradual change that tracked an increase in the environmental temperatures that preceded egg laying over the same time period. The timing of peak abundance of winter-moth larvae had also shifted in response to environmental temperatures. In order for the birds to capitalize on the availability of this key prey for their young, the females had to adjust when they laid eggs each year, since the optimal time changed annually in response to early spring temperatures. On the basis of analyses of the annual timing of the birds' egg laying and rearing of young in response to environmental temperature fluctuations, the investigators concluded that the population responded successfully

to regional climate change by adaptive phenotypic plasticity of individual birds rather than by a genetically based response.

Curtis A. Deutsch, Joshua J. Tewksbury, and Raymond B. Huey of the University of Washington at Seattle and colleagues constructed thermal performance curves for terrestrial insects from around the world through the use of a global data set that related population growth rates of insects to environmental temperatures. The investigators then used the performance curves to predict the direct impact that rising environmental temperatures might have on insect fitness at different latitudes. Even though greater increases in temperatures were expected in temper-

ate regions, the smaller warming in tropical regions was predicted to have greater impact on insects because tropical species lived at close to their optimal temperature and had limited capacity to adjust to change. Species living at temperate latitudes generally operated at conditions appreciably cooler than their optimal temperature, a situation in which an increase in temperatures might enhance fitness. One conclusion from the analyses was that the greatest risk of extinction from global warming would occur in species living in the world's regions of greatest biological diversity, the tropics.

Menna E. Jones of the University of Tasmania and colleagues investigated changes in the life-history traits of populations of the Tasmanian devil (*Sarcophilus harrisii*), a carnivorous marsupial endemic to Tasmania. Tasmanian devil populations were being devastated by a contagious cancer called devil facial tumour disease (DFTD). The disease produced large tumours around the head and mouth that interfered with eating and invariably led to death within a few months. Researchers first noted DFTD among Tasmanian devils in 1996. By 2007 it was present in at least one-half of the populations of the species, and some in-

The growths on the throat of this Tasmanian devil were caused by devil facial tumour disease. The fatal contagious disorder threatened the species with extinction.

Hannah Bender—University of Sydney/Landov

ected populations had declined by about 90%. Susceptibility to DFTD was believed to be a consequence of low diversity in the genes that facilitated the animal's immune responses to tumours, and the spread of the infection was promoted by the physically aggressive biting behaviour among individuals during the mating season. The investigators examined demographic data of Tasmanian devil populations from five locations before and after the appearance of the disorder, and they determined that the proportion of animals that were more than three years old in a given population was greater before than after the onset of the disease. Also, in most populations before the onset of the disease, a majority of females produced several litters between ages two and four, and no females bred before then. After DFTD became prevalent, the number of females that bred early increased by 16 times on average. Despite an unprecedented shift by most females in the population to begin breeding at significantly earlier ages, the spectre of extinction of Tasmanian devils continued to be a major conservation concern. Plans to save the species included developing a vaccine against DFTD, keeping healthy Tasmanian devils in zoos and breeding programs under quarantine, and building fences to protect healthy populations in the wild from infected animals.

Among living tetrapods—amphibians, reptiles, birds, and mammals—virtually all species live one year or more after they are hatched or born, and females typically reproduce several times in their lifetime. In a dry desert region of Madagascar, Kristopher B. Karsten of Oklahoma State University and colleagues discovered an unusual chameleon that lived most of its life in the egg stage and whose females reproduced only once in their lifetime. The investigators found that all individuals of the chameleon, *Furcifer labordi*, were the same age. The entire population hatched from eggs in November. They mated about two months later, and after the females laid their eggs, both sexes became senescent. The adults died within five months of hatching—the shortest postembryonic life span ever reported for a tetrapod. The entire species then persisted for at least six months each year solely in the egg stage. It was uncertain how such an unusual life-history pattern might have evolved, but presumably it was one strategy for a species that lived in an extremely harsh and unpredictable sea-

sonal environment where high adult mortality led to the evolution of shorter life spans. The confirmation that some chameleons were naturally short-lived had important implications for conservation programs that held animals in captivity to form assurance colonies for later release into the wild.

Many animals communicate with others of their species for reproduction, and the challenges in such communication range from situations in which being too quiet is ineffective to situations in which being too loud can be dangerous. A study by Ryo Nakano of the University of Tokyo and Takuma Takanashi of the Forestry and Forest Products Research Institute, Tsukuba, Japan, and colleagues in Japan and Denmark reported on a moth that produced ultrasonic sounds during courtship. The male Asian corn borer moth, *Ostrinia furnacalis*, directed the low-intensity sounds toward a nearby female. Predators or other males that might compete for the same mate could not detect the quiet sound. Yet the nearby female could hear the courtship sounds, which enhanced the male's opportunity for mating. The investigators determined that the male produced the sound by rubbing specialized scales on the wings against the thorax. Further investigation revealed that production of low-intensity ultrasonic sounds during courtship was common among a variety of species in other families of moths.

Jun-Xian Shen of the Chinese Academy of Sciences, Beijing, and colleagues discovered another type of ultrasonic communication—in an amphibian. During ovulation female Chinese torrent frogs, *Odorrana tormota*, produced ultrasonic sounds that signaled when they were ready to mate. After ovulation, the females did not produce the call. The males gave advertisement calls during the mating season, but the female calls were distinctive in having a higher frequency and shorter duration. The call of the female informed males that she was ready to mate and indicated her location in a densely forested habitat. Male torrent frogs had a hyperacute ability to detect the call amid high ambient noise levels created by stream waters and to determine the female's location precisely. The production of high-frequency sounds by females and the males' ability to pinpoint their source were most likely adaptations for communicating in the noisy habitat of torrential streams.

One of the oddest vertebrates is the platypus (*Ornithorhynchus anatinus*), a type of mammal called a monotreme. Platypuses lay eggs like reptiles and birds but have fur and feed their young milk produced from lactate glands with no nipple. Other unusual features of the platypus include the presence of a bill with electrosensory pits, the absence of teeth in adults, and—in males—the production of venom, which they apply through spurs on the hind feet. Geneticist Wesley C. Warren of the Washington University School of Medicine, St. Louis, Mo., and an international consortium sequenced the entire genome of the species to assess the evolutionary relationships between platypuses, other mammals, birds, and reptiles. Comparative investigations of protein-coding and non-protein-coding genes and the reading of some 26.9 million DNA sequences revealed information on the genomic evolution of mammals. The findings showed that the venoms of reptiles and monotremes evolved independently as the result of convergent evolution and that the milk-producing genes were conserved from a mammalian ancestry. The study also confirmed that marsupials and placental mammals are more closely related to each other than either is to monotremes.

(J. WHITFIELD GIBBONS)

BOTANY

In 2008 progress was made in creating genetically modified (GM) plants to produce pharmaceutical drugs. The production of pharmaceuticals derived from GM plants had proved to be efficient on a large scale, but little research had been done in using GM plants for vaccines against cancer and other chronic diseases. In one report Alison McCormick of Touro University California's College of Pharmacy and colleagues described new plant-made vaccines that they had developed for treating non-Hodgkin lymphoma cancer. The researchers were able to use the GM plant technique to make vaccines tailored to individual patients, which was important because the molecular signature of the lymphoma tumour cells differed from patient to patient. The researchers created the vaccine by isolating the antibody to each patient's tumour and inserting the gene for that antibody into a modified version of the tobacco mosaic virus, which was then used to infect a to-

(continued on page 250)

Honeybees and Colony Collapse Disorder

In 2008 agricultural researchers sought to determine the cause of a mysterious disorder that was destroying colonies of *Apis mellifera* honeybees. The malady, called colony collapse disorder (CCD), was threatening honeybee populations across the United States, where they were essential for the pollination of many commercially important crops. The disorder had also been reported elsewhere, primarily in Europe. In CCD the sudden failure of a honeybee colony was characterized by the death of its adult bees, which would leave the hive and fail to return. During the few days or weeks over which the adults disappeared, the queen and several attendant worker bees usually remained in the hive, and the hive had plentiful food stores and showed evidence of normal brood rearing. Although sudden honeybee-colony die-offs were known to occur from time to time, an unusual feature of CCD was that honey-seeking neighbouring bees and common hive pests such as wax moths appeared to delay invading hives that had been affected by the disorder.

The unexplained loss of honeybee colonies that came to be known as CCD was first reported in the fall of 2006 by a commercial beekeeper from Pennsylvania who was overwintering his colonies in Florida. (Subsequent investigations suggested that beekeepers had experienced unexplained colony losses for at least the previous three years.) By February 2007 several large commercial migratory beekeeping operations had reported cases of CCD, with some operators suffering the loss of 50–90% of their colonies. Many of these larger operations were overwintering their colonies in California, Florida, Oklahoma, and Texas. By late February 2007, some nonmigratory operations located in the mid-Atlantic region and the Pacific Northwest also had reported the loss of more than 50% of their colonies. The absence of dead bees in the affected hives made initial investigations difficult and inconclusive.

Beekeeping is a critical component of modern agriculture, and CCD not only threatens the beekeeping operations that provide pollination service and honey production but also has the potential for crippling the production of many crops that are dependent on honeybees for pollination. In the United States, beekeepers provide pollination service for more than 90 commercially grown crops, including many fruits and vegetables. The economic value of U.S. crops that benefit from honeybee pollination has been estimated at \$15 billion annually. In 2006 the California almond-export crop alone was valued at \$1.9 billion and required more than one million bee colonies for pollination (out of a total of about 2.6 million colonies in the U.S.). With the number of available colonies for crop pollination in the country in decline, the beekeeping industry faces a tremendous challenge in meeting the demand for pollination services.

The Agricultural Research Service of the U.S. Department of Agriculture has organized efforts to address the CCD crisis through surveys and data collection, samples analysis, and mitigation and preventive measures. A variety of possible causes of CCD have been suggested. They include chemical contamination of colony

food stores or beeswax; poisoning from pesticides, including newly introduced insecticides based on nicotine derivatives; the introduction of genetically modified crops; possible lack of genetic diversity in colonies; and infection of colonies by pathogens or parasites, including known honeybee parasites such as the single-celled *Nosema ceranae* and the invasive varroa mite (*Varroa jacobsoni*).

Some of these suggestions have been discounted, but a 2007 study stated that Israeli acute paralysis virus (IAPV) appeared to be strongly associated with the disorder. The virus—which was first identified in Israel—had not been previously reported in the U.S., but a subsequent genetic screening of preserved honeybee specimens showed that IAPV had been present in honeybees in the U.S. since at least 2002. A study of the virus in 2008 determined that there were three types and that two of them had infected honeybees in the U.S. Although the virus is a consistent marker of CCD, a cause-and-effect relationship has yet to be established, and many scientists suspect that CCD might be the result of a combination of two or more pathogens or stressors. Bee colonies are commonly found to be infested with pathogens and parasites, and the investigation of the interactions of all the possible causative agents has proved to be a challenge for bee scientists.

Colony stress could contribute to CCD by harming the bees' immune systems and making colonies more susceptible to disease. Possible sources of stress include poor nutrition caused by the lack of plants that are sources of nectar and pollen, the use of honeybees to pollinate crops with little nutritional value for bees, the overcrowding of honeybee colonies, and the repeated transport of colonies over long distances for pollination or honey production.

Steps to improve honeybee health are being taken that might reduce colony stress. The advent and utilization of improved nutritional supplements could boost honeybee health during periods of nectar or pollen dearth or inclement weather. Several large migratory operations are being periodically sampled for possible warning signs of colony-health issues that could trigger or lead to CCD. Some recommendations that have been made to beekeepers to improve honeybee health include feeding bees antibiotics to prevent nosema infections, using genetic stocks that show resistance to mites, and applying fumigants such as formic-acid- or thymol-based products only when necessary to control varroa-mite infestation. Another recommendation is to avoid reusing equipment that has been exposed to bee colonies that have died from CCD.

A new technological advance that could help in discovering the underlying cause of CCD in honeybees is the full sequencing of the honeybee genome, which was published in late 2006. It makes available new molecular approaches and honeybee genomics in the investigation of the impact of possible causal agents on specific genes and honeybee-colony health. Likewise, the advance might help identify new pathogens in honeybees and unravel the complex effects of multiple combinations of pathogens and environmental toxins.

(WILLIAM MICHAEL HOOD)

(continued from page 248)

bacco plant. The virus carried the gene into the plant's cells, where the antibody was produced, and after a few days the antibody was extracted and purified. Only a few plants were needed to make enough vaccine for each patient. The results of a phase 1 clinical trial showed that 70% of the patients developed an immune response to the plant-made vaccine.

In another study South Korean researchers showed that the tomato plant held promise as a suitable plant for producing a possible oral vaccine against Alzheimer disease. The researchers produced GM tomatoes engineered with the human gene for beta-amyloid, a peptide that was believed to be one of the major components of Alzheimer disease. The gene was introduced into the tomato plants by infecting them with a genetically engineered bacterium belonging to the genus *Agrobacterium*. When mice were fed soluble extracts from the plants, the beta-amyloid triggered an immune response. The researchers hoped that it would eventually be possible to reduce the accumulation of beta-amyloid in the human brain in this way and thereby inhibit the degeneration of neuron cells.

Scientists discovered how a gene known as *SUN* controlled the shape of fruit. The fruit of the wild ancestral tomato plant was small and round, but cultivated varieties came to have a wide range of shapes and sizes. After investigating the molecular basis of the *SUN* gene's effect on elongation, Esther van der Knaap and colleagues at Ohio State University and Michigan State University reported that a duplication of a DNA sequence in the *SUN* gene had increased the gene's expression and had led to the elongated shape of the fruit. The gene-duplication event might have been caused by a DNA element called a retrotransposon, which inserted itself within the plant's genome, or genetic code, and increased the expression of the gene. The authors said that their findings demonstrated that retrotransposons might be a major driving force in genome evolution, especially in plants. The discovery might also help unravel the mystery behind the huge differences in shape among fruits and vegetables and might provide new insights into the basic mechanisms of plant development.

More evidence came to light concerning the effects of climate change on plants. Researchers from AgroParisTech

The top half of this newly discovered species of palm (Tahina spectabilis) in Madagascar is an inflorescence covered with tiny flowers. Botanists identified the tree as a long-lived palm that used up its resources to reproduce and then died.

in France surveyed 171 species of forest plants across six Western European mountain ranges by reviewing about 8,000 plant surveys that had been collected between 1905 and 2005. The researchers found that more than two-thirds of the species had climbed in elevation over those 100 years and that the average increase in their optimum elevation was 29 m (95 ft) per decade. The shift to higher elevation was greater for plant species whose habitat was restricted to mountains. Average temperatures in Western Europe rose by nearly 1 °C (1.8 °F) during the 20th century, and these results added to the growing

body of evidence that increasing temperatures were leading to the migration of plants in search of cooler climates. The study also showed that quick-breeding grasses had moved up mountains more quickly than slower-growing trees. This disparity raised concerns that communities of plants would disintegrate and possibly affect the animals that relied on them for food and shelter.

Flowers typically used scents to attract their pollinators, but a new study revealed that tobacco flowers used a mixture of both attractants and repellents to regulate their pollination and defend themselves. A team of botanists

led by Ian Baldwin at the Max Planck Institute for Chemical Ecology in Jena, Ger., found that tobacco flowers produced nectar with both benzyl acetone, which had a sweet smell, and nicotine, which had a bitter taste and was poisonous. The study selectively blocked the production of each scent to see how they affected the plant's pollination. The nicotine repelled predatory insects that tried to rob the nectar or eat the flowers. The nicotine also prevented pollinators from lingering too long at any one flower and thereby caused them to visit more flowers and increase the chances of cross-pollination. The proper dose of both attractant and repellent chemicals was needed to optimize pollination by enticing pollinators to the flower and then persuading them to leave shortly afterward. "This . . . shows just how sophisticated a plant can be in using chemistry to get what it wants," commented Baldwin.

A team led by Sarah Sallon of the Louis Borick Natural Medicine Research Center at Hadassah Hospital in Jerusalem managed to germinate a Judean date-palm seed that was thought to be at least 2,000 years old. It was the oldest seed to have been successfully germinated. The seed was found at Masada, the hill fortress overlooking the Dead Sea that was besieged by the Romans in AD 72–73. The scientists treated the seed with hormones, and after eight weeks it began to sprout. It grew over 26 months into a healthy sapling 1.5 m (4.9 ft) tall, which was comparable to modern date seedlings. Radiocarbon dating of fragments of the seed's shell that clung to the plant's roots when it was transferred to a larger pot pinpointed the age of the seed. "The exceptionally dry and hot climatic conditions at Masada may have prevented it from disintegrating and preserved its viability, but this still says a lot about the ability of seeds to survive," said Sallon. The study of the viability of such ancient seeds was important for understanding conservation techniques for seed banks, and it might also help in modern date-palm cultivation and breeding. (See ENVIRONMENT: Sidebar.)

(PAUL SIMONS)

MOLECULAR BIOLOGY AND GENETICS

The Genetics of Stress Response. Physical traits often run in families. Tall parents tend to have tall children; short parents tend to have short children; blond-haired parents tend to have

blond-haired children; and so forth. Emotional or behavioral traits also tend to run in families, although these traits can be more complex and difficult to quantify. Anxiety disorder (the tendency to experience excessive anxiety relative to a stimulus) is a behavioral trait that demonstrates 40–60% heritability. This level of heritability indicates that environmental factors, such as stressful conditions, and genetic factors, such as those that influence how stress is perceived and accommodated, are both very important in contributing to the etiology of the disorder. A study published in April 2008 by a team of researchers led by David Goldman of the U.S. National Institutes of Health was an important step toward dissecting the genetic factors that contribute to anxiety disorder. It provided insights into the basis not only of the disorder but also of the normal variations in responses to stress.

The study consisted of several components. One component explored the functional significance of normal genetic variation in the gene *NPY*, which encodes a 36-amino-acid peptide called neuropeptide Y. The peptide is expressed at high levels in regions of the brain that are associated with arousal and emotional response to a stress-inducing challenge. Previous studies had demonstrated that neuropeptide Y is released in the brain in response to stress and that its release helps to control characteristic fight-or-flight hormonal and metabolic responses to stress, such as an increase in heart rate. The researchers hypothesized that natural genetic variation in the *NPY* gene might lead to variation in the expression of neuropeptide Y, which in turn might correlate with variation in stress response from individual to individual (a characteristic called trait anxiety). To test their hypothesis, the researchers identified seven naturally occurring variations in the human *NPY* gene sequence. They then took DNA samples from a large number of study volunteers and characterized the samples with regard to these variations. The resulting data enabled them to classify the *NPY* alleles into haplotypes (groups of alleles defined by the presence and absence of specific DNA-sequence markers). Since humans carry two copies of most genes—one maternally inherited and one paternally inherited—the volunteers in the study could be further categorized by the diplotype (set of two *NPY* haplotypes) each person happened to carry.

The researchers then tested the possible impact of *NPY* diplotype on the expression of neuropeptide Y by measuring the level of neuropeptide-Y messenger RNA (mRNA) in lymphoblast cells from 47 volunteers whose *NPY* diplotype had been determined. The results demonstrated a threefold range in neuropeptide-Y mRNA levels and a clear correlation between *NPY* diplotype and the expression level of the *NPY* mRNA. A similar correlation between *NPY* diplotype and neuropeptide-Y mRNA levels was observed from studies of 28 postmortem brain samples and from an independent study of neuropeptide-Y levels in plasma samples derived from a separate study of 42 subjects.

Next, the researchers sought to test whether *NPY* diplotypes associated with low, medium, or high neuropeptide-Y expression levels might also correlate with brain responses to emotion and stress. They applied a technique called functional magnetic resonance imaging (fMRI) to detect amygdala and hippocampal activation in 71 study volunteers who were subjected to transient stress by showing them images of threatening facial expressions. The fMRI provided real-time and noninvasive measurement of small changes in the blood flow or oxygenation levels of tissues. Since the amygdala governs arousal, emotional response, and autonomous responses to fear and the hippocampus functions in establishing memory and is influenced by stress, small changes in the blood flow or oxygenation levels of these regions of the brain served as quantifiable markers for the emotional recognition of and response to stress.

The results were striking. Amygdala activation in stressed study volunteers with a diplotype associated with low *NPY* expression was significantly higher than in study volunteers with a high *NPY*-expression diplotype. Indeed, *NPY* diplotype accounted for 9% of the variance observed in amygdala activation among the volunteers. Studies of task-related hippocampal activation also demonstrated a significant correlation with *NPY* diplotype.

To extend their work from imaging studies to trait anxiety, Goldman and colleagues used the Tridimensional Personality Questionnaire to characterize 137 study volunteers on various measures of harm avoidance. From these data the researchers found statistically significant, although modest, correlations between an individual's *NPY* diplotype and both fear of uncertainty

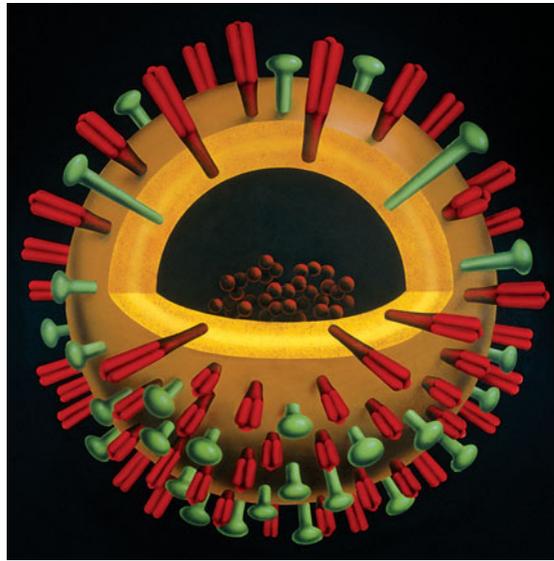

and anticipatory worry, but they found no correlation between *NPY* diplotype and either shyness with strangers or fatigability and asthenia (loss of strength). Considering the multitude of factors that influence emotional perception and response, it was remarkable that normal, naturally occurring sequence variations in one gene, *NPY*, could be demonstrated to have such an impact.

Seasonal Susceptibility to Influenza. Despite efforts to promote widespread immunization, every year in the United States and many other countries, 5–20% of the population becomes infected with influenza (flu) virus and experiences symptoms such as high fever, headache, fatigue, nasal discharge, sore throat, muscle aches, gastrointestinal upset, and general misery. In addition, many thousands of people die every year from influenza or its complications.

Influenza is generally spread by aerosol transmission, particularly when an infected person coughs or sneezes in proximity to others. Influenza can also be transmitted when a person touches a surface contaminated with the virus from an infected person and then inadvertently touches the mucous membranes of the nose or mouth with the contaminated hand or finger.

A notable characteristic of influenza infection in the Northern Hemisphere is that it is seasonal. Influenza peaks in the winter, and the months from November to March are typically considered to constitute the flu season. Although the seasonal epidemiology of influenza infection was long recognized, it was poorly understood. In 2007, however, experiments were reported that convincingly demonstrated that temperature and humidity affect flu transmission, and in 2008 a study emerged that provided clear evidence of a mechanism to explain this effect.

This study, by Joshua Zimmerberg and colleagues from the U.S. National Institutes of Health, concerned the properties of substances, called phospholipids, that make up the influenza viral envelope. The researchers used a methodology called proton magic-angle spinning nuclear magnetic resonance to probe the ordered-versus-disordered arrangement of the phospholipids at different temperatures. At cool to cold temperatures (temperatures below 22 °C [72 °F]), the phospholipids formed an or-

This drawing of the influenza virus shows an RNA core (at centre), the viral envelope (yellow), and proteins (red and green) that project from the virus.

dered gel phase, which the researchers believed would protect the virus from the elements and thereby extend its survival during transmission. At warmer temperatures, such as those common in the summer, the phospholipid envelope melted into a liquid phase, which the researchers believed would not protect the virus effectively against the environment. Thus, its survival and the range of its transmission would be limited.

The study not only offered a logical explanation for the seasonal nature of the epidemiology of influenza but also presented new approaches to preventing influenza transmission. For example, compounds might be designed to disrupt the organization of the phospholipids in the viral envelope at cool temperatures. The results of the study also suggested that other viruses that use a phospholipid envelope to shield themselves from the environment during transmission might demonstrate similar properties.

(JUDITH L. FRIDOVICH-KEIL)

PALEONTOLOGY

In 2008 scientists from The Netherlands, the United States, and Yemen published a report on the first dinosaur trackways discovered on the Arabian Peninsula, a region in which dinosaur finds were extremely rare. At a site in Yemen, more than 100 footprints were found in two sets of tracks. One was made by a single bipedal ornithomimid and the other by a herd of 11

quadrupedal sauropods. A new dromaeosaur, *Mahakala omnogovae*, was reported from fossil remains discovered in Mongolia. The small size of the animal's body, together with its phylogenetic placement, indicated that extreme miniaturization was typical in ancestral members of the clade that contained Dromaeosauridae, Troodontidae, and Avialae (which included all birds). A report presented at the annual meeting of the Society of Vertebrate Paleontology in late 2007 reevaluated the status of four species of pachycephalosaurs—dinosaurs with distinctive thick skulls with bony spikes along their snouts. The paper argued that two of the species were actually juveniles of the largest species, *Pachycephalaurus wyomingensis*, and that the skulls of juvenile pachycephalosaurs changed considerably as they matured.

The presence of collagen proteins in soft-tissue samples of *Tyrannosaurus rex* was reported in April 2007 by researchers who analyzed material that had been discovered inside a *Tyrannosaurus* femur (thighbone) two years earlier. A study published in January 2008 by a second group of researchers examined the collagen peptide sequences in the samples and determined that the reported *Tyrannosaurus* collagen peptide sequences were not valid. A response paper by the authors of the 2007 report claimed that the methods that were used in the second study were less accurate than mass spectrometry, the method that they had used. A third report, published in August 2008, claimed that the blood vessels and soft-tissue cells that had been described in the *Tyrannosaurus* were instead biofilms formed by bacteria that had invaded the fossils after death. At year's end the issues remained in dispute.

A newly studied fossil of a bat from the Early Eocene (about 50 million years ago) of Wyoming exhibited features that were more primitive than those of other known bat fossils. The fossil indicated that the bat was capable of flight, like other Eocene bats, but the ear structure showed that the bat would have lacked the ability to use echolocation. This research supported the hypothesis that flight evolved in bats before echolocation.

Whales were known to be related to artiodactyls (even-toed ungulates, such

as pigs and deer), but the first fossil of an early artiodactyl that was similar morphologically to early whales was not reported until late 2007. The report described a fossil of *Indohyus*, a small raoellid artiodactyl from the Eocene of southern Asia, and it showed that the animal was closely related to whales. Unlike other artiodactyls, *Indohyus* had an ear structure and premolars that were similar to those of early whales, and the limb-bone density and stable-oxygen-isotope composition of its teeth were also similar. The study concluded that the raoellids were aquatic waders and that an aquatic lifestyle developed in this lineage prior to the origin of whales.

The closest living relatives of the elephants were sea cows and hyraxes, but the three groups were highly divergent from their common ancestor. A study of fossil teeth from *Moeritherium*, a 37-million-year-old elephant from Egypt, suggested that these animals spent most of their time in the water and that their lifestyle was therefore more similar to that of sea cows than modern elephants. The study further found that the carbon and oxygen composition of the teeth of *Moeritherium* was more similar to that of modern aquatic mammals than terrestrial animals.

The earliest-known primitive ungulates had long been types of condylarths from the Early Paleocene of Montana. A recent report, however, documented an earlier condylarth specimen—from the late Cretaceous. An isolated molar from lake deposits of central India not only extended the fossil record of condylarths back into the Mesozoic Era but also showed that early condylarths had been more widely distributed than was previously thought.

The sparse fossil record of the monotreme duck-billed platypus was greatly extended back in time when a misidentified specimen was reidentified. A computer tomographic scan of fossil jaws that were found in Australia and were thought to belong to *Teinolophos trusleri* indicated that the enigmatic fossil was actually a fossil platypus. Dated to 112 million years ago, the fossil was by far the oldest monotreme specimen discovered to date. The next-oldest-known specimen was a 62-million-year-old fossil tooth

from Patagonia. (Although the adult platypus lacks teeth, juveniles have distinctively shaped compressed teeth.)

A newly described specimen of the Permian xenacanthid shark *Triodus* had two larval temnospondyl amphibians and a small acanthodian fish preserved in its digestive track. This unusual find provided evidence of a three-level food chain. The acanthodian fish had been ingested by one of the temnospondyls, which in turn had been eaten by the shark.

A newly described fish from the Late Devonian Gogo Formation of Australia represented the oldest record of a live-bearing vertebrate in the fossil record. The new ptyctodontid placoderm, *Materpiscis attenboroughi*, preserved an intrauterine embryo connected by a permineralized umbilical cord. A second ptyctodont, *Austroptyctodus gardineri*, from the same formation showed three small embryos in the same position.

The origin of modern amphibians (frogs, salamanders, and caecilians) was controversial primarily because of the large gaps in the fossil record between modern forms and two possible ancestral groups, the Temnospondyli

and Lepospondyli. A newly reported temnospondyl fossil, *Gerobatrachus hottoni*, from the Early Permian of Texas showed characters found in both frogs and salamanders and therefore partially bridged the gap between modern amphibians and their Paleozoic ancestors.

Antarctica had long been the coldest place on the Earth, but a team of scientists found fossil evidence that it was once warm enough for tundra plants and animals. The scientists reported finding 14-million-year-old fossil stems and leaves of a semiaquatic moss in deposits of an ancient alpine lake in one of Antarctica's Dry Valleys. The most unusual thing about the fossils was that they were freeze-dried; when rehydrated they resembled living specimens. The bodies of ostracods (seed shrimp) with intact soft parts were also collected.

The Paleozoic machaeridians were an enigmatic group of wormlike organisms known mainly from shell plates found in ocean-bottom assemblages. At various times over the past 150 years, they had been considered to be related to barnacles, echinoderms, mollusks, or annelid worms. A newly described machaeridian fossil from Morocco was found with rarely preserved soft parts, including parapodia and chaetae. The presence of these structures indicated that the machaeridians were clearly related to the annelids. Another example of an exceptionally preserved fossil was a jellyfish described from Middle Cambrian deposits of Utah. The specimen, found in the Marjum Formation, showed soft-tissue structures such as tentacles and subumbrellar and exumbrellar surfaces.

Carnivorous fungi from 100 million years ago were found preserved in Cretaceous amber from southwestern France. The fungi contained structures called hyphal rings that had trapped small nematode prey, which were also preserved. On the basis of the type of hyphal rings found in the fossils, the fungi did not belong to any group of living carnivorous fungi. The authors suggested that the hyphal structures for trapping prey developed independently in various lineages of fungi through geologic time.

(WILLIAM R. HAMMER)

The dinosaur that formed the bipedal prints preserved in this trackway found in Yemen was identified as an ornithomimid.

Khaled Abdullah—Reuters/Landov

Literature

The **PERSONAL** outweighed the **POLITICAL** in much of the literary world in 2008 as individual concerns came to the fore in Arabic, Chinese, Latin American, Canadian English, and Russian works. In France **AUTOFICTION** described the mixture of autobiography and fiction that was common worldwide. **COLONIAL HISTORIES** and the displacement of native peoples occupied many writers. Meanwhile, **LITERARY WEB SITES** debuted in China and Russia. **POETRY** was **DEFENDED** in the U.S., became the subject of a **REALITY-TV** competition in Russia, and seemed in **ECLIPSE** in Arabic literature.

ENGLISH

United Kingdom. If one theme predominated in British literature in 2008, it was the experience of immigrants and the effects on their lives of globalization. Unsurprisingly, many novels bore witness to the U.K.'s changing demographics. *The Road Home* (2007) by Rose Tremain (winner of the 2008 Orange Broadband Prize for Fiction) tackled the recent wave of economic migrants from Poland. The novel's hero, Lev, a widower with a daughter and a mother to support, arrives in London hoping to find opportunities for economic advancement but soon finds himself sleeping on the streets. In depicting the British through the eyes of this likable character, Tremain intended to overcome prejudice. As Tremain said, "The moment we become engaged with an individual story, empathy arrives and our attitudes alter." Chris Cleave's widely lauded second novel was inspired by his experience working at an Immigration Removal Centre in Oxfordshire. *The Other Hand* builds up to an account of a horrific encounter between the English O'Rourke family, a Nigerian teenager named Little Bee, and men with machetes on a beach in Nigeria. The novel opens after the central event, in an Essex detention centre, where Little Bee has spent two years as an asylum seeker after having escaped Nigeria on a tea ship. When she is accidentally released and contacts the O'Rourkes, disaster

and turmoil ensue. James Urquhart in *The Independent* pronounced the novel to be "a timely challenge to reinvigorate our notions of civilized decency." The book was short-listed for the 2008 Costa Novel Award.

Three of the four novelists short-listed for the 2007 Costa First Novel Award were themselves immigrants. Nikita Lalwani brought her experiences of

British writer Rose Tremain won the Orange Broadband Prize for The Road Home, a tale about the circumstances of immigrants.

Ulf Andersen/Getty Images

conflicting values and cultures to her novel *Gifted* (2007), about a young math prodigy torn between the ambitions held for her by her father, traditional Indian expectations for girls, and the pressures typically faced by British adolescents. Bangladesh-born Tahmima Anam's *A Golden Age* (2007) dealt with the effects of civil war in 1971 Pakistan on a woman and her family. Sri Lanka-born Roma Tearne's *Mosquito* (2007) was about a 44-year-old novelist returning to his native Sri Lanka after the death of his wife in London. The widower falls for a 17-year-old Sinhalese girl, but their love is disrupted by civil war and its attendant bestiality, torture, suicide bombers, and despair. Tearne followed this with *Bone China*. Part Sri Lankan family saga, part migrant's tale, it carried themes of displacement, loss, and the tragedy of violence back home.

Immigration enriched English literature in the realm of poetry as well. Daljit Nagra's debut collection, *Look We Have Coming to Dover* (2007), was short-listed for several major awards and won the 2008 Arts Council England Decibel Award. In much of his poetry, Nagra employed Punglish, a form of English spoken by Punjabi-speaking Indians living in the U.K. The winner of the Forward Prize for Poetry, Mick Imloh, by contrast, borrowed more from the Victorian era than from Britain's new lexicons. *The Lost Leader*, his collection of portraits of iconic figures and events from Scottish history, was compared to the works of Browning for its "acuteness and variousness—and poetic resonance."

The U.K.'s enduring fascination with the Indian subcontinent was reflected in the choice of winner for the 2008 Man Booker Prize. Aravind Adiga's epistolary novel *The White Tiger* gives the reader a glimpse into the mind and life of a tea-shop boy turned entrepreneur. In contrast to the recent spate of colourful books on middle-class India, *The White Tiger* made little mention of saffron and saris. Nor did it grapple with familiar themes of colonialism. As Andrew Holgate pointed out in *The Sunday Times*, the provocative novel was an "unadorned portrait of the country as seen from the bottom of the heap," showing poverty, corruption, and a merciless class system. Adiga, a first-

time novelist, beat the seasoned Indian novelist Amitav Ghosh, whose *Sea of Poppies* was also short-listed. Meanwhile, Salman Rushdie's classic about pre- and postpartition India, *Midnight's Children* (1980), was voted the Best of the Booker as the award celebrated its 40th anniversary.

The year 2008 was also one of attention-grabbing debuts. Ross Raisin astonished reviewers with his creation of a new fictional voice in *God's Own Country*. The novel's narrator, a teenage country misfit who becomes obsessed with a girl newly arrived from the city, elicited comparisons to the hero of J.D. Salinger's 1951 classic, *The Catcher in the Rye*. Equally talked about, but less successful, was Richard T. Kelly's state-of-the-nation novel *Crusaders*, about a cleric in Newcastle. Inspired by classic Russian writers, it received wide attention as an ambitious debut that ultimately failed. Reviewers noted that its 19th-century style and format were unsuitable for conveying the postmodern fragmentation suffered by its characters.

Predictably enough, given the rehearsal of arguments for and against the Orange Prize in recent years, debate about the women-only literary award intensified. Novelist Tim Lott argued that the award bolstered sales of women's novels in a market that already favoured female writers. A.S. Byatt told the *Times* (London) that it was sexist and that she forbade her publishers to submit her novels to the award for consideration. The academic John Sutherland claimed that it ghettoized women's literature. Organizers of the prize responded by emphasizing its international scope and usefulness in seeking out and promoting good literature.

Strangely, the winner of the 2007 Costa Book of the Year award, A.L. Kennedy, was absent from the Orange Prize short list. The Scottish author's fifth novel, *Day* (2007), opens with the return of a Royal Air Force tailgunner to a German prisoner of war camp where he was interred in World War II. Only this time he is an extra in a war film. Using internal monologue and switching from first to second person, Kennedy explores both his troubled childhood and his decision to return to a fictional version of the war that has destroyed him. Like Kennedy's novel, Sadie Jones's *The Outcast* is set in the aftermath of World War II and features a young man damaged by an unloving father. Jones's well-received debut was short-listed for the Orange Prize. These were more suc-

cessful examples of a prevalent trend in U.K. fiction, described by the chair of the Orange Prize as the "misery memoir" and typically featuring family secrets, child abuse, and psychosis.

As in fiction, in the genres of history and biography, World War II remained an enduring theme. Nicholas Rankin released *Churchill's Wizards: The British Genius for Deception 1914-1945*, and Ben Macintyre's *Agent Zigzag* (2007), about Britain's "most extraordinary wartime double agent," was short-listed for the 2007 Costa Biography Award. Less celebratory and certainly less colourful were the spate of books published to mark the 90th anniversary of the armistice that ended World War I. *We Will Not Fight: The Untold Story of the First World War's Conscientious Objectors* (2007) by Will Ellsworth-Jones gave a history of the abuse suffered by pacifists and the societal pressures that led many underage youths and unfit individuals to enlist. Brian MacArthur's *For King and Country* was an anthology of letters and diaries relating the stories of lives ruined by World War I. Michèle Barrett's *Casualty Figures: How Five Men Survived the First World War* (2007) similarly used original memoirs to relate the squalor of trenches, grotesque accounts of cadavers used as sandbags, and the unspeakable horror of witnessing mass slaughter.

The winner of the 2007 Costa Biography Award was Simon Sebag Montefiore's exhaustively researched portrait of *Young Stalin* (2007). A strong contender for the award was Julie Kavanagh's *Rudolf Nureyev* (2007), based on 10 years of research. Kavanagh's study of the defected Russian dancer revealed, as one reviewer attested, "a man who danced like a god, but behaved like a violent, voracious beast." A more likable subject was *The Bloomsbury Ballerina: Lydia Lopokova, Imperial Dancer and Mrs John Maynard Keynes*. In her biography of this earlier Russian dancer who enthralled the West, Judith Mackrell brings to life Lopokova's chilly reception among Bloomsbury intellectuals, her stint as a vaudevillian in the U.S., and her enigmatic and spirited form of ballet.

On the more popular front, best-selling writer Ian Rankin, having wrapped up his hugely popular Rebus series about a Scottish detective, produced his first post-Rebus novel, *Doors Open*. This galloping art-heist novel enjoyed universal acclaim. Kate Atkinson, a former Whitbread Book of the Year winner, likewise delighted reviewers with

her shift away from playful yet acerbic domestic sagas to crime writing. Her third crime novel, *When Will There Be Good News?*, was described in *The Guardian* as "funny, bracingly intelligent and delightfully prickly." Writer Alexander McCall Smith, meanwhile, took a break from his well-known serial *44 Scotland Street* to publish his first online interactive novel, *Corduroy Mansion*, set in a large house in London. Publishing in installments each weekday over 20 weeks, McCall Smith invited readers to send him feedback on his odd characters and how the plot might develop. (See BIOGRAPHIES.)

With the global credit crunch, publishers rushed to bring out books on the financial market. One early offering was *The Ascent of Money: A Financial History of the World* by Niall Ferguson, a Scottish professor at Harvard University. Ferguson charted the history of money from ancient times, but his account of the 2008 financial meltdown was marred by its hasty last-minute analysis. Meanwhile, *The Gods That Failed: How Blind Faith in Markets Has Cost Us Our Future*, by Larry Elliot and Dan Atkinson, blamed deregulation and the philosophies of Friedrich Hayek and Milton Friedman for Britain's economic crisis. The financial crisis also gave rise to the publication of cookbooks aimed at the cash-strapped: U.K. cooking guru Delia Smith reissued her 1976 classic *Delia's Frugal Food*; Peter Higginbotham shocked food critics by declaring that *The Workhouse Cookbook* (a complete facsimile of the 1901 *Manual of Workhouse Cookery*) had topical relevance; and Fiona Beckett's timely contribution, *The Frugal Cook*, was voted one of the 10 best autumn cookbooks by *The Independent*.

A recent trend of science books designed to answer little questions was superseded by another thriving genre: the great sweeping panorama, linking scientific phenomena to history and human activity. Science writers showed themselves masters of the art of scientific storytelling, bringing difficult concepts within the range of ordinary readers. This was very much in evidence in the 2008 short list for the Royal Society Prizes for Science Books. In *Coral: A Pessimist in Paradise* (2007), Steve Jones took the reader on a journey into the history of coral via subjects as diverse as naturalist Charles Darwin, painter Paul Gauguin in Tahiti, atomic bomb testing, and Roman poet Ovid. The judges of the award described the work

(continued on page 258)

WORLD LITERARY PRIZES 2008

All prizes are annual and were awarded in 2008 unless otherwise stated. Currency equivalents as of July 1, 2008, were as follows: €1 = \$1.578; £1 = \$1.994; Can\$1 = \$0.989; ¥1 = \$0.009; SKr 1 = \$0.166; Dkr 1 = \$0.211; and 1 Russian ruble = \$0.043.

Nobel Prize for Literature

Awarded since 1901; included in the behest of Alfred Nobel, who specified a prize for those who "shall have produced in the field of literature the most outstanding work in an ideal direction." The prizewinners are selected in October by the Swedish Academy and receive the award on December 10 in Stockholm. Prize: a gold medal and an award that varies from year to year; in 2008 the award was SKr 10 million.

Jean-Marie Gustave Le Clézio (France)

International IMPAC Dublin Literary Award

First awarded in 1996; this is the largest international literary prize and is open to books written in any language. The award is a joint initiative of Dublin City Council, the Municipal Government of Dublin City, and the productivity-improvement company IMPAC. It is administered by Dublin City Public Libraries. Prize: €100,000, of which 25% goes to the translator if the book was not written in English, and a Waterford crystal trophy. The awards are given at Dublin Castle in May or June.

De Niro's Game by Rawi Hage (Lebanon and Canada)

Neustadt International Prize for Literature

Established in 1969 and awarded biennially by the University of Oklahoma and *World Literature Today*. Novelists, poets, and dramatists are equally eligible. Prize: \$50,000, a replica of an eagle feather cast in silver, and a certificate.

Patricia Grace (New Zealand), awarded in 2008

Man Booker International Prize

This prize is awarded every other year (beginning in 2005) to a living author of fiction of any nationality who writes in English or whose work is widely translated into English for the body of his work. The prize is supported by the Man Group PLC. Winners are announced in midyear. Prize: £60,000.

Chinua Achebe (Nigeria), awarded in 2007

Astrid Lindgren Memorial Award for Literature

This award, first bestowed in 2003 by the government of Sweden, is given annually to one or more living authors who, in the words of the organizers, "in their writing have produced literature for children and young people of absolutely the highest artistic quality and in the humanistic spirit associated with Astrid Lindgren." Prize: SKr 5 million.

Sonya Hartnett (Australia)

Commonwealth Writers' Prize

Established in 1987 by the Commonwealth Foundation. In 2008 there was one award of £10,000 for the best book submitted, as well as an award of £5,000 for the best first book. In each of the four regions of the Commonwealth, two prizes of £1,000 are awarded: one for the best book and one for the best first book.

Best Book	<i>The Book of Negroes</i> by Lawrence Hill (Canada)
Best First Book	<i>A Golden Age</i> by Tahmima Anam (Bangladesh)
Regional winners—Best Book	
Africa	<i>The Hangman's Game</i> by Karen King-Aribisala (Nigeria)
Caribbean & Canada	<i>The Book of Negroes</i> by Lawrence Hill (Canada)
Europe & South Asia	<i>Animal's People</i> by Indra Sinha (India)
Southeast Asia & South Pacific	<i>The Time We Have Taken</i> by Steven Carroll (Australia)

Man Booker Prize

Established in 1969, sponsored by Booker McConnell Ltd. and, beginning in 2002, the Man Group; administered by the National Book League in the U.K. Awarded to the best full-length novel written by a citizen of the Commonwealth or the Republic of Ireland and published in the U.K. during the 12 months ended September 30. Prize: £50,000.

The White Tiger by Aravind Adiga

Costa Book of the Year

Established in 1971 as the Whitbread Literary Awards (from 1985 Whitbread Book of the Year); Costa Coffee assumed sponsorship in 2006. The winners of the Costa Book Awards for Poetry, Biography, Novel, and First Novel as well as the Costa Children's Book of the Year each receive £5,000, and the winner of the Costa Book of the Year prize receives an additional £25,000. Winners are announced early in the year following the award.

Day by A.L. Kennedy (2007 award)

Orange Broadband Prize for Fiction

Established in 1996. Awarded to a work of published fiction written by a woman in English and published in the U.K. during the 12 months ended March 31. Prize: £30,000 and a bronze figurine called the "Bessie."

The Road Home by Rose Tremain (U.K.)

Frank O'Connor International Short Story Award

The prize was first awarded in 2005 and recognizes a collection of short stories in English by a living author and published in the previous 12 months. The award is organized by the Munster Literature Centre in Ireland and Cork and underwritten by the Cork City Council in association with the *Irish Times*. Prize: €35,000, shared by the writer and the translators (if any).

Unaccustomed Earth by Jhumpa Lahiri (U.S.)

Bollingen Prize in Poetry

Established in 1949 by Paul Mellon. It is awarded to an American poet every two years by the Yale University Library. Prize: \$100,000.

Frank Bidart (2007 prize)

PEN/Nabokov Award

With this award, in even-numbered years the PEN American Center recognizes a living author for his or her body of work in a variety of genres written in, or translated into, English. The award, named for Vladimir Nabokov and supported by the Vladimir Nabokov Foundation, was first presented in 2000. Prize: \$20,000.

Cynthia Ozick (2008 award)

PEN/Faulkner Award

The PEN/Faulkner Foundation each year recognizes the best published works of fiction by contemporary American writers. The award, named for William Faulkner, was founded by writers in 1980 to honour their peers. Prize: \$15,000.

The Great Man by Kate Christensen

Pulitzer Prizes in Letters and Drama

Begun in 1917. Awarded by Columbia University, New York City, on the recommendation of the Pulitzer Prize Board for books published in the previous year. Five categories in Letters are honoured: Fiction, Biography, and General Non-Fiction (authors of works in these categories must be American citizens); History (the subject must be American history); and Poetry (for original verse by an American author). The Drama prize is for "a distinguished play by an American author, preferably original in its source and dealing with American life." Prize: \$10,000 for each award.

Fiction	<i>The Brief Wondrous Life of Oscar Wao</i> by Junot Díaz
Drama	<i>August: Osage County</i> by Tracy Letts
History	<i>What Hath God Wrought: The Transformation of America, 1815–1848</i> by Daniel Walker Howe
Poetry	<i>Time and Materials</i> by Robert Hass
	<i>Failure</i> by Philip Schultz
Biography	<i>Eden's Outcasts: The Story of Louisa May Alcott and Her Father</i> by John Matteson
General Non-Fiction	<i>The Years of Extermination: Nazi Germany and the Jews, 1939–1945</i> by Saul Friedländer

National Book Awards

Awarded since 1950 by the National Book Foundation, a consortium of American publishing groups. Categories have varied, beginning with 3-Fiction, Nonfiction, and Poetry—swelling to 22 awards in 1983, and returning to the following 4 in 2001. Prize: \$10,000 and a crystal sculpture in each category.

Fiction	<i>Shadow Country</i> by Peter Matthiessen
Nonfiction	<i>The Hemingses of Monticello: An American Family</i> by Annette Gordon-Reed
Poetry	<i>Fire to Fire: New and Collected Poems</i> by Mark Doty
Young People's Literature	<i>What I Saw and How I Lied</i> by Judy Blundell

Frost Medal

Awarded annually since 1930 by the Poetry Society of America for distinguished lifetime service to American poetry.

Michael S. Harper

WORLD LITERARY PRIZES 2008 (continued)

Association for Library Service to Children (ALSC) Awards

The ALSC, a branch of the American Library Association (ALA), presents a series of awards each year for excellence in children's literature. The two best-established and best-known are the following:

The **Newbery Medal**, first bestowed in 1922 (the oldest award in the world for children's literature), honours the author of the most distinguished contribution in English to American literature for children. The award consists of a bronze medal.

Laura Amy Schlitz, for *Good Masters! Sweet Ladies! Voices from a Medieval Village*

The **Caldecott Medal**, first bestowed in 1938, is awarded to the artist of the most distinguished picture book for children. The award consists of a bronze medal.

Brian Selznick, for *The Invention of Hugo Cabret*

Governor General's Literary Awards

Canada's premier literary awards. Prizes are given in 14 categories altogether: Fiction, Poetry, Drama, Translation, Nonfiction, and Children's Literature (Text and Illustration), each in English and French. Established in 1937. Prize: Can\$25,000.

Fiction (English)	<i>The Origin of Species</i> by Nino Ricci
Fiction (French)	<i>Naissance de Rebecca à l'ère des tourments</i> by Marie-Claire Blais
Poetry (English)	<i>More to Keep Us Warm</i> by Jacob Scheier
Poetry (French)	<i>La Lantueur du monde</i> by Michel Pleau

Griffin Poetry Prize

Established in 2001 and administered by the Griffin Trust for Excellence in Poetry. The award honours first-edition books of poetry published during the preceding year. Prize: Can\$50,000 each for the two awards.

Canadian Award *The Holy Forest: Collected Poems of Robin Blaser* by Robin Blaser

International Award *Notes from the Air: Selected Later Poems* by John Ashbery (U.S.)

Büchner Prize

Georg-Büchner-Preis. Awarded for a body of literary work in the German language. First awarded in 1923; now administered by the German Academy for Language and Literature. Prize: €40,000.

Josef Winkler (Austria)

Hoofdt Prize

P.C. Hoofdprijs. The Dutch national prize for literature, established in 1947. Prize: €60,000.

Abram de Swaan

Nordic Council Literature Prize

Established in 1961. Selections are made by a 10-member jury from among original works first published in Danish, Norwegian, or Swedish during the past two years or in other Nordic languages (Finnish, Faroese, Sami, etc.) during the past four years. Prize: Dkr 350,000.

Bavian by Naja Marie Aidt (Denmark)

Prix Goncourt

Prix de l'Académie Goncourt. First awarded in 1903 from the estate of French literary figure Edmond Huot de Goncourt, to memorialize him and his brother, Jules. Prize: €10.

Syngué Sabour, pierre de patience by Atiq Rahimi

Prix Femina

Established in 1904. The awards for works "of imagination" are announced by an all-women jury in the categories of French fiction, fiction in translation, and nonfiction. Announced in November together with the Prix Médicis. Prize: Not stated.

French Fiction *Où on va, papa?* by Jean-Louis Fournier

Strega Prize

Premio Strega. Awarded annually since 1947 for the best work of prose (fiction or nonfiction) by an Italian author in the previous year. The prize is supported by the beverage company Liquore Strega and Telecom Italia. Prize: not stated.

La solitudine dei numeri primi by Paolo Giordano

Cervantes Prize for Hispanic Literature

Premio Cervantes. Established in 1976 and awarded by the Spanish Ministry of Culture for a body of work in the Spanish language. Announced in November or December and awarded the following April. Prize: €125,000.

Juan Marsé (Spain)

Planeta Prize

Premio Planeta de Novela. Established in 1951 by the Planeta Publishing House for the best unpublished original novel in Spanish. Awarded in Barcelona in October. Prize: €601,000 and publication by Planeta.

La hermandad de la buena suerte by Fernando Savater

Camões Prize

Prémio Camões. Established in 1988 by the governments of Portugal and Brazil to honour a "representative" author writing in the Portuguese language. Prize: €100,000.

João Ubaldo Ribeiro (Brazil)

Russian Booker Prize

Awarded since 1992, the Russian Booker Prize has sometimes carried the names of various sponsors—e.g., Smirnoff in 1997-2001. In 2004 it was underwritten by the Open Russia Charitable Organization and called the Booker/Open Russia Literary Prize. Awards: \$15,000 for the winner; \$1,000 for each finalist.

Bibliotekar by Mikhail Yelizarov

Big Book Prize

Premiya Bolshaya Kniga. First given out in 2006; it is sponsored by the government of Russia and underwritten by a number of prominent businessmen, who also serve as the jury. Awards: 3 million rubles for first prize, 1.5 million for second, and 1 million for third.

Vladimir Makanin for his novel *Asan*

Naguib Mahfouz Medal for Literature

Established in 1996 and awarded for the best contemporary novel published in Arabic. Prize: \$1,000 and a silver medal. The winning work is translated into English and published in Cairo, London, and New York.

Al-Fa'il ("The Labourer") by Hamdī Abū Jalil (Egypt)

Caine Prize for African Writing

The Caine Prize for African Writing is awarded annually for a short story written by an African writer and published in English. The prize is named for Sir Michael Caine, longtime chairman of Booker PLC, the publishing company, and chairman of the Booker Prize management committee for 25 years. The Caine Prize was first given out in 2000. Award: £10,000 plus a travel allowance.

Henrietta Rose-Innes (South Africa) for "Poison"

Man Asian Literary Prize

This prize is to be awarded annually, beginning in autumn 2007, for an Asian novel unpublished in English. The prize is underwritten by the Man Group PLC and the Hong Kong International Literary Festival Ltd. Prize: \$10,000 for the author and \$3,000 for the translator, plus publication and distribution of the work if other arrangements have not been made.

Ilustrado by Miguel Syjuco (Philippines)

Jun'ichirō Tanizaki Prize

Tanizaki Jun'ichirō Shō. Established in 1965 to honour the memory of novelist Jun'ichirō Tanizaki. Awarded annually to a Japanese author for an exemplary literary work. Prize: ¥1,000,000 and a trophy.

Natsuo Kirino for *Tōkyō-jima* ("Tokyo Island")

Ryūnosuke Akutagawa Prize

Akutagawa Ryūnosuke Shō. Established in 1935 and now sponsored by the Association for the Promotion of Japanese Literature, the prize is awarded in January and June for the best serious work of fiction by a promising new Japanese writer published in a magazine or journal. Prize: ¥1,000,000 and a commemorative gift.

"Chichi to ran" ("Breasts and Egg") by Mieko Kawakami (138th prize, second half of 2007)

"Tokī ga nijimu Asa" ("A Morning When Time Blurs") by Yang Yi (139th prize, first half of 2008)

Mao Dun Literary Award

Established in 1981 to honour contemporary Chinese novels and named after novelist Shen Yanbing (1896–1981), whose nom de plume was Mao Dun; awarded every five years. The latest awards were given on Oct. 25, 2008.

Qinqiang ("Qin Opera") by Jia Pingwa

Ergun He you an ("The Right Bank of the Argun River") by Chi Zijian

Hu guang shan se ("The Scenery of Lakes and Mountains") by Zhou Daxin

An suan ("Plotting") by Mai Jia

(continued from page 255)

as an “idiosyncratic discussion of how zoology, history and ecology meet.” Stuart Clark’s short-listed book *The Sun Kings: The Unexpected Tragedy of Richard Carrington and the Tale of How Modern Astronomy Began* (2007) told of Carrington’s discovery that the Earth could be affected by influences in space after a vast solar storm in 1859 crashed telegraph systems and sent magnets reeling. His unfolding of Carrington’s struggles with the scientific community showed the importance of personalities and life events in determining the course of scientific inquiry. One reviewer wrote, “The reader is left with the clear sense that science often advances in random, but very human, ways.” Ian Stewart, meanwhile, gave a dramatic account of the history of symmetry from ancient Babylon to the 21st century in *Why Beauty Is Truth: The History of Symmetry* (2007). The winner of the Royal Society’s General Award was science writer Mark Lynas, who looked back to warmer periods in the Earth’s history to predict what higher average temperatures might mean to human civilization in the future. *Six Degrees: Our Future on a Hotter Planet* (2007) paints a very grim picture of superstorms, vast conflagrations, crippling droughts, and millions upon millions of environmental refugees, but the judges felt that its overall message was one of “practical optimism toward the issues facing us.”

The best of children’s and teenage fiction confronted difficult issues in a way that did not patronize. The winner of the Carnegie Medal was likely to please 12-year-old boys with an appetite for gore, but it also dealt with issues of truth. *Here Lies Arthur* by Philip Reeve is a refashioning of the Arthurian legend, stripping it of its knights and Round Table and making its hero a brutish local tyrant who spends his time pillaging and stirring up boundary disputes. The reality of his thuggish character, however, is obscured by Myrddin, an old bard who uses storytelling and conjuring tricks to weave around Arthur the atmosphere of legend. *The Guardian’s* Kathryn Hughes noted, “Particularly useful is the way that Reeve asks his young readers to think carefully about the way that stories harden into official narratives when enough people are prepared to believe them.” The winner of the 2008 Guardian Children’s Fiction Prize was equally hard-hitting. The first in a trilogy for teenagers by Patrick Ness, *The Knife of Never Letting Go* is set in a future dystopia known as Prentisstown where

all the women are dead and everyone’s thoughts can be heard in an uncensored cacophony, known as “the noise.” The fast-paced read pulled no punches, dealing with topical issues such as information overload and the attraction of violence. As Ness commented, “The thing a teenage audience will do for you is that if you don’t insult their intelligence, they will often follow you to strange places.”

(CAROL PEAKER)

United States. In 2008, the year of the unending U.S. presidential primaries and then the unnerving stock market dive and the epoch-making election campaign, U.S. literature seemed to lurk in the shadows, except for those who loved it as much as life and political news.

Some literary good news came in the form of Peter Matthiessen’s huge novel *Shadow Country*, a one-volume reworking of a trilogy he published in the 1990s. *Shadow Country* took place in the early 20th century on the southern Florida frontier, in all of its watery, mythological, and intense psychological glory. The novel explored from multiple points of view the life and legend of frontier bad man/madman E.J. Watson, an Everglades farmer and outlaw; the character is large enough and dangerous enough to fill Matthiessen’s nearly 900-page novel.

Several other works were published by reigning American masters, including Philip Roth’s raw college novel set in the period of the Korean War (the early 1950s), *Indignation*; Joyce Carol Oates’s rendering of a recent American child murder case, *My Sister, My Love*; and Nobel Prize winner Toni Morrison’s tale of slavery in colonial America, *A Mercy*.

Lifelong Pacific Northwest resident Ursula K. Le Guin looked back to the legend of the founding of Rome for the materials of *Lavinia*, her critically well-received new novel. The wife of Aeneas tells the story: “I remember Aeneas’ words as I remember the poet’s words. I remember every word because they are the fabric of my life, the warp I am woven on.”

History played a role in a number of other admirable novels. Expatriate writer Jerome Charyn went back to American colonial times for his raucous story of soldiers, spies, and bawds in *Johnny One-Eye*, a pitch-perfect rendering of the Revolutionary War period. Nicholas Delbanco chose New England and Europe for his setting of a story from the same period in *The Count of Concord*, a novel about Ben-

jamin Thompson, the brilliant American Tory whose scientific discoveries were largely unsung. In *The Plague of Doves*, Louise Erdrich took up the matter of a social atrocity out of the early history of the upper Midwest. In *To Catch the Lightning*, Alan Cheuse offered a fictive version of the life of Edward S. Curtis, Pacific Northwest photographer of the American Indian.

Adultery lies at the romantic centre of Russell Banks’s beautifully made novel *The Reserve*, which was set in the 1930s and etched in a stylized fashion that recalled the best of F. Scott Fitzgerald. In her whimsical second novel, *The Invention of Everything Else*, Samantha Hunt chose a friendship between a New York City hotel maid in the 1940s and Nikola Tesla, the eccentric genius of an inventor. An adulterous affair in the middle of a presidential primary campaign trips up one of the major characters in Ethan Canin’s engaging novel *America, America*, which was published on the cusp of the general election. John Edgar Wideman brought out *Fanon*, an experimental novel about one of the founders of the post-colonial perspective. In his short novel *Peace*, Richard Bausch beautifully carved out a resonant moment on the U.S. front in Italy during World War II.

Part of the present time is the raucous, ribald charm of *The English Major*, Jim Harrison’s new novel about a 60-something Midwesterner, a schoolteacher turned farmer who, after his marriage crumbles, sets out on the road ready for any adventures that come his way. Also closer to home was Charles Baxter’s novel *The Soul Thief*, which dealt with questions of family and identity. Joseph Olshan, in *The Conversion*, which was set among gay American expatriates in Europe, added the question of art and aesthetics to the mix. Paul Auster, in *Man in the Dark*, played with questions of illusion and reality in a brooding surmise of a contemporary American’s life during the period of the Iraq War. *Famous Suicides of the Japanese Empire*, poet and essayist David Mura’s first novel, took up the question of family life under the shadow of the internment camps for Japanese Americans during World War II.

Novelist and futurist James Howard Kunstler published *World Made by Hand*, a subtle, low-key, and enormously persuasive portrait of an early 21st-century United States that suffers a series of terrorist attacks and the cutoff of foreign oil. Three of the country’s most entertaining novelists—Stephen

King, John Grisham, and Christopher Buckley—published, respectively, *Duma Key*, *The Appeal*, and *Supreme Courtship*.

The distinguished Library of America added another Philip Roth volume to its series—Roth was the first living writer in the series—and brought out huge compilations of the work of William Maxwell (including a number of full-dress novels, story collections, and the luminous short novel about a Midwestern murder *So Long, See You Tomorrow*) and Katherine Anne Porter (represented by 500 pages of her short fiction and another 500 pages of essays and reviews).

American short-story writers helped to make 2008 a fine year. *Lost in Uttar Pradesh*, Evan S. Connell's new and selected stories, led the pack in depth of vision and exquisite prose. Tobias Wolff published *Our Story Begins: New and Selected Stories*; Joyce Carol Oates came out with *Wild Nights!*, her fictionalized versions of the last days of a number of American writers from Edgar Allan Poe to Ernest Hemingway. The highly regarded short-story writer Jhumpa Lahiri signed in with *Unaccustomed Earth*, a set of beautifully developed long stories about South Asians in the United States.

Jay Parini tried to address the general neglect of poetry in *Why Poetry Matters*, as did publisher Robert Giroux and poet and music critic Lloyd Schwartz by editing the Library of America volume of Elizabeth Bishop's *Poems, Prose, and Letters*. Former poet laureate Charles Simic added *That Little Something* to his shelf of volumes. Frank Bidart stepped away from narrative poems to a more lyric tone in *Watching the Spring Festival*. Campbell McGrath offered *Seven Notebooks*: "Then the imagination withdraws, drifts across the table to investigate the glass flowers rolled in cloth tape. / It hovers, probes the petals, some like galaxies, some like figs or seashells. Dutiful and penitent, / it shimmers back across the gulf of air, without a metaphor, to doze away the afternoon."

Jane Shore got playful in a serious way—or was it the reverse?—in *A Yes-or-No Answer*: "Have you read The Story of O? Will Buffalo sink under all that snow? / Do you double-dip your Oreos? / Please answer the question yes or no. / The surgery—was it touch and go? / Does a corpse's hair continue to grow? / Remember when we were simpatico? / Answer my question: yes or no." Marie Howe employed plain speech in *The Kingdom of Ordinary Time*. Thomas Lux now and then went for the humorous in

God Particles; for example, in "Eyes Scooped Out and Replaced by Hot Coals," he wrote: "the eyes shall be gouged out / and replaced by hot coals / in the head, *the blockhead*, / of each citizen who, / upon reaching his/her majority, / has yet to read / *Moby-Dick*, by Mr. Herman Melville (1819–1891), American novelist / and poet." In *Dear Darkness*, Kevin Young showed off a similar slyness of tone and attentiveness to the vernacular: "I love you like barbecue / You leave nothing on the bone / I love you like barbecue / Leave me nothing but bone / You make me go hogwild honey / Make me want to hurry home."

Pulitzer Prize winner Michael Chabon published *Maps and Legends*, a collection of offbeat essays that ranged through themes of writing and reading. James D. Houston collected his essays about life in California in *Where Light Takes Its Color from the Sea*. David Shields came in with *The Thing About Life Is that One Day You'll Be Dead*, and Terry Tempest Williams offered *Finding Beauty in a Broken World*. *Dreaming Up America* showed off Russell Banks's estimation of the history of the American imagination. In *The Writer as Migrant* prizewinning novelist Ha Jin took up the question of literary exile and the displaced writer's relation to narrative language.

This year saw the posthumous publication of William Styron's engaging personal essays under the title *Havanas in Camelot*. Ian Frazier came out with *Lamentations of the Father*; William T. Vollmann published *Riding Toward Everywhere*; and essayist Barbara Hurd was represented by *Walking the Wrack Line*. Jay Parini edited *The Selected Essays of Gore Vidal*. Novelist Larry Woiwode addressed his poignant and informative memoir, *A Step from Death*, to his only son, Joseph: "So, dear son, where to begin? . . . Let me step back as far as I can and say that what I remember most about my beginnings, besides the voice of my mother striding down through layers of dark to where I lay under the wonder of the onrush of sleep, is how I felt set apart."

The biographical year began with the late 2007 publication of *Alfred Kazin: A Biography* by Richard M. Cook. One of the most highly regarded literary critical works of the year was poet Stanley Plumly's *Posthumous Keats*. Adam Kirsch signed in with useful essays in *The Modern Element: Essays on Contemporary Poetry*, and among a number of interesting literary biographies were works by novelists Lily Tuck and Ed-

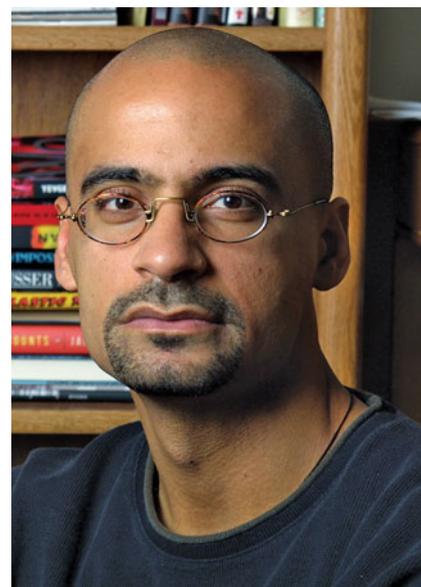

mund White, who wrote on Elsa Morante and Rimbaud, respectively, in *Woman of Rome* and *Rimbaud: The Double Life of a Rebel*. *The Selected Letters of Thornton Wilder*, edited by Robin G. Wilder and Jackson R. Bryer, arrived in the second half of the year.

Wallace Stegner and the American West by Philip L. Fradkin showed off a highly regarded late 20th-century writer in a broad context. Historian David Levering Lewis delivered *God's Crucible: Islam and the Making of Europe, 570 to 1215*. Novelist Les Standiford deployed his narrative skills in *Washington Burning*.

In 2008 Kay Ryan was named the U.S. poet laureate. Junot Díaz won the Pulitzer Prize in fiction for his novel *The Brief Wondrous Life of Oscar Wao* (2007); in poetry Robert Hass was a co-winner for *Time and Materials* (2007) with Philip Schultz (for *Failure*, 2007); and *Eden's Outcasts: The Story of Louisa May Alcott and Her Father* (2007) by John Matteson took the biography category. The PEN/Faulkner Award for fiction went to Kate Christensen for her novel *The Great Man* (2007). Matthiessen's *Shadow Country* won the National Book Award for fiction; the nonfiction prize went to Annette Gordon-Reed for *The Hemingses of Monticello*; and Mark Doty won in poetry for *Fire*.

Prominent literary figures who died in 2008 included writers Studs Terkel,

Dominican-born Junot Díaz won the 2008 Pulitzer Prize in fiction for his novel The Brief Wondrous Life of Oscar Wao.

Jim McKnight/AP

Oakley M. Hall, William F. Buckley, Jr., Michael Crichton, Paula Gunn Allen, James Crumley, Tony Hillerman, David Foster Wallace, Donald Westlake, and William Wharton; critic John Leonard; and publisher Robert Giroux. (See OBITUARIES.) Among the other losses to American letters were those of S.J. Hamrick (who wrote as W.T. Tyler), George Garrett, Arturo Vivante, Helen Yglesias, and esteemed magazine editor Raymond J. Smith. (ALAN CHEUSE)

Canada. Estrangement was a common theme of Canadian novelists in 2008. Rawi Hage's *Cockroach* portrayed society's outcasts as they endure the indignities of immigrant life; similar experiences were depicted by Austin Clarke in *More*, a tale of an immigrant woman who mourns her alienation from her gangster son. In Rivka Galchen's *Atmospheric Disturbances*, a character's disturbed mind ponders its condition with a skewed sense of humour. Canadian cowboy volunteers in the South African Boer War find that reality shatters their illusions in Fred Stenson's *The Great Karoo*. The aboriginal experience formed the backdrop both to Joseph Boyden's Giller Prize-winning *Through Black Spruce* and to David Bergen's *The Retreat*, a complicated tale of relations between and among white women and aboriginal men.

Strange families provided material for many novelists. In Marina Endicott's *Good to a Fault*, a single woman takes in a homeless family, and they live together in a *mélange* plagued by guilt, gratitude, love, rage, and too much self-analysis. A family of a different sort, a woman and her niece and nephew, take to the road in search of the children's father in *The Flying Troutmans* by Miriam Toews. Even more troubled families predominated in Mary Swan's *The Boys in the Trees*, in which a man's murders of his wife and children threaten the secrets of other "ordinary" people, and in poet Patrick Lane's first novel, *Red Dog, Red Dog*, which chronicled the unfulfilled lives of a dysfunctional family in a dysfunctional community. In Neil Bissoondath's *The Soul of All Great Designs*, two families rise up in equal and opposite alarm when their children begin dating.

The Cellist of Sarajevo by Steven Galloway was based on the true story of the brave man who played his cello in the public square every day. A young man haunted by an extraordi-

nary experience in the Galapagos Islands was the protagonist of Nino Ricci's *The Origin of Species*. Helen Humphrey's sixth novel, *Coventry*, traced the difficult search for one's bearings in a world at war. Daccia Bloomfield's *Dora Borealis* delved below the surface of Toronto's insular art scene to reveal what it means to be pursued by a dream. In Paul Quarrington's semicomical, semiautobiographical novel *The Ravine*, a writer squanders his talents through drink and knavery, yet he somehow survives to write the tale; and four disparate people in an assisted-living retirement home in Joan Barfoot's *Exit Lines* face the question of whether to support the suicide of one of them.

Short stories ranged widely. Kunal Basu's collection *The Japanese Wife* wandered from student demonstrations in China's Tiananmen Square to funeral rites on the Ganges; *The Cult of Quick Repair* was Dede Crane's artful denial of the quick fix in stories of flagrant sinners and their seedy fates; and Sarah Steinberg's *We Could Be like That Couple* was peopled with characters who perpetually look elsewhere than their own lives for fulfillment. Anthony De Sa's *Barnacle Love* captured the immigrant experience through linked stories about a father and his son; in contrast, Pasha Malla took a different tack with a bizarre interplay of styles, voices, vices, and taboos in *The Withdrawal Method*. In Rohinton Mistry's story *The Scream*—issued by itself in a special illustrated edition—a dying man, who is confined to a Mumbai (Bombay) apartment, rails against the ending of his life.

Canadian author Neil Bissoondath's The Soul of All Great Designs examined a situation that brings two families reluctantly together.

Ulf Andersen/Getty Images

Poetry addressed a variety of situations. Barbara Pelman's *Borrowed Rooms* was about the temporary personas people try on to suit their circumstances; Daphne Marlatt's *The Given* was the story of a woman imprisoned in 1950s housewifery; and *The Dream World* by Alison Pick described the sojourn of an outsider "come-from-away" in backcountry Newfoundland. Don McKay's *The Muskwa Assemblage* juxtaposed poetry and prose to describe a wilderness trip in the Muskwa-Kechika region of British Columbia; A.F. Moritz's *The Sentinel* watched the planet's goings-on and reported in detached tones on the convolutions and risks of being fully human; and Sachiko Murakami's *The Invisibility Exhibit* tackled the resounding silences that have swallowed up Vancouver's "missing women."

A number of works were written in a lighter vein. These included Robert Priest's *Reading the Bible Backwards*, an innovative reverse engineering of the Bible and other cultural narratives; Weyman Chan's *Noise from the Laundry*, a breath-taking romp of wit, wisdom, and linguistic acrobatics; and Karen Houle's *During*, which marked the flux of events through disjointed abstract syntax and vocabulary, at once lyrical and cerebral.

(ELIZABETH RHETT WOODS)

Other Literature in English. The prodigious and diverse output of new books in 2008 from sub-Saharan Africa, Australia, and New Zealand was highlighted by outstanding literary works from both established and emerging authors. In Africa writers from Nigeria and South Africa dominated in offering critically acclaimed and commercially successful new releases. Veteran Nigerian novelist Chukwuemeka Ike joined a distinguished pantheon of other African writers to receive the prestigious Fonlon-Nichols Award. Nigeria also celebrated—with much of the rest of the world—the 50th anniversary of the first publication of favourite son Chinua Achebe's classic work *Things Fall Apart* (1958), the best-selling novel of all time by an African.

Nigerian Sade Adeniran drew praise as the recipient of the 2008 Commonwealth Writers' Prize (CWP) for best first book (African region) for her novel *Imagine This* (2007), a story based on the journal of Lora

Ulf Andersen/Getty Images

Australian author Steve Toltz's first novel, *A Fraction of the Whole*, was short-listed for the Man Booker Prize.

Ogunwole, which chronicled her life from age nine to adulthood. The CWP for best book (Africa region) went to another Nigerian woman, Karen King-Aribisala, for *The Hangman's Game* (2007).

South African readers welcomed the release of two works by internationally renowned authors who wrote in both Afrikaans and English: *Other Lives*, a novel divided into three interrelated parts, by fiction writer, essayist, and university professor André Brink; and *A Veil of Footsteps (Memoir of a Nomadic Fictional Character)* by author, painter, and activist Breyten Breytenbach. Athol Fugard, arguably South Africa's finest living playwright, produced *Coming Home*, which was scheduled to have its world stage premiere in early 2009. The Caine Prize, awarded annually for the best short story in English by an African writer, went to South Africa's Henrietta Rose-Innes for her short story "Poison" (published in the collection *Africa Pens*, 2007).

New Zealand honoured some of its finest writers with the annual Montana New Zealand Book Awards. Among the recipients were *Opportunity* (2007) by Charlotte Grimshaw, for fiction; *Cold Snack* (2007) by Janet Charman, for poetry; and *The Blue* (2007) by Mary McCallum, in the categories of best first book and readers' choice. Maori literature received much-deserved promotion in the West when Patricia Grace was named the latest winner of the Neustadt International Prize for Literature.

Australians hailed the publication of Peter Carey's new novel, *His Illegal Self*.

Also of note was worldwide best-selling author and prolific novelist Colleen McCullough's latest work, *The Independence of Miss Mary Bennet*, a novel inspired by Jane Austen's *Pride and Prejudice*. Elsewhere, Steven Carroll won the coveted Miles Franklin Award as well as the CWP (best book, South East Asia and South Pacific region) for his novel *The Time We Have Taken* (2007), and *The Anatomy of Wings* (2007) by Australian Karen Foxlee won in the CWP category of best first book from the region. Tim Winton brought out his ninth novel to date, *Breath*, which, like so much of his fiction, drew heavily from landscape and place, especially coastal Western Australia. Sydney-born author and first-time novelist Steve Toltz demonstrated great promise and delighted readers and critics alike with *A Fraction of the Whole*, which was short-listed for the Man Booker Prize.

(DAVID DRAPER CLARK)

GERMAN

At the beginning of the 2008 Frankfurt Book Fair, 40-year-old author Uwe Tellkamp won the German Book Prize for his novel *Der Turm*, an exploration of life in Dresden in the years leading up to the East German revolution of 1989. Four years earlier Tellkamp had won the Ingeborg Bachmann Prize for the best emerging author in the German language on the basis of the same novel, which was at the time still a work in progress. Since then Tellkamp's novel had been eagerly awaited, and it appeared to widespread critical acclaim. Tellkamp himself—somewhat like his protagonist, Christian Hoffmann—had grown up in Dresden as a doctor's son with literary ambitions, served in the East German National People's Army, and actually spent a short time in jail in the fall of 1989 because as a soldier he refused to go into action against East German protesters. His novel was set among the educated bourgeoisie in socialist East Germany, a class that largely separated itself from socialist politics and sought to create relatively independent niches for itself; one of those niches in the novel was the "tower" society from which the novel got its name. The notion came from one of the first German bildungsromans, Johann Wolfgang von Goethe's *Wilhelm Meisters Lehrjahre*. Whether the kind of literary education and elitism represented by the tower society would be able to survive the collapse of the social and political system it op-

posed was one of the novel's major themes.

Another celebrated young East German author, Ingo Schulze, also published a novel about the collapse of the former Eastern bloc: *Adam und Evelyn*. Adam is an East German tailor who often becomes erotically involved with his female clients; for this reason his girlfriend Evelyn decides to travel to Hungary without him. Adam follows her there and, because Hungary then opens its borders to the West, ultimately winds up with Evelyn in Munich. The novel alludes to the biblical story of Adam and Eve and their banishment from paradise, with the implication that the fall of the Berlin Wall ultimately banished the citizens of the East German state from a not-so-paradisiacal protective cocoon.

In Turkish-born Feridun Zaimoglu's novel *Liebesbrand*, the protagonist, Richard, has a car accident in Turkey and is saved by a young German woman. He falls in love with her, but she quickly disappears from his life. Zaimoglu used his novel to explore the potential (or lack of potential) for real love in contemporary society. Similar concerns appeared in Iris Hanika's *Treffen sich zwei*, in which two lonely people suddenly find each other; but how long their love will last remains an open question.

Sherko Fatah's *Das dunkle Schiff* was the story of a young man born in Iraq who becomes involved with a group of violent jihadists but manages to find refuge in Germany; his past, however, follows him to his new home. Another novel about contemporary politics was Swiss author Lukas Bärfuss's *Hundert Tage*, the story of a Swiss worker employed by a nongovernmental organization who is hiding out in Rwanda in 1994, during the genocide against the Rwandan Tutsis. Dietmar Dath's novel *Die Abschaffung der Arten* dealt with the potential for ecological catastrophe in the contemporary world. It was set in an uncertain future in which human beings no longer rule the world and animals have taken control, and its protagonist is a lion.

A number of important works by older authors were issued in 2008. Günter Grass published *Die Box: Dunkelkammergeschichten*, the second volume of his autobiography, which had begun in 2006 with the controversial *Beim Häuten der Zwiebel*, in which Grass revealed the fact that as a young man during World War II, he had briefly been a member of the Waffen-

Jens Meyer/AP

German author Uwe Tellkamp displays his novel *Der Turm*, for which he won the 2008 German Book Prize in October.

SS. The second volume of Grass's autobiography, which centred on Grass's family and his literary works, proved much less controversial. The 82-year-old Siegfried Lenz, meanwhile, published *Schweigeminute*, a novel about a love affair between a female high school teacher and a male student. Martin Walser's novel *Ein liebender Mann* also featured age differences, but in this case the older person was Goethe, who at age 73 fell in love with and proposed marriage to a 19-year-old woman named Ulrike von Levetzow. Unsurprisingly, both in Walser's novel and in reality, Goethe did not marry the young woman; fortunately for posterity, out of his disappointment came the "Marienbader Elegie," one of Goethe's most personal and most moving poems. Walser's novel revealed how personal disappointments could result in literary triumphs.

(STEPHEN BROCKMANN)

FRENCH

France. The most important literary event of 2008 in France was the awarding of the Nobel Prize for Literature to J.-M.G. Le Clézio, one of the country's leading writers. (See NOBEL PRIZES.) During his 45-year career, Le Clézio's work spanned many phases; early novels were dryly experimental, but later works incorporated luxuriant exoticism, an ecology-based confrontation of Western society, and, more recently,

family stories inscribed in the history of Europe and of his own Mauritius. In *Ritournelle de la faim*, Le Clézio told of his mother's coming of age before and during World War II; her bourgeois, fascist-leaning family loses everything when France is occupied. They flee the Nazis, arriving in Nice, where his mother sheds her last childish illusions as she discovers the truth of hunger.

This blending of autobiography with historical fiction, known in France as autofiction, was by far the year's most prevalent trend. In *Jeudi saint* Jean-Marie Borzeix was his own main character. While researching a Nazi massacre in his native village, he stumbles upon the existence of a previously unknown Jewish victim, and he launches a frenetic search to discover that person's identity.

In his *Impératif catégorique*, Jacques Roubaud attempted to revive fading memories of his military service in the Algerian war of independence, which he protested through a hunger strike. He also told, through the haze of memory, of his brother's suicide and of his own beginnings in Parisian literary circles. In her autofiction *Cafés de la mémoire*, Chantal Thomas described her literary origins as a member of the post-Sartre generation through memories of the countless cafés she frequented, seeking freedom in the 1960s and '70s under the influence of Simone de Beauvoir and Roland Barthes. Whereas Thomas described an upward climb, Christine Jordis, in her autofiction *Un Lien étroit*, plotted a bleak descent: her unhappy childhood—during which she was abandoned by her father and left with her miserable mother—her failed marriage, and her present-day loneliness.

Loneliness was also a major theme of the year's fictional works. Catherine Cusset's *Un Brillant Avenir* portrayed the slow crumbling of promise in one woman's life as she passes from orphaned child whose future seems boundless to her adoptive parents, to girl in love, to activist wife, to petty mother-in-law, and finally to sad woman on the verge of widowhood.

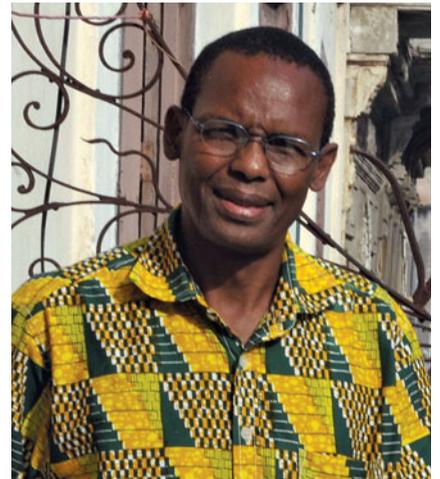

Christian Oster treated the theme of loneliness from the male perspective in *Trois hommes seuls*, in which a man must visit his ex-wife in Corsica but is loath to go alone. Having no friends, he asks two acquaintances to accompany him on the ride. Because they barely know each other, the three men stumble awkwardly upon all the wrong questions to reveal the deeply fearful solitude of their existence.

Another important theme of the year's literature was human duality. In *Boutès*, Pascal Quignard approached the question of human duality from his favourite perspective, music. He set two mythological figures as fundamental oppositions of the psyche: Orpheus, whose music is rational, social, ordered, and paternal, against Butes (the Argonaut who dived headfirst and almost drowned trying to reach the Sirens), who represents an ecstatic, solitary, and destructive longing for return to the sound-filled oneness of the maternal womb.

In *Le Rêve de Machiavel*, Christophe Bataille explored the same duality in a historical setting: in 1527 Machiavelli flees a Florence ravaged by plague and arrives at the seemingly safe haven of a village that has not been touched by disease. Soon after, however, the plague strikes the village, and the rational scholar watches as the intellectual advances of his beloved Renaissance are swept away in the return of terrified irrationality, witch hunts, and religious insanity in the face of death.

In *Ce que le jour doit à la nuit* Yasmina Khadra described human duality in the more recent setting of colonial Algeria. There an Islamic Algerian boy has been adopted into the Christian culture of the French colonizers. Treated with love and kindness, he finds beauty in a people most of his countrymen regard as oppressors. At the same time, he fights to retain his father's culture as his privileged comfort among the colonizers contrasts with the misery of his native people.

Guinea-born author Tierno Monénembo attracted attention—and the Prix Renaudot—with his historical fiction.

STR/AFP/Getty Images

The 2008 Prix Femina went to the best seller *Où on va, papa?*, in which Jean-Louis Fournier wrote with brutal humour and heartbreaking honesty about his two mentally disabled sons; he expresses his embarrassment and disappointment that they will never read, but he reiterates throughout his undying love for them. The Prix Médicis was awarded to the long and complicated *Là où les tigres sont chez eux*, in which Jean-Marie Blas de Roblès intertwined many stories and voices—of characters ranging from a 17th-century Jesuit to a modern-day reporter and his cocaine-snorting daughter—to create a fresco of Brazil that spanned the centuries. The Prix Renaudot went to Guinea-born Tierno Monénembo's historical fiction *Le Roi de Kahel*, the story of a 19th-century French adventurer's attempt to carve out a kingdom for himself in what is now Guinea. Afghan-born Atiq Rahimi won the Prix Goncourt for *Syn-gué sabour*, in which an Afghan woman is nursing her comatose, vegetative mujahideen husband; she sits at his bedside, pouring out her frustration at her marital, social, and religious oppression. In her husband's silence, she finally finds her voice. (VINCENT AURORA)

Canada. The biggest news on the literary scene during the year was not the work of one author but that of a group: the writers and artists who were able to make culture a page-one story during the Canadian federal election. Government cultural funding rarely emerged as an issue, but they brought it to the fore and kept the ruling Conservative Party from winning a majority by depriving it of seats in French Canada, where such issues were tied in with issues of identity.

On the purely literary front, Jacques Poulin picked up the Prix Gilles-Corbeil, given for his entire body of work. True to form, the very reserved Poulin did not appear in person. Other veterans triumphed during the year: Marie-Claire Blais won her fourth Governor General's Literary Award, this time for her novel *Naissance de Rebecca à l'ère des tourments*. Francine Noël returned with *J'ai l'angoisse légère*, giving the characters from her past novels a new life. Popular writer Monique Proulx was short-listed for several prizes but came up empty. Her novel *Champagne*, however, about a group of characters living on a Laurentian lake, was a success among readers. Attendees of Montreal's Salon du Livre gave the nod to Michel Tremblay's *La Traversée du continent* as their favourite book. The pro-

Ulf Andersen/Getty Images

French Canadian writer Monique Proulx's novel Champagne was short-listed for numerous honours, including the Governor General's Literary Award for French-language fiction.

lific Tremblay had been turning out a new book every year.

There was some room for younger writers as well. Pierre Samson won the Prix des Collégiens for his novel *Catastrophes* (2007). Catherine Mavrikakis won the Grand Prix du Livre de Montréal for *Le Ciel de Bay City*, a story of death and anxiety. And authors such as Éric Dupont continued to build their careers, despite the domination of the older generation; his novel *Bestiaire* attracted critical praise.

Senior writer Bruno Roy reached back to 1968 to recall Quebec's more turbulent years with *L'Osstidcho; ou, le désordre libérateur*, an essay about rock music and politics. On the other end of the age spectrum, Lino finished his graphic novel trilogy with *La Chambre de l'oubli*, an urban dystopia. In an example of solidarity, the writing community awarded Roger Des Roches the Prix Chasse-Spleen for his book of poems *Dixhuitjuilletdeuxmillequatre*, a work other writers considered worthy of attention. (DAVID HOMEL)

ITALIAN

The literary event of the year was the surprising success of Paolo Giordano's *La solitudine dei numeri primi*, winner both of the Campiello Prize for a first novel and of the Strega Prize. The protagonists of the story were compared to a prime pair—prime numbers that are separated by only one even number—near each other yet always apart. The

author was a 26-year-old researcher in the field of theoretical physics, and his arrival on the Italian literary scene brought a welcome new perspective. The novel was especially remarkable for its description of the complex thought processes of its male protagonist: a mathematician, scarred by a traumatic childhood experience, whose difficulty in dealing with human relationships bordered on the pathological.

Michele, the protagonist of Francesca Sanvitale's *L'inizio è in autunno*, winner of the Viareggio-Rèpaci Prize for fiction, has difficulty cultivating meaningful attachments until he meets a Japanese art restorer. Michele—who is a psychiatrist—is drawn to the mystery that surrounds the man and begins to discern hidden analogies between their life choices and the crucial scene in Honoré de Balzac's short story *Adieu* (1830), in which Stéphanie cries out her farewell before descending into madness. The novel was inspired by the restoration of the Sistine Chapel and reflected the amazement visitors felt at the sight of the original brilliance of Michelangelo's frescoes, newly delivered to the public after centuries of dust and alterations. The central scene of the novel depicts Michele as he is lost in the contemplation of the artwork but also afraid to direct his glance toward Christ's head, the detail that could unveil the mystery of his Japanese friend.

Un cappello pieno di ciliege, Oriana Fallaci's posthumous work, was preceded by an intense publicity campaign and met with predictable success. Fallaci (1929–2006), an international journalist and best-selling author who spurred controversy for her public contempt of Islam following the Sept. 11, 2001, attacks in the United States, returned to personal history in the epic saga of her family from 1773 to 1889. Maria Rosa Cutrufelli's novel *D'amore e d'odio* also proposed a long chronological span, from 1917 to 1999, but adopted a different narrative strategy. Each chapter (or "time," as Cutrufelli called them) bears a date and the name of a woman who tells her story to an interlocutor whose reactions, objections, and emotional participation are not transcribed and therefore can only be imagined. The seven "times" of the novel take readers through different epochs and geographic locations to end five minutes before the advent of the 3rd millennium. Delina, the Italo-Albanian protagonist of the final segment, is a photographer who has just

Italian author Paolo Giordano was praised for his description of complex thought processes in his debut novel, *La solitudine dei numeri primi*.

witnessed the plight of clandestine immigrants and found it strikingly similar to her childhood memories.

La città dei ragazzi is the name of a community that was founded in Rome at the end of World War II and that brings together displaced children from all over the world. It was also the title of Eraldo Affinati's book about his experiences as a teacher in that community. The author's journey to Morocco with two of his students leads to an interrogation on his role as a teacher and on the meaning of being a father.

Elvira Seminarà's *L'indecenza* focused on the havoc caused by the arrival of a Ukrainian caretaker in the life of a Sicilian couple. The presence of the young foreigner brings to the fore the contradictions in the couple's ostensibly flawless daily routine and a secret tragedy in their life. This novel was one of the first to reflect on a new phenomenon in Italian culture—i.e., the advent of the *badante*, the often young and almost inevitably foreign and female caretaker who is charged with attending to the needs of the old and the sick. In her portrayal of Ludmila, the Ukrainian *badante* of her novel, Seminarà masterfully explored the uncanny

combination of distance and intimacy that the role entails.

The enduring success of Roberto Saviano's *Gomorra* (2006), which forced the young author to live in hiding and under police protection, inspired several books on the city of Naples, such as Francesco Durante's *Scuorno* and Andrej Longo's *Dieci* (2007). The 10 stories in Longo's collection were a paradoxical reflection on the Ten Commandments, which are systematically perverted under the dire social conditions depicted by the author.

Several important writers died in 2008, including Mario Rigoni Stern, whose memoir *Il sergente nella neve* (1953) was a celebrated representation of Italian soldiers' life and death on the Russian front during World War II, and Fabrizia Ramondino, author of *Althénopis* (1981), an elegant novel in which the complexity of Naples mirrors an intricate mother-daughter relationship. The same Mediterranean Sea that played such a prominent role in Ramondino's work was also responsible for her death: she drowned just before her last novel, *La via*, appeared in bookstores. (LAURA BENEDETTI)

SPANISH

Spain. Chaos, fear, and secrecy were characteristic themes in the novels published in Spain in 2008. As a follow-up to the enormous success of his novel *La sombra del viento* (2001), Carlos Ruiz Zafón came out with the best-selling *El juego del ángel*, a narrative of intrigue, romance, and tragedy woven through a labyrinth of secrets in which the spell of books, passion, and friendship combined to create an amazing story. In the tragicomic *Instrucciones para salvar el mundo*, Rosa Montero reflected on senselessness and hope.

Ray Loriga's *Ya sólo habla de amor* addressed the failure of love and the mental subterfuges people use to overcome it. In *El país del miedo*, Isaac Rosa explored the origin of a generalized fear that prompts people to accept abusive forms of protection and to make defensive responses that paradoxically create more vulnerability.

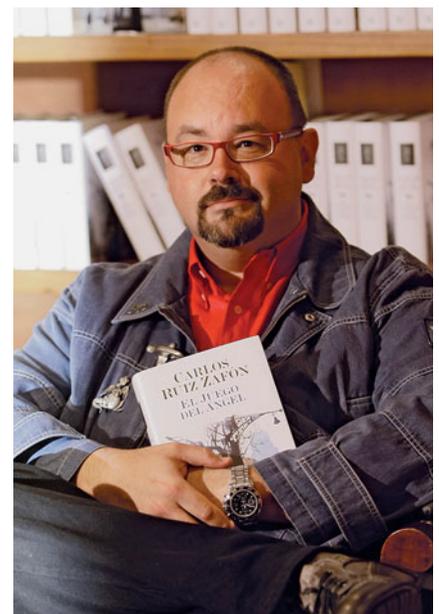

A mixture of historical novel, detective novel, hagiography, and parody, *El asombroso viaje de Pomponio Flato* by Eduardo Mendoza was both his most unusual and one of his funniest books. *El día de hoy* by Alejandro Gándara was about the eternal struggle against luck and destiny, about the lies that structure experience and the memories that

are forgotten. The novel was a unique view of a city as a biography, narrated as a walk that encounters corners, lies, escapes, and opportunities.

Spain's richest literary prize, the Planeta Prize, was awarded to *La hermandad de la buena suerte*, a detective novel by writer and philosopher Fernando Savater. The book told the story of a rich man who hires mercenaries to look for someone who has disappeared. In Savater's words, "It's an adventure novel with a touch of the metaphysical." The most renowned Spanish-language literary prize, the Cervantes Prize, was awarded to novelist Juan Marsé.

Juan José Millás won the 2008 National Prize for Narrative with *El mundo* (2007), which had also been awarded the 2007 Planeta Prize; the novel related the childhood memories of a boy in what was essentially a literary psychoanalysis. The Primavera Prize went to *Nudo de sangre* by Agustín Sánchez Vidal, a historical novel that takes place in colonial Peru between the 16th and the 18th century. The book described the search for Inca emperor Atahualpa's treasure and for the lost city of Vilcabamba after the Jesuits were expelled from Spain. The unwanted Jesuits appeared also in Francisco Casavella's *Lo que sé de los vampiros*, which was awarded the Nadal Prize. In the novel an aristocratic young man named Martín de Viloalle travels

Spanish writer Carlos Ruiz Zafón holds *El juego del ángel*, a complicated story of intrigue and secrets that became a best seller.

Gustau Nacarino—Reuters/Landov

around Europe with the exiled Jesuits, making a living with his drawings. The Alfaguara Prize was awarded to Cuban writer Antonio Orlando Rodríguez for his novel *Chiquita*. A loss to Spanish letters was the death in January of esteemed poet Ángel González. (See OBITUARIES.) (VERÓNICA ESTEBAN)

Latin America. Detective novels were popular in 2008. Mexican writer Élmer Mendoza presented *Balas de plata*, which featured a depressed detective who struggles to complete his investigation as he confronts drug traffickers and the politicians associated with them. *Balas de plata* denounced corruption in an original, impeccable style; as a manuscript titled *Quién quiere vivir para siempre*, it had won the 2007 Premio Tusquets Editores de Novela.

In *La muerte lenta de Luciana B* (2007; *The Book of Murder*, 2008) by Argentine author Guillermo Martínez, the detective is a writer and literary critic who, in the manner of Jorge Luis Borges, is more interested in examining differing versions of the crime than in finding the culprit. *Tuya* (2005) by Argentine Claudia Piñeiro was reedited in 2008 after a first edition was unsuccessful. In this crime novel the woman who acts as a detective is involved in a love triangle. The novel offered a thorough psychological analysis of the Argentine middle class. Another Argentine writer, Juan Sasturain, reintroduced his detective Etchenike in *Pagaría por no verte*, a good crime novel that depicted local customs against the tragic background of Argentina in the 1980s.

The novel *La sombra del púgil* by Argentine Eduardo Berti was a sophisticated tale of family conflicts during Argentina's military dictatorship. At the end of 2007, Chilean writer Roberto Brodsky published *Bosque quemado*, in which the topic of state terrorism was treated in conjunction with the themes of exile and return. The novel won the 2007 Premio Jaén de Novela. Guerrilla wars and intergenerational family problems were the focus of *Una familia honorable* by Guatemalan Rafael Cuevas Molina.

Ronald Flores of Guatemala searched for the origins of violence and religious conflicts in the 18th century. In *La rebelión de los zendales*, he told the story of the Indian uprising in an area extending from Guatemala into Mexico. The world of Bolivia's aboriginal peoples was represented in all its complexity in *Música de zorros* by Manuel Vargas. In this novel dreamlike and real aspects of the Indians' world are seen

Vittorio Zunino Celotto/Getty Images

Internationally respected Mexican writer and critic Carlos Fuentes entwined the philosophy of Machiavelli with Mexico's past and present circumstances in La voluntad y la fortuna.

as present and overlapping. A dreamlike reality was also depicted with deft touches in *Vidas perpendiculares* by Mexican author Álvaro Enrigue. The main character relives or dreams other lives, which appear one on top of the other in a tale in which space and time are juggled with humour and sarcasm.

Several works mixed autobiography and fiction. In his posthumously published novel *La ninfa inconstante*, Guillermo Cabrera Infante reminisced about the prerevolutionary Havana of his youth, and he depicted in detail the city's nightlife, streets, music, movies, and characters—all the obsessions already present in his two previous novels. In this historical setting, a mature film critic falls in love with a 16-year-old Havana-born Lolita. Cabrera Infante's great literary talent was again evident in the constant linguistic play that earned him the devotion of his readers. In a similar way, Carlos Fuentes's obsessions reappeared in *La voluntad y la fortuna*, a title intended as an homage to Machiavelli, whose political philosophy pervades the book. (In a famous passage from *The Prince*, Machiavelli asserts that fortune can and must be mastered by will.) This

long novel encompassed earlier parts of Fuentes's story and a big part of Mexico's history, in particular the violence in daily life, drug trafficking, political corruption, and intractable problems that caused recurrent fratricidal fights. Argentine Graciela Schwartz explored in *Señales de vida* the bittersweet remembrances of adolescent joys and fears with a provocative language that moves seamlessly from colloquial to lyrical and back. In *El boxeador polaco*, Guatemalan Eduardo Halfon evoked the story of his grandfather, who was interred at the Nazi extermination camp in Auschwitz.

La casa de Dostoievsky by Chilean writer Jorge Edwards won the Planeta-Casa de América award. This roman à clef was full of appearances by well-known poets—Enrique Lihn, Nicanor Parra, Heberto Padilla, “Nerón” Neruda—by name or thinly disguised. Patricio Fernández, founder of the satiric magazine *The Clinic* (the title was a reference to the London clinic where Chilean dictator Augusto Pinochet was treated), published *Los nenes*, a novel in which the characters are writers whose names are only slightly altered. The novel took on the literary world, portraying the writers as at times coarse and irresponsible. The work also incorporated the discovery of Pinochet in London, his return to Chile, and his death.

Dominican writer Junot Díaz wrote in perfect English as well as in Spanish. His novel *The Brief Wondrous Life of Oscar Wao* (2007) won the 2008 Pulitzer Prize for Fiction. It was published in Spanish in 2008 as *La breve y maravillosa vida de Óscar Wao*, translated by Cuban writer Achy Obejas.

Two important anthologies of short stories were published in 2008, *El descontento y la promesa: nueva/joven narrativa uruguaya*, edited by Hugo Achúgar, and *Sol, piedra y sombras: veinte cuentistas mexicanos de la primera mitad del siglo XX*, edited by Jorge F. Hernández. (LEDA SCHIAVO)

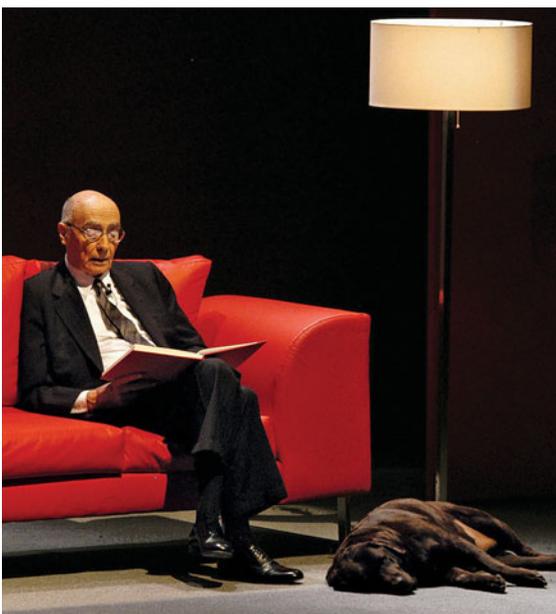

PORTUGUESE

Portugal. The 2008 short-story prize of the Association of Portuguese Writers was awarded to Angolan author Ondjaki, the most international of current young Lusophone African writers, for his book *Os da minha rua* (2007). Among the works of this prolific novelist, poet, children's storyteller, and documentarian were *Bom dia, camaradas* (2000) and *O assobiador* (2002), pub-

lished in English in 2008 as *Good Morning, Comrades* and *The Whistler*, respectively. The 2008 Camões Prize, the most important trophy of Portuguese-language literatures, went to Brazilian novelist, journalist, and scholar João Ubaldo Ribeiro, author of such influential works as *Viva o povo brasileiro* (1984; *An Invincible Memory*, 1989) and *A casa dos Budas ditosos* (1999).

Ten years after winning the Nobel Prize and following the publication of several less-successful titles, José Saramago returned to form with the novel *A viagem do elefante*. Critic Pedro Mexia described the book as the “itinerary” from Lisbon to Vienna of the eponymous elephant—a gift of the 16th-century King John III of Portugal to his cousin Maximilian of Austria. Saramago’s worldwide success *Ensaio sobre a cegueira* (1995; *Blindness*, 1997) was adapted to film (2008) by acclaimed Brazilian director Fernando Meirelles. Another internationally celebrated Portuguese writer, António Lobo Antunes, published his 20th novel, *O arquipélago da insónia*. Antunes’s most influential critic, Maria Alzira Seixo, linked this “story of family disintegration, seen from the perspective distorted by illness of the [autistic] narrator,” to *Auto dos danados* (1985; *Act of the Damned*, 1993) and to *O manual dos inquisidores* (1996; *The Inquisitors’ Manual*, 2003).

Portuguese Nobel laureate José Saramago attends a reading of his work in 2006. The writer drew attention in 2008 for his effective new novel A viagem do elefante and because the much-praised film Blindness was based on one of his books.

Ivan Garcia—AFP/Getty Images

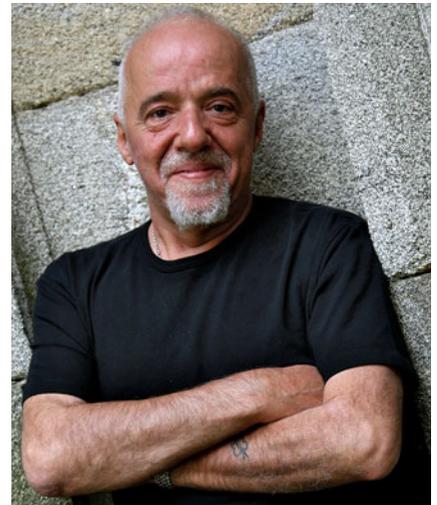

The 2008 Grand Prize of Poetry of the Association of Portuguese Writers went to Ana Luísa Amaral for her *Entre dois rios e outras noites* (2007). Herberto Helder, one of Portugal’s most respected contemporary poets, published *A faca não corta o fogo: súmula e inédita*, his first collection since 2001. Renaissance scholar Vítor Manuel de Aguiar e Silva, author of *Camões: Labirintos e Fascínios* (1994), received in 2007 the Literary Life Prize of the Association of Portuguese Writers. The prestigious 2007 Pessoa Prize was awarded in 2008 to historian Irene Flunser Pimentel, the author of *A história da PIDE* (2007), a study of the Portuguese political police from 1945 to 1974. Earlier 20th-century history was revisited in *D. Carlos* (2006), Rui Ramos’s acclaimed and timely biography of King Carlos I, who was assassinated in Lisbon in 1908; the regicide was commemorated throughout 2008.

(VICTOR K. MENDES)

Brazil. The major highlight of the 2008 literary year was the marking of the centenary of the death of Brazil’s world-renowned novelist Joaquim Maria Machado de Assis (1839–1908). Major colloquia and exhibitions in his honour were organized throughout Brazil and internationally.

Several notable works of fiction gained wide attention, including Milton Hatoum’s *Órfãos do Eldorado*, a family saga set in the rubber-boom Amazon of the early 20th century. Miguel Sanches Neto published *A primeira mulher*, a police thriller about a professor’s midlife crisis. Paulo Coelho also turned to a thriller, in a departure from his esoteric fiction, with *O vencedor está só*, in which a serial killer searches for his ex-wife. The Bahian poet Ruy Espinheira Filho published a semiautobiographical novel, *De paixões e de vampiros: uma história do tempo da Era*, of life in his native rural Bahia in the 1960s, prior to the military dictatorship. Flávio Znhaki’s *De cabeça baixa* narrates the life of a failed novelist who, upon discovering a copy of his novel with annotations by an unknown critic, decides to revive his literary career.

Vittorio Zunino Celotto/Getty Images

In a departure from his previous esoteric themes, Brazilian author Paulo Coelho published a thriller in which a serial killer searches for his ex-wife.

Among the new theatrical works was *Leopoldina—cartas e relatos*, a montage of letters written by the Brazilian Empress Maria Leopoldina, mother of Dom Pedro II, at the time of Brazilian declaration of independence from Portugal in 1822. In this year devoted to Machado de Assis, Lygia Fagundes Telles finally published the award-winning play *Capitu*, written in 1968 with Paulo Emílio Salles Gomes, which focused on the “oblique and sly” eyes of the heroine in Machado’s novel *Dom Casmurro*. The dramatist Aimar Labaki published a study of the life, works, and great influence of theatrical director José Celso Martinez Correa (Zé Celso).

The Camões Prize 2008 for literature was awarded to the Bahian novelist João Ubaldo Ribeiro for his body of work. The Brazilian Jabuti prize for best novel was awarded to Cristóvão Tezza for *O filho eterno* (2007). Among the notable publications about Brazilian culture were Alberto Carlos Almeida’s *A cabeça do brasileiro* (2007), which set out to describe the national mind-set in the early 21st century, and José Miguel Wisnik’s *Veneno remédio—o futebol e o Brasil*, a cultural interpretation of the role of association football (soccer) in Brazilian life.

Deaths included those of novelist-memoirist Zélia Gattai (wife of Jorge Amado), Bahian poet and musician Dorival Caymmi (see OBITUARIES), and writers José Alcides Pinto, Fernando Barbosa Lima, and Fausto Wolff.

(IRWIN STERN)

RUSSIAN

Several new, contradictory, and at times surprising trends were noticeable in Russian literature in 2008. The short list for the Russian Booker Prize bore clear witness to this. The nominees Ilya Boyashev's *Armada* (2007; "Armada"), Yelena Nekrasova's *Shchukinsk i goroda* ("Shchukinsk and Cities"), German Sadulayev's *Tabletka* ("The Pill"), Vladimir Sharov's *Budte kak deti* ("Be like Children"), and Galina Shchekina's *Grafomanka* ("The Graphomaniac") ultimately lost to Mikhail Yelizarov's *Bibliotekar* (2007; "The Librarian"). Most of these novels were written in a style similar to magic realism, which only a few years earlier had been associated in Russia with popular literature. The latest work of the best known of these authors, Vladimir Sharov, was another of his paradoxical narratives that featured a collision of the everyday, the historical, and the fantastic in a Gnostic vein. In *Budte kak deti* Lenin and his fellow atheistic Bolsheviks are secretly Christian mystics. A no-less-paradoxical reconsideration of the Soviet period was at the heart of Yelizarov's *Bibliotekar*, which was heavily influenced by the work of Argentine writers Jorge Luis Borges and Julio Cortázar. The novel told the story of a conformist Soviet writer—author of rather ordinary Socialist Realist novels—whose works turn out to be the source of a mystical energy. The fantastic elements of Nekrasova's novel are rooted in daily life; in Boyashev's *Armada*, the setting was an antiutopia.

In reaction to the playful postmodern novels of the 1990s, there was a marked increase of interest in novels of manners and of everyday life; eventually, however, such novels aroused interest only when they contained an element of social radicalism (as was the case with Sadulayev's *Tabletka* or in the works of Zakhar Prilepin, another popular young author and winner of the 2008 National Bestseller Prize for his novel *Grekh* ["Sin"]) or when they took an uncompromising stance on contemporary life (examples include Vadim Chekunov's novel about the contemporary Soviet army, *Kirza* ["Boots"], and Nataliya Klyuchareva's *Rossia: obshchyy vagon* ["Russia: The Third-Class Car"]). Novels depicting Russian prosperity, which were common during the early 2000s, clearly had fallen out of fashion. By contrast, books about personal and private life found an audience—e.g., Pavel Sanayev's *Pokhoronite menya za plintusom* ("Bury Me Behind the

Plinth"), which went unnoticed when first published in 1996 but became a best seller in 2008. (Its success did have a sensational side: it was a novel about a family of easily identifiable contemporary actors by an author who was the son of well-known actors.)

Significantly, new works published in 2008 by two of the 1990s' most noted authors, Vladimir Sorokin and Viktor Pelevin, were greeted with indifference. Sorokin's *Sakharnyy kreml* ("Sugar Kremlin"), a book of thematically linked short stories, was a sequel to his last, highly political antiutopian novel, *Den oprichnika* (2006; "Day of the Oprichnik"). Pelevin's book, *P5: proshchalnye pesni politicheskikh pigmeyev Pindostana* ("P5: Songs of Parting from the Political Pygmies of Pindostan"), was generally panned.

Interesting works by talented authors that went largely unnoticed by critics and prize givers included Demyan Kudryavtsev's structurally complex 20th-century family saga *Bliznetsy* ("Twins"); Aleksey Lukyanov's elegant metaphysical novella *Zhestokokryly nasekomy* ("Coleoptera"); a collection of prose fiction combining the surreal and grotesque from one of the Leningrad underground's most venerable figures, Boris Dyshlenko; Yury Buyda's *Tretye serdtse* ("The Third Heart"), a stylized gothic tale about Russian immigrants in the 1920s in Europe; and Lev Usyskin's collection of stylized historical stories, *Russkie istorii* ("Russian Stories").

The attempt to integrate poetry into popular culture (for the first time since the Soviet era) was visible in the appearance of a new glossy magazine called *POETomu* (a wordplay pulling the English word *poet* from the Russian word for "because" [*poetomu*]) and the televising of the competition *King of the Poets*. The winner was well-known writer Dmitry Vodennikov, a leading practitioner of the "new sincerity" in Russian poetry. Vodennikov's success, and that of several other young authors, at winning a popular audience for poetry provoked a vigorous critical debate, whose participants included leading figures such as Mikhail Aizenberg and Dmitry Kuzmin, on the relationship between popular success and critical judgment. Yelena Fanailova's latest highly charged and very political poems, especially the cycle *Baltisky dnevnik* ("Baltic Diary"), provoked a no-less-sharp and heated discussion. Some saw in her work a new direction in Russian poetry, but

others discerned a return to the language and style of thought of Soviet literature (or rather anti-Soviet literature, its mirror image).

The publication of the third and fourth volumes of Yelena Shvarts's *Collected Works* was a significant event for Russian literature in 2008. Other noteworthy books of poetry came from Aleksey Tsvetkov (Andrey Bely Prize winner for 2007), Nataliya Gorbanevskaya, Mikhail Aizenberg, Andrey Rodionov, and Vadim Mesyats. Among first books the most significant came from Alla Gorbunova and Vasily Borodin. The launching of the Internet site Openspace, devoted exclusively to culture, proved quite valuable for the discussion of Russian literature.

The year 2008 marked the passing of the 1970 Nobel Prize winner Aleksandr Solzhenitsyn. A biography of him by Lyudmila Saraskina, published shortly before his death, won the second prize for the Big Book Award. First prize was captured by Vladimir Makanin's *Asan*. (See OBITUARIES.)

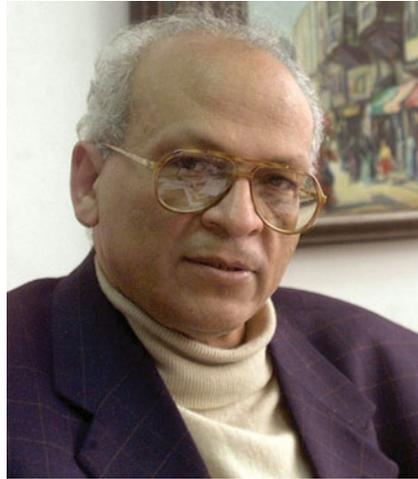

(VALERY SHUBINSKY)

PERSIAN

The much-diminished number of published literary works marked 2008 as the year in which the efforts of Iranian Pres. Mahmoud Ahmadinejad's government to limit intellectual freedoms, including literary activity, finally bore fruit. On the positive side, 2008 was also the year in which the Internet as an alternative literary forum took hold in Iran and the rest of the Persian-speaking world. Among the most-read noteworthy works of fiction were two short-story collections, *An gushih-yi danj-i samt-i chap* ("That Secluded Corner to the Left") by Mahdi Rubbi and *Zindagi mutabiq-i khastah-yi tu pish miravad* (2006; "Life Goes On as You Would Expect") by Amir-Husayn Khurshidfar. Ziya' Muvahhid's *Nardban andar biyaban* (2006; "A Ladder in the Desert") became the year's top innovative poetry collection. Two other poetry collections, Sarvenaz Heraner's *Sarrizha-yi sukut* ("Overflowing of Silence") and Ru'ya Muqaddas's *Ru'yaha-yi 'ashiqanah: 'ashiqanahha-yi Ru'ya* ("Lovely Reveries: Love Songs of Ru'ya"), were the most notable works of Persian poetry. Paul Sprachman's 2006 English translation of Ahmad Dehqan's *Safar bih gara-yi 270 darajah* (*Journey to Heading 270 Degrees*) was the best seller among translated Persian works.

Among Persian Web sites that published recently censored or long-suppressed literary works on the Internet, Gooya (http://mag.gooya.eu/culture/archives/cat_croman.php), which listed hundreds of short stories and poems throughout the year, remained the most popular. Other major Web sites with literary content included <http://www.iransliterature.com/pe/>, <http://www.golshirifoundation.org/>, and <http://www.andischeh.com>.

Hundreds of new personal blogs were also set up, mostly by authors eager to publish without having to submit their work to a government ministry for vetting. The rift between the state and the youth of Iran became clear in official speeches and Internet discussions on the functions of literature. While younger poets such as Rosa Jamali experimented with ever-newer forms and styles of expression, state authorities continued to urge writers to capture the spirit of Islam and the revolution in their works. Meanwhile, the deaths of Afghan poet 'Aqil Birang Kuhdamani in December 2007 at age 56 and Iranian expatriate novelist and singer Shusha Guppy in March 2008 at age 72, both in London, topped the list of literary losses. (AHMAD KARIMI-HAKKAK)

Egyptian writer and editor Jamāl al-Ghīṭānī published the sixth volume of his memoirs collectively titled, *Dafātir al-tadwīn* ("Notebooks").

the field of publishing, where review committees were rare and money seemed the sole determinant of worthiness for publication. Somewhat detached from daily political life in his country, Jamāl al-Ghīṭānī published *Rinna* ("Was Sounded"), the sixth volume of his memoirs collectively titled *Dafātir al-tadwīn* ("Notebooks"). It was a largely spiritual journey in the footsteps of the great Sufi mystic Abū al-Fayḍ Dhū al-Nūn al-Miṣrī (Dhun-nun).

The prolific Lebanese novelist Rabīf Jābir wrote about his country's civil war and acts of revenge in *al-Itirāfāt* ("The Confessions"). Ibrāhīm Nasr Allāh, a Jordanian-Palestinian writer, in his *Zaman al-khuyūl al-bayḍā* (2007; "The Time of White Horses"), offered an epos of Palestinian history from Ottoman times to 1948, the year Palestinians call the *nakbah* ("catastrophe"). The action of the novel occurs in a village strongly anchored in Palestinian culture and traditions of honour. Tunisian Al-Habib al-Salmī ('Abd al-Malik ibn Ḥabīb) presented a love story in *Rawā'ih Marie-Claire* ("Marie-Claire's Perfumes") against the background of the cultural divide between East and West. Moroccan Tahar Ben Jelloun wrote (in French) a semiautobiographical novel about his mother's dementia in *Sur ma mère* ("About My Mother"), revealing at the same time much about Moroccan culture and his own childhood memories. Libyan novelist Aḥmad Ibrāhīm Faḥīh made waves at the end of 2007 with the publication of his 12-volume epic novel *Kharā'it al-rūḥ* ("The Maps of the

Soul"). The novel was set in Libya from 1931 to the early 1950s, after independence was achieved.

In the Gulf countries women writers raised their voices in objection to their lack of personal freedom and to male control over their lives. Kuwaiti novelist and journalist Munā Shāfi'ī addressed the need for freedom and personal choice in women's lives in *Laylat al-junūn* ("The Night of Madness"). Zainab Ḥifnī's *Siqān multawiya* ("Intertwined Legs") examined the lives of Saudis living in England and their struggle to rear their daughters according to Saudi traditions.

Arab intellectuals were united in their preoccupation with the state of the Arabic language. They deplored its deterioration among writers and students as some writers paid little attention to correct grammar and did not seem embarrassed by their shortcomings. The issue motivated the Arab League and Egypt's al-Majma' al-Lughawi (Egyptian Academy) to debate the question in search of ways in which to restore respect for Arabic and to improve language competency among Arabs. They pointed out the growing tendency among institutes of higher education to dispense education in foreign languages. This deterioration took place at a time of growing interest in Arabic language in the Western world, particularly in the United States.

In February 2008 French-language writer Yasmina Khadra (pseudonym of Mohammed Moulessehoul, a former Algerian army officer), who wrote of Algeria's colonial history in *Ce que le jour doit à la nuit* ("What the Day Owes to the Night"), received the trophy *Créateurs sans Frontières* at the Quai d'Orsay in Paris. The 2008 Naguib Mahfouz Medal for Literature was awarded to Hamdī Abū Jalīl of Egypt for *Al-Fa'il* ("The Labourer"). Jābir 'Uṣfūr was a co-winner of the 2008 Sharjah Prize for Arab Culture. In August 2008 the Arab world lost its best-known and most creative contemporary poet, Palestinian Maḥmūd Darwish. His passing left a huge void in the genre of poetry, especially the poetry of resistance. (See OBITUARIES.) (AIDA A. BAMIA)

CHINESE

In 2008 four novels shared the seventh triennial Mao Dun Literary Award, the highest official award for fiction in China. First on the list was *Qinqiang* (2005; "Qin Music," the name of a local opera form and favoured pastime in

Yoshikazu Tsuno—AFP/Getty Images

Celebrated writer and Buddhist nun Jakuchō Setouchi of Japan produced a “mobile phone novel” at age 86 under the pen name Murasaki.

northwestern China) by Jia Pingwa, a well-known writer whose 1993 novel *Feidu* (“The Ruined Capital”) scandalized many with its theme of illicit sex, graphically described. *Qinqiang*, however, helped redeem the author’s reputation. Based on memories of his hometown in Shanxi province, it was commonly considered an elegy on rural life in northwestern China. The book was a powerful expression of Jia’s concerns for the future of Chinese rural society presented in a detailed—some might even say long-winded—narrative.

The second recognized book was *Ergun He you an* (2005; “The Right Bank of the Argun River”) by Chi Zijian. This novel was the first to focus on the Evenk, a reindeer-herding people eking out a living on the borderlands between China and Russia. It was written in the voice of the group’s current shaman, a woman more than 90 years old, who relates a series of affecting tales that reflect the Evenk way of life and struggle for survival.

The third winner was Zhou Daxin’s allegorical novel *Hu guang shan se* (2006; “Landscapes of Lakes and Mountains”). Its protagonist was Nuan Nuan, a young rural woman who returns to her village after living for a few years in Beijing as an immigrant worker. The author allegorized the story by equating elements in the narrative of Nuan Nuan’s return with *wuxing*, the traditional Chinese cosmological and moral system in which the five elements (metal, wood, water, fire, and earth) overcome and succeed one another in an immutable cycle.

The final winner was Mai Jia’s *An suan* (2003; “Plot Against”), a spy story that had gained a large popular following since 2005, when it was made into a 34-part teleplay with the same title (and with Mai as screenwriter). It was the first spy story ever to receive the Mao Dun award.

Another 2008 literary event worthy of mention was the establishment of Shengda Literature Ltd. (SDL), a subsidiary company of Shengda, now the leading Web-based interactive entertainment media company in China. Owing the three biggest Chinese literary Web sites, including *Qi dian zhong wen wang* (Starting Point Chinese Web [SPCW]), SDL had aggressively developed a paid online literary model. In September, as a part of this development, SPCW—which was said to have more than 8 million unique visitors and more than 300 million page views per day—organized an online exhibition of

fiction by chairmen of 30 provincial writers associations. These writers allowed their works to be published on SPCW in an effort to attract more online viewers. (WANG XIAOMING)

JAPANESE

In 2008, for the first time in its 73-year history, the Akutagawa Prize, awarded twice yearly to promising Japanese fiction writers, went to a writer whose mother tongue was not Japanese. The prize for the year’s first half was awarded—not without controversy (some critics thought her Japanese crude)—to Yang Yi, whose “*Toki ga nijimu asa*” (“A Morning Steeped in Time”) was first published in the June 2008 issue of the literary magazine *Bungakukai*. Yang was born in Harbin, China, in 1964 and went to Japan in 1987 as a student. Her Japanese then was virtually nonexistent. Twenty years later she won the Bungakukai New Writers Award with her debut novel, *Wan-chan* (“Mrs. Wang”). It concerned the struggles of a Chinese bride in Japan to become an intermediary for Japanese men seeking Chinese wives. In “*Toki ga nijimu asa*”, however, Yang portrayed a Chinese student during the Tiananmen Square protests of 1989 and his later immigration to Japan.

The Akutagawa Prize for the second half of 2007 (announced in January 2008) went to the musician and poet Mieko Kawakami’s “*Chichi to ran*” (“Of Breasts and Eggs”), first printed in the December 2007 issue of *Bungakukai*. It was written in an innovative style using rather breathless long sentences in the Kansai dialect of western Japan.

Jakuchō Setouchi, a prominent writer and Buddhist nun, surprised Japanese readers with her confession that at age 86 she had written *Ashita no niji* (“Tomorrow’s Rainbow”), a “mobile phone novel” (*keitai shosetsu*). Most of these stories, so called because they were downloaded from mobile phone Web sites, were written by younger authors for a younger audience. Setouchi, the author of a noteworthy modern translation of *The Tale of Genji*, had used the pen name Murasaki (“Purple”) to disguise her identity.

Haruki Murakami, another prominent writer, in 2008 published *Tifani de chōshoku o*, a new translation of Truman Capote’s novella *Breakfast at Tiffany’s*, and 50 years after its original publication in English, it was one of Japan’s best sellers. Well-known writer Banana Yoshimoto again made the

best-seller list, this time with a new long novel, *Sausu pointo* (“South Point”). The runaway best seller of 2008 was Takiji Kobayashi’s *Kanikōsen* (*The Factory Ship*), originally published in 1929, a classic novel of slave labour that was seen as having some bearing on 21st-century economic conditions.

The Yomiuri Prize for Literature was given to Rieko Matsuura’s *Kenshin* (2007; “Dog’s Body”). The Jun’ichirō Tanizaki Prize, for the year’s most accomplished literary work, was awarded to Natsuo Kirino’s *Tōkyō-jima* (“Tokyo Island”). The Yasunari Kawabata Prize, given to the year’s most accomplished short story, went to Mayumi Inaba’s “*Miru*” (“*Codium fragile*,” the scientific name of an alga commonly known as Dead Man’s Fingers), first published in the February 2007 issue of *Shinchō*, and to Shin’ya Tanaka’s “*Sanagi*” (“The Chrysalis”), first published in the August 2007 issue of *Shinchō*. The second Kenzaburō Ōe Prize to be awarded was given to playwright Toshiki Okada’s *Watashitachi ni yurusareta tokubetsuna jikan no owari* (2007; “The End of Our Special Time”). The novelists Kunio Ogawa and Saeko Himuro died in 2008. (YOSHIIHIKO KAZAMARU)

Military Affairs

PEACE agreements and **CEASE-FIRES** disintegrated, and military units worldwide **GRAPPLED** with **SECURITY CONCERNS** about information freely available on the **INTERNET**. Meanwhile, a **SOLAR-POWERED UAV** set an unofficial **WORLD RECORD** for **ENDURANCE**.

Russia and Georgia fought a short, intense war in 2008, fueling global fears of a new Cold War. On August 7 Georgia launched an aerial bombardment and ground attacks against its breakaway province of South Ossetia. Russia responded by sending thousands of troops, citing the need to protect 70,000 Russians in South Ossetia. The fighting spread rapidly to the rest of Georgia. The U.S. and NATO expressed solidarity with Georgia and voiced concerns over Russia's behaviour in the conflict. By August 16 both Georgia and Russia had signed a peace deal brokered by French Pres. Nicolas Sarkozy. Shortly after fighting ceased, Russia officially recognized the independence of South Ossetia and another breakaway province, Abkhazia, further agitating Georgia and some Western governments.

WMD, ARMS CONTROL, AND DISARMAMENT

The Convention on Cluster Munitions, a treaty banning cluster bombs, was approved by 107 countries in May. The use of cluster munitions, which scatter small bomblets across a target area, had been criticized by human rights groups because many of them failed to explode on impact and killed or maimed civilians who encountered them later. Major manufacturers and users of these weapons, including China, Russia, and the U.S., did not participate in treaty negotiations.

Russia announced in November that it intended to deploy a new generation of highly accurate short-range missiles in the Baltic region to counter the extension of a U.S. defense shield to Central Europe. This followed announcements earlier in 2008 that the U.S.

would install 10 antimissile missiles in silos in Poland and build a radar station in the Czech Republic as part of its Ballistic Missile Defense System to defend North America and NATO against ballistic missile attack.

CONFLICTS

Africa. A peace deal between the Democratic Republic of the Congo (DRC) and various rebel groups in the eastern part of the country fell apart in August. Despite the presence of approximately 17,000 UN peacekeepers in the DRC, fighting in 2008 led to the displacement of more than 250,000 people and an untold number of casualties.

The UN estimated that approximately 300,000 civilians had fled the fighting in The Sudan's war-torn Darfur region in 2008, and international peacekeepers and aid workers found themselves increasingly at risk from attack. Only about half of the 26,000 troops authorized for the joint UN-African Union force had been deployed by year's end. (See **WORLD AFFAIRS: The Sudan**: Sidebar.)

The UN Security Council voted in June to allow countries to send warships into Somalia's territorial waters to combat the growing piracy problem. Dozens of commercial ships were hijacked off Somalia's 28,900-km (1,800-mi)-long coast during the year.

The Americas. The 9,000-strong left-wing Revolutionary Armed Forces of Colombia (FARC) continued its 44-year-old struggle against the government but suffered more than 1,500 desertions in 2008 as the result of a government amnesty plan. FARC commander Manuel Marulanda (see **OBITUARIES**) died in March, and two additional members of FARC's seven-man senior command were killed during the year.

Middle East. In Iraq the level of violence declined considerably throughout the year following the so-called surge of 2007, when U.S. Pres. George W. Bush committed an additional 30,000 U.S. troops. Analysts also attributed much of the decline in violence to the dispersal of ethnically mixed neighbourhoods, where Sunni and Shi'ite Arabs previously lived side by side. About 550 Australian combat troops were withdrawn from Iraq in June, fulfilling an election promise by Prime Minister Kevin Rudd to end his country's military commitment to the war. South Korea withdrew the last of its 600 troops from Iraq in December, ending what was once the third largest mission there (after the U.S. and the U.K.). In addition, Japan ended its air force's mission to ferry supplies for the coalition forces in Iraq. The deployment was Japan's first to a combat zone since World War II. By the end of 2008, Iraqi authorities had taken over responsibility from coalition forces for security in 13 of the country's 18 provinces.

In December Israel launched numerous air and missile attacks on targets across the Gaza Strip, killing hundreds of Palestinians. Militant Palestinians responded by firing rockets into Israel, striking as far as Beersheba, the farthest into Israel that a Palestinian missile had ever reached. The fighting erupted after Hamas, which had controlled the Gaza Strip since 2007, ended a cease-fire declared in June.

South and Central Asia. The war against the Taliban in Afghanistan intensified and widened during 2008. U.S. unmanned aerial vehicles (UAVs) were increasingly used to attack suspected Taliban targets in Pakistan's tribal region close to the Afghan border. Such attacks were credited with killing Taliban leaders, notably Mohammad Omar in October. Pakistanis, however, complained that civilians were often being killed by the UAV attacks and that such incursions were a violation of Pakistan's sovereignty. U.S. and NATO forces in Afghanistan were criticized by the Afghan government and human rights groups for not doing enough to limit the numbers of civilians killed—an estimated 173 in the first eight months of 2008—by attacks on suspected Taliban targets. An additional 367 civilians died from attacks by insurgent forces during the same period. Pakistan increasingly

became a target of attacks by extremist groups. In September, for example, a suicide bomber detonated a truck filled with an estimated 1,000 kg (2,200 lb) of explosives in front of a hotel in Islamabad, killing more than 50 people. This was the deadliest and the largest such attack (in terms of the amount of explosives used) in Pakistan's capital.

Government forces and Liberation Tigers of Tamil Eelam (LTTE) separatists fought a series of pitched battles following Sri Lanka's withdrawal from a cease-fire agreement in January. The government's promise to destroy the insurgency by year's end was not realized. The conflict had killed more than 70,000 people since 1983, when civil war broke out in the Tigers' fight for an independent homeland.

Southeast Asia. Government negotiators in the Philippines reached an agreement in July with Moro Islamic Liberation Front (MILF) rebels on the southern island of Mindanao to end their four-decade-old struggle for a self-governing state. The deal fell apart the next month, however, after Christian politicians objected. Renewed fighting left more than 300 people dead.

MILITARY TECHNOLOGY

In July the Zephyr-6, a British-built solar-powered UAV set an unofficial world endurance record for a flight by an unmanned aircraft, staying aloft for more than 82 hours and running through the night on batteries that it had recharged in sunlight. Military officials hoped that similar UAVs could loiter over an area, collecting reconnaissance data for extended periods.

The U.S. Navy chartered the world's first kite-assisted cargo ship to carry military supplies as part of the Pentagon's efforts to reduce its fuel usage. The MV *Beluga SkySails* was equipped with a sky sail (a giant computer-controlled kite that uses wind power to provide additional propulsion). It was estimated that the sky sail could reduce fuel costs by up to 30%.

With soldiers on the battlefield increasingly laden with up to 9 kg (20 lb) of batteries to power everything from radios to GPS systems, there was a growing need to reduce their burden. The U.S. Department of Defense concluded its Wearable Power contest in October, and the winner was a joint venture by German company Smart Fuel Cell and DuPont. Their contest entry was a 3.8-kg (8.3-lb) combination of methanol-fuel-cell and rechargeable

© SkySails

The world's first kite-assisted cargo ship the MV Beluga SkySails was chartered by the U.S. Navy to carry military supplies.

batteries, which was able to provide all the electrical power that an infantry soldier required for four days.

ARMED FORCES AND POLITICS

In May Japan's parliament passed a new law allowing Japan to deploy military satellites for nonaggressive missions, including communications and surveillance; the law ended a 40-year self-imposed ban on Japan's military use of space. The use of weapons in space remained banned under Japanese law.

In June France announced the biggest overhaul in its military in 14 years. Under the plan the 320,000-strong armed forces would be reduced by 54,000 personnel, and 50 military bases would be closed. France also announced that it would rejoin NATO's integrated military command, from which it withdrew in 1966.

U.S. Secretary of Defense Robert Gates accepted the resignations of Air Force Chief of Staff Gen. T. Michael Moseley and Secretary of the Air Force Michael Wynne in June after a report highlighted significant oversights in the air force's nuclear security practices. These included a Pentagon admission that it had mistakenly shipped four nuclear-weapon fuses to Taiwan in August 2006. The air force later announced that it was setting up a new Global Strike Command to control all of its nuclear weapons.

The Colombian government fired 3 generals and 24 other soldiers in October in response to the alleged extrajudicial killings of 11 men earlier in the

year. The scandal led to the resignation of the commander of the Colombian army, Gen. Mario Montoya.

In October, South Korean and U.S. personnel began the first-ever search in the demilitarized zone (DMZ) dividing North and South Korea for the remains of troops killed in the Korean War (1950–53). An estimated 13,000 South Korean and 2,000 U.S. troops were believed to be buried in the DMZ.

MILITARY AND SOCIETY

Israel sentenced a soldier to 19 days in jail for uploading a photograph of his military base to the social networking Web site Facebook. This was believed to be the first such conviction for an Israeli soldier. It followed a decision made by the U.S. in March to ban Google from photographing details of U.S. military bases for its widely used map services, including Google Earth and Street View. Governments in many countries were increasingly concerned that images and other data available on the Internet could compromise security.

The South African National Defence Force (SANDF) suffered a growing personnel crisis in 2008 owing to both AIDS-related illnesses and the exodus of technical staff to better-paying civilian jobs. An estimated 14,000 positions were unfilled in the armed forces, which made the vacancy rate 15.3%; 23% of SANDF members were HIV-positive. In May a South African high court overturned a SANDF policy barring HIV-positive people from joining the military. (PETER SARACINO)

DARPA—50 Years of Innovation

In 2008 the U.S. Defense Advanced Research Projects Agency (DARPA) celebrated the 50th anniversary of its founding (Feb. 7, 1958). During its existence the organization has consistently been a world leader at turning science fiction into practical technological solutions. DARPA was born in the aftershock of the Soviet Union's surprise launch of Sputnik—the first artificial satellite to orbit Earth—in October 1957. Engaged in Cold War rivalry with the Soviet Union, U.S. Pres. Dwight D. Eisenhower sought a massive boost in research-and-development efforts to give the United States a decisive lead in military and other technologies. ARPA (the D was added in 1972, removed in 1993, then reinstated in 1996) was therefore created with a mandate to develop totally new military capabilities.

Since its beginning the agency has sought to be both bold and innovative. By hiring program managers typically for only four to six years, DARPA acquires fresh insights and experience while minimizing the bureaucratic stagnation that often afflicts large organizations. Although subordinate to the U.S. Department of Defense, DARPA is free from the burdens of military hierarchy and complicated government rules for issuing contracts. As the only research agency not tied to a specific operational mission, DARPA has always enjoyed considerable independence in choosing its projects.

With a 2008 budget of about \$3 billion, the agency has fewer than 300 employees, including about 140 program managers. The program managers are authorized to award contracts to universities and industry and are encouraged to fund projects that may be risky but hold promise in becoming novel solutions to current and future military challenges.

DARPA has been a key player in developing numerous military systems such as aircraft, armour, robots, satellites, surveillance aircraft, rifles, information systems, and medical devices. A few highlights include:

- Stealth technology. DARPA's work on developing aircraft that can evade detection by radar led to production of the F-117 stealth fighter and the B-2 stealth bomber.
- High-performance armour. U.S. soldiers in Iraq and Afghanistan use advanced body armour, developed by DARPA, that consists of vest inserts made of boron carbide. The inserts are 35% lighter than previously used materials and strong enough to protect against rifle and light-machine-gun fire.
- Navigation systems. Between 1959 and 1968, DARPA helped establish the first satellite navigation system (Transit), which allowed ships and submarines to establish their positions to within 200 m (650 ft). Transit was superseded by the Navstar Global Positioning System (GPS), and DARPA helped develop compact GPS receivers for military use.
- Night-vision technology. Advanced night-vision systems developed by DARPA assist troops and aircrews to operate in darkness. They also have been integrated into unmanned surveillance systems.
- Unmanned aerial vehicles (UAVs). DARPA pioneered the development of UAVs. Its work led to the introduction of UAVs such as the Predator, which can provide extended military surveillance and reconnaissance.

DARPA's willingness to take risks has sometimes led to embarrassing failure. Among its fiascoes was a Vietnam War-era program code-named Agile, in which \$264 million was spent on projects such as building large mechanical elephants for transporting troops through the jungle. In the 1970s DARPA invested in an unsuccessful psychic spy program, which attempted to make use of parapsychology to conduct remote espionage.

Although DARPA is an arm of the Defense Department, its work frequently has led to nonmilitary applications. An early DARPA undertaking was to develop powerful liquid-fuel rocket engines for long-range ballistic missiles. One such engine was the 1.5 million-pound-thrust F-1, which was used in the first stage of the Saturn V rocket that launched NASA's Apollo spacecraft on missions to the Moon. DARPA was also a pioneer of the information revolution; communications technology that it developed helped make the Internet possible. When the early computers of the 1960s began to be used more widely for research, there was a growing need for scientists to share data and computer resources. At the time the only suitable communication link was the old-fashioned circuit-switched telephone system. To speed up data transfer and allow multiple computers to work together, DARPA funded research that resulted in a computer network called ARPANET. It used a new technology, called packet switching, that allowed large chunks of data to be broken up into small "packets," which could then be routed independently to their destination on a computer network. ARPANET later evolved into the Internet, and packet switching proved to be an efficient means of transporting large amounts of data quickly between computers.

Now in its sixth decade, DARPA remains at the forefront of efforts to maintain the U.S.'s lead in military technology. For example, the agency is developing economical and environmentally friendly means of converting coal to liquid fuels in order to reduce the military's dependence on foreign supplies of petroleum. The agency is also working to counter terrorist threats. A program called the Human-carried Explosive Detection Stand-off System, for example, seeks to develop a sensor system that can rapidly detect human-carried explosives at a distance of up to 150 m (490 ft) for the purpose of stopping suicide bombers before they reach their intended targets.

No project epitomizes DARPA better than its Urban Challenge. This competition, begun in 2004 as the Grand Challenge, was designed to encourage industry to develop a new generation of vehicles that could travel along roads and negotiate traffic without a human driver. Urban Challenge culminated in November 2007 with the awarding of a \$2 million grand prize to a robotic sport-utility vehicle developed by a consortium led by General Motors and Carnegie Mellon University. The vehicle outperformed several of its competitors on a course designed to simulate street driving and traffic. DARPA hopes that the expertise gained from Urban Challenge will be transformed into practical battlefield solutions. For example, if robotic trucks could be used in supply convoys, humans would be exposed to less risk from roadside attacks.

(PETER SARACINO)

Performing Arts

Highlights in 2008 included the **NEW YORK** Philharmonic in **NORTH KOREA** and a Grammy for **JAZZ** artist Herbie Hancock. On the big screen, **COMIC-BOOK** heroes Batman and Iron Man ruled, while **SERIOUS** works—both new and classic—**REINVIGORATED** the theatre.

MUSIC

Classical. The last vestiges of the Cold War seemed to thaw for a moment on Feb. 26, 2008, when the unfamiliar strains of “The Star-Spangled Banner” unfolded before 1,000 North Koreans as Music Director Lorin Maazel led the New York Philharmonic orchestra in a concert in the East Pyongyang Grand Theatre. Maazel and the orchestra offered a crowd-pleasing array of iconic works, including Antonin Dvorak’s *New World Symphony* and George Gershwin’s *An American in Paris*. The performance, which was also broadcast live via television and radio to the rest of the country, was as much a historic gesture as it was a concert as two vastly different political systems and cultures used music as a symbol of, perhaps, a new phase in cultural diplomacy.

Another staple of Western classical music, Dmitry Shostakovich’s *Symphony No. 7*, was also used as a symbol—albeit of an entirely different sort. In August Russian conductor Valery Gergiev journeyed to Tskhinvali in the region of South Ossetia, Georgia, to lead a performance of that symphony—the composer’s paean to the defenders of Leningrad in World War II—to celebrate the “victory” of Russian troops over Georgian forces in their clash over the breakaway region.

Two months later Gergiev led a concert in Jerusalem to promote peace in the Middle East, following in the footsteps of conductor Daniel Barenboim, who had performed at similar events in the region in recent years in efforts to bridge the gulf between Palestinians and Israelis. In January Barenboim had moved a step farther; after playing works by Beethoven in the West Bank city of Ramallah, he announced that he had become a citizen of Palestine.

Politics as usual played out in Germany’s Bayreuth Festival, an annual festival devoted to the music of Richard Wagner. In recent years the festival had been the focus of manic speculation about who would become the next head. In a power struggle to gain control upon the retirement of the composer’s grandson, Wolfgang (who had ruled the event for 57 years), various branches of the Wagner family starred in an operatic duel of their own. Wolfgang’s choice was said to have been his daughter Katharina, whose claim was contested by another group of Wagners in league with Gerard Mortier, then director of the New York City Opera. In the end, Katharina and her half-sister, Eva Wagner-Pasquier, won out. One of their goals was to distance the 132-year-old festival from its associations in the 1930s with the Nazis. (Wagner was Adolf Hitler’s favourite composer.)

One of the Nazis’ favourite conductors, the late Herbert von Karajan, was honoured throughout the year in celebration of the 100th anniversary of his birth. The conductor—whose political leanings were infamous but who was rehabilitated by his celebrated interpretations of the classical canon in the decades following the end of World War II—was feted at events in Berlin and Vienna, at festivals in Salzburg and Lucerne, and in CD reissues of highlights from some of his 900 recordings.

Another conductor, the late Leonard Bernstein, whose legacy extended to his roles as composer, social activist, educator, and beloved champion of classical music, was honoured throughout the year in which he would have turned 90. He was the subject of “Bernstein: The Best of All Possible Worlds,” a multivenue celebration in New York City that featured 30 concerts and events throughout the autumn. In October a performance of Bernstein’s *Mass* was

led by conductor Marin Alsop at Carnegie Hall.

Elliott Carter, one of the most illustrious composers of the 20th century, turned 100 on December 11. Carter, a 1971 winner of the Gold Medal of the National Institute of Arts and Letters for Eminence in Music and a member of the Classical Music Hall of Fame, was honoured with a series of concerts and events around the world. During the summer program at Tanglewood in Lenox, Mass., he was feted with three orchestral programs. In September, Musikfest Berlin 08 featured a number of his works, including *Soundings* and *Symphonia: Sum fluxae pretium spei* (the latter in its German debut), performed by Barenboim and the Staatskapelle Berlin. Finally, in December an international colloquium devoted to his music, “Hommage à Elliott Carter,” was held at the Institut de Recherche et Coordination Acoustique/Musique (IRCAM) in Paris.

American composer Charles Wuorinen had a very busy year as he turned 70. Six of his works received premieres, including his *Second Piano Quintet*, which was performed by pianist Peter Serkin and the Brentano String Quartet at the Rockport (Mass.) Chamber Music Festival. The New York City Opera also announced that Wuorinen had been commissioned to create an operatic version of the story-turned-movie *Brokeback Mountain* for its 2013 season; the company’s budget woes later caused the commission to be withdrawn, however.

Milan’s La Scala opera company announced in late May a new commission, a version of Nobel Prize winner Al Gore’s book-turned-film on climate change, *An Inconvenient Truth*. Italian composer Giorgio Battistelli was commissioned to create the work for the company’s 2011 season, in time to mark the 150th anniversary of Italy’s unification.

In September the Los Angeles Opera (LA Opera) offered the premiere of *The Fly*, Howard Shore’s opera based on his score for the 1986 horror movie; the production was led by the film’s director, David Cronenberg. The company also featured a production of Giacomo Puccini’s *Il trittico*, with its three segments staged by film directors William Friedkin (*The Exorcist*), who

prepared two, and Woody Allen (*Annie Hall*).

Cinema played a central part in “An Evening with Anthony Hopkins” at the Meyerson Symphony Center in Dallas. The famed British actor hosted an evening of clips from five of his films and performances of several of his musical compositions, including *The Masque of Time*, which was given its world premiere by the Dallas Symphony Orchestra.

Made in America, a contemporary work by American composer Joan Tower, won three 2008 Grammy Awards in February. The CD of a performance of the piece by Leonard Slatkin and the Nashville Symphony won for best classical album and best orchestral performance, and Tower was honoured for best classical contemporary composition. The work also represented a new approach to the commissioning process, in which a consortium of 65 smaller U.S. orchestras banded together in 2001 to jointly pay for the work’s creation and were then given the opportunity to perform it as part of their seasons. Another new work did not fare as well. In April the world premiere of Swedish-Israeli composer Dror Feiler’s *Halat hisar* (“State of Siege”) was canceled when musicians of Germany’s Bavarian Radio Symphony Orchestra claimed that the volume level of the work—which incorporates simulated machine-gun fire—caused many of them to suffer ringing ears after a rehearsal.

Two wildly disparate ensembles marked significant anniversaries in 2008. The Hallé Orchestra in Manchester, Eng., the oldest professional symphony orchestra in the United Kingdom, celebrated its 150th anniversary. In Vienna the Vegetable Orchestra marked its 10th anniversary with a concert at the city’s RadioKulturhaus. The orchestra’s 12 musicians had toured the world, performing on such self-made instruments as “celery bongos,” “leek violins,” and “cucumberphones.”

In England the Ford Motor Co. created an orchestra to perform on instruments made of parts from a Ford Focus. Although the ensemble did not have a name, it was featured in a £45 million (about \$66.5 million) advertising campaign in which its 15 members played everything from a “clutch guitar” to a “window harp.” The tag line for the ad was: “The new Ford Focus. Beautifully arranged.”

A humanoid robot, ASIMO, which was created by Japanese automaker Honda, conducted the Detroit Sym-

Sebastian Goodwin-Day, a member of the 15-person novelty orchestra the Ford Motor Co. assembled in April in the United Kingdom, plays a “clutch guitar.” The ensemble’s instruments were constructed from parts of a Ford Focus.

phony Orchestra in May in a performance of the song “The Impossible Dream.” The segment was part of a youth program that also featured cellist Yo-Yo Ma.

At Severance Hall in Cleveland, the public itself was allowed to take the baton, via the UBS Virtual Maestro. The device, which came with an electronic controller to manipulate tempo and volume level, allowed participants to conduct an onscreen virtual orchestra in excerpts of works such as Gioachino Rossini’s “William Tell Overture” and Hector Berlioz’s *Symphonie fantastique* during the intermission of performances by the Cleveland Orchestra in May. The device later was taken to other U.S. cities, including Los Angeles, Boston, and Seattle.

Media technology continued to play a role in the popularization of classical music. In September the Metropolitan Opera (the Met) in New York City broadcast its opening-night gala at Lincoln Center via a high-definition (HD) satellite hookup. The event marked the start of the third season of the company’s “The Met: Live in HD” initiative, which drew more than one million viewers to cinemas around the world in its first two years. The Met’s live simulcasts of several of its productions to 850 venues in Europe, the United States, Canada, Australia, and Japan reshaped the way cutting-edge technology had taken a venerable musical form to a wider world.

The trend was embraced (in the form of recorded performances) in 2008 by

other opera companies, including London’s Royal Opera House, San Francisco Opera, and La Scala. The LA Opera recorded Plácido Domingo’s 40th anniversary gala—which featured tenor Domingo and soprano Patricia Racette and conductor James Conlon leading the LA Opera Orchestra—and broadcast it to 21 venues across the United States.

The Internet also served as a conduit to the classical music marketplace. In January online music retailer ArkivMusic announced that its revenues for the preceding year grew by more than 30%. The Web site, which at the beginning of the year offered more than 82,000 CD titles, saw this growth at a time when CD revenues in the rest of the music industry were declining at a rate of 15% annually. In a press statement, ArkivMusic’s president, Eric Feidner, said, “It’s hard to overemphasize the significance of this in today’s music marketplace. We currently only sell physical CDs of classical music. With the industry’s ever-increasing focus on digital downloads, I think this shows just how unique our particular genre of music is relative to the overall music business.”

Before the existence of CDs, digital downloads, and other paraphernalia used for music enjoyment, there was the Edison cylinder, which played on the phonograph Thomas Edison introduced in 1877. In October the Marston record label announced that it was releasing three CDs of excerpts from recordings originally made on Edison cylinders in the late 19th and early 20th

centuries by Julius H. Block. Thought to have been destroyed in Germany during World War II, the cylinders had recently been rediscovered in Russia. The label claimed that the cylinders represented some of the earliest recordings of works by Bach, Wagner, and others. Highlights of the first three CDs included such historic snippets as Russian writer Leo Tolstoy reading from his works, what was reputed to be the voice and whistling of composer Pyotr Ilyich Tchaikovsky, an 11-year-old Jascha Heifetz introducing himself at a performance, and a recording of pianist Paul Pabst, who studied with Franz Liszt.

In 2008 the classical music world marked the passing of a number of important artists. Composer-arranger Alexander Courage, who contributed to the scores of more than 100 films, including *My Fair Lady*, along with such television programs as *Star Trek*, died at age 88 on May 15 in Los Angeles. British musicologist Wilfrid Mellers died in May, and American soprano and educator Gail Robinson died in October. Other significant losses included those of Italian tenor Giuseppe Di Stefano, Danish soprano Inga Nielsen, Turkish soprano Leyla Gencer, German-born violinist Siegmund Nissel, Argentine-born composer Mauricio Kagel, and American composers Henry Brant and Norman Dello Joio. (See OBITUARIES.) (HARRY SUMRALL)

Jazz. The jazz world was shaken when a pillar of the jazz establishment, the International Association for Jazz Education (IAJE), collapsed. For 40 years the IAJE—which by 2008 had 10,000 members in 50 countries—had provided services for jazz educators, published the *Jazz Education Journal*, and held conventions. After 1996, when the last *JazzTimes* convention was held, the IAJE's annual gathering became the major conclave of jazz students, teachers, and industry representatives, drawing more than 7,000 attendees in 2006 and in 2007.

Attendance in 2008 at the IAJE convention in Toronto plunged to 4,000. After the resignations of its executive director and president-elect, the IAJE canceled its 2009 convention, suspended its journal, and filed for bankruptcy. Almost immediately thereafter, the Jazz Education Network was founded by 35 educators. Mary Jo Papich, who had been elected IAJE president, became president of the new organization.

Much of the year's most interesting activity emerged from new artists and

new jazz communities that had matured in the 21st century. After 50 years of jazz education in the United States and abroad, skillful young disciples of major artists such as Bill Evans, Oscar Peterson, and Wayne Shorter emerged not only from the American heartland but also from Australia, Central Europe, and Asia. Most jazz education was oriented to jazz's heritage and to fusions with other musical traditions. A number of daring mentors, however, encouraged young musicians to experiment with organic, original developments of jazz sounds, rhythms, and forms.

New communities of musicians who played free jazz and cultivated free improvisation were often led by well-known veteran artists. Pianist Irene Schweizer was the centre of the scene in Zürich, and pianist Alexander von Schlippenbach was central to Berlin's underground jazz. Saxophonists Evan Parker and Lol Coxhill were senior members of London's large improvising community; interesting Dutch musicians appeared in the wake of drummer Han Bennink and pianist Misha Mengelberg. Pianist-composer Satoko Fujii formed big bands in Japanese cities, and drummer John Pochée and saxophonist Sandy Evans were among the leaders of Sydney's improvisers and composers. Vancouver, the San Francisco Bay Area, Los Angeles, Chicago, Boston, and the New York City region were among North America's hot spots for exploratory jazz.

Veterans remained at the top of their form. Two of the most visible artists in 2008 were 78-year-old saxophonists Sonny Rollins and Ornette Coleman. Both maintained busy international touring schedules, and Rollins released the live album *Road Shows, Volume 1* on his own Doxy label.

Young alto saxophonist Miguel Zenón, whose CD *Awake* appeared, was awarded a John D. and Catherine T. MacArthur Foundation fellowship (a "genius grant"). Legendary early-jazz pianist Tony Jackson was the subject of Clare Brown's play *Don't You Leave Me Here*, which premiered in London. In New York City the Jazz at Lincoln Center orchestra and the Abyssinian Church choir introduced a new composition by Wynton Marsalis to celebrate the Harlem church's 200th anniversary.

Jazz fused with country music as trumpeter Marsalis joined singer Willie Nelson in *Two Men with the Blues*, which made the hit album charts. The

great jazz bassist Charlie Haden returned to the music of his childhood, singing with his family in a bluegrass concert in New York City and releasing the album *Ramblin' Boy*, which featured guest appearances by Vince Gill and Ricky Skaggs.

After almost two years without a venue for nationally touring performers, Chicago once again had the Jazz Showcase when Joe Segal reopened the 62-year-old club in a new location. From nearby Evanston, Ill., collector Jim Neumann donated his library of more than 100,000 jazz recordings to Oberlin (Ohio) College. The huge collection was scheduled to be housed in a new building that would be completed in 2009. In a 20-year project, the recordings were slated to be digitized under the supervision of a full-time curator. David Stull, the dean of Oberlin's conservatory, said that the college planned to establish the world's largest online jazz archive.

Toronto-based jazz magazine *Coda* celebrated its 50th year in 2008. In the midst of the U.S. presidential election campaign, an all-star cast of New York musicians, including Roy Haynes, Dee Dee Bridgewater, Kurt Elling, and Roy Hargrove, held a fund-raiser for Barack Obama, who reportedly had tracks by Miles Davis, John Coltrane, and Charlie Parker on his portable music player. Herbie Hancock's album *River: The Joni*

Jazz saxophonist Sonny Rollins performs on August 28 at the Chicago Jazz Festival.

Letters, dedicated to singer Joni Mitchell, became the first jazz collection in 43 years to win a Grammy Award for album of the year. Other outstanding albums included the *Ornette Coleman Anthology* by Aki Takase and Silke Eberhard and a belated discovery, Paul Rutherford's *Solo in Berlin 1975*.

A book of major importance, *A Power Stronger than Itself: The AACM and American Experimental Music* by George E. Lewis, came out during the year. Other notable book titles included Howard Mandel's *Miles Ornette Cecil: Jazz Beyond Jazz* and Bob Blumenthal's *Jazz: An Introduction to the History and Legends Behind America's Music* (2007).

With the death of American tenor saxophonist Johnny Griffin, jazz lost one of its last remaining hard-bop stars. British swing trumpeter and radio host Humphrey Lyttelton, American experimental clarinetist Jimmy Giuffrè, Cuban bassist and bandleader Cachao, and young Swedish pianist Esbjorn Svensson were among the notable losses in 2008 (see OBITUARIES), as were American drummer Lee Young, American composer Neal Hefti, Italian saxophonist Mario Schiano, and Spanish drummer Peer Wyboris.

(JOHN LITWEILER)

Popular. International. The global music scene was dynamic in 2008. Experimentation and unexpected collaborations abounded, and musicians from the landlocked West African state of Mali were highly visible. The bravery of the new African music scene was epitomized by Malian diva Rokia Traoré, who released her first album in five years, *Tchamantche*. Many of the album's songs reflected Traoré's subtle and bluesy electric guitar, which was matched with an ancient African lute, the *ngoni*. The intimate, sophisticated recording showed the quality and range of her singing and songwriting as she went from a Bambara-language song about the tragedies of illegal immigrants attempting to reach Europe to a highly individual English-language reworking of the Billie Holiday classic "The Man I Love," which begins as a brooding ballad and develops with vigorous improvisation.

Traoré's compatriot Toumani Diabaté, the world's best-known exponent of the *kora*, a West African harp, had a good year as well. He had worked with a wide range of musicians, from his own Symmetric Orchestra to the late Ali Farka Touré, but in 2008 Diabaté released only his second purely instrumental solo recording in 21 years. *The*

Mariam Doumbia (left) and Amadou Bagayoko, the Malian duo Amadou and Mariam, perform during the 2008 All Points West Music and Arts Festival in Jersey City, N.J., on August 10.

Rob Loud—FilmMagic/Getty Images

Mandé Variations was a powerful demonstration of his virtuosic and varied playing; pieces ranged from references to being a *griot* (i.e., descended from a long line of hereditary Malian musicians) to praise songs that include playful musical references to film composer Ennio Morricone. Diabaté's wide-ranging musical interests were also reflected by his contributions to *Maestro*, a new album by American blues guitarist Taj Mahal, and *Welcome to Mali*, a new set by the highly successful Malian duo Amadou and Mariam, which also featured the adventurous British pop star Damon Albarn.

Amadou and Mariam, Albarn, and many other artists took part in the experimental concerts organized by Africa Express, which began in 2006 and in 2008 were held in London and Liverpool, Eng., and Lagos, Nigeria. The aim was to promote equality between African and Western musicians, who were encouraged to perform together onstage. A series of impressive and unexpected spontaneous collaborations resulted; for example, Senegalese star Baaba Maal sang with the British pop band Franz Ferdinand, and Amadou and Mariam played with another British pop band, the Magic Numbers.

Alim Qasimov, the finest exponent of the *mugham*, the dramatic ancient poetry of Azerbaijan, performed alongside the celebrated Kronos Quartet from San Francisco at an emotional concert in London that could lead to further joint projects. From the East charismatic Cambodian singer Chhom Nimol and his colleagues from Los Angeles in the band Dengue Fever released a new album, *Venus on Earth*, and toured in

Europe for the first time, bringing to new audiences the Cambodian music styles that flourished in the 1960s before the country's music scene was brutally crushed by the Khmer Rouge.

Barriers were transcended in Cuba, where 77-year-old singer Omara Portuondo was featured on three new albums, including a collaboration with Brazilian star Maria Bethânia and a solo set, *Gracias*, which included a duet with another legendary veteran, Brazilian Chico Buarque. Portuondo could also be heard on *Buena Vista Social Club at Carnegie Hall* (2008), a live recording of the last-ever show by the best-selling Cuban supergroup, which took place in New York City in 1998.

In the United Kingdom the growing popularity of traditional music led to the emergence of new folk artists, including Julie Fowlis, a singer with an exquisite, pure style who specialized in Scottish Gaelic songs. She toured in both Britain and the United States and recorded an acoustic Scottish Gaelic version of the Beatles classic "Blackbird." She also took part in the Rogues Gallery concerts, in which pirate songs and sea shanties were revived by a celebrity cast that also included American actor Tim Robbins, Irish singer Shane MacGowan, and the project's American producer Hal Willner.

One of the tragedies of the year was the early death of the singer and songwriter Andy Palacio, who had brought the world the soulful, gently rhythmic music of the Garifuna people of Central America. Another loss was Rick Wright, the keyboard player and a founding member of the British band Pink Floyd. (See OBITUARIES.)

(ROBIN DENSELOW)

United States. The American record industry in 2008 continued to shift from traditional models to a digital marketplace. In the first half of the year, album sales totaled 204.6 million units, down 11% from the first half of 2007. “We’re in unpredictable times,” said country star Kenny Chesney, who released his *Lucky Old Sun* album in October. “People say, ‘The music industry is over.’ It’s not over, though. . . . People are still going to want to go out and hear live music.”

Chesney was the only contemporary American hit maker to sell out numerous stadium concerts in 2008, and even he opted to lower some ticket prices in recognition of fans’ economic stresses. Other top touring acts included Madonna, Rascal Flatts, Bon Jovi, and Eagles. Fans also supported an auditorium tour from the once-unlikely duo of Led Zeppelin singer Robert Plant and bluegrass thrush Alison Krauss.

British neosoul singer Amy Winehouse (see BIOGRAPHIES) was among the toasts of the 50th annual Grammy Awards, though she was unable to attend because of visa problems. By February Winehouse’s erratic behaviour and substance-abuse issues were eroding what had been significant career momentum. Still, she won five Grammy Awards, including record of the year. The Grammys’ top prize, album of the year, went to a jazz album—Herbie

Country music star Kenny Chesney sings at Lincoln Financial Field in Philadelphia, a stop on his Pirates and Poets tour, July 19. Chesney’s was the year’s most successful tour.

Singer Mary J. Blige and rapper Jay-Z perform at Madison Square Garden in New York City on May 2. The sold-out show was one of several very successful events on their national tour.

Hancock’s *River: The Joni Letters*—for the first time in 43 years. “I’d like to thank the Academy for courageously breaking the mold,” Hancock said as he accepted the award. The Rock and Roll Hall of Fame inducted performers Leonard Cohen, the Dave Clark Five, Madonna, John Mellencamp, and the Ventures, and Kennedy Center Honors—the highest arts awards in the United States—were bestowed on George Jones, Barbra Streisand, Pete Townshend, and Roger Daltrey.

Hip-hop music continued to sell well. For example, Lil Wayne’s *Tha Carter III* album sold more than a million copies in its first week of issue. That was the highest debut-week sales figure since the release of 50 Cent’s *The Massacre* in 2005. “Lollipop,” the debut single from Lil Wayne’s album, spent five weeks atop the all-genre *Billboard* charts. Atlanta rapper T.I.’s *Paper Trail* album was another notable release, and hip-hop also showed signs of maturing as a touring genre. Early in 2008 Jay-Z’s tour with Mary J. Blige grossed more than \$30 million, including sellout shows at Madison Square Garden in New York City and the Hollywood Bowl in Los Angeles. In addition, a tour headed by Kanye West made more than \$31 million. These were hopeful signs for a genre that had posted only one top 20 North American tour in the previous five years, according to *Billboard*.

Many performers chose sides in the presidential race between Democrat Barack Obama and Republican John McCain. Bruce Springsteen, John Leg-

end, will.i.am, and others offered public support for Obama, while country stars Hank Williams, Jr., and John Rich were vocal in their support of McCain. Several musicians sought to restrict the use of their songs at political rallies. Tom Petty, Jackson Browne, and the Foo Fighters requested that McCain cease to use their songs; Browne actually sued the campaign. Sam Moore of Sam & Dave asked the Obama campaign to stop playing “Hold On, I’m Comin’.”

Several former pop and rock acts released country albums in 2008. Jessica Simpson’s *Do You Know* debuted at number one on the *Billboard* country chart, and Hootie & the Blowfish lead singer Darius Rucker became the first African American singer in a quarter century to have a number one solo country single. Country labels and country radio were also partial to *American Idol* alumni; Carrie Underwood, Kellie Pickler, Bucky Covington, and Kristy Lee Cook all worked in that format.

Among 2008’s notable losses were soul music legend Isaac Hayes, groundbreaking guitarist Bo Diddley, record producer Jerry Wexler, gospel greats Ira Tucker and Dottie Rambo, singer-songwriter John Stewart, singer Edie Adams, Four Tops lead singer Levi Stubbs, and Country Music Hall of Fame member Eddy Arnold (see OBITUARIES); other deaths included those of country guitar virtuoso Jerry Reed, blues singer Nappy Brown, revered session drummer Buddy Harman, and steel guitarist Don Helms. (PETER COOPER)

DANCE

North America. Anniversaries and farewell performances were the highlights of the year's dance activity. In and around New York City, the centennial of Antony Tudor's birth was variously marked, most prominently in a two-day conference that included symposia arranged by the Antony Tudor Ballet Trust in cooperation with the Juilliard School, where Tudor taught for a number of years, and in a fall City Center season by American Ballet Theatre (ABT). The company's annual spring-summer season at the Metropolitan Opera House opened with a rare performance of *The Judgment of Paris*, Tudor's acidic and hilarious take on the ancient story, transposed into the decadent 1930s. The company's fall season in the more intimate City Center included the landmark *Pillar of Fire* and the elegiac *The Leaves Are Fading*.

The spring season of New York City Ballet (NYCB) celebrated the career of Jerome Robbins, who died in 1998, with performances of 33 of his ballets. NYCB was joined by dancers from other companies for whom Robbins worked, such as the Paris Opéra Ballet, the Royal Ballet (London), and ABT. As a complement to NYCB's season, the New York Public Library for the Performing Arts offered a wide-ranging exhibition called "New York Story: Jerome Robbins and His World."

San Francisco Ballet (SFB) started the year with celebratory programs to mark its own 75th anniversary, culminating in the New Works Festival in mid-spring. The event featured the world premieres of 10 works that SFB had commissioned, including ballets by Christopher Wheeldon, Mark Morris, and Paul Taylor. Selections from the festival supplied part of the repertory for SFB's U.S. tour in the fall.

The Alvin Ailey American Dance Theater celebrated its 50th anniversary. In December—during the troupe's annual monthlong season at City Center—two special premieres were given: *Festa Barocca*, a full-company work by Mauro Bigonzetti, and *Go in Grace*, a collaboration between choreographer Hope Boykin and singing group Sweet Honey in the Rock. Lar Lubovitch Dance Company, which had an erratic history (of folding and reopening) during the career of its choreographer and founder, staged a comeback to celebrate its 40th anniversary, with seasons of smaller works at the Dance Theater Workshop in New York City and larger ones at City Center.

Dancers of the Alvin Ailey American Dance Theater perform in September in Istanbul during an international tour to celebrate the company's 50th anniversary.

To mark her 35th anniversary as dancer and choreographer, Canadian Margie Gillis presented a program called *M.Body.7*, a group showcase created by Gillis for dancers of a wide range of ages. Laura Dean, long absent from the modern dance scene, was given the prestigious Scripps Award at the American Dance Festival in Durham, N.C., which celebrated its 75th anniversary.

Several illustrious dancers retired from American stages in 2008. At NYCB two male dancers were saluted: Nikolaj Hübbe, a Dane who departed at the end of the winter season to head the Royal Danish Ballet, where he had begun his career, and Damian Woetzel, who since 2007 had also directed the Vail (Colo.) International Dance Festival. Notable ballerinas who announced their retirement included National Ballet of Canada's (NBC's) Jennifer Fournier, who made something of a second name for herself with the Suzanne Farrell Ballet, and Russian-trained, Georgian-born Nina Ananiashvili, who danced her final *Giselle* at ABT and announced that she would retire from the company in 2009.

Earlier in the year, Ananiashvili had led the State Ballet of Georgia, a troupe she had directed since 2004, on a U.S. tour. Among the offerings in repertory were some works by Aleksey Ratmansky, the departing artistic director of the Bolshoi Ballet. In the fall ABT announced that Ratmansky had

signed a five-year contract as artist in residence for the company. Ratmansky's *Concerto DSCH* was a thrilling display of daring dancing to Shostakovich at NYCB and a highlight of the season's new ballets.

Twyla Tharp worked prominently with both Miami City Ballet and ABT. For Miami she created work to music commissioned from Elvis Costello, called *Nightspot*, and for ABT she made *Rabbit and Rogue* to music commissioned from Danny Elfman. In the fall Tharp gave Seattle's Pacific Northwest Ballet two more premieres, *Opus 111* (to music of Johannes Brahms) and *Afternoon Ball* (to music of Vladimir Martynov). By year's end Tharp had been awarded a Kennedy Center Honor.

Christopher Wheeldon wrapped up his work as resident choreographer of NYCB with a Tchaikovsky-inspired ballet called *Rococo Variations*. In the fall Wheeldon's own *Morphoses* played at City Center following its second appearance at the Vail festival. Wheeldon's Stravinsky-inspired *Commedia* was a highlight of the run.

Houston Ballet's (HB's) artistic director Stanton Welch created new works for his company, including *A Doll's House* (a story of chaos in a toy shop). Canadian choreographer James Kudelka created for the troupe *Little Dancer*, a Degas-inspired work set to the music of Philip Glass. The company had to cancel the end of its run of John Cranko's *Onegin* in the wake of Hurri-

cane Ike. In November, Les Grands Ballets Canadiens de Montréal went to Houston under HB's auspices, taking two works that were new to the city.

Washington's John F. Kennedy Center for the Performing Arts presented two delightful samplers. In June Protégés II offered a mixed bill presenting the top pupils from prominent ballet academies around the world. Subsequently, Kennedy Center offered a five-day long celebration called Ballet Across America, which showcased companies from all regions of the country.

International visitors to North America included the Kirov (Mariinsky) Ballet in its first-ever season at New York City's relatively small City Center, where the stage could hardly contain the radiant and yet cool Uliana Lopatkina and the charmingly brash Alina Somova; the Russian dancers gave Balanchine's works a new accent. Likewise, the Kirov's dancers in the works of William Forsythe toned down some of the often frantic aspects of the dances. (Forsythe's own *Impressing the Czar*, in a revival by the Royal Ballet of Flanders, became the featured dance entry at the Lincoln Center Festival.) Lincoln Center's Great Performers series included dances by Michael Clark in a series of all-Stravinsky programs.

The Mark Morris Dance Group offered Morris's new *Excursions* at Tanglewood, Mass., before presenting *Romeo and Juliet*, on *Motifs of Shakespeare* at the kickoff of a Prokofiev festival at Bard College, Annandale-on-Hudson, N.Y. The three-act work used a newly discovered original version of Prokofiev's 1930s score, which differed from the work that became widely popular after the composer's revisions of the 1940s.

Among the touring appearances by the Merce Cunningham Dance Company, most notably a series at DIA:Beacon in Beacon, N.Y., the troupe gave a special performance of the Cunningham's John Cage-inspired *Ocean* in the Rainbow Quarry of Waite Park, Minn. The Paul Taylor Dance Company added to its own repertory *Changes*, set to the music of the Mamas and the Papas; the work was made by Taylor to fulfill SFB's anniversary commission.

Events across Canada included Marie Chouinard's *Body Remix/Goldberg Variations*, which was performed in Victoria, B.C., and Vancouver. Alberta-born Azure Barton offered two works with Les Ballet Jazz de Montréal during Ottawa's Canada Dance Festival. Toronto was the setting for the final, closing performance of the Danny Grossman

Dance Company, which had its beginnings in 1977.

The enduringly popular ballet film *The Red Shoes* celebrated its 60th anniversary in 2008. Dance on film and video had highlights, most notably in "Dominique Delouche: Ballet Cineaste," a retrospective festival of the Film Society of Lincoln Center; most of the films had been offered on DVD, notably by Video Artists International. Frederick Wiseman's 1995 documentary about ABT was newly released on DVD by Zipporah Films. Opus Arte, often in collaboration with the BBC, put out a number of titles, including the Royal Ballet in *The Sleeping Beauty* and *La Fille mal gardée*. Elton John's ballet-themed musical *Billy Elliot* (based on the 2000 film) went to Broadway in November.

Losses to North American dance included several Canadians: dancer Ian Gibson, dancer and choreographer Leonard Gibson, ballerina and teacher Rosemary Deveson, teacher and choreographer Kay Armstrong, former NBC artistic director David Haber, and British-born ballerina and teacher Joy Camden. Among the Americans who died in 2008 were jazz dancer and choreographer Gus Giordano, ballerina Sallie Wilson, Russian-born ballerina Irina Baronova, tap dancer Jimmy Slyde, and dancer and actress Cyd Charisse (see OBITUARIES), as well as ballerina Ellen Everett, ballet dancer Michael Bjerknes, Russian-born dancer and longtime School of American Ballet teacher Hélène Dudin, Colombian-born modern dancer and choreographer Eleo Pomare, and dance writer Amanda Smith.

(ROBERT GRESKOVIC)

Europe. The bravest initiative in the European ballet world in 2008 was undoubtedly the opening of a completely new classical company in Spain, a country that for many years had seen its most talented dancers leave for lack of opportunities at home. One of those dancers was Ángel Corella, distinguished principal of American Ballet Theatre; thanks to his drive, determination, and years of planning, the 50-strong Corella Ballet gave its official first performance in Madrid in September with Natalia Makarova's production of Petipa's *La Bayadère*.

On a sadder note, the death of Maurice Béjart in late 2007 cast a shadow over the entire dance scene. His own company, Béjart Ballet Lausanne, continued to tour under the directorship of dancer and choreographer Gil Roman; one of the programs the company showed was Béjart's last piece, *Le Tour*

du monde en 80 minutes, staged by Roman. Among other groups mounting tribute programs was the Paris Opéra Ballet, featuring Béjart's famous versions of *The Firebird* and *Rite of Spring* as well as the powerful *Serait-ce la mort?*

As usual, the Paris company also presented a new evening-length work by one of its dancers, this time *Les Enfants du paradis* by José Martinez, set to a commissioned score by Marc-Olivier Dupin. Visitors to Paris included New York City Ballet, with a much fuller and more interesting program than those it had presented earlier in the year in London and Copenhagen. Very high prices in London had dampened sales and elicited complaints from dancers; a much more reasonable pricing schedule in Paris was rewarded by full houses and a very enthusiastic reception. There was some disappointment, though, that the company had to cancel Balanchine's *Vienna Waltzes*—never seen in Paris—when the estate of composer Richard Strauss withheld permission for his music to be used for this ballet outside the United States.

There were major changes in Scandinavia; the National Norwegian Ballet moved into its new home in a fine new opera house in Oslo, and the national companies of Finland, Sweden, and Denmark each had a change of artistic director. Kenneth Greve took over the National Ballet of Finland, producing narrative ballets by Aleksey Ratmansky and John Neumeier and a triple bill of works by Nordic choreographers. Marc Ribaud's first season at the head of the Royal Swedish Ballet included the premiere of a piece by Patrice Bart based on the life of King Gustav III, the Swedish monarch who founded the company. Nikolaj Hübbe's first premiere for the Royal Danish Ballet (RDB) was a new production of *Giselle*, directed by Hübbe himself in collaboration with Sorella Englund; company ballerina Silja Schandorff and new principal dancer Nehemiah Kish performed the first night. English choreographer Tim Rushton made a new version of *Askepot (Cinderella)*, in which the RDB was joined by members of Rushton's own Danish Dance Theatre; earlier in the season Christopher Wheeldon had made his first work for RDB—*The Wanderers*, to music by English composer Gavin Bryars. The company made a brief visit to China in connection with the Olympic Games in Beijing following seasons there by the Paris Opéra Ballet and the Royal Ballet (RB) from London.

Belinsky Yuri—Itar-Tass/Landov

Yekaterina Kondaurova of the Kirov (Mariinsky) Ballet dances the role of Alma in Kirill Simonov's ballet *The Glass Heart*, set to the music of Alexander Zemlinsky.

The Kirov (Mariinsky) Ballet continued its extensive touring program, visiting U.S. cities as well as sending a smaller group to London with a program of short ballets. At home in St. Petersburg, the troupe premiered *The Glass Heart*, with choreography by company soloist Kirill Simonov; but for some months the headlines about the company focused on the rumoured departure of its director, Makhar Vaziyev, leading up to the announcement that he had indeed left the company and had been replaced by ballet master Yuri Fateyev.

The year started for the Bolshoi Ballet with a major success, Johan Kobborg's production of Bournonville's *La Sylphide*. Kobborg himself danced the witch, Madge, at one performance, and the young star Natalya Osipova was much admired in the title role. Later in the season Ratmansky's revival of a famous ballet from the Soviet era, *The Flames of Paris*, combined some elements of the original version with new choreography of his own. Some critics had reservations about the result, but there was praise for Mariya Aleksandrova, and later Osipova, in the leading role. Ratmansky's contract as director of the company expired at the end of the year, after a brilliant if sometimes difficult five-year reign.

Kobborg later reproduced his version of *La Sylphide* in Switzerland for the Zürich Ballet. In Germany, John Neumeier made a new piece, *Verklungene Feste*, for his Hamburg Ballet, and Kevin O'Day created *Hamlet* for the Stuttgart Ballet. In Austria the Ballet of the Vienna State Opera gave its first performances of Kenneth MacMillan's epic *Mayerling* in October.

Also in October, MacMillan's earlier piece *Manon* entered the repertory of English National Ballet (ENB). Made for the RB in 1974, it had been performed by companies all over the world but never before by another British company. In the summer ENB presented at the Royal Albert Hall *Strictly Gershwin*, a spectacular with choreography by Derek Deane; later in the year ENB played a season in its original home, the Royal Festival Hall.

Kim Brandstrup, Christopher Wheelton, and resident choreographer Wayne McGregor all made new work for the RB, while Jerome Robbins's *Dances at a Gathering* returned to the repertoire after more than 30 years' absence. Soloists Lauren Cuthbertson and Rupert Pennefather were promoted to principal rank; they joined Edward Watson as the only British dancers at the top level of the company.

Northern Ballet Theatre, one of the most creative companies in the United Kingdom, added two new full-length works to its repertoire: a version of *Hamlet* by director David Nixon and *A Tale of Two Cities* by Cathy Marston, a former RB associate who was director of the ballet company in Bern, Switz. Scottish Ballet produced a new *Romeo and Juliet*, using a pared-down scenario and choreography by Krzysztof Pastor. Rambert Dance Company director Mark Baldwin made a new piece, *Eternal Light*, to a new score by Howard Goodall, for his company's autumn tour; the outstanding Jonathan Goddard, who earlier in the year had become the first modern dancer to win the National Dance Award for Best Male Dancer, joined the company from the Richard Alston group. Alston himself, celebrating 40 years as a choreographer, showed a program that included *The Men in My Life*, a compilation of pieces he had made for male dancers during his career. Matthew Bourne's latest work had its premiere at the Edinburgh International Festival, followed by a sold-out run in London; but although *Dorian Gray* seemed a natural subject for him, the piece had a cool reception from the critics.

The dance world was saddened by the deaths in 2008 of Norman Morrice (see OBITUARIES), choreographer and former director of both Ballet Rambert and the RB; Nadia Nerina, South African-born former RB ballerina; the great Bolshoi ballerina Natalya Bessmertnova (see OBITUARIES); Ulf Gadd, Swedish dancer and choreographer; and former RB principal dancer Maryon Lane. (JANE SIMPSON)

THEATRE

Great Britain and Ireland. Controversies about public funding at the end of 2007 spilled into 2008, and the Arts Council was compelled to backtrack on a series of unpopular cuts in its grants to theatres such as the Bush in West London, a powerhouse of new writing for 30 years; the Northcott in Exeter, an important local venue that had already undergone an Arts Council-sponsored refurbishment; and the Bristol Old Vic, the most significant surviving Georgian theatre in the United Kingdom.

Although the funding pot was increased by 8% (over a three-year period) to a total of £318 million (about \$560 million), 185 organizations had their grants cut completely, and 27 saw their subsidies reduced. The Arts Council had detected a cultural shift toward what was disparagingly referred to as "clowns on stilts" theatre and site-specific ventures in nontraditional venues, but as playwright David Edgar pointed out in a powerful polemic, the increased diversity brought by Asian and Afro-Caribbean playwrights was almost entirely text-based.

A commonly voiced complaint was that musicals were pushing the "straight play" out of the West End, though it was generally overlooked that the commercial West End—unlike the National Theatre (NT) or any other government-subsidized organization—had no obligation toward new drama. At any rate, new plays were rife on the fringe and in venues such as the Almeida, the Young Vic, and the Royal Court.

Still, the West End came up with three highly entertaining new dramas: Yasmina Reza's *God of Carnage*, translated by Christopher Hampton and starring Ralph Fiennes and Tamsin Greig in a battle of parents over their respective children; television stars Kris Marshall and Joanna Page in Neil LaBute's brilliant *Fat Pig*, a scabrous study in loyalty, love, and obesity; and Joanna Murray-Smith's *The Female of the Species*, in which Dame Eileen

Atkins reveled in a performance widely taken to be a satiric portrait of the feminist academic Germaine Greer—who, without seeing it, denounced the play and its author. Atkins warmed up for this performance with a cutting comic display in the Theatre Royal, Haymarket's revival by Jonathan Kent of Edward Bond's *The Sea*, a brilliant comedy that combined elements of Benjamin Britten's *Albert Herring* and Shakespeare's *The Tempest*.

The Haymarket's adventurous season concluded with a slightly misfired musical, *Marguerite*, by Michel Legrand and the *Les Misérables* team of Alain Boublil and Claude-Michel Schönberg with Jonathan Kent. Ruthie Henshall gave her all as the eponymous heroine in World War II France, caught in a web of romance and espionage, but the show was not much of a success. Compared with Trevor Nunn's disastrous new version of *Gone with the Wind*, though, perhaps it was a triumph after all.

Audiences settled more happily for the irresistible Broadway import, recast for London, of *Jersey Boys* and found some kind of solace in a new musical version of Isabel Allende's novel of swash and buckle and derring-do, *Zorro*; Matt Rawle was outstanding as the hero, even if the songs by the Gipsy Kings were of average quality. The ersatz genre of the jukebox musical was represented by *Never Forget*—a tribute show to the British boy band Take That—and by a wonderful reimagining and staging of Jimmy Cliff's 1972 reggae film, *The Harder They Come*, which did not find the audience it merited.

The West End was galvanized by two events. The first was director Emma Rice's adaptation of the 1946 David Lean film *Brief Encounter* (itself based on Noel Coward's one-act *Still Life*) as a brilliant mixed-media "happening"—video, fluid stage locations, and vaudeville—in the cinema on the Haymarket where Lean's film had received its premiere. Producer David Pugh worked in collaboration with Kneehigh, one of the United Kingdom's most innovative companies, which also performed at the NT—e.g., in *War Horse* (2007).

The second jolt was provided by the Donmar Warehouse's launching of a West End season at Cameron Mackintosh's magnificently refurbished Wyndham's Theatre on Charing Cross Road. The Donmar continued to prosper at its home base in Covent Garden, with glorious revivals of Pam Gems's *Piaf* starring Elena Roger (it moved into the Vaudeville for a season) and Enid Bag-

nold's 1956 *The Chalk Garden* (also slated for possible transfer, starring Margaret Tyzack and Penelope Wilton). Donmar artistic director Michael Grandage launched a phenomenally interesting season with Kenneth Branagh in the title role of Chekhov's *Ivanov*, in a new version by Tom Stoppard, and with Sir Derek Jacobi as Malvolio in *Twelfth Night*.

Branagh's return to the London stage after a five-year absence was triumphant. The actor sought no sympathy as a gentleman farmer swimming in debts and depression while his Jewish wife—to whom he is unfaithful and verbally abusive—dies of tuberculosis. The wife was played with pellucid beauty by Gina McKee, but the whole company bristled with spirit and intelligence, from Lorcan Cranitch's impetuous estate manager and Kevin R. McNally's alcoholic neighbour right through to Andrea Riseborough's startling ingenue and Sylvestra Le Touzel's rapacious social climber.

Grandage—whose scheduled NT debut, directing Georg Büchner's *Danton's Death*, was delayed in 2008—imported his familiar high-level production values from his home base in the little 225-seat Donmar Warehouse; the dilapidated designs of Christopher Oram, the exquisite lighting of Paule Constable, and the gloriously discreet sound track of Adam Cork all proclaimed the new technical golden age in the British theatre.

Kirsty Wigglesworth/AP

The RSC scored heavily with its season of Shakespeare's history plays at north London's Roundhouse. The season in Stratford—where the Courtyard proved a great success as a temporary home while the main theatre was being rebuilt across the road—had mixed success: *The Merchant of Venice* was generally derided, and *The Taming of the Shrew* starred two unattractive actors and was burdened by a cumbersome "concept." However, David Tennant—best known as Doctor Who on BBC television—was outstanding both as Hamlet and as Berowne in *Love's Labour's Lost*, in productions directed by Gregory Doran.

The best overall Shakespeare work was at the Globe on the river in Southwark, where David Calder gave a marvelously moving *King Lear*; hot new director Jonathan Munby gave new life and spring to *A Midsummer Night's Dream*; and Christopher Luscombe masterminded a delectable production of *The Merry Wives of Windsor*, with Serena Evans and Sarah Woodward as the jolly scheming spouses.

There were several other notable new plays. The Globe, surprisingly, came up with Ché Walker's *The Frontline*, which was a contemporary Ben Jonson-style report from the muddle of drug-infested Camden Town, and the Royal Court garnered raves for American playwright Christopher Shinn's *Now or Later*, in which a Democratic presidential candidate's final push to victory is nearly sabotaged by his son's behaviour.

Eddie Redmayne, a rising star, played the freckle-faced transgressor.

At the NT an ongoing success story continued under artistic director Nicholas Hytner (who confirmed that he would stay on at least until London hosted the Olympic Games in 2012). There were tremendous new plays from Simon Stephens and Rebecca Lenkiewicz. Stephens's was *Harper Regan*, an urban odyssey not dissimilar to Mike Leigh's defining movie *Naked* (in which the brilliant NT actress Lesley Sharp, who played Harper, also appeared), while Lenkiewicz's *Her Naked Skin* was directed by Howard Davies and featured Lesley Manville and newcomer Jemima Rooper as a lesbian couple highlighted against the turmoil of the Edwardian suffrage movement.

The NT also presented Howard Brenton's intriguing chronicle play about former prime minister Harold MacMillan, *Never So Good*, with Jeremy Irons in the lead; a magisterial revival of Shaw's *Major Barbara* with Simon Russell Beale and Clare Higgins; a lively version of Thomas Middleton's Jacobean shocker *The Revenger's Tragedy*, with Rory Kinnear (touted as the NT's next Hamlet) entering the underworld of a sleazy nightclub; and Ralph Fiennes as Oedipus in Jonathan Kent's impressively hieratic revival of Sophocles' tragedy, in a new version by Irish playwright Frank McGuinness, with Fiennes in imposing form and an all-male chorus given much individual character and speeches set to music by Jonathan Dove.

The very best new plays of the year, however, were off the beaten track. Philip Ridley's *Piranha Heights* at the Soho Theatre was a stunning account of disastrous interracial dysfunctional relationships at the top of an East London high rise, and Anthony Neilson's *Relocated* in the Royal Court's upstairs studio was a creepy thriller of false accusation and secret fears in the context of mounting public hysteria over child abuse. Sam Shepard's *Kicking a Dead Horse* at the Almeida Theatre, though critically lambasted, was a far-from-insignificant Wild West version of Beckett's *Happy Days*, with Stephen Rea, one of Shepard's most loyal and perceptive interpreters, charting his character's comic cultural dilemma by the side of his own supine equine.

The Almeida under Michael Attenborough had another good year, with a brilliant revival of Harold Pinter's *The Homecoming*; an extraordinary, highly charged theatrical presentation of

Stephen Adly Guirgis's *The Last Days of Judas Iscariot* from Philip Seymour Hoffman's LAByrnth company (recast with local actors); and an insidious, compelling revival by Anthony Page of Ibsen's *Rosmersholm* starring Helen McCrory and Paul Hilton.

It was the 50th anniversary year of Pinter's *The Birthday Party*, and a fine production was duly given at the Lyric in Hammersmith, where the play had received its premiere; the staging was timely, in light of Pinter's death at the end of the year. (See OBITUARIES.) The Bite program at the Barbican celebrated its 10th anniversary with a particularly rich series headed by Robert Lepage's nine-hour, nine-play masterpiece *Lipsynch*. Kevin Spacey's Old Vic was electrified by his double act with Jeff Goldblum in David Mamet's *Speed-the-Plow*, followed by Matthew Warchus's glorious revival of Alan Ayckbourn's famous trilogy of comedies, *The Norman Conquests*.

Across the road the Young Vic offered a fascinating revival of Thomas Babe's *A Prayer for My Daughter*, which stood up well. The house maintained a high profile with a brilliantly theatrical revival by Richard Jones of Bertolt Brecht's *The Good Soul of Szechuan* (Jane Horrocks opened valiantly in the title role shortly after the real-life natural disasters in that Chinese province) and an overpowering staging of Kurt Weill's *Street Scene*, given too short a run but unquestionably one of the outstanding shows of the year.

The Menier Chocolate Factory marked time with revivals of old Broadway musicals. Jerry Herman and Harvey Fierstein's *La Cage aux folles* was done well, with Douglas Hodge and Philip Quast as the sentimental lovers (Denis Lawson replaced Quast when the show transferred to the Playhouse in October). Marvin Hamlisch and Carole Bayer Sager's *They're Playing Our Song* featured Connie Fisher, chosen in 2006 by television viewers to play Maria in *The Sound of Music*, but she failed to enhance her leading-lady status in the role of a ditsy lyricist.

Liverpool was designated the European Capital of Culture, and the sprawling, diverse drama program included a giant mechanical spider crawling all over the office buildings in the city centre and a *King Lear* in which Pete Postlethwaite renewed his early roots at the Everyman Theatre. The Edinburgh Festival was a bit of a washout—it rained incessantly for three weeks—though everyone loved the raunchy

vaudeville *La Clique*, which moved to London at the Hippodrome (formerly the Talk of the Town). The Dublin Theatre Festival hosted Vanessa Redgrave in her startling NT performance (seen in 2007 on Broadway) as Joan Didion in *The Year of Magical Thinking* and presented a new dance drama, *Dodgems*, set on a real fairground bumper-car track. (MICHAEL COVENEY)

U.S. and Canada. The radical economic downturn in the U.S. during the closing months of 2008 sent a chill through both the commercial and the nonprofit sectors of the American theatre. For Broadway the consequences were immediate: holiday tourism slumped; investment capital for all but the safest new projects went south; regular theatergoers slammed their wallets shut; and closing notices were posted in November and December for a spate of shows—including such ostensibly enduring hits as the musical *Hairspray*, slated to close in January 2009 after a six-year run, and Tony Award winners *Spamalot* and *Spring Awakening*—that had been expected to run for months, even years, into the future.

The nation's nonprofit regional theatres, more insulated from the slump's immediate effects by multiseason support from foundations and corporate givers, nevertheless shifted into crisis mode as well, recognizing that belt-tightening loomed on the horizon. The ominous mood was further darkened by the closing of at least four major theatre organizations across the country, including the influential but debt-ridden 30-year-old Theatre de la Jeune Lune of Minneapolis, Minn., and once-viable resident companies in Milwaukee, Wis., Stamford, Conn., and San Jose, Calif.

Hard times were nothing new for the theatre business, of course, and the industry took heart late in the year as the speeches and policy positions of President-elect Barack Obama offered hope that the health of the arts in general—and the National Endowment for the Arts (NEA) in particular—would be high on the coming administration's agenda.

The economic trepidation in some circles was matched by a proud sense of accomplishment in others. Broadway's alarming losses were compensated for, artistically at least, by superb productions of two American classics of the post-World War II era—the 1949 Rodgers and Hammerstein musical *South Pacific*, staged at Lincoln Center Theater with characteristic élan by Bartlett Sher (now in his eighth year as

Sara Krulwich—The New York Times/Redux

Jesse Williams (top) and Lois Markle perform in Edward Albee's absurdist short *The Sandbox at the Cherry Lane Theatre in New York City in March.*

artistic director of Seattle's Intiman Theatre), and Arthur Miller's 1947 drama *All My Sons*, which received a revelatory experimental treatment from British director Simon McBurney. Working with a cast led by John Lithgow, McBurney, the moving force behind the acclaimed London-based ensemble Complicite, employed Brechtian presentation and cinematic flourishes that unleashed a strain of raw power in Miller's warhorse of a play that more conventional productions had failed to tap. (*South Pacific* more or less swept the 2008 Tony Awards, with seven wins, including awards for direction and design; the Miller revival would be up for award consideration in 2009.)

It was a big year for another American theatrical icon, Edward Albee, who turned 80 on March 12. Among three major productions of his work in New York City and environs that were staged during the year were an intriguing self-directed revival of his absurdist shorts *The Sandbox* (1959) and *The American Dream* (1961) and the debut at Princeton, N.J.'s McCarter Theatre Center of *Me, Myself, and I*, an uncharacteristically sunny (and typically punny) treatment of family dysfunction.

The development of new plays continued to receive widespread support in 2008, via such efforts as a new NEA-funded initiative administrated by Arena Stage of Washington, D.C.; the newly established Yale Center for New Theatre in New Haven, Conn., underwritten by a \$2.8 million Robina Foundation grant; the Public LAB of New York City's Public Theater, flush with \$2.7 million from the Mellon Foundation; and such new-play standard-bearers as the Sundance Institute of Utah, Minneapolis's Playwrights' Center, and New York's New Dramatists. Up-and-comers Tarell Alvin McCraney (*Wig Out*), Shelia Callaghan (*Dead City*), Itamar Moses (*The Four of Us*), and Julie Marie Myatt (*Welcome Home, Jenny Sutter*) were among the new generation of writers to watch.

One of the most talked-about new plays of the season was Octavio Solis's *Lydia*, a dark, poetic melodrama of complex family relationships and sexual violence, set in the writer's native border town of El Paso, Texas. Commissioned and premiered by the Den-

ver Center Theatre Company, *Lydia* was headed for high-profile productions in Los Angeles, New Haven, Conn., and elsewhere.

All 10 of the late August Wilson's 20th-century-cycle plays were mounted in chronological order of setting at the Kennedy Center in Washington, D.C., in March and April, under the overall supervision of Kenny Leon, artistic director of True Colors Theatre Company of Atlanta, Ga. Aiming to present the works "as if they were cut from the same cloth," Leon shared directorial duties with Wilson specialists Israel Hicks, Todd Kreidler, Gordon Davidson, Derrick Sanders, and Lou Bellamy.

Major job changes on the American scene included a virtual round-robin of artistic directorships in Massachusetts: Diane Paulus, whose Broadway-bound Shakespeare in the Park revival of *Hair* was a sensation in New York, took the reins of the influential American Repertory Theatre in Cambridge, Mass., and Peter DuBois moved from his associate director slot at the Public Theatre to the top job at Boston's Huntington Theatre Company. The Huntington's Nicholas Martin, hitting his stride at 70, moved northwest to head the summer-season Williamstown Theatre Festival.

In Canada the much-discussed restructuring of the Stratford Shakespeare Festival went shockingly awry; Marti Maraden and Don Shipley, two members of the three-pronged leadership team that had been announced the

previous year, abruptly backed out in March before their tenure began, leaving the American director Des McAnuff as sole head. McAnuff took on Shaw's *Caesar and Cleopatra* as well as *Romeo and Juliet* and imported Stratford's first international production, Deutsches Theater of Berlin's already-well-traveled *Emilia Galotti*. Montreal-based auteur Robert Lepage, who had received the 2007 Europe Theatre Prize, continued to impress audiences and critics around the world with his lavishly visual high-tech interpretation of Hector Berlioz's *La Damnation de Faust*, which impressed audiences and critics at New York City's Metropolitan Opera and elsewhere.

Fringe festivals continued to thrive in major Canadian cities. Toronto's version marked its 20th anniversary by beginning a

Next Stage fest-within-a-fest, with selected participants who had already proved themselves on the national fringe circuit (rather than being programmed by the usual lottery-selection process). These handpicked "cream of the crop" shows—in tandem with the festival's on-site heated beer tent—attracted a reported 4,500 spectators in chilly January.

Theatre figures who died during 2008 included actress Estelle Getty, better known for her role in TV's *Golden Girls* than for her considerable accomplishments in Broadway and Off-Broadway productions; playwright William Gibson, author of *The Miracle Worker* and *Two for the Seesaw*; and director and master teacher Paul Sills, a proponent of theatre games invented by his mother, Viola Spolin, and leader of Chicago's ragtag Compass Players, precursor of the comedy troupe Second City (see OBITUARIES); other losses included Robert Alexander, creator of the Living Stage Theatre Company, which served for more than 30 years as the community outreach arm of D.C.'s Arena Stage; actress and playwright Oni Faida Lampley; Montreal-born Richard Monette, who led Canada's Stratford Shakespeare Festival for 14 seasons; and Barbara Ann Teer, founder of the National Black Theatre of Harlem. (JIM O'QUINN)

MOTION PICTURES

United States. In a year without Harry Potter, other Hollywood franchises

filled the cinemas with plenty of fantasy and excitement. *Indiana Jones and the Kingdom of the Crystal Skull* gave enjoyable proof that time really can stand still; no bones creaked as director Steven Spielberg and his star Harrison Ford resumed the breezy adventure series for the first time since 1989. The tone of Spielberg's sequel contrasted sharply with the dark complexities and anguish of Christopher Nolan's second Batman adventure with Christian Bale (see BIOGRAPHIES), *The Dark Knight*—a film given a frisson all its own by the death in January of Heath Ledger (see OBITUARIES), cast as the frighteningly maniacal Joker, the most evil of Batman's adversaries.

Daniel Craig returned as James Bond in *Quantum of Solace* (Marc Forster), a cold film so pumped up for action that characters scarcely had room to breathe. Livelier action-adventure was available in Guillermo del Toro's *Hellboy II: The Golden Army*, a feast of rococo images and humour, and the Marvel Comics spin-off *Iron Man* (Jon Favreau), lifted out of the genre pile by the intense performance of Robert Downey, Jr. (see BIOGRAPHIES), as the superhero thrust into the front line against foreign foes of the United States. Klaatu, the extraterrestrial ambassador from the 1951 classic *The Day the Earth Stood Still*, returned in the form of Keanu Reeves in Scott Derrickson's lavish but unimaginative remake.

The year's political dramas were chiefly confined to the real world and to the American presidential elections. Still, it was hard to ignore Oliver Stone's *W.*, a surprisingly judicial treatment of the presidency and early years of George W. Bush, boisterously impersonated by Josh Brolin. Ron Howard's film of Peter Morgan's play *Frost/Nixon* extracted much human interest from the famous 1977 television meeting between interviewer David Frost (Michael Sheen) and disgraced former president Richard M. Nixon (Frank Langella). On the "war on terrorism" front, Ridley Scott's *Body of Lies* made superficial attempts to treat CIA antiterrorist operations realistically, but the film was essentially popcorn fodder.

Enough thoughtful quality product kept audiences' brains engaged. Steven Soderbergh went overboard with ambition in *Che*, an epic two-part biography of the Marxist revolutionary Che Guevara; although the film was weak as drama, it was bolstered by Benicio Del Toro's central performance (he won the

Warner Bros./Everett Collection

Australian actor Heath Ledger—who died from an accidental drug overdose in January—stars as the Joker and Welsh actor Christian Bale portrays Batman in the Hollywood blockbuster The Dark Knight.

best actor prize at the Cannes Festival). Mickey Rourke galvanized Darren Aronofsky's *The Wrestler* with his comeback performance as a faded wrestler attempting to get back on top. In *Changeling*, featuring Angelina Jolie, Clint Eastwood directed one of his most finely controlled and vibrant films; it was inspired by a true story of murder and deception in Los Angeles in the 1920s. *Revolutionary Road*, Sam Mendes's scrupulous adaptation of Richard Yates's 1961 novel, locked the viewer into American suburbia in the 1950s; Leonardo DiCaprio and Kate Winslet excelled as the married couple unable to live happily ever after. The hardships of Brad Pitt (see BIOGRAPHIES) proved longer and stranger in *The Curious Case of Benjamin Button*, David Fincher's smoothly accomplished film about a man who ages backward from wizened youth to unlined old age.

After several years of small-scale experimentation, director Gus Van Sant moved closer to the mainstream with *Milk*, a brilliantly observed account of the public career in the 1970s of Harvey Milk, one of the first openly gay politicians in the United States. Sean Penn (an unorthodox casting choice) lit up the film with his mischief and warmth. John Patrick Shanley's version

of his Pulitzer Prize-winning play *Doubt* featured a strident Meryl Streep as the Roman Catholic-school nun who spreads suspicions about Philip Seymour Hoffman's priest, but the play's power remained. British director Danny Boyle showed fizz galore in *Slumdog Millionaire*, a bustling film about a Mumbai (Bombay) street kid accused of having cheated on a TV show.

In the animation field, the best undoubtedly was *WALL•E* (Andrew Stanton), Pixar's tale of robot love on an Earth trashed and deserted by humans. *Madagascar: Escape 2 Africa* (Eric Darnell, Tom McGrath) was the rare animation sequel that was actually better than the original. Teenage viewers rushed to see Zac Efron in *High School Musical 3: Senior Year* (Kenny Ortega). This cinema spin-off from the television-movie phenomenon was typically spirited and well staged, but it offered little dramatic nourishment.

Michael Patrick King's film *Sex and the City* was thinly plotted, but four years after the television comedy series ended, fans were still happy to see Carrie Bradshaw (Sarah Jessica Parker) and her fellow New Yorkers, now in their 40s, talk about their lives and dreams. Bigger audiences across the world flocked to *Mamma Mia!*, Phyllida Lloyd's version of the upbeat stage musical garlanded with ABBA songs; it was the year's one resounding feel-good film. *Vicky Cristina Barcelona*, set in Spain, was a funny Woody Allen movie about sexual attraction, sparked into extra heat by the teaming of Javier Bardem (see BIOGRAPHIES) and Penélope Cruz. Wider audiences enjoyed Jason Segel and Kristen Bell in *Forgetting Sarah Marshall* (Nicholas Stoller)—a comedy that was rude one minute and sweet the next (in the current fashion) but that was dispatched with well-drawn characters. Two giants in the film industry, Paul Newman and Charlton Heston, died during the year. (See OBITUARIES.)

British Isles. No British film discomfited or transfixed the viewer as much as *Hunger*, the first feature by the video artist Steve McQueen, which described with eloquent visual detail the last weeks of the Irish Republican Bobby Sands in 1981 as he starved himself to death in prison. Michael Fassbender's performance was courageous and unflinching. Mike Leigh, known for exploring urban misery, lightened his mood for *Happy-Go-Lucky*, an ambling comedy about the daily whirl of a chattering, optimistic schoolteacher. Shane Meadows, another individualistic chronicler of modern

Britain, offered *Somers Town*, the natural and funny tale of a cross-cultural teenage friendship. Director Terence Davies returned with *Of Time and the City*, a modest film essay about his home city, Liverpool.

Among “heritage” films, Julian Jarrold’s *Brideshead Revisited* bathed the viewer in 1920s nostalgia; though details of Evelyn Waugh’s revered novel were changed, the film kept enough of its spirit. Australian director Stephan Elliott’s jazzy spin on Noël Coward’s play *Easy Virtue* met with a mixed reception, as did *The Edge of Love* (John Maybury), a stylistically confused drama about the wartime loves of 20th-century poet Dylan Thomas. History received a contemporary kick in *The Other Boleyn Girl* (Justin Chadwick), which featured Scarlett Johansson as Mary, sister of Anne Boleyn. Lavish settings and Keira Knightley’s beauty dominated another American co-production, *The Duchess*; unfortunately, the drama about the 18th-century duchess of Devonshire lacked meat and wasted the talents of a promising director, Saul Dibb.

Among films set in the present, Noel Clarke’s *Adulthood*, a sequel to the earlier *Kidulthood* (2006; directed by Menhaj Huda, written by Clarke), pitched its antiviolence story at the level of a scream, but it proved a hit with British youth pleased to see their own lives mirrored on the screen. The powerful *The Boy in the Striped Pyjamas* (Mark Herman), adapted from John Boyne’s novel, viewed the Holocaust through the eyes of the young son of a concentration camp commandant. Asa Butterfield’s performance as the boy was exceptional.

Canada, Australia, and New Zealand. No film could top the ambition, length, or flamboyance of Baz Luhrmann’s *Australia*—165 minutes of colourful melodrama, stunning landscapes, and political breast-beating wrapped around a plot about Nicole Kidman’s aristocratic English outsider who is trying to hold on to her late husband’s land. Brandon Walters’s mixed-race child supplied the film’s political conscience and best performance; Hugh Jackman’s cattle drover provided pin-up appeal. On a much smaller scale, Elissa Down’s *The Black Balloon* was impressive for its caring treatment of the pressures of living with an autistic sibling. New Zealand’s film scene remained quiet.

From Canada, Atom Egoyan’s *Adoration*, one of the director’s typically multilayered dramas, centred on an orphaned high-school student trying to

make sense of his life and the dangerous world. In *Ce qu’il faut pour vivre* (*The Necessities of Life*), Benoît Pilon sensitively explored the experiences of an Inuit tuberculosis sufferer in a Quebec City hospital.

Western Europe. A looming global recession did nothing to stop the French industry from spending \$115 million, its largest-ever sum for a film, on *Astérix aux Jeux Olympiques*. French critics tore Frédéric Forestier and Thomas Langmann’s comedy to shreds, but they found enough to praise elsewhere. Adapted from François Bégaudeau’s memoir, Laurent Cantet’s *Entre les murs* (*The Class*), the Palme d’Or winner at the Cannes Festival, swept the viewer into the daily life of garrulous, obstreperous Parisian students and their junior-high-school teacher (convincingly played by Bégaudeau himself). Arnaud Desplechin, a specialist in wayward epics of introverted talk, tightened his grip somewhat in *Un Conte de Noël* (*A Christmas Tale*), which featured Catherine Deneuve as a dysfunctional family’s matriarch who needs a bone marrow transplant. The unexpected French hit of the year was Dany Boon’s *Bienvenue chez les Ch’tis* (*Welcome to the Sticks*), a comedy that made fun of regional prejudices. Philippe Claudel’s *Il y a longtemps que je t’aime* (*I’ve Loved You So Long*) told the story of two sisters reconnecting after a gap of 15 years; the director and his actors, Kristin Scott Thomas and Elsa Zylberstein, shared the pleasant knack of finding big resonances in small things. A tougher view of life prevailed in *Les Hauts Murs*, Christian Faure’s unflinching drama based on the true story of a

teenage boy desperate to escape from an imprisoning orphanage.

Belgian filmmakers Jean-Pierre and Luc Dardenne presented the spare *Le Silence de Lorna* (*Lorna’s Silence*), a brooding account of a young Albanian woman (brilliantly played by Arta Dobroshi) caught in a deadly immigration scam. Bouli Lanners’s *Eldorado* offered absurdist comedy with melancholy touches. Bolder entertainment came from Joachim Lafosse’s *Élève libre* (*Private Lessons*), a subversive comedy about a naive teenager and his dangerously sophisticated summer tutor.

Two Italian films displayed fresh energy and a new confidence about wading into the country’s political life. Matteo Garrone’s *Gomorra* (*Gomorrhah*), based on a best-selling exposé, used a chilling documentary approach to strip the glamour from Mafia crime in Naples; the film won the Grand Prix at Cannes. Paolo Sorrentino’s jaunty *Il divo* presented the internecine career of the politician Giulio Andreotti, wickedly portrayed by Toni Servillo. Struggling immigrants came under a sophisticated spotlight in Francesco Munzi’s *Il resto della notte* (*The Rest of the Night*); the bare life of a Sardinian shepherd took centre stage in *Sonetàula* (Salvatore Mereu), a film that was a victory for Italian neorealism and the painterly, measured image.

In Germany, Uli Edel’s *Der Baader Meinhof Komplex* (*The Baader Meinhof Complex*) reactivated painful memories of the Red Army Faction’s revolutionary terrorism in the 1960s and ’70s. Nikolai Müllerschön’s *Der Rote Baron* (continued on page 288)

INTERNATIONAL FILM AWARDS 2008

Golden Globes, awarded in Beverly Hills, California, in January 2008

Best drama	<i>Atonement</i> (U.K./France; director, Joe Wright)
Best musical or comedy	<i>Sweeney Todd: The Demon Barber of Fleet Street</i> (U.S./U.K.; director, Tim Burton)
Best director	Julian Schnabel (<i>Le Scaphandre et le papillon</i> [<i>The Diving Bell and the Butterfly</i>], France/U.S.)
Best actress, drama	Julie Christie (<i>Away from Her</i> , Canada)
Best actor, drama	Daniel Day-Lewis (<i>There Will Be Blood</i> , U.S.)
Best actress, musical or comedy	Marion Cotillard (<i>La Môme</i> [<i>The Passionate Life of Edith Piaf; La Vie en rose</i>], France/U.K./Czech Republic)
Best actor, musical or comedy	Johnny Depp (<i>Sweeney Todd: The Demon Barber of Fleet Street</i> , U.S./U.K.)
Best foreign-language film	<i>Le Scaphandre et le papillon</i> (<i>The Diving Bell and the Butterfly</i>) (France/U.S.; director, Julian Schnabel)

Sundance Film Festival, awarded in Park City, Utah, in January 2008

Grand Jury Prize, dramatic film	<i>Frozen River</i> (U.S.; director, Courtney Hunt)
Grand Jury Prize, documentary	<i>Trouble the Water</i> (U.S.; directors, Carl Deal and Tia Lessin)
Audience Award, dramatic film	<i>The Wackness</i> (U.S.; director, Jonathan Levine)
Audience Award, documentary	<i>Fields of Fuel</i> (U.S.; director, Josh Tickell)
World Cinema Jury Prize, dramatic film	<i>Ping-pongkingen</i> (Sweden; director, Jens Jonsson)
World Cinema Jury Prize, documentary	<i>Man on Wire</i> (U.K.; director, James Marsh)
Best director, dramatic film	Lance Hammer (<i>Ballast</i> , U.S.)
Best director, documentary	Nanette Burstein (<i>American Teen</i> , U.S.)

British Academy of Film and Television Arts, awarded in London in February 2008

Best film	<i>Atonement</i> (U.K./France; director, Joe Wright)
Best director	Joel Coen and Ethan Coen (<i>No Country for Old Men</i> , U.S.)
Best actress	Marion Cotillard (<i>La Môme</i> [<i>The Passionate Life of Edith Piaf; La Vie en rose</i>], France/U.K./Czech Republic)
Best actor	Daniel Day-Lewis (<i>There Will Be Blood</i> , U.S.)
Best supporting actress	Tilda Swinton (<i>Michael Clayton</i> , U.S.)
Best supporting actor	Javier Bardem (<i>No Country for Old Men</i> , U.S.)
Best foreign-language film	<i>Das Leben der Anderen</i> (Germany; director, Florian Henckel von Donnersmarck)

Berlin International Film Festival, awarded in February 2008

Golden Bear	<i>Tropa de elite</i> (Brazil; director, José Padilha)
Silver Bear (Grand Jury Prize)	<i>Standard Operating Procedure</i> (U.S.; director, Errol Morris)
Best director	Paul Thomas Anderson (<i>There Will Be Blood</i> , U.S.)
Best actress	Sally Hawkins (<i>Happy-Go-Lucky</i> , U.K.)
Best actor	Reza Najie (Mohammed Amir Naji) (<i>Avaze gonjeshk-ha</i> , Iran)

Césars (France), awarded in Paris in February 2008

Best film	<i>La Graine et le mulet</i> (<i>Couscous</i>) (France; director, Abdellatif Kechiche)
Best director	Abdellatif Kechiche (<i>La Graine et le mulet</i> [<i>Couscous</i>], France)
Best actress	Marion Cotillard (<i>La Môme</i> [<i>The Passionate Life of Edith Piaf; La Vie en rose</i>], France/U.K./Czech Republic)
Best actor	Mathieu Amalric (<i>Le Scaphandre et le papillon</i> [<i>The Diving Bell and the Butterfly</i>], France/U.S.)
Most promising actor	Laurent Stocker (<i>Ensemble, c'est tout</i> , France)
Most promising actress	Hafsi Herzi (<i>La Graine et le mulet</i> [<i>Couscous</i>], France)

Academy of Motion Picture Arts and Sciences (Oscars; U.S.), awarded in Los Angeles in February 2008

Best film	<i>No Country for Old Men</i> (U.S.; directors, Ethan Coen and Joel Coen)
Best director	Ethan Coen and Joel Coen (<i>No Country for Old Men</i> , U.S.)
Best actress	Marion Cotillard (<i>La Môme</i> [<i>The Passionate Life of Edith Piaf; La Vie en rose</i>], France/U.K./Czech Republic)
Best actor	Daniel Day-Lewis (<i>There Will Be Blood</i> , U.S.)
Best supporting actress	Tilda Swinton (<i>Michael Clayton</i> , U.S.)
Best supporting actor	Javier Bardem (<i>No Country for Old Men</i> , U.S.)
Best foreign-language film	<i>Die Fälscher</i> (<i>The Counterfeiter</i>) (Austria/Germany; director, Stefan Ruzowitzky)
Best animated film	<i>Ratatouille</i> (U.S.; director, Brad Bird)

Cannes Festival, France, awarded in May 2008

Palme d'Or	<i>Entre les murs</i> (<i>The Class</i>) (France; director, Laurent Cantet)
Grand Prix	<i>Gomorra</i> (<i>Gomorra</i>) (Italy; director, Matteo Garrone)
Jury Prize	<i>Il divo</i> (Italy/France; director, Paolo Sorrentino)
Best director	Nuri Bilge Ceylan (<i>Uc maymun</i> [<i>Three Monkeys</i>], France/Italy/Turkey)
Best actress	Sandra Corveloni (<i>Linha de passe</i> , Brazil)
Best actor	Benicio Del Toro (<i>Che</i> , France/Spain/U.S.)
Caméra d'Or	<i>Hunger</i> (U.K./Ireland; director, Steve McQueen)

INTERNATIONAL FILM AWARDS 2008 (continued)

Locarno International Film Festival, Switzerland, awarded in August 2008

Golden Leopard	<i>Parque vía</i> (Mexico; director, Enrique Rivero)
Special Jury Prize	<i>33 sceny z zycia</i> (<i>33 Scenes from Life</i>) (Germany/Poland; director, Malgorzata Szumowska)
Best actress	Ilaria Occhini (<i>Mar nero</i> , Italy/Romania/France)
Best actor	Tayanc Ayaydin (<i>Pazar: Bir ticaret masali</i> , Germany/Turkey/U.K./Kazakhstan)

Montreal World Film Festival, awarded in September 2008

Grand Prix of the Americas (best film)	<i>Okuribito</i> (<i>Departures</i>) (Japan; director, Yojiro Takita)
Best actress	Barbara Sukowa (<i>Die Entdeckung der Currywurst</i> [<i>The Invention of the Curried Sausage</i>], Germany)
Best actor	Erick Cañete (<i>El viaje de Teo</i> [<i>Teo's Voyage</i>], Mexico)
Best director	Goran Markovic (<i>Turneja</i> [<i>The Tour</i>], Serbia/Bosnia and Herzegovina)
Special Grand Prix of the Jury	<i>Ce qu'il faut pour vivre</i> (<i>The Necessities of Life</i>) (Canada; director, Benoît Pilon)
Best screenplay	<i>Bienvenido a Farewell-Gutmann</i> (<i>Welcome to Farewell-Gutmann</i>) (Spain; writers, Jesús G. Vilda and Xavi Puebla); <i>Dare mo mamotte kurenai</i> (<i>Nobody to Watch over Me; The Guardian</i>) (Japan; writer, Ryoichi Kimizuka)
International film critics award	<i>Turneja</i> (<i>The Tour</i>) (Serbia/Bosnia and Herzegovina; director, Goran Markovic)

Venice Film Festival, awarded in September 2008

Golden Lion	<i>The Wrestler</i> (U.S.; director, Darren Aronofsky)
Special Jury Prize	<i>Teza</i> (Ethiopia/Germany/France; director, Haile Gerima)
Volpi Cup, best actress	Dominique Blanc (<i>L'Autre</i> [<i>Occupation; The Other One</i>], France)
Volpi Cup, best actor	Silvio Orlando (<i>Il papà di Giovanna</i> [<i>Giovanna's Father</i>], Italy)
Silver Lion, best director	Aleksey German, Jr. (<i>Bumaznyj soldat</i> , Russia)
Marcello Mastroianni Award	Jennifer Lawrence (<i>The Burning Plain</i> , U.S.)
(best young actor or actress)	
Luigi De Laurentiis Award (best first film)	<i>Pranzo di ferragosto</i> (<i>Mid-August Lunch</i>) (Italy; director, Gianni Di Gregorio)

Toronto International Film Festival, awarded in September 2008

Best Canadian feature film	<i>Lost Song</i> (director, Rodrigue Jean)
Best Canadian first feature	<i>Le Jour avant le lendemain</i> (<i>Before Tomorrow</i>) (directors, Marie-Hélène Cousineau and Madeline Ivalu)
Best Canadian short film	<i>Block B</i> (director, Christopher Chan Fui Chong)
International film critics award	<i>Lymelife</i> (U.S.; director, Derick Martini); <i>Disgrace</i> (Australia/South Africa; director, Steve Jacobs)
People's Choice Award	<i>Slumdog Millionaire</i> (U.K./U.S.; director, Danny Boyle)

San Sebastián International Film Festival, Spain, awarded in September 2008

Best film	<i>Pandoranin kutusu</i> (<i>Pandora's Box</i>) (Turkey/France/Germany/Belgium; director, Yesim Ustaoglu)
Special Jury Prize	<i>Asbe du-pa</i> (<i>Two-Legged Horse</i>) (Iran; director, Samira Makhmalbaf)
Best director	Michael Winterbottom (<i>Genova</i> , U.K.)
Best actress	Melissa Leo (<i>Frozen River</i> , U.S.); Tsilla Chelton (<i>Pandoranin kutusu</i> [<i>Pandora's Box</i>], Turkey/France/Germany/Belgium)
Best actor	Oscar Martínez (<i>El nido vacío</i> [<i>Empty Nest</i>], Argentina/Spain/France/Italy)
Best cinematography	Hugo Colace (<i>El nido vacío</i> [<i>Empty Nest</i>], Argentina/Spain/France/Italy)
New directors prize	Cao Baoping (<i>Li mi de cai xiang</i> [<i>The Equation of Love and Death</i>], Hong Kong/China)
International film critics award	<i>Tiro en la cabeza</i> (Spain/France; director, Jaime Rosales)

Vancouver International Film Festival, awarded in October 2008

People's Choice Award (most popular Canadian film)	<i>Mothers&Daughters</i> (director, Carl Bessai)
People's Choice Award (most popular international film)	<i>Il y a longtemps que je t'aime</i> (France/Germany; director, Philippe Claudel)
National Film Board Best Canadian Documentary Award	<i>Fiercelight: When Spirit Meets Action</i> (director, Velcrow Ripper)
Citytv Western Canada Feature Film Award	<i>Fifty Dead Men Walking</i> (director, Kari Skogland)
Kyoto Planet "Climate for Change" Award	<i>Blue Gold: World Water Wars</i> (U.S.; director, Sam Bozzo)
Dragons and Tigers Award for Young Cinema	<i>Perfect Life</i> (China/Hong Kong; director, Emily Tang)

Chicago International Film Festival, awarded in October 2008

Gold Hugo (best film)	<i>Hunger</i> (U.K./Ireland; director, Steve McQueen)
Silver Hugo (Special Jury Prize)	<i>Tokyo sonata</i> (<i>Tokyo Sonata</i>) (Japan/Netherlands/Hong Kong; director, Kiyoshi Kurosawa)
Best documentary	<i>Valentino: The Last Emperor</i> (U.S.; director, Matt Tyrnauer)

European Film Awards, awarded in Berlin in December 2008

Best European film	<i>Gomorra</i> (<i>Gomorrah</i>) (Italy; director, Matteo Garrone)
Best actress	Kristin Scott Thomas (<i>Il y a longtemps que je t'aime</i> , France/Germany)
Best actor	Toni Servillo (<i>Il divo</i> , Italy/France, and <i>Gomorra</i> [<i>Gomorrah</i>], Italy)

(PATRICIA BAUER)

(continued from page 285)

The Red Baron), a biography of the World War I pilot Baron Manfred von Richthofen, looked good but suffered from a poor script. Dennis Gansel's *Die Welle* tracked the dangerous progress of a school course in fascist politics. In the thriller *Jerichow*, director Christian Petzold displayed his usual knack for tense psychological drama.

Two Spanish films treated Basque terrorism. Manuel Guitérrez Aragón's *Todos estamos invitados* painted a flawed but lively portrait of a society accustomed to violence; Jaime Rosales's more forbidding *Tiro en la cabeza* used formal experimentation to investigate politics in the abstract.

Among Scandinavian countries, Denmark scored with *Flammen & citronen* (*Flame & Citron*), Ole Christian Madsen's subtle treatment of life and intrigue during the Nazi occupation. The country's immigrant communities came under the spotlight in Omar Shargawi's intense thriller *Gå med fred Jamil* (*Go with Peace Jamil*) and Natasha Arthy's high-quality teenage drama *Fighter*, which featured a Turkish immigrant family and the martial art kung fu. Painstaking visual craftsmanship stamped the Swedish film *Maria Larssons eviga ögonblick* (*Everlasting Moments*), Jan Troell's true story of a dedicated family woman who gradually discovers her gift for photography. Lacerating relationships dominated *Himlens hjärta*, Simon Staho's raw drama about two couples led toward danger by a dinner-party discussion about adultery. In *O'Horten*, the slight story of a train engineer at a loss in retirement, Norwegian director Bent Hamer offered another of his offbeat humanistic comedies.

Eastern Europe. Turkey's cinema industry had a bustling year. Nuri Bilge Ceylan's family drama *Uc maymun* (*Three Monkeys*) offered little relief from the clouds of doom hovering over the characters, but the director's grip was impressive; the film won the Cannes Festival's best director prize. *Tatil kitabı* (*Summer Book*), from a new director, Seyfi Teoman, was a far friendlier film, deftly illuminating ordinary lives through its story of a family in the agricultural provinces. Another impressive talent emerged in Ozcan Alper's *Sonbahar* (*Autumn*), a searching drama about a political prisoner's return home. Veteran actress Tsilla Chelton lent backbone and humour to *Pandoranın kutusu* (*Pandora's Box*), Yesim Ustaoglu's film about a country matriarch with Alzheimer disease.

Serbia's biggest domestic hit was Uros Stojanovic's *Carlston za Ognjenku* (*Tears for Sale*), an engaging black comedy about two sisters from a war-devastated mountain village who are desperate to find a virile male. Gritty realism dominated the Russian *Vse umrut, a ya ostanus* (*Everybody Dies but Me*), Valeriya Gay Germanika's urgent portrait of troubled adolescents in the Moscow suburbs. In Kazakhstan documentary maker Sergey Dvortsevov made a striking feature debut with *Tulpan*, a Cannes prizewinner that explored the lives of nomadic shepherds with a potent blend of landscape, humour, and ethnographic detail.

Little of note emerged from Hungary, though Bela Paczolay's *Kalandorok* ("Adventurers") sent three family members on a road trip with speed and a twist of personality. In the Czech Republic, Petr Zelenka's sophisticated *Karamazovi* (*The Karamazov Brothers*) viewed Dostoevsky's novel through various fancy mirrors, including scenes from a powerful stage production. The biggest hit in the Slovak language was *Muzika* ("Music") by Juraj Nvota, a sad-funny sex comedy set in the 1970s. Slovakia's (and the Czech Republic's) most commercially successful film was *Báthory* (Juraj Jakubisko), an unwieldy but colourful English-language co-production, featuring Anna Friel as the legendary Hungarian countess.

In Poland veteran director Andrzej Wajda returned after a five-year gap with *Katyn* (2007), a muted account of the Soviet massacre in 1940 of Polish army officers, intellectuals, and prisoners of war. More satisfying was *Cztery noce z Anna* (*Four Nights with Anna*), Jerzy Skolimowski's first work in 17 years; this small-scale film was nourished by the director's feeling for obsessive love and the oddities of human behaviour. Malgorzata Szumowska's German co-production *33 sceny z zycia* (*33 Scenes from Life*) peered into its heroine's troubled life with sometimes uncomfortable dedication.

Latin America. No Latin American product enjoyed a grander showcase than Brazilian director Fernando Meirelles's English-language production *Blindness*, which opened the Cannes Festival. A plainer visual style might have drawn audiences closer to the characters from José Saramago's novel, who are trapped in a degrading world and collectively going blind. Walter Salles and Daniela Thomas found an audience with *Linha de passe*, a slight but humane film about four

brothers in São Paulo trying to make their way honestly. In *Os desafinados* Walter Lima, Jr., a veteran of Brazil's Cinema Novo movement, delivered an affectionate if messy tribute to the bossa nova music boom. No affection warmed José Padilha's *Tropa de elite*, a high-pressured and violent celebration of Brazil's military police. The film won the Berlin festival's top prize, the Golden Bear.

In Mexico Enrique Rivero made a notable directing debut with *Parque vía*, a low-key drama about a caretaker's fragile solitary life. Francisco Franco, from the theatre, was revealed as another director to watch with his sharply etched *Quemar las naves*, excellent in its depiction of a bourgeois family under pressure. In further signs of the region's health, impressive new directors also surfaced in Costa Rica (Ishtar Yasin Gutiérrez, with *El camino*), Uruguay (Federico Veiroj, with *Aené*, a vivid portrait of adolescent pangs), and Chile, where José Luis Torres Leiva displayed a master's hand in *El cielo, la tierra, y la lluvia*, a bracing mood piece about isolated lives.

In Argentina cult director Lisandro Alonso moved closer to mainstream tastes with *Liverpool*, a subtly textured drama about a returning sailor haunted by his past. Prison claustrophobia was vividly depicted in Pablo Trapero's *Leonera* (*Lion's Den*), and the film was further strengthened by Martina Gusman's performance as a university student fated to give birth in prison. Elegant reflections and regret dominated *La ventana* (*The Window*), Carlos Sorin's marvelously atmospheric film about an aged aristocrat who is waiting for the return of a long-lost son.

Middle East. No film from the region tested audiences' resolve more than *Asbe du-pa* (*Two-Legged Horse*), from the young Iranian director Samira Makhmalbaf. Through stark images the film showed an Afghan youth hired to carry about on his back a crippled boy who is bent on humiliating him. Dramas featuring social issues, an Iranian specialty, included *3 zan* (*3 Women*), Manijeh Hekmat's naturalistic study of women searching for their roots and identities, and Majid Majidi's *Avaze gonjeshk-ha* ("The Song of Sparrows"), an imperfect but humane story that pits rural verities against Tehran's modern whirlwind. Shot with great care, Panahbarkhoda Rezaee's *Cheraghi dar meh* ("A Light in the Fog") placed the hard life of a widow under a micro-

Sony Pictures Classics/Everett Collection

Ari Folman's animated film *Vals im Bashir* (*Waltz with Bashir*), related a soldier's experiences during Israel's invasion of Lebanon in 1982.

scope. Cult director Abbas Kiarostami experimented in *Shirin*, which consists of the reactions on 113 female faces—112 Iranian actresses, plus Juliette Binoche—to a 12th-century Persian play performed offscreen. The film was for connoisseurs only.

Israel generated the extraordinary and powerful animated film *Vals im Bashir* (*Waltz with Bashir*), Ari Folman's often hallucinatory recollection of his experiences as a soldier during Israel's invasion of Lebanon in 1982. In *Etz Limon* (*Lemon Tree*), Eran Riklis, director of the 1991 hit *Gmar Gavi'a* ("Cup Final"), renewed his ability to make intelligent entertainment out of the Israeli-Palestinian border conflict. Guy Nattiv and Erez Tadmor also scored well with *Zarim* (*Strangers*), a roving tale of star-crossed love.

India. Commerce rather than art continued to dominate India's teeming film industry. Among Hindi costume spectacles, Ashutosh Gowariker's *Jodhaa Akbar* led the field in star power, with Hrithik Roshan and Aishwarya Rai Bachchan top-billed as a 16th-century Muslim emperor and a Hindu princess who are engaged in a legendary romance. For once, character portrayals mattered more than big battles. Veteran director Shyam Benegal also put characters first in *Mahadev ka Sajjanpur* (*Welcome to Sajjanpur*), a warmly textured kaleidoscope of life in a central Indian village. The year also brought *Roadside Romeo*, directed by Jugal Hansraj—the first installment of a proposed series of Indian animated features co-produced with Walt Disney Pictures. The film, about the street adventures of a spoiled Mumbai dog, broke no boundaries, but children left satisfied.

East and Southeast Asia. Costing \$80 million, John Woo's Chinese production *Chi bi* (*Red Cliff*) entered the record books as the most expensive film made to date in the Chinese language. The first segment of a two-part historical epic set during the unstable ancient period of the Three Kingdoms, it balanced tough action scenes with convincing characters, a trick also managed by Peter Chan's *Tau ming chong* (*The Warlords*). Director Gao Qunshu showed a bright talent for realism in his thoughtful thriller *Qian jun yi fa* ("Old Fish"); Cao Baoping revealed promise with *Li mi de cai xiang* (*The Equation of Love and Death*), a teasing diversion that intertwines a drug crime with three strangers seeking love.

South Korea maintained its furious

level of production. Director Kim Ji Woon outdid himself with a strenuous spaghetti western imitation, *Joheun-nom nabbeun-nom isanghannom* (*The Good, the Bad, and the Weird*). Na Hong Jin's *Chugyeogja* (*The Chaser*) supplied serial-killer thrills wrapped up in social criticism. Fans of subtler fare could enjoy Hong Sang Soo's *Bam gua nat* ("Night and Day"), a surreal-tinged disquisition on self-delusion and the play between the sexes.

Japan's art cinema jewel was Hirokazu Koreeda's *Aruitemo aruitemo* (*Even if You Walk and Walk*), a deceptively modest slice of life, alert to every criss-crossing dynamic inside a dysfunctional family. Cheerful and cheeky, Koji Hagiuda's *Kodomo no kodomo* ("Child by Children") spun a tale about a pregnant 11-year-old girl without giving in to sensationalism.

Africa. South Africa delivered three notable films. Ralph Ziman's *Jerusalem* used glossy packaging and directorial force to make something distinctive from a stereotyped underworld story. The strengths of Anthony Fabian's *Skin*, a co-production between South Africa and the United Kingdom, lay in the straightforward treatment of its true story about a girl with black skin who was born to white parents. Steve Jacobs's *Disgrace*, co-produced with Australia, carved sturdy drama from J.M. Coetzee's novel; the film featured John Malkovich as a dissolute Cape Town academic who confronts the upheavals of South Africa and of his own soul. (GEOFF BROWN)

Documentary Films. Several major documentaries of 2008 addressed topics related to the war in Iraq. Alex Gibney's

Academy Award-winning *Taxi to the Dark Side* used a young Afghan's story to examine controversial techniques used to elicit confessions from prisoners. Errol Morris directed *Standard Operating Procedure*, which looked into the prisoner-abuse scandal of 2004 at Abu Ghraib prison in Iraq; the film received the Jury Grand Prize at the 2008 Berlin Film Festival.

Trouble the Water, directed by Tia Lessin and Carl Deal, won the Grand Jury Prize: Documentary at the 2008 Sundance Film Festival, among other awards. The film explored the aftermath of Hurricane Katrina. *Flow: For Love of Water*, directed by Irena Salina, examined the world's water crisis. Yung Chang's *Up the Yangtze* (2007) chronicled the effects on the populace of the massive Three Gorges Dam project. The film received the Golden Gate Award at the San Francisco International Film Festival.

The subject of *Nerdcore Rising*, by Iranian American comedian Negin Farsad, was a form of hip-hop whose lyrics centered on nerd culture. The film was screened at events across the United States.

British filmmaker James Marsh directed *Man on Wire*, a chronicle of tightrope walker Philippe Petit's infamous journey in 1974 between the two towers of the World Trade Center in New York City. The work won the Jury Prize for World Cinema and the World Cinema Audience Award at the Sundance Film Festival, where the Documentary Directing Award was received by Nanette Burstein for *American Teen*, a film about high-school seniors in Warsaw, Ind. (BEN LEVIN)

Physical Sciences

Scientists discovered a new family of **SUPERCONDUCTING** materials and obtained unique images of individual **HYDROGEN ATOMS** and of a **MULTIPLE-EXOPLANET SYSTEM**. Europe completed the **LARGE HADRON COLLIDER**, and China and India took new steps in **SPACE EXPLORATION**.

CHEMISTRY

Solid-State Chemistry. The discovery in early 2008 of superconductivity in a rare-earth iron-arsenide compound (an iron pnictide) touched off a wave of intense research that quickly produced a large new chemical family of superconductors based on iron. More than 20 years had passed since researchers last discovered a new collection of chemically related superconducting materials—the ceramic copper-oxide superconductors.

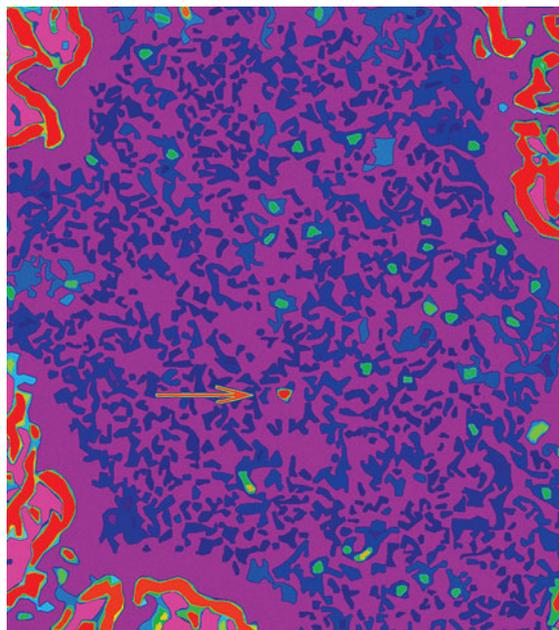

A superconductor loses all electrical resistance when cooled below a characteristic temperature called its critical temperature (T_c). Most superconductors, such as those used in the powerful electromagnets of magnetic-resonance devices, have a T_c close to absolute zero (0 K, -273.15°C , or -459.67°F). The identification of a new family of superconductors reawakened researchers' long-standing hope of finding materials with a critical temperature of room temperature (about 300 K) or above, which would open the door to many applications. (Among copper-oxide superconductors, the highest T_c that had been obtained was 138 K.)

Hideo Hosono and co-workers at the Tokyo Institute of Technology in February created the first-known iron-arsenide superconductor, lanthanum iron arsenide (LaOFeAs) doped with fluoride ions. The material, created through a combination of high-temperature and high-pressure methods, contained alternating layers of iron arsenide and lanthanum oxides and became superconducting at 26 K. Other

laboratories soon began experimenting with similar compounds that used other rare-earth elements in place of lanthanum, and by late April researchers at laboratories in China had reported raising the T_c to 43 K by using samarium and to 52 K by using praseodymium. By late in the year, the highest T_c that had been established for the iron-arsenide family of superconductors was 56 K. It was reported by scientists at Zhejiang University, Hangzhou, China, in a material that contained gadolinium and thorium ($\text{Gd}_{0.8}\text{Th}_{0.2}\text{FeAsO}$).

Physical Chemistry. Individual heavy atoms—and single molecules made from those atoms—could be routinely

This transmission-electron-microscope image, coloured to add contrast, shows individual hydrogen atoms (green) and an individual carbon atom (red, with arrow).

Courtesy Zettl Research Group, Lawrence Berkeley National Laboratory and University of California at Berkeley

examined in exquisite detail by means of a transmission electron microscope (TEM). The imaging of lower-mass atoms such as carbon by TEM continued to present a challenge, however, because they yielded extremely weak signals that were difficult to distinguish from instrument noise. For this reason the TEM imaging of atoms of hydrogen, the lightest element, had long been considered to be all but impossible. Nevertheless, in 2008 Alex Zettl and co-workers at the University of California, Berkeley, reported a technique for producing such images. They succeeded in part by developing methods for supporting hydrogen atoms on pristine films of graphene—one-atom-thick sheets of carbon—that were transparent under the team's imaging conditions. The researchers also utilized data-averaging techniques to boost their ability to extract high-resolution spatial data from directly imaged individual hydrogen and carbon atoms as well as carbon chains adsorbed on graphene.

The capabilities of TEMs were also broadened through the development of methods for capturing images and videos of single organic molecules in

motion. The strategy used by Eichi Nakamura and co-workers at the University of Tokyo was to trap molecules either inside or on the exterior of carbon nanotubes. For example, the group recorded rotational and bond-flexing changes in single molecules of aminopyrene derivatives that were fixed inside a nanotube. They also imaged a biotinylated triamide as it underwent a variety of shape-altering conformational changes while attached to a nanotube exterior. These studies captured the evolution of organic molecules in real time and might lead to new ways of directly observing reaction dynamics of complex molecules.

Organic Chemistry. Unexpected details of a classic reaction mechanism in organic chemistry were revealed by Roland Wester at the University of Freiburg, Ger., and colleagues. By using high-vacuum techniques to react beams of methyl iodide molecules and chloride ions, the team recorded direct evidence of a

reaction mechanism called bimolecular nucleophilic substitution (S_N2), but they found that the reaction did not always proceed in the way that had been taught for decades in introductory organic-chemistry courses.

According to the classic mechanism that depicted the interplay between reactants in this ubiquitous type of substitution reaction, the chloride ions should approach methyl iodide from the opposite side of the molecule's carbon-iodine bond. The "attacking" ion would cause the molecule to invert its tripod-shaped methyl radical (CH_3) and eject an iodide ion along the original carbon-iodine axis. The team found direct evidence of that mechanism when they collided molecular beams at low energy. In higher-energy collisions, however, they found that chloride slammed into the methyl iodide and imparted rotational energy that caused the molecule to tumble. After one rotation the chloride then displaced the iodide ion to complete the reaction.

Applied Chemistry. Solid catalysts lay at the heart of most of the chemical industry's production processes. Many of the factors critical to catalyst performance remained poorly understood, however, because of the difficulties in scrutinizing the inside of a working chemical reactor. For example, little was known about the way catalysts changed chemically and physically during the course of a reaction and the locations where reactions took place.

To learn about the way in which reactant gases flowed across a bed of powdered catalyst and where products were formed within the bed, Alexander Pines of the University of California, Berkeley, and co-workers developed a nuclear magnetic resonance (NMR) imaging method that enabled them to "see" inside a reactor. By reacting *para*-hydrogen (hydrogen molecules in which the two nuclei have opposite spin) with propylene in a microreactor, the team was able to monitor the highly enhanced NMR signals of the labeled propane-product molecules and thereby map their distribution throughout the reactor.

Another approach, used by a research team led by Bert M. Weckhuysen and Frank M.F. de Groot of the University of Utrecht, Neth., was based on scanning transmission X-ray spectroscopy. They showed that the X-ray method was well suited to probing the changing nature of solid catalysts during reaction. Demonstrating the method's strengths, the group mapped—with about 15-nm

(nanometre; $1 \text{ nm} = 10^{-9} \text{ m}$) spatial resolution—the locations of chemical species that formed on the surface of an iron catalyst while the solid was mediating Fischer-Tropsch synthesis. That carbon-coupling process was used commercially for making liquid (transportation) fuels from carbon sources such as natural gas and coal. A key feature of the customized microreactor used in the study was the device's ability to tolerate reaction conditions (atmospheric pressure and temperatures up to $350 \text{ }^\circ\text{C}$ [$662 \text{ }^\circ\text{F}$]) that were typical of industrial processes. The team found that as the reaction proceeded, the initial form of the catalyst, alpha ferric oxide ($\alpha\text{-Fe}_2\text{O}_3$), changed to metallic iron and ferrosferric oxide (Fe_3O_4). They also observed formation of an iron silicate (Fe_2SiO_4), a buildup of hydrocarbon products, and formation of other chemical species. This type of information could be used to design more effective and longer-lasting catalysts and more efficient chemical reactors. Further improvements to the system's X-ray optics were expected to increase the method's spatial resolution, with the goal of obtaining atomic-scale information.

Biochemistry. Changes in glycan (polysaccharide) structures in cell membranes accompanied the progression of disease and other key physiological cellular processes. As a result, glycans were attractive targets for biochemical imaging. Carolyn R. Bertozzi and co-workers at the University of California, Berkeley, described a method that made it possible to image carbohydrates as they were produced on the cell surfaces of living organisms. The researchers introduced an azide-tagged sugar (azide-derivatized *N*-acetylgalactosamine) into developing zebra-fish embryos in order to label their cell-surface glycans with azides. The group treated the embryos with a difluorinated cyclooctyne reagent to cause the labeled glycans to fluoresce. Then, by using a fluorescence microscopy method, the group imaged an increase in glycan biosynthesis in the jaw region, pectoral fins, and other organs of the living embryos. The researchers proposed that the technique could be generalized to other types of biomolecules.

Industrial Chemistry. DEET (*N,N*-diethyl-meta-toluamide) had been widely used around the world for decades as a potent repellent of blood-feeding insects. As the active component in commercial mosquito repellents, the compound had a reputation for effectively warding off mosquitoes and other an-

noying and disease-carrying pests. The molecular basis of DEET's effects, however, had not been clear. In experiments conducted with fruit flies and the mosquito that transmits malaria, Leslie B. Vosshall and co-workers at Rockefeller University, New York City, found that DEET blocked the electrophysiological responses of the insects' olfactory sensory neurons to attractive odour compounds, including lactic acid, a component of human sweat. Specifically, the repellent impeded the insects' ability to sniff out humans by inhibiting olfactory receptors that formed a complex with a coreceptor called OR83b. Knowing the way DEET worked and its molecular target, scientists could begin to use high-throughput screening methods to search for new insect repellents that would be even more effective and safer than DEET.

(MITCH JACOBY)

PHYSICS

Particle Physics. In 2008 the European Organization for Nuclear Research (CERN) near Geneva completed the construction of and inaugurated its new particle accelerator, the Large Hadron Collider, but full-scale operation was postponed until past the end of the year. (See Sidebar.) Meanwhile, experiments at two other research facilities produced surprising results.

Physicists at the Belle Collaboration, which was based at the High Energy Accelerator Research Organization (KEK) in Tsukuba, Japan, reported an unexpected asymmetry in the decay rates of exotic particles known as B mesons. The discovery suggested a possible solution to a major problem in particle physics: only tiny amounts of antimatter existed in the universe, but according to theoretical models, equal amounts of matter and antimatter would have been produced at the beginning of the universe in the big bang.

Yuri M. Litvinov and co-workers at Germany's Society for Heavy Ion Research in Darmstadt observed periodic oscillations in what should have been simple exponential decay curves of two radioactive isotopes (praesodymium-140 and promethium-142). The researchers concluded that this was caused by the oscillation between two different types of neutrinos emitted in the decay. Such oscillations had previously been observed only in solar neutrinos with experiments that had required the use of huge underground detection systems. If the findings were

The Large Hadron Collider—The World's Most Powerful Particle Accelerator

On Sept. 10, 2008, scientists of the European Organization for Nuclear Research (CERN), Geneva, ran the first test operation of what had been described as the largest machine and the most ambitious scientific experiment ever built—the Large Hadron Collider (LHC). For the test the scientists successfully guided beams of subatomic particles around a ringlike structure that was about 27 km (17 mi) in circumference and formed the heart of the collider. The structure was located in an underground circular tunnel that CERN had originally built for an earlier particle accelerator called the Large Electron-Positron Collider (1989–2000). The tunnel lay beneath the French-Swiss border near Geneva at a depth of 50–175 m (165–575 ft).

The LHC was designed to send two beams of hadrons (protons and other particles that are composed of quarks) in opposite directions around the ringlike structure. Initially, protons (hydrogen nuclei) would be used, but later experiments were planned with heavy ions such as lead nuclei, which consist of protons and neutrons. Within the LHC the particles traveled in channels evacuated to a higher vacuum than that of deep space and cooled to within two degrees of absolute zero. During full-scale operation, the particles would be accelerated to speeds within one-millionth of a percent of the speed of light. At four points in the tunnel, the paths of the particles intersected so that some of the particles would crash into each other and produce large numbers of new particles. Huge magnets weighing tens of thousands of tons and banks of detectors would collect and record the particles produced at each collision point. Under maximum power, collisions between protons would take place at a combined energy of up to 14 trillion electron volts—about seven times greater than had been achieved previously by any other particle accelerator.

The LHC project took a quarter of a century to realize. Planning began in 1984, and in 1994 CERN's governing body gave the final go-ahead for the project. Many thousands of scientists and engineers from dozens of countries were involved in designing, plan-

ning, and building the LHC, and the cost of its construction was more than \$5 billion. The first full-scale operation of the LHC had been scheduled for late 2008 but was postponed in order to investigate and repair a leak that developed in the collider's helium cooling system because of an electrical malfunction.

One goal of the LHC project was to understand the fundamental structure of matter by re-creating the extreme conditions that, according to the big bang theory, occurred in the first few moments of the universe. (The high energy involved had led some critics to contend that the LHC might create a small black hole that could destroy the Earth, but safety reviews by scientists refuted such concerns and concluded that the collider would not produce anything that had not already been produced by high-energy cosmic-ray collisions in the atmosphere.) For decades physicists had used the so-called standard model to describe the fundamental particles that make up matter. The model had worked well but had weaknesses. First, and most important, it did not explain why some particles have mass. In the 1960s British physicist Peter Higgs postulated a type of particle that interacts with other particles to provide their mass. Higgs particles had never been observed, but it was expected that they could be produced in the very high energy collisions of the LHC. Second, the standard model required some arbitrary assumptions, which some physicists had suggested might be resolved by postulating a new class of supersymmetric particles—these particles might also be produced by the collisions in the LHC. Finally, examination of asymmetries between particles and their antiparticles might provide a clue to another mystery: the imbalance between matter and antimatter in the universe.

As with all groundbreaking experiments, the most exciting results might be unexpected ones. In British physicist Stephen Hawking's view, "It will be much more exciting if we don't find the Higgs. That will show that something is wrong and we need to think again."

(DAVID G.C. JONES)

confirmed, it might be possible to examine the properties of neutrinos through the decay characteristics of heavy ions and would therefore be relatively easy to investigate.

Quantum Information Storage and Retrieval. Many research groups were studying structures called quantum dots, which might form the next generation of computers. Quantum dots could be made either from tiny groups of atoms (usually of semiconductor materials) that acted together as a single atom or from Bose-Einstein condensates (BECs), tiny clouds of atoms that shared the same quantum state. Information was transmitted in such structures as qubits—bits of information carried by individual quanta.

A major problem in developing quantum computers was the retention and storage of information over a long pe-

riod of time. Brian D. Gerardot of Heriot-Watt University, Edinburgh, and colleagues demonstrated the storage of information via the two spin states of a valence hole in a semiconductor quantum dot that remained stable for about one millisecond. Using a different approach, Sylvain Bertina and co-workers at the National Centre for Scientific Research at Grenoble, France, used a molecular magnet that consisted of a vanadium V^{IV}_{15} molecule about one nanometre in diameter. The molecule contained magnetic ions whose coupled spins were able to form collective-spin qubits. The researchers suggested that such systems might have a stability of about 100 microseconds.

An amazing feature of quantum-dot systems was that they might be able to teleport information from one quantum dot to another instantaneously by

a phenomenon called quantum entanglement. Kwang Seong Choi and colleagues at the California Institute of Technology succeeded in storing two entangled photon states in separate atomic clouds and then retrieving the states after a short delay. Yu-Ao Chen and colleagues at the University of Heidelberg, Ger., went one step farther and demonstrated teleportation between photonic (light-based) and atomic qubits. The polarization state of a single photon was teleported over a distance of 7 m (23 ft) onto a remote atomic qubit that served as a quantum memory. The state was stored for up to eight microseconds. The researchers also produced a type of "quantum repeater" in which "entanglement swapping" with the storage and retrieval of light between two atomic ensembles was possible. This approach addressed

the degradation of signals over long distances, which was a major problem in working with quantum-dot systems.

Condensed-Matter Physics. Physicists had begun to use BECs to produce bright coherent matter waves, called atom lasers, which held great promise for precision measurements and for fundamental tests of quantum mechanics. In 2008 Nicholas P. Robins and colleagues at the Australian National University in Acton claimed to be the first to have generated a continuous atom-laser beam from a rubidium BEC cloud that was continuously supplied with new atoms pumped in from a physically separate cloud.

Thorsten Schumm and associates at the Vienna University of Technology constructed so-called atom chips—blocks of material with microscopic wire structures to manipulate ultracold gases—that were able to perform BEC operations such as splitting one condensate into two parts that could then be held in place.

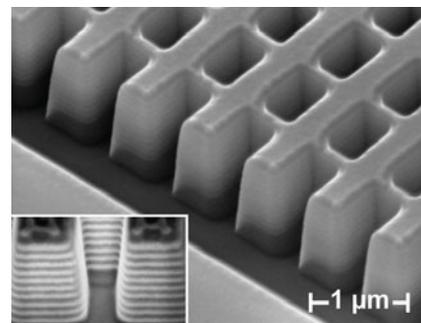

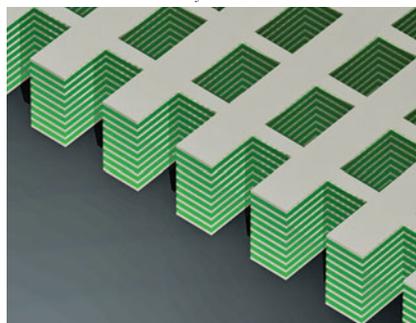

Superconductivity. Hideo Hosono and co-workers at the Tokyo Institute of Technology discovered an entirely new class of superconductor (a material that loses all electrical resistance when cooled below a characteristic temperature). The new material consisted of a layered iron-based compound and became superconducting at 26 K (−247 °C [−413 °F]). (See *Chemistry*, above.)

At the Argonne National Laboratory near Chicago, Valerii Vinokur and colleagues devised the inverse of a superconductor—a “superinsulator,” which had zero electrical conductance. They used a film of titanium nitride, which was usually superconducting. It became a super insulator, however, when cooled below a certain critical temperature in the presence of a magnetic field. The conductive state of the material depended on the strength of the applied magnetic field and the thickness of the sample.

Solid-State Physics. In a move toward realizable technological devices, Alberto Politi and co-workers at the Centre for Quantum Photonics, University of Bristol, Eng., produced high-fidelity silicon-silicon integrated optical realizations of key quantum-photonics circuits, including a two-photon quantum interference, a controlled-NOT gate, and a path-entangled state of two photons. These results showed that it was possible to form sophisticated photonic quantum circuits directly onto a silicon chip.

The schematic at left and inset at bottom of image at right show the layered structure of a three-dimensional fishnet metamaterial fabricated to have an optical property not known in nature—a negative refractive index. The scale bar in the scanning electron microscope image at right indicates one micrometre (0.00004 in).

tigated interfaces between crystals of organic molecules. Transfer of charge on a molecular scale produced a highly conducting metal-like interface, and the results could point to a new class of electronic material.

As integrated circuits with ever-smaller components were developed, there would come a time when quantum-physical phenomena would prevent further size reduction. K. Nishiguchi and colleagues of the NTT Corp., Kanagawa, Japan, demonstrated a method of potentially circumventing this limitation by using the quantum-mechanical tunneling of single electrons in a transistor to carry out pattern-matching operations.

Lasers and Optics. The search continued for laser systems that generated radiation at new wavelengths. Harumasa Yoshida and colleagues at Hamamatsu (Japan) Photonics K.K. reported an aluminum-gallium-nitride laser diode that emitted ultraviolet light at 342 nanometres, the shortest wavelength reported for an electrically driven laser diode. Ying Yang and co-workers at the University of St. Andrews, Scot., described a laser that used an inorganic light-emitting diode (LED) to activate a polymer (organic) lasing material. Such a device could provide a cheap and compact source of radiation across the visible spectrum.

In other laser systems, Jan Schäfer and colleagues at the University of Erlangen-Nürnberg (Ger.) observed multi-mode laser action in the red region of the spectrum from isolated spherical liquid microcavities that contained cadmium-selenide/zinc-sulfide nanocrystal quantum dots. S.I. Tsintzos and fellow workers at the University of Crete, Heraklion, Greece, produced a gallium-arsenide LED that involved quasiparticles

called polaritons (a hybrid of light and matter). They were produced by the strong coupling between photons and excitons (another type of quasiparticle, formed by an electron and a positive hole) in semiconductor microcavities. The unique properties of polaritons might provide the basis for a new generation of polariton emitters and semiconductor lasers.

In the field of general optics, physicists continued work on negative-index metamaterials—artificially engineered structures with negative refractive indexes. Jason Valentine and co-workers at the University of California, Berkeley, produced a three-dimensional metamaterial with low energy loss and a negative refractive index in the optical region of the spectrum. Such materials opened up a vast field for new optical devices, which might possibly include “invisibility cloaks.”

Fundamental Physics. Two research groups added to the knowledge of the reality underlying modern physics. A major feature of quantum mechanics was the property of entanglement, by which information appeared to be transported instantaneously between two quantum devices. In terms of classical physics, this would imply that the information traveled faster than the speed of light, which was explicitly disallowed by relativity theory. Daniel Salart and co-workers at the University of Geneva carried out an experiment to determine the lowest speed at which such a transfer of information, if it existed, would take place. Taking measurements of two-photon interference between detectors that were 18 km (11 mi) apart, the researchers concluded that any interaction would have to travel at a speed greater than 10,000 times the speed of light. A second

problem in modern physics was the apparent theoretical incompatibility of quantum mechanics with general relativity across very small distances. It had been suggested that this might be an indication that at such distances Newton's law of gravitational attraction broke down. Andrew Geraci and colleagues at Stanford University, however, showed that the law continued to hold down to a distance of 10 micrometres. (DAVID G.C. JONES)

ASTRONOMY

Solar System. A trio of spacecraft made a multitude of new discoveries about the planets Mercury, Mars, and Saturn in 2008. On January 14 and again on October 6, the NASA Messenger spacecraft flew within 200 km (125 mi) of the surface of Mercury, the solar system's innermost planet. This was the first mission to the planet since the Mariner 10 spacecraft made three flybys of Mercury in 1974–75. By the end of its October flyby, Messenger had photographed more than 90% of the planet, including most of the regions that had not been seen by Mariner 10. That mission had revealed that flat plains cover much of the planet, and a detailed analysis of the Messenger images showed that the plains were formed from lava flows rather than impact debris. Among new surface features that were detected was one, called "the spider," formed by more than 100 trenches that radiate outward from a central mass complex. Multicolour images of some of the craters on the planet suggested that they are no more than a few hundred million years old. Messenger data showed that Mercury's magnetic field is highly symmetrical, which supported the idea that the field is being generated by an active dynamo in a hot molten iron core. Messenger was to make another flyby of Mercury in 2009 before it settled into orbit around the planet in 2011.

NASA's Phoenix Mars Lander touched down on the surface of Mars on May 25. It was the first spacecraft to land on the northern polar regions of Mars. The main goal of the mission was for the lander to dig into the Martian surface and look for the presence of chemicals that could play a role in living organisms. Even before the analysis of the soil began, images of the Martian surface taken by cameras on the lander had revealed the presence of water ice. Analysis of scoops of Martian soil by the lander's miniature onboard labora-

tory—which included wet-chemistry labs and optical and atomic-force microscopes—revealed that the soil contained inorganic salts of chlorine, magnesium, sodium, and potassium. The soil was found to be slightly alkaline, with a pH of between 8 and 9. Although the lander was not designed to determine whether life had existed on Mars, its instruments could determine the presence or absence of organic molecules in the soil. The cold of the Martian winter brought an end to the mission in November. Also during the year observations by NASA's Mars Reconnaissance Orbiter revealed the presence of hydrated silica over large regions of the surface of Mars. These observations suggested that there had been liquid water on the surface of Mars as recently as two billion years ago.

The Cassini spacecraft in orbit around Saturn continued to report new discoveries about the large gaseous planet and its many satellites. Saturn's tiny moons Atlas and Pan, which lie just inside and outside Saturn's A ring, have the general appearance of fat pancakes. They, together with the moons Prometheus, Pandora, and Daphnis appear to have a very low density—between 0.38 and 0.45 g per cu cm, or less than one-half the density of water. The observations suggested that these moons accreted material from the nearby rings of Saturn. The Cassini spacecraft came within 500 km (310 mi) of Rhea, Saturn's second largest moon, in 2005, and it unexpectedly detected the presence of rocky debris in orbit around the moon. After scientific analysis the first reported discovery of rings around a moon of any planet in the solar system was announced in March 2008.

Stars. New discoveries of planets in orbit around stars other than the Sun continued to excite scientists. Since their initial detection in 1995, more than 300 extrasolar planets had been found, and they ranged in mass from about four Earth masses to about 20 times the mass of Jupiter. Thirty of the more than 200 stars known to have an extrasolar planet had been found to have more than one planet.

Although astronomers had found extrasolar planets mainly by indirect methods, such as by detecting tiny periodic motion in the stars they orbited, in 2008 two groups of astronomers succeeded in directly imaging extrasolar planets. Using a camera on the Hubble Space Telescope, a team of astronomers led by Paul Kalas of the University of California, Berkeley, took

visible-light photographs of a planet in orbit around Fomalhaut, a relatively nearby star. Designated as Fomalhaut b, the planet was calculated to have a mass more than three times the mass of Jupiter and to orbit the star at a distance 10 times the distance between the Sun and Saturn. Because the planet appeared brighter than would be expected for an object of its size, however, some astronomers suggested that the body

This Hubble Space Telescope colour-enhanced image shows the dust cloud around the star Fomalhaut. (The star, blocked out, is represented by the white dot at centre.) The inset at lower right is an enlargement of the small square area above it and combines images of a planetlike body (Fomalhaut b) taken in 2004 and 2006 as it moved in orbit around the star.

might be a clump of gas and dust in orbit around the planet. The second group of astronomers, led by Christian Marois of the Herzberg Institute of Astrophysics in Victoria, B.C., acquired infrared images for the first time of an extrasolar planet system with multiple planets. Using the Earth-based Gemini North and Keck telescopes in Hawaii, they found three planets orbiting star HR 8799, in the constellation Pegasus. Their respective distances from the star were about 25, 40, and 70 times that between the Earth and Sun.

A team of astronomers led by Michel Mayor of Geneva Observatory detected a planetary system around the star HD 40307 that resembles the solar system. The star is about 42 light years from Earth and has a mass of about eight-tenths that of the Sun. The star's three planets have masses of 4.2, 6.8, and 9.4 Earth masses and move in circular orbits around the star with periods of 4.3, 9.6, and 20.5 days, respectively. Since they are so close to the central star, they would have to be rocky objects like Mercury, Venus, and the Earth.

In March 2008 scientists announced the first discovery of an organic molecule in an extrasolar planet. Using the Hubble Space Telescope's Near Infrared Camera and Multi-Object Spectrometer, they detected methane in the atmosphere of a hot Jupiter-sized planet that orbits the star HD 189733b. Their observations also confirmed the existence

of water in the atmosphere of the planet, which had been reported in 2007 from observations made with NASA's Spitzer Space Telescope. Together, these discoveries continued to reinforce the idea that the conditions for life might well exist on planets around many neighbouring stars.

On Jan. 9, 2008, scientists for the first time witnessed the earliest stages of the death of a massive star. Astronomers Alicia Soderberg and Edo Berger of Princeton University were using NASA's Swift X-Ray Observatory to study the X-ray emission from supernova 2007uy, which had exploded 10 days earlier in the galaxy NGC 2770. By happenstance, they witnessed a burst of X-rays that lasted seven minutes. They realized that the burst was being produced by an exploding supernova in the outer reaches of NGC 2770. According to well-established theory, supernova explosions occur when a massive star (5–10 times the mass of the Sun) depletes its nuclear fuel. The star's core then collapses rapidly and releases as much as 50% of the rest-mass energy of the core in a matter of seconds. This leads to the formation of a shock wave that propagates through the outer layers of the star and produces a burst of X-rays. Subsequently, the stellar remnant expands and cools and produces an optical-light emission, which is ordinarily detected from supernovae days and weeks after the initial core col-

lapse. The new supernova, subsequently named SN 2008D, was the first ever observed during the X-ray-burst stage. Immediately following the report of the explosion, dozens of astronomical telescopes, including the Hubble Space Telescope, the Chandra X-ray Observatory, the 508-cm (200-in) telescope at Mt. Palomar (California), the Gemini North telescope, and the Very Large Array radio telescope (New Mexico), detected the supernova at radio and optical wavelengths. They confirmed that the observed phenomena represented the death of a massive star.

Galaxies and Cosmology. Some star deaths lead to another class of phenomena—gamma-ray bursts. Such bursts, which last from seconds to minutes, had been detected over the course of more than four decades. Many such bursts were thought to be produced in supernova explosions in which a part of the emitted energy is beamed into relativistic jets of particles and radiation. On March 19, 2008, NASA's Swift spacecraft alerted astronomers to the brightest gamma-ray burst observed to date. Named GRB080319B, the gamma-ray burst came from a galaxy 7.5 billion light years from the Milky Way Galaxy in the direction of the constellation of Boötes. For about a minute the object emitted as much radiation as 10 million galaxies. Such gamma-ray bursts are typically followed by an afterglow of visible light, and the brightness of the afterglow that followed this event reached about the fifth magnitude. Consequently, it was the most distant object ever recorded that was bright enough to be directly observable with the unaided eye.

In March scientists published a detailed analysis of the past five years of observations by NASA's Wilkinson Microwave Anisotropy Probe (WMAP), launched in 2001. According to the cosmological view supported by these observations, the universe began with a hot explosive event (the big bang), and as the universe expanded and cooled, it left behind radiation detectable at microwave wavelengths. The very small point-to-point fluctuations in the background radiation that remained amounted to only a few parts per million. The new analysis of the WMAP fluctuation data indicated that the universe is 13.73 billion years old with a precision of better than 1% and that the first stars formed only about 430 million years after the big bang. The data also implied that the universe is made up of only 4.5% ordinary matter (of the kind found in stars) and that the

rest of the universe appears to be made up of 23.4% dark matter and 72.1% dark energy. (KENNETH BRECHER)

SPACE EXPLORATION

Manned Spaceflight. A highlight of space exploration in 2008 was China’s third manned space mission, on September 25–28. The Shenzhou 7 spacecraft carried three taikonauts (astronauts) into Earth orbit, and while in orbit taikonaut Zhai Zhigang conducted a 25-minute space walk—the program’s first—to test a Chinese-built spacesuit. China said that a mission planned for 2010 would be the first step toward constructing a basic space station that would be composed of modules from two unmanned and one manned spacecraft.

The political turmoil triggered by Russia’s invasion of Georgia in August called into question the planned retirement of the U.S. space shuttle in 2010. The U.S. was to rely on Russian Soyuz space launches for manned spaceflight capability for several years between the final mission of the shuttle and the first mission of its replacement, Orion. Although many space shuttle contracts were already being closed, some U.S. officials started to examine the possibility of continuing support of the shuttle until Orion was ready in about 2014.

In 2008 the space shuttle completed four flights to the International Space Station (ISS). The first, STS-122, delivered the European Space Agency’s Columbus laboratory module. With a length of 7 m (23 ft) and diameter of 4.6 m (15 ft), it was larger than the American-built Destiny laboratory module, which was delivered to the ISS in 2001. Columbus could accommodate 10 laboratory racks for various types of gear for experiments. The third flight, STS-124, also delivered a new laboratory module—the Japanese Aerospace and Exploration Agency’s Kibo (Hope). Kibo was Japan’s first-ever component built for a manned space vehicle. About 11 m (36 ft) long, it barely fit inside the space shuttle’s payload bay. Kibo could also hold up to 10 experiment racks, and it was equipped with two robotic arms that would be used with an external platform—to be delivered in 2009—for conducting experiments in the vacuum of space. Between the Columbus and Kibo missions, the STS-123 flight delivered the Canadian-built robot known as Dextre. The robot was designed to be attached to Canadarm 2 (a previously installed external manipulator arm),

and it was to perform difficult tasks that would otherwise require a human to make a space walk. In addition, STS-123 carried a small Experiment Logistics Module that was stored on one of the station’s nodes and later mounted atop Kibo. The STS-126 flight delivered equipment that included additional sleeping quarters, a new bathroom, and a water-recovery system to increase the crew capacity of the ISS to six persons. Members of the crew performed four space walks, including one to repair the jammed solar-array rotary joint that had severely restricted the power available on the station since September 2007.

STS-125, the final shuttle mission for servicing the Hubble Space Telescope (HST), was to have been the fourth shuttle flight in 2008. A few days before its scheduled launch in October, however, a device to format data on the HST failed. Within a short time the HST was switched over to a backup

data formatter, but the mission was postponed until spring 2009 to allow NASA to ready a spare that would be carried aboard the flight.

The Soyuz TMA-12 mission took two new cosmonauts and a South Korean spaceflight participant to the ISS. The previous crew and the spaceflight participant returned on the Soyuz TMA-11 craft, which experienced a steep descent and rough landing about 400 km (250 mi) off target because the service module failed to separate from the descent module before their entry into the Earth’s atmosphere. The previous Soyuz landing had experienced a similar incident, and Russia conducted a rigorous examination of the explosive bolts used to separate the Soyuz modules for entry into the atmosphere. Engineers determined that an electrical grounding problem was causing one of the bolts to malfunction, and in July cosmonauts removed the suspect bolt from the TMA-12 Soyuz while it was

docked to the ISS. In October the Soyuz craft returned to Earth and landed normally.

The European Space Agency launched its Autonomous Transfer Vehicle (ATV), an automatically piloted supply ship for the ISS. The first unit, dubbed Jules Verne, was launched on March 9. It made two test approaches by using the Global Positioning System and a laser tracking system, and then it performed an automated docking on April 3. After supplies were loaded onto the ISS and replaced with ISS waste, Jules Verne was undocked and sent into the atmosphere, where it burned up. Another three ATV missions were planned, and Japan was to introduce a similar transfer vehicle in 2009.

Space Probes. India joined the ranks of countries that had sent a spacecraft to the Moon when its Chandrayaan-1, launched on October 22, reached the Moon on November 8. (*Chandrayaan* is Hindi for “moon craft.”) From an orbit only 100 km (60 mi) above the lunar surface, the spacecraft was to map the lunar terrain at high spectral and spatial resolution and with stereo images. A miniature synthetic aperture radar was designed to search for indications of any water hidden in the soil in the Moon’s north and south polar regions.

NASA’s Phoenix Mars Lander touched down in the north polar region of Mars on May 25. (Phoenix was constructed from a partially built spacecraft from the canceled Mars Surveyor 2001 program.) Its high-altitude landing site, on the plain Vastitas Borealis, permitted the lander’s solar arrays to receive continuous summer daylight for its planned 90-day mission. Using a robotic arm, the spacecraft uncovered traces of water ice, and its equipment for chemical analysis showed that the surface-soil chemistry was highly alkaline. Phoenix continued to operate until early November.

More than four years after having landed on Mars and fulfilled their planned 90-day mission, the Opportunity and Spirit rovers continued exploring the planet. After completing a 24-month exploration of Victoria crater, Opportunity headed toward a 22-km (13.7-mi)-wide crater about 12 km (7.5 mi) away on a two-year trip that was to be made with the aid of imagery from the Mars Reconnaissance Orbiter. Spirit,

NASA

This false-colour mosaic image of Saturn’s moon Enceladus from a 2008 Cassini flyby distinguishes areas thought to be boulders and coarse-grained ice (green) from those of finer-grained ice (white).

in Gusev crater, was parked for the Martian winter and survived a dust storm that coated its solar panels with dust.

In 2008 the Messenger probe flew past Mercury on January 14 and October 6, and it was to make one additional flyby on Sept. 29, 2009. Each encounter reshaped the U.S. probe’s solar orbit to target it for entry into Mercury orbit on March 18, 2011. Images obtained during the flybys revealed that Mercury’s craters were only half as deep, proportionally, as those of the Moon.

NASA’s New Horizons probe crossed the orbit of Saturn (though the planet was on the other side of the solar system) as it continued on its way to a flyby of Pluto in 2015. The Ulysses solar polar mission formally ended on June 30, a few months after having completed its third pass over the northern hemisphere of the Sun. Ulysses had studied the solar wind at higher solar latitudes than had previously been possible.

The Lunar Reconnaissance Orbiter was to be launched by NASA in early 2009 to scout potential landing sites for robotic and manned missions and for possible resources, including water. One instrument would measure the ambient radiation, data that were crucial for the safety of future crews. In an effort to determine the rate at which craters were being formed, cameras and other instruments would remap areas that had been studied during Proj-

ect Apollo. The orbiter would also release a small probe that would impact the Moon.

Unmanned Satellites. Several science satellites were launched during the year. NASA’s Gamma-ray Large Area Space Telescope, launched June 11, carried a large-area telescope for high-resolution studies of gamma-ray bursts. A burst monitor would immediately alert the spacecraft to any new gamma-ray bursts so that it could point the telescope at them within minutes and identify their source. On August 26, after completing a checkout of the onboard instruments, NASA renamed the spacecraft the Fermi Gamma Ray Space Telescope.

The Interstellar Boundary Explorer (IBEX) was carried into space on October 19 aboard an aircraft-launched Pegasus rocket. IBEX’s propulsion motor was then used to form a high-apogee orbit from which the satellite was to map where the solar wind formed a shock wave as it collided with the interstellar medium at the far reaches of the solar system.

Launch Vehicles. The Sea Launch Zenit launch vehicles returned to service in January 2008 following repairs to fix damage caused to its floating ocean launch platform by the explosion of a Zenit rocket about one year earlier. Development of the Ares launch vehicle, derived from the space shuttle solid-rocket booster, encountered problems with unexpected vibrations that could affect crew performance during the first-stage burn. A shock-absorbing system was to be added to alleviate the problem. The first unmanned Ares I-X test launch was scheduled for mid-2009.

Success finally came to the SpaceX venture of hotel magnate Elon Musk. SpaceX had experienced three failures of its Falcon 1 launch vehicle in as many tries—the latest on Aug. 2, 2008, when the first and second stages failed to separate. On September 28 a fourth Falcon 1 was launched from the Kwajalein Atoll in the central Pacific Ocean. Although the satellite it carried failed to separate from the second stage, the rocket launch was rated as a success. SpaceX was planning on providing unmanned and manned missions to the ISS in the period between the discontinuance of the space shuttle and the start of Orion operations. (DAVE DOOLING)

Religion

The world's religions were plagued in 2008 by **DIVISION AND STRIFE**—including clashes between **CHRISTIANS, HINDUS, AND MUSLIMS** in India and further moves toward the **REALIGNMENT** of the worldwide Anglican Communion—yet **ECUMENICAL EFFORTS** continued; and the **INFLUENCE OF RELIGION ON POLITICS** was demonstrated in France, Turkey, South Korea, and the United States.

ISSUES AND EVENTS

Religious Violence. In March Asma Jahangir, the UN special rapporteur on freedom of religion, warned that renewed communal violence was a possibility in India unless authorities took preventative action. She declared that “institutionalized impunity for those who exploit religion and impose their religious intolerance on others has made peaceful citizens, particularly the minorities, vulnerable and fearful.” Three months after her warning, the Indian government’s plans to transfer land adjoining a Hindu shrine in Kashmir, India’s only state with a Muslim majority, led to unrest that left five people dead and hundreds wounded. The government argued that the transfer of 40 ha (99 ac) of land to the Shri Amarnath Shrine Board was necessary to accommodate pilgrims to the Amarnath cave, one of the holiest shrines in Hinduism, but Muslim protesters said that the move was part of a conspiracy to settle Hindus in the valley and reduce Muslims to a minority. Authorities reversed the land transfer in late June, which in turn touched off Hindu protests and demonstrations by Muslim separatists who called for independence for Kashmir.

At least 35 people were killed in Orissa state, India, after the August 23 deaths of Swami Laxmanananda Saraswati, a Hindu leader, and four of his followers. The police declared that Maoist rebels had killed the swami, who had been trying to reconvert Christians to Hinduism, but many Hindu groups blamed the slayings on Christians. In subsequent weeks more than 4,000 Christian homes and 115

churches were destroyed in Orissa, and Hindus attacked Christians in the states of Karnataka, Tamil Nadu, Kerala, and Madhya Pradesh. In separate violence, an Islamic group called the Indian Mujahideen claimed responsibility for bomb blasts in Jaipur, Bangalore, Ahmedabad, and New Delhi in

Hindu holy men on July 12 protest the government's revocation of a previous land transfer to the Shri Amarnath Shrine in India's Muslim-majority state of Jammu and Kashmir. The original transfer had triggered demonstrations by Muslims who opposed expanding the Hindu shrine.

Channi Anand/AP

which more than 100 people were killed, saying that the violence was in revenge for attacks on Muslims.

A series of terrorist attacks in Mumbai (Bombay) in late November that killed more than 174 people was attributed to Lashkar-e-Taiba, a Pakistani-based Islamic terrorist organization. (See Special Report on page 192.) Six of the victims died at the Nariman House, where an outreach centre run by Chabad-Lubavitch, an ultra-Orthodox Jewish Hasidic movement, was located. Indian Muslim leaders refused to allow the bodies of the nine attackers killed in the assaults to be buried in Islamic cemeteries.

A spokesman for the Dalai Lama said that 80 people were killed when more than 500 Buddhist monks participated in independence demonstrations in March in Lhasa, capital of the Tibet Autonomous Region of China. The Buddhist leader accused Chinese officials of having promulgated a rule of terror and cultural genocide, but the government-controlled New China News Agency reported that police had exercised “great restraint” while mobs stoned, stabbed, and clubbed them.

Anglican Rifts. The worldwide Anglican Communion faced renewed pressures in 2008 that could lead to a major realignment within its 38 national churches, which comprise about 77 million members. (See Special Report on page 188.) In June more than 1,000 conservative Anglicans, including 291 bishops, met in Jerusalem for what they called the Global Anglican Future Conference (GAFCON). The delegates issued a statement saying that although they were not breaking away from the communion, they “do not accept that Anglican identity is determined necessarily through recognition by the Archbishop of Canterbury.” The GAFCON statement announced plans to form a new council of archbishops to oversee Anglicans who upheld traditional theological tenets and opposed moves to ordain homosexual clergy and bless same-sex unions. In response, Archbishop of Canterbury Rowan Williams countered that a self-appointed council “will not pass the test of legitimacy in the communion.”

In July more than 650 bishops attended the decennial Lambeth Conference and acknowledged that the issue

of homosexuality “has challenged us and our churches on what it might mean to be a communion.” The bishops added, “Confidence in the validity of the Anglican Communion, the bonds of affection and our mutual interdependence is severely damaged.” Archbishop Williams warned that the communion would “continue to be in grave peril” if its churches in the United States and Canada were to refuse to accept moratoriums on the consecration of gay bishops and same-sex unions.

Bishop Robert Duncan of Pittsburgh was deposed in September from ministry in the Episcopal Church by a vote of the House of Bishops, which declared that Duncan’s attempts to persuade his diocese to leave the church constituted abandonment of communion. (A similar action in 2007 by the diocese of San Joaquin, based in Fresno, Calif., had led to the deposition of its bishop, John-David Schofield, in January 2008.) In the fall the Pittsburgh diocese became the second to leave the Episcopal Church, aligning with the Anglican Province of the Southern Cone, and the dioceses of Quincy, Ill., and Fort Worth, Texas, also voted to leave. The Common Cause Partnership, a federation of more than 100,000 North American Anglicans, announced the formation of the Anglican Church in North America in December and appealed for its recognition as the 39th Anglican province. Meanwhile, American churches and dioceses that broke with the Episcopal Church were embroiled in litigation with the denomination over ownership of parish properties.

In early July the General Synod of the Church of England voted in London to approve a process by which women could be consecrated as bishops. The vote called for church officials to draw up a code of practice to govern the change, and further enabling legislation was to go before the synod in February 2009. Church officials said that the first female bishops would not be appointed before 2014. The July vote spurred threats of a walkout by conservatives who opposed such a move, and proponents of adding female bishops warned against a compromise that would permit some dioceses to keep an all-male episcopacy. In April a similar measure had failed to garner the required two-thirds majority of clergy in the Church of Wales, although consecration of women bishops had been endorsed by the House of Bishops and the House of Laity.

Orthodox Christian Conflicts. Russia’s conflicts with Ukraine and Georgia

tested relations between the Russian Orthodox Church and its counterparts in the other two countries during 2008. In July, during celebrations in Kiev of the 1,020th anniversary of the advent of Christianity in the Slavic kingdom that predated Ukraine and Russia, Ukrainian Pres. Viktor Yushchenko called on Orthodox Ecumenical Patriarch Bartholomew to bless the creation of an independent Ukrainian church. Bartholomew, the spiritual leader of the world’s 250 million Orthodox Christians, stopped short of taking sides but said that divisions in the church would have “problematic consequences for Ukraine’s future.”

In August, when fighting broke out between Russia and Georgia, Russian Orthodox Patriarch Aleksey II and Georgian Orthodox Patriarch Ilia II issued statements lamenting the warfare between Orthodox Christians. Aleksey conveyed letters of appeal from Ilia to Russian Pres. Dmitry Medvedev and Prime Minister Vladimir Putin. Aleksey died in December at the age of 79. (See OBITUARIES.)

American Controversies. Gay rights issues occupied the Presbyterian Church (USA) during 2008. In February the denomination’s high court, the General Assembly Permanent Judicial Commission, ruled that candidates for ordination must practice fidelity if married and chastity if single. The court said that the standard was mandatory but could be changed by amending the denomination’s constitution; moreover, presbyteries and congregations were not allowed to create their own standards for ordination, as some had done. In June delegates to the church’s General Assembly in San Jose, Calif., voted to reinterpret the constitutional provision regarding chastity, but the action awaited votes for approval by a majority of the 173 presbyteries.

In Washington, D.C., in April, Pope Benedict XVI held an unprecedented meeting with five victims of clergy sex abuse. In an address to American bishops, he said that the crisis was “sometimes very badly handled” and pledged that the church would pursue healing and reconciliation with those “so seriously wronged.” In late October the Vatican issued guidelines that recommended the use of psychological testing to help evaluate candidates for the priesthood and to screen out those with “psychopathic disturbances.”

found that church leaders had either spent millions of dollars on personal expenses or taken part in a cover-up of the diversion of the money. The report prompted the resignation of the church’s top leader, Metropolitan Herman, one of the leaders for whom the commission had recommended discipline. The church spokesman, the Rev. Andrew Jarmus, said that it had appointed a management team to provide more supervision and more effective checks and balances. In November Metropolitan Jonah, who had recently been named bishop of Fort Worth, was elected to succeed Metropolitan Herman as leader of the church.

Ecumenical Gestures. In March, King Abdullah of Saudi Arabia called for dialogue between representatives of all monotheistic religions. The appeal was the first of its kind by an Arab leader and was especially significant because of Saudi Arabia’s ban on non-Muslim worship services and imposition of the death penalty on Muslims who had converted to another religion. In *Les Versets douloureux*, a book published in June, a rabbi, an imam, and a Roman Catholic

Shear-Yashuv Cohen, the chief rabbi of Haifa, Israel, on October 6 became the first non-Christian to address an international synod of Roman Catholic bishops.

priest each explain passages from the holy book of his faith that others have found objectionable. In October at the Vatican, the grand rabbi of Haifa, Israel, Shear-Yashuv Cohen, became the first non-Christian to address an international synod of Catholic bishops. He said that the event was a signal of hope in the wake of “a long, hard, and painful history” between Catholics and Jews.

Pope Benedict marked the 50th anniversary of the death of Pope Pius XII by saying that his predecessor “often acted in a secret and silent way” to help Jews during the Holocaust because he sensed that by doing so he could save the greatest possible number. The Rev. Peter Gumpel, the official advocate for the canonization of Pius, said that Benedict was delaying the signing of a decree to recognize Pius’s “heroic virtue” because of interfaith disagreements on whether Pius had done enough to save Jews. Gumpel also said that Benedict would not visit Israel unless the Yad Vashem Holocaust museum removed a plaque suggesting that Pius had been indifferent to the survival of the Jews. Israeli Pres. Shimon Peres responded that a papal visit “should not be tied to controversy over Pius XII.”

The World Council of Churches (WCC), which encompassed more than 560 million Christians in 349 church bodies, in March urged its members to open a dialogue with Muslim scholars. The WCC noted that the two faiths have several major differences, including Christians’ difficulty appreciating Muhammad as a prophet and Muslims’ difficulty appreciating Jesus as God incarnate. Jean-Louis Cardinal Tauran,

head of the Pontifical Council of Inter-Religious Dialogue, said that his group did not focus on Islam during a meeting in June because “we are being held hostage by Islam a little bit.” He added, “Islam is very important, but there are also other great Asiatic religious traditions.” Despite those comments, the Vatican hosted a three-day forum of Catholic and Muslim scholars in November. The group called on Catholics and Muslims to renounce “oppression, aggressive violence and terrorism” and affirming the rights of religious minorities to their own places of worship. Anglican Archbishop Williams stirred controversy in January when he told the BBC that the introduction in Britain of some aspects of Islamic Shari’ah law seemed unavoidable. A spokesperson for Prime Minister Gordon Brown said in response that Shari’ah law could not be used in a civilian court, and Williams clarified that he was not talking about establishing parallel jurisdictions.

Church-State Relations. Critics accused French Pres. Nicolas Sarkozy of having violated the country’s tradition of church-state separation by making several positive references to religious faith, including his description of Islam as “one of the greatest and most beautiful civilizations the world has ever known” during a visit in January to Saudi Arabia. A month later he told the Representative Council of Jewish Institutions in France that the violence and wars of the 20th century were caused by an “absence of God.” In response to criticism by French secularists, Sarkozy, who had described himself as a lapsed Catholic, declared, “I never said that secular morality is inferior to religious morality.” In September, during a four-day visit to France, Pope Benedict met with the French president at the Elysée Palace and called for “a new reflection on the true meaning and importance of laïcité,” a term usually translated into English as secularism. In response, Sarkozy said that it was “legitimate for democracy and respectful of secularism to have a dialogue with religions.”

In June Turkey’s constitutional court overturned constitutional amendments passed by the parliament in February to permit the wearing of Islamic head scarves in universities, ruling that the amendments violated some articles of the constitution, including one describing the Turkish Republic as a secular state. (See Special Report on page 190.) In a related matter, leaders of the Turkish Religious Affairs Directorate denied that the country was attempting to re-

form Islamic teachings. Reports to that effect were based on a project at Ankara University’s divinity school to reinterpret the Hadith, a collection of the words and deeds of the Prophet Muhammad. Mehmet Gormez, deputy head of the Religious Affairs Directorate, said that the project “does not aim to change the theological fundamentals of the religion. It is a study aimed at interpreting and understanding these theological fundamentals.” Ali Baradkoglu, head of the directorate, said later, “We have continually noted that there can be no reform in Islam because there is no need for that.”

In August tens of thousands of Buddhists rallied in Seoul against what they described as South Korean Pres. Lee Myung-bak’s favouritism toward Christians in his government appointments. Lee, a Presbyterian, later expressed regret for any offense his government might have caused, and the government revised the code of conduct for public officials to instruct them to maintain religious neutrality when carrying out official duties.

Social Trends. A survey conducted by the Pew Research Center in Washington, D.C., found that the prevalence of

Pope Benedict XVI (right) welcomes Muslim and Roman Catholic scholars to a three-day ecumenical forum held at the Vatican in November.

L'Osservatore Romano, HO/AP

anti-Muslim and anti-Jewish sentiments was increasing in several European countries. Only the United Kingdom did not show a substantial increase in anti-Semitic attitudes; there only 9% of those surveyed rated Jews unfavourably. An international survey by Germany's Bertelsmann Foundation found that religious belief was strong among young people aged 18–29: 85% described themselves as religious believers, and 44% were defined as deeply religious because they often prayed and based their everyday behaviour on their beliefs. Martin Rieger, head of the Religion Monitor project, said, "The notion that religion continuously declines from generation to generation can be clearly disproved, even in some of the industrialized nations."

In the U.S. presidential election in November, support for President-elect Barack Obama among religious groups equaled or exceeded that for John Kerry, the 2004 Democratic nominee. The shift was particularly notable among Catholics, who supported Obama over Republican nominee John McCain by a nine-point margin (54% to 45%); in 2004 Catholics had favoured Republican incumbent George W. Bush over Kerry by a five-point margin (52% to 47%). Obama also increased the percentage of white evangelicals who voted Democratic, winning 26% of this vote, compared with Kerry's 21%. At the same time, among religious cate-

gories Obama's biggest percentage of support came from religiously unaffiliated voters. He won 75% of their votes, compared with 67% for Kerry.

In December the Vatican released a new document that addressed an array of bioethical questions. Among other issues, the document described the church's opposition to human cloning and embryonic stem cell research.

In the News. The Rev. Michael Heller received the Templeton Prize for Progress Toward Research or Discoveries About Spiritual Realities. (See BIOGRAPHIES.) Fernando Lugo (see BIOGRAPHIES) received a dispensation from the pope allowing him to step down as a bishop before he assumed office in August as president of Paraguay. The Rev. Orlando Antonini, the papal nuncio to Paraguay, said that it was the first instance in which a member of the Catholic hierarchy had been given papal permission to return to lay status. In April, Cable News Network founder Ted Turner, who once called Christianity a "religion for losers," apologized for his past criticisms of religion as he launched a \$200 million partnership with Lutheran and Methodist groups to fight malaria in Africa. Thomas S. Monson (see BIOGRAPHIES) became president of the Church of Jesus Christ of Latter-day Saints in February following the death of Gordon B. Hinckley at age 97. (See OBITUARIES.)

Other prominent religious figures who died in 2008 included Archbishop Christodoulos, head of the Greek Orthodox Church; Chiara Lubich, founder of the Catholic Focolare spiritual renewal movement; Avery Cardinal Dulles, a prominent scholar who had never served as a bishop before being appointed a cardinal; Maharishi Mahesh Yogi, the Transcendental Meditation leader; Warith Deen Mohammed, who moved thousands of black Americans into mainstream Islam after breaking with his father's Nation of Islam organization; Sir John Marks Templeton, founder of the Templeton Foundation and creator of the Templeton Prize; Alfonso Cardinal Lopez Trujillo, president of the Pontifical Council for the Family; Metropolitan Laurus, who worked to reconcile the Russian Orthodox Church with the Russian Orthodox Church Outside Russia; and the Rev. Marcial Maciel Degollado, founder of the Catholic Legionaries of Christ congregation, who was disciplined by the Vatican for alleged sexual abuse. (See OBITUARIES.)

Among the other losses were Bible scholar David Noel Freedman, who oversaw the Anchor Bible Series; Thich Huyen Quang, supreme patriarch of the Unified Buddhist Church of Vietnam; and Taktser Rinpoche, eldest brother of the Dalai Lama and himself revered as a reincarnate lama.

(DARRELL J. TURNER)

ANALYZING THE MEGACENSUS OF RELIGIONS, 1900–2008

Each year since 1750, churches and religions around the world have generated increasing volumes of new statistical data. Much of this information is uncovered in decennial governmental censuses; half the countries of the world

have long asked their populations to state their religions if any, and they still do today. The other major source of data each year consists of the decentralized censuses undertaken by many religious headquarters. Each year al-

most all Christian denominations ask and answer statistical questions on major religious subjects. A third annual source is the total of 27,000 new books each on the religious situation in a single country, as well as some 9,000

Worldwide Adherents of All Religions by Six Continental Areas, Mid-2008

	Africa	Asia	Europe	Latin America	Northern America	Oceania	World	%	Change Rate (%)	Number of Countries
Christians	465,880,000	364,106,000	583,802,000	536,162,000	277,089,000	27,496,000	2,254,535,000	33.4	1.23	240

Continents. These follow current UN demographic terminology, which now divides the world into the six major areas shown above. See United Nations, *World Population Prospects: The 2006 Revision* (New York: UN, 2007), with populations of all continents, regions, and countries covering the period 1950-2050, with 100 variables for every country each year. Note that "Asia" includes the former Soviet Central Asian states, and "Europe" includes all of Russia eastward to the Pacific.

Change Rate. This column documents the annual change in 2008 (calculated as an average annual change from 2005 to 2010) in worldwide religious and nonreligious adherents.

Countries. The last column enumerates sovereign and nonsovereign countries in which each religion or religious grouping has a numerically significant and organized following.

Adherents. As defined in the 1948 Universal Declaration of Human Rights, a person's religion is what he or she professes, confesses, or states that it is. Totals are enumerated for each of the world's 240 countries following the methodology of the *World Christian Encyclopedia*, 2nd ed. (2001), and *World Christian Trends* (2001), using recent censuses, polls, surveys, yearbooks, reports, Web sites, literature, and other data. See the World Christian Database (www.worldchristiandatabase.org) for more detail. Religions (including nonreligious and atheists) are ranked in order of worldwide size in mid-2008.

Christians. Followers of Jesus Christ, enumerated here under **Affiliated**, those affiliated with Christian churches (church members, with names written on church rolls, usually total number of baptized persons including children baptized, dedicated, or undedicated): total in 2008 being 2,132,703,000, shown above divided among the six standardized ecclesiastical megablocs and with (negative and italicized) figures for those **Doubly affiliated** persons (all who are baptized members of two denominations) and **Unaffiliated**, who are persons professing or confessing in censuses or polls to be Christians though not so affiliated. **Independents.** This term here denotes members of Christian churches and networks that regard themselves as postdenominationalist and neopostdenominationalist and thus independent of historical, mainstream, organized, institutionalized, confessional, denominationalist Christianity. **Marginal Christians.** Members of denominations who define themselves as Christians but on the margins of organized mainstream Christianity (e.g., Unitarians, Mormons, Jehovah's Witnesses, Christian Science, and Religious Science).

Muslims. 84% Sunnis, 14% Shi'ites, 2% other schools.

Hindus. 68% Vaishnavites, 27% Shaivites, 2% neo-Hindus and reform Hindus.

Nonreligious. Persons professing no religion, nonbelievers, agnostics, freethinkers, uninterested, or dereligionized secularists indifferent to all religion but not militantly so. **Chinese universalists.** Followers of a unique complex of beliefs and practices that may include: universalism (yin/yang cosmology with dualities earth/heaven, evil/good, darkness/light), ancestor cult, Confucian ethics, divination, festivals, folk religion, goddess worship, household gods, local deities, mediums, metaphysics, monasteries, neo-Confucianism, popular religion, sacrifices, shamans, spirit writing, and Taoist and Buddhist elements.

Buddhists. 56% Mahayana, 38% Theravada (Hinayana), 6% Tantrayana (Lamaism).

Ethnoreligionists. Followers of local, tribal, animistic, or shamanistic religions, with members restricted to one ethnic group.

Atheists. Persons professing atheism, skepticism, disbelief, or irreligion, including the militantly antireligious (opposed to all religion). In recent years a flurry of books have outlined the Western philosophical and scientific basis for atheism. Ironically, the vast majority of atheists today are found in Asia (primarily Chinese communists).

Neoreligionists. Followers of Asian 20th-century neoreligions, neoreligious movements, radical new crisis religions, and non-Christian syncretistic mass religions.

Jews. Adherents of Judaism. For detailed data on "core" Jewish population, see the annual "World Jewish Populations" article in the American Jewish Committee's *American Jewish Year Book*.

Confucianists. Non-Chinese followers of Confucius and Confucianism, mostly Koreans in Korea.

Other religionists. Including a handful of religions, quasi-religions, pseudoreligions, parareligions, religious or mystic systems, and religious and semireligious brotherhoods of numerous varieties.

Total population. UN medium variant figures for mid-2008, as given in *World Population Prospects: The 2006 Revision*.

printed annual yearbooks or official handbooks. Together, these three major sources of data constitute a massive annual megacensus, although decentralized and uncoordinated. The two tables below combine all these available data on religious affiliation. The first table

summarizes worldwide adherents by religion. The second goes into more detail for the United States of America. This year one column has been added to the worldwide table: annual change as a growth rate. This allows comparisons between religious traditions: this year

the world's two largest religious communities, Christians and Muslims, increased by 27,473,000 and 25,350,200, respectively, but Christians grew at 1.23%, while Muslims grew at 1.8%.

(DAVID B. BARRETT, TODD M. JOHNSON, PETER F. CROSSING)

Methodology. This table extracts and analyzes a microcosm of the world religion table. It depicts the United States, the country with the largest number of adherents to Christianity, the world's largest religion. Statistics at five points in time from 1900 to 2005 are presented. Each religion's **Annual Change** for 2000-05 is also analyzed by **Natural** increase (births minus deaths, plus immigrants minus emigrants) per year and **Conversion** increase (new converts minus new defectors) per year, which together constitute the **Total** increase per year. **Rate** increase is then computed as percentage per year.

Structure. Vertically the table lists 30 major religious categories. The major categories (including nonreligious) in the U.S. are listed, with largest (Christians) first. Indented names of groups in the "Adherents" column are subcategories of the groups above them and are also counted in these unindented totals, so they should not be added twice into the column total. Figures in italics draw adherents from all categories of Christians above and so cannot be added together with them. Figures for Christians are built upon detailed head counts by churches, often to the last digit. Totals are then rounded to the nearest 1,000. Because of rounding, the corresponding percentage figures may sometimes not total exactly to 100%. Religions are ranked in order of size in 2005.

Christians. All persons who profess publicly to follow Jesus Christ as God and Savior. This category is subdivided into **Affiliated** (church members) and **Unaffiliated** (nominal) Christians (professing Christians not affiliated with any church). See also the note on Christians to the world religion table. The first six lines under "Affiliated" Christians are ranked by size in 2005 of each of the six megablocs (Anglican, Independent, Marginal Christian, Orthodox, Protestant, Roman Catholic).

Evangelicals/evangelicals. These two designations—italicized and enumerated separately here—cut across all of the six Christian traditions or ecclesiastical blocs listed above and should be considered separately from them. The **Evangelicals** (capitalized "E") are mainly Protestant churches, agencies, and individuals who call themselves by this term (for example, members of the National Association of Evangelicals); they usually emphasize 5 or more of 7, 9, or 21 fundamental doctrines (salvation by faith, personal acceptance, verbal inspiration of Scripture, depravity of man, Virgin Birth, miracles of Christ, atonement, evangelism, Second Advent, et al.). The **evangelicals** (lowercase "e") are Christians of evangelical conviction from all traditions who are committed to the evangel (gospel) and involved in personal witness and mission in the world.

Jews. Core Jewish population relating to Judaism, excluding Jewish persons professing a different religion.

Other categories. Definitions are as given under the world religion table.

Sports and Games

The **OLYMPIC** Games and **PARALYMPIC** Games in Beijing dominated most of the sports year in 2008, with spectacular Olympic performances by swimmer Michael **PHELPS** and sprinter Usain **BOLT**. Non-Olympic highlights of the year included the association football (soccer) **EURO 2008** tournament and the inauguration of cricket's **INDIA PREMIER LEAGUE**, but the global recession triggered **CUTS** by corporate sponsors in several sports and pushed others to **REDUCE** their 2009 schedules.

AUTOMOBILE RACING

Grand Prix Racing. In 2008 the Fédération Internationale de l'Automobile (FIA) Formula 1 (F1) world drivers' championship was won by the U.K.'s Lewis Hamilton (McLaren) by a single point. Many found it to be a fitting result, considering the way the 2007 season ended when Hamilton blew a 12-point lead with only two races to go and lost out on the title by one point in his rookie season. Ferrari's Felipe Massa of Brazil won six races during the 2008 season compared with five for Hamilton, but on November 2 Hamilton passed Toyota's Timo Glock of Germany on the final turn of the season-ending Brazilian Grand Prix to secure a fifth-place finish in the race and thus deny Massa the overall title by a single point, 98–97. The 2007 champion, Kimi Räikkönen (Ferrari) of Finland, finished in third place with 75 points. Ferrari won the constructors' championship with 172 points, beating out McLaren-Mercedes (151) and BMW Sauber (135).

Hamilton started 2008 with a victory at the Australian Grand Prix on March 16, but he did not win again until taking the Monaco Grand Prix in rainy conditions on May 25. That victory started a stretch of three wins in five races for Hamilton, including consecutive victories in July at the British Grand Prix and the German Grand Prix. On September 7 Hamilton took the check-

ered flag in the Belgian Grand Prix, but the stewards added a 25-second penalty to his time for cutting through the final chicane, and the victory was awarded to Massa. After a 12th-place finish at the Japanese Grand Prix on October 12, Hamilton's lead in the standings was cut from seven points to five with two races remaining, but he won the Chinese Grand Prix the following week before securing the overall title with his fifth-

Formula 1 (F1) race car driver Lewis Hamilton of the U.K. waves to the crowd on July 6 after his victory in the British Grand Prix, one of five races that he won en route to securing his first F1 drivers' championship.

Rui Vieira—PA Photos/Landov

place result in Brazil. The 23-year-old Hamilton was F1's youngest-ever season champion, the first black driver to top the F1 rankings, and the first British champion since Damon Hill in 1996.

During the 2007 season Hamilton, Fernando Alonso of Spain, and Räikkönen all had a chance to win the title heading into the last race of the season, which made it the tightest battle for the championship in 21 years. In 2008, however, seven drivers and five teams captured races, while four drivers led the championship, six took pole positions, and 15 led races. Two-time world champion Alonso, back with Renault after a turbulent season as Hamilton's teammate at McLaren, earned the most points over the last six races. He won in Japan and in Singapore, F1's first-ever night race. Three drivers won for the first time: Germany's Sebastian Vettel (Toro Rosso) took the Italian Grand Prix at age 21 to become F1's youngest-ever winner, Robert Kubica (BMW Sauber) of Poland won the Canadian Grand Prix, and McLaren's Heikki Kovalainen of Finland captured the Hungarian Grand Prix. Scotland's David Coulthard (Red Bull–Renault), 37, announced his retirement after earning 13 wins in 15 years.

The focus on the sport again shifted to news off the racetrack as FIA Pres. Max Mosley became entangled in a scandal after a British tabloid newspaper exposed his involvement in what was described as a Nazi-themed orgy with prostitutes. A video showed Mosley engaging in sex acts while speaking German, and although he admitted to hiring the women, he said there were no Nazi overtones. Mosley, who had been FIA president since 1994, refused to resign after the *News of the World* report surfaced, and in June he won a vote of confidence to remain in his position through October 2009. In July he won an invasion of privacy lawsuit against the tabloid.

Hamilton was the target of racist abuse leading up to the final race of the season in Brazil. Racist messages about Hamilton were written on a Spanish Web site, he was insulted by two Brazilian comedians, and he was

handed a black cat—a symbol of bad luck in Brazil—at a sponsor's function. This occurred despite the efforts of the FIA, which launched an antiracism campaign after Spanish fans, who blamed Hamilton for Alonso's troubles at McLaren, taunted the British driver during testing in Spain in February.

F1 was a victim of the global economic downturn in late 2008, as Honda Motor Co. announced in December that it was pulling out of the sport, which reduced the starting grid to 18 cars. The Honda team finished in ninth place, or next to last, in the constructors' standings after Japanese team Super Aguri, which was backed by Honda, pulled out in April after four races. Japan's largest automaker, Toyota, said that it would scale back costs on F1 racing after finishing fifth in the season standings. The Honda withdrawal meant that 2008 could be the last season for Brazilian driver Rubens Barrichello, who had competed in a record 271 Grand Prix races. The FIA in December announced a series of changes for the 2009 season, hoping that the measures would help teams cut costs and reduce F1's combined \$1.6 billion annual spending.

(PAUL DIGIACOMO)

U.S. Auto Racing. In 2008 American Jimmie Johnson (*see* BIOGRAPHIES) of Hendrick Chevrolet Racing won his third straight National Association for Stock Car Auto Racing (NASCAR) driving crown, a feat accomplished only once before in the 60-year history of NASCAR, by Cale Yarborough in 1976–78. Johnson won \$15,170,464 for the season and made the title runoff, the Chase for the Championship, his private preserve, winning three races and finishing 10th or better eight times. Carl Edwards of the Roush Fenway Ford stable won nine times, the most of any driver in the 36-event Sprint Cup series, but only the 10 Chase races counted in the drivers' championship, and Edwards finished 69 points behind Johnson. Kyle Busch, in a Joe Gibbs team Toyota, won 8 of the first 26 races and at one time led Johnson by 40 points, but Busch, who also won 10 times in 20 Nationwide Cup starts and 5 times in 16 Craftsman Truck appearances, was never a factor in the Chase. Johnson's feat was accomplished in a season buffeted by a gas crisis that hit NASCAR with falling attendance and diminishing sponsor support.

The 35-event Nationwide Series, contested in a different kind of stock car, was won by Childress Chevrolet's Clint Bowyer by 21 points over Edwards, who actually had seven victories to

Bowyer's one. In the 25-race Craftsman Truck Series, Johnny Benson, in a Bill Davis Toyota, beat Ron Hornaday, Jr., of Chevrolet.

NASCAR's \$18,689,258 Daytona (Fla.) 500, the richest race in the Americas, celebrated its 50th year with an improbable 1–2 finish for the Roger Penske Dodge team. Ryan Newman won the \$1,506,045 first prize when teammate Kurt Busch pushed him over the finish line ahead of Toyota's Tony Stewart. This was the first victory in the jewel of stock car racing for Penske, whose Indy cars had won the Indianapolis 500 classic 14 times.

In open-wheel competition, the Indy Racing League (IRL) and rival Champ Car World Series merged after 13 years of a rivalry that was said to have caused both sparse fields. Nine Champ Car teams were permitted to lease Honda engines and Dallara chassis, which thus increased the number of participants per race to 26 and, according to the newly combined IRL, added attendance and sponsorship money. Two Champ Car events, the Grand Prix of Long Beach, Calif., and of Edmonton, Alta., were added to the IndyCar championship, and a third, in Surfers Paradise, Australia, became a posttitle exhibition event. Long Beach, won by Justin Wilson, was contested at the same time as the Firestone 300 at the Twin Ring Motegi circuit in Japan, where Danica Patrick (*see* BIOGRAPHIES) became the first female driver to win a major single-seater race.

New Zealander Scott Dixon, of Target Chip Ganassi Racing, won both the IRL season drivers' championship and the 92nd running of the Indianapolis 500. For his overall honours, he fended off a late-season charge by Brazilian Helio Castroneves of the Penske stable by 17 points. Tony Kanaan, another Brazilian, was third, and Englishman Dan Wheldon ranked fourth. All drove Dallara-Hondas. Dixon, the eighth non-American to win the Indy 500 in 10 years, earned the pole position with an average 226.366 mph and led 115 of the 200 laps. Second-place Vitor Meira of Panther Racing, who was 1.7498 seconds behind, led only 12 laps, while 21-year-old Marco Andretti of Andretti Green, whose third-place finish was the highest for an American, led 15. Dixon won \$2,988,065 of the \$14,400,000 million purse. His winning speed was 143.567 mph. (ROBERT J. FENDELL)

Rallies and Other Races. Sébastien Loeb (Citroën) of France dominated the 2008 world rally championship (WRC) sea-

son en route to a record fifth consecutive drivers' title. After winning his fifth Monte Carlo Rally in January, Loeb (with co-driver Daniel Elena of Monaco) took the checkered flag in 10 more of the 15 WRC races. He secured the title on November 2 with a third-place finish behind Mikko Hirvonen (Ford) of Finland in the penultimate Rally of Japan. In the season-ending Wales Rally GB on December 7, Loeb scored a narrow come-from-behind victory. He finished the season with 122 points, well ahead of Hirvonen (103 points), who won three times. Finland's Jari-Matti Latvala (Ford), age 22, became the youngest driver to have won a WRC race (Sweden), but he ended the season ranked fourth behind Spaniard Dani Sordo (Citroën), whose second place in Spain was his best finish. Citroën, with 191 points, overtook Ford (173 points) to take the manufacturers' title, with Subaru (98 points) again in third place.

Denmark's Tom Kristensen claimed a record eighth personal victory in the 24-Hour Le Mans Grand Prix d'Endurance on June 15. He and co-drivers Allan McNish of Scotland and Rinaldo Capello of Italy covered 381 laps in their Audi R10 for Audi's eighth win in nine years. The second-place Peugeot team—Jacques Villeneuve of Canada, Marc Gené of Spain, and Nicolas Minassian of France—also completed 381 laps but crossed the finish line 4 min 31.094 sec behind the winners.

Professional sports car racing in the U.S. remained split, with the Grand-Am series centred on the 24 Hours of Daytona and the 11-race American LeMans countering with the 12 Hours of Sebring. The 24 Hours of Daytona, the most important of the 12-event series, was won by a Chip Ganassi Lexus-Riley Prototype driven by American Scott Pruett and Memo Rojas of Mexico, with turns by Juan Pablo Montoya of Colombia and Dario Franchitti of Scotland. The Lexus finished two laps ahead of Americans John Fogarty and Alex Gurney, in a GAINSCO-Stallings Pontiac-Riley, averaging 103.057 mph. A Penske team Pontiac-Riley driven by Brazil's Helio Castroneves and Australian Ryan Briscoe, both of the IRL, and Kurt Busch of NASCAR was third, four laps back.

In the 56th running of the 12 Hours of Sebring, a P2 Class Team Penske Porsche RS Spyder driven by Timo Bernhard of Germany and Romain Dumas of France, with fellow Frenchman Emmanuel Collard, broke the eight-year dominance of the diesel-powered Audi sport prototypes, covering 351 laps. In

second place, 1 min 2.084 sec behind, was another P2 Porsche driven by Americans Butch Leitzinger and Andy Lally, with Marino Franchitti of Scotland. The eventual season titlists, Germans Marco Werner and Lucas Luhr, drove an Audi Sport of North America prototype.

(ROBERT J. FENDELL;
MELINDA C. SHEPHERD)

BASEBALL

North America. *Major League Baseball.* In an unusual conclusion to Major League Baseball's (MLB's) 2008 season, the Philadelphia Phillies beat the visiting Tampa Bay Rays 4–3 before 45,940 spectators in Citizens Bank Park on October 29 to win the best-of-seven World Series by four games to one. The fifth game of the Series began on October 27 in Philadelphia, but it was halted by rain in the middle of the sixth inning with the score tied 2–2. MLB Commissioner Bud Selig declared that the game would be suspended—the first such ruling in Series history—and be completed when the weather permitted. After the game was postponed again the next evening, play was resumed in the bottom of the sixth inning, and the Phillies scored to take a 3–2 lead. Rocco Baldelli hit a home run for Tampa Bay in the seventh, but in the bottom of that inning, Pedro Feliz singled home the eventual winning run as the Phillies claimed their first championship since 1980 and the second in franchise history. Pitcher J.C. Romero earned the victory for Philadelphia, and reliever Brad Lidge recorded the save, his 48th in as many relief appearances during the season. Cole Hamels, who won the opening game and pitched six innings on the original date, was voted the Series' Most Valuable Player (MVP).

The Series opened on October 22 in Tropicana Field in St. Petersburg, Fla., where the Phillies defeated the Rays 3–2 on a two-run first-inning home run by Chase Utley and the pitching of Hamels, a 24-year-old left-hander who yielded just five hits over seven innings. In game two on October 23, the Rays scored twice in the first inning and went on to win 4–2. James Shields pitched 5½ innings for the Rays and earned the victory with a save by rookie David Price as the Phillies left 11 men on base.

When the Series moved to Philadelphia on October 25, the Phillies won game three 5–4 on a bases-loaded infield single by Carlos Ruiz in the ninth inning. The Phillies hit three home runs, but Tampa rallied to a 4–4 tie in

On September 21, Derek Jeter of the New York Yankees waves farewell to the fans after being taken out of the game in the ninth inning. It was the last game for historic Yankee Stadium, which opened on April 18, 1923.

Gary Hershorn—Reuters/Landow

the eighth inning of a game that was delayed by rain and did not finish until 1:47 AM local time. The Phillies routed the Rays 10–2 in game four on October 26. Joe Blanton, the winning pitcher, hit the first home run of his career and the first by a pitcher in a World Series since Ken Holtzman of the Oakland A's in 1974.

Play-offs. The Phillies registered their first National League (NL) pennant since 1993 by defeating the Los Angeles Dodgers four games to one in the best-of-seven National League Championship Series (NLCS). The Phillies clinched by beating the Dodgers 5–1 in Los Angeles on October 15 behind Hamels, who was voted MVP of the NLCS. A home run by Manny Ramirez (see BIOGRAPHIES) accounted for the lone Los Angeles run in game five. The Phillies advanced to the NLCS by defeating the Milwaukee Brewers three games to one in the NL Division Series (NLDS); the Dodgers swept the Chicago Cubs in three games in the other NLDS.

The Rays won the American League (AL) pennant by defeating the defending champion Boston Red Sox four games to three in the best-of-seven American League Championship Series (ALCS). The Rays clinched with a 3–1 victory in St. Petersburg on October 19. After yielding a first-inning home run to Dustin Pedroia, Matt Garza pitched seven innings, yielding only one other hit. Four pitchers followed him, with Price earning the save. Garza was voted ALCS MVP with a 2–0 record, having also won game three. The Rays scored on a fourth-inning double by AL Rookie of the Year Evan Longoria, who hit home runs in a record four consecutive ALCS games, and Baldelli's run-scoring single in the fifth. In the AL Division Series, the Rays defeated the Chicago

White Sox three games to one, and the Red Sox downed the Los Angeles Angels of Anaheim three games to one.

Regular Season. The Angels (100–62) achieved the best record in either league and won the AL West division by 21 games. The Rays (97–65) won the AL East by two games over Boston (95–67), which secured the wild-card berth with the best record of any second-place team. The White Sox won the AL Central by defeating the Minnesota Twins 1–0 in a play-off game to break a regular-season tie for first place. Both teams had records of 88–74 before that extra game, which was played in Chicago on September 30.

Philadelphia (92–70) captured the NL East by three games over the New York Mets. The Dodgers (84–78) won the NL West by two games over the Arizona Diamondbacks. The Cubs (97–64) took the NL Central by 7½ games over the Brewers, whose 90–72 record secured the NL wild-card berth.

Individual Accomplishments. Chipper Jones of the Atlanta Braves won the NL batting title with a .364 average, and Philadelphia's Ryan Howard led the league with 48 home runs and 146 runs batted in (RBIs), but Albert Pujols of the St. Louis Cardinals—with 37 home runs, 116 RBIs, and a .357 average—was named the NL regular-season MVP. Pedroia—with a .326 average and a league-leading 54 doubles—was voted AL MVP. Minnesota's Joe Mauer led the AL with a .328 average; Miguel Cabrera of the Detroit Tigers scored 37 home runs; and Josh Hamilton of the Texas Rangers topped the AL with 130 RBIs. Arizona pitcher Brandon Webb registered the most victories, 22, but lost to Tim Lincecum (18–5) of the San Francisco Giants in the NL Cy Young balloting. AL Cy Young winner Cliff Lee of

the Cleveland Indians led the AL with 22 victories. Relief pitcher Francisco Rodriguez of the Angels amassed 62 saves, surpassing the record held by Bobby Thigpen, who had 57 for the White Sox in 1990. Geovany Soto of the Cubs was the first catcher to be named NL Rookie of the Year since the Dodgers' Mike Piazza in 1993.

On June 9 Ken Griffey, Jr., then with the Cincinnati Reds (later traded to the White Sox), became the sixth batter in history to record his 600th home run. Ramirez, playing with the Red Sox before he was traded to the Dodgers, became the 24th player to reach the 500 mark. Jon Lester of the Red Sox pitched a 7-0 no-hitter against the Kansas City Royals on May 19. Carlos Zambrano of the Cubs pitched a 5-0 no-hitter on September 14 against Houston. The game, originally scheduled to be played in Texas, was moved to Milwaukee because of Hurricane Ike.

The American League beat the National League 4-3 in 15 innings in the annual All-Star Game, held on July 15 at Yankee Stadium, in that venerable ballpark's last season. The game consumed 4 hours 50 minutes, the longest All-Star Game by time in history, and extended the AL's unbeaten streak to 12. J.D. Drew of the Red Sox hit a two-run game-tying home run in the seventh inning and was voted MVP.

Little League World Series. A team from Waipahu, Hawaii, defeated one from Matamoros, Mex., 12-3 to capture the Little League World Series on August 24 at Williamsport, Pa. Tanner Tokunaga hit two home runs, and Iolana Akau hit one for Hawaii, which became the fourth consecutive representative from the U.S. to win the title. Hawaii scored in each of the six innings in which it batted, the first time since 1974 that such a feat had been accomplished. Hawaii scored twice on passed balls and once on a bases-loaded walk against Mexico, which committed three errors. Hawaii advanced to the championship game by rallying to defeat Lake Charles, La., and Mexico qualified by beating Tokyo. (ROBERT VERDI)

Latin America. The 2008 Caribbean Series was held in Santiago, Dom.Rep., on February 2-7. Because the Puerto Rican Winter League canceled its 2007-08 season because of financial problems, the Dominican Republic was represented by two teams in the series, the Cibao Eagles (Águilas Cibaeñas) and the Licey Tigers (Tigres). Licey won the series title with a 5-1 record, while Cibao finished second with a 3-3 mark.

The Aragua Tigers (Tigres) from Venezuela and the Obregón Yaquis, representing Mexico, each finished with a 2-4 record.

In Cuba, Santiago de Cuba swept Pinar del Rio four games to none to win the 47th Serie Nacional (National Series) championship. Santiago had defeated Las Tunas three games to none in the quarterfinals and Villa Clara four games to two in the semifinals to advance. It was Santiago's second consecutive title. Havana Province featured the series' top two pitchers; right-hander Jonder Martínez went 13-2, with a league-leading 1.55 earned run average, while left-hander Yulieski González was 15-0—the best record in the history of the Serie Nacional—with a 2.25 earned run average.

The Mexico City Red Devils (Diablos Rojos) beat the Monterrey Sultanes four games to one to win the Mexican League championship series. It was the Red Devils' 15th league title and their first since 2003.

At the Olympic Games in Beijing, South Korea defeated the Cuban national team 3-2 in the championship game to capture the gold medal. The U.S. bested Japan 8-4 to win the bronze. (MILTON JAMAIL)

Japan. The Seibu Lions defeated the Yomiuri Giants four games to three to win the 2008 Japan Series under rookie manager Hisanobu Watanabe. The Lions came back from a three-games-to-two series deficit for their first championship in four years and 13th overall. In game seven Hiroshi Hiraio hit a go-ahead single to cap a two-run eighth-inning rally, and four relievers combined for seven perfect innings, leading the Lions to a 3-2 victory. Seibu right-hander Takayuki Kishi was named the Series' Most Valuable Player after pitching a complete-game shutout in game four and 5½ scoreless innings in relief in game six. In the Pacific League (PL) Climax Series playoffs for a Japan Series berth, the Nippon Ham Fighters, who finished third in the regular season, eliminated the second-place Orix Buffaloes two games to none in the first stage only to lose to the Lions four games to two in the second stage. The Giants made the biggest comeback in Central League history after falling behind the eventual second-place Hanshin Tigers by as many as 13 games. They beat the 2007 Japan Series champion Chunichi Dragons in the Climax Series' second stage. Rakuten Eagles right-hander Hisashi Iwakuma won the Sawamura Award

for the most outstanding pitcher after leading the PL with 21 wins, a 1.87 earned run average, and an .840 winning percentage.

Legendary home-run king Sadaharu Oh, who retired in 1980 with 868 career homers, ended his managing career. Buffaloes slugger Kazuhiro Kiyohara, fifth on the all-time home-run list with 525, retired at the end of the season. (HIROKI NODA)

BASKETBALL

Professional. In June 2008 the Boston Celtics, who accounted for more National Basketball Association (NBA) championships than any other franchise, won their record 17th title by thoroughly dominating and dismantling the generally favoured Los Angeles Lakers, closing out the best-of-seven series in six games. Forward Paul Pierce, the unanimous choice of a nine-member media panel as the Finals' Most Valuable Player (MVP), led the Celtics to a 131-92 deciding victory in game six—the largest margin of victory in a clinching game in the history of the championship series. With the title in hand, the Celtics could boast that they had defeated the Lakers 9 of the 11 times that the two storied teams had faced each other in the Finals. Celtics coach Glenn ("Doc") Rivers was the franchise's sixth head coach to win an NBA championship. (See BIOGRAPHIES.)

The Celtics set a record for the most victories at home in an NBA play-off season, finishing 13-1. They also completed the single-best win-loss turnaround in league history, having gone from winning only 24 of 82 regular-season games in 2006-07 to winning a league-leading 66 games during the 2007-08 season. The Celtics were just the third team ever to win the title after missing the previous postseason (the others were the 1974-75 Golden State Warriors and the 1976-77 Portland Trail Blazers). The Celtics' 2008 title was, among other things, a tribute to the team's veteran players. Forward Kevin Garnett and guard Ray Allen had joined the squad in off-season trades from the Minnesota Timberwolves and the Seattle SuperSonics, respectively. Garnett (in his 13th season in the NBA), Allen (in his 12th), and Pierce (in his 10th) acquired championship rings for the first time in their playing careers; backup forward P.J. Brown, who joined the team in midseason as a free agent, won a ring for the first time in his 15th season in the league.

The game-six crowd in Boston's TD Banknorth Garden lustily chanted "Beat L.A." and "Seventeen" as Garnett scored 26 points and grabbed 14 rebounds. Allen scored 26 points and tied a Finals single-game record by hitting seven three-point field goals, and Pierce contributed 17 points and 10 assists. Pierce averaged 21.8 points in the series' six games despite having suffered a sprained knee in game one that required him to use a wheelchair to get to the locker room for examination and treatment before returning to play.

Aside from the star trio of Pierce, Garnett, and Allen, the Celtics had other significant contributors. Rookie point guard Rajon Rondo, fighting off a foot injury, had 21 points, 8 assists, and 6 steals in the deciding game, and centre Kendrick Perkins, who missed game five because of a shoulder injury, returned as a starter to play more than 13 minutes. On top of their potent offensive game, the Celtics displayed a stifling defense in putting the Lakers away. The five Lakers starters—Kobe Bryant, Derek Fisher, Vladimir Radmanovic, Lamar Odom, and Pau Gasol—collectively shot just 36.2% from the floor (17 for 47) in game six. Bryant, the NBA's regular-season MVP, hit 4 of his first 5 shots but only 3 of his last 17.

In the Women's National Basketball Association (WNBA), the San Antonio Silver Stars and the Detroit Shock met in the best-of-five championship series in October. The Shock prevailed, winning its third title in six years, by a score of 76–60 in game three to sweep the series. Detroit forward Katie Smith scored 18 points in the last game, and she was named MVP of the Finals.

(PHIL JASNER)

College. Regarded by many observers as the best team throughout the entire 2007–08 college basketball season, the Memphis Tigers held a commanding 60–51 lead over the Kansas Jayhawks with just two minutes left in the National Collegiate Athletic Association (NCAA) championship game. Kansas played those final two minutes so well, however, that the two teams were forced to play five minutes of overtime to conclude the tournament. Kansas decisively won that overtime to clinch the game by a score of 75–68 and capture the school's third national title. Memphis, which finished the season with a 38–2 overall

Winslow Townson/AP

On June 17, longtime NBA stars Kevin Garnett, Ray Allen, and Paul Pierce (from left to right) of the Boston Celtics show off the championship trophy that they captured when the Celtics defeated the Los Angeles Lakers in the NBA Finals.

record, would be remembered by some observers as the team that gave away the title. Others, however, would regard the Tigers as one of the best teams not to win an NCAA championship.

In the final game, Kansas forward Darrell Arthur was brilliant with 20 points and 10 rebounds. It was his play that gave Kansas a chance at the end, but it was Mario Chalmers who made the most important shot in Kansas basketball history—a game-tying three pointer in the final seconds of regulation. Memphis, a poor free-throw shooting team all season, had nevertheless hit an impressive 59 of 71 foul shots during the regional final, the national semifinal, and the first 38 minutes 45 seconds of the championship game, but the Tigers missed four of five foul shots in the final 75 seconds. Notwithstanding the Tigers' struggles at the foul line, the Memphis guards were sensational. Chris Douglas-Roberts had 22 points. Freshman point guard Derrick Rose, with 18 points, 8 assists, and 6 rebounds, looked like he had won the game for his team with a dominating second-half performance. (The season was Rose's first and last. In June he became the first pick in the National Basketball Association draft.) Kansas, which scored just 51 points in the championship matchup's first 38 minutes, put up 24 more points on the scoreboard in the final 7 minutes and was a very deserving winner in the end, proving that some games were not

over even when it appeared that they were.

The women's 2008 NCAA championship subplot was Candace versus Candice. Tennessee had Candace Parker, the star player for the Lady Vols, the 2007 defending champions. Stanford had Candice Wiggins, who won the 2008 Wade Trophy, given annually to the women's college basketball player of the year. (Parker won the Wade Trophy in 2007.) In the championship game, Tennessee won easily, defeating Stanford by a score of 64–48. For the Lady Vols, who finished the season 36–2, it was a record eighth national championship. Stanford finished with a 35–4 season record.

Parker, playing her final college game before heading to the Women's National Basketball Association to play professionally, scored 17 points. Wiggins became the first woman to have

two 40-point games in the same NCAA tournament and finished her six tournament games with an amazing 151 points. Meanwhile, Tennessee's Hall of Fame coach Pat Summitt set a new standard each time her team won a game. With a record 983 victories, she was almost certain to get her 1,000th win during the 2008–09 season.

(DICK JERARDI)

International. From the moment the Americans strode onto the court at the 2008 Olympic Games in Beijing to open the men's basketball tournament against host China, it was clear that only one team would be leaving with the gold medal. Because the U.S. men's basketball team had stumbled through international tournaments since the turn of the 21st century, securing no better than bronze medals in two world championships and one Olympics, the media had dubbed this squad the "Redeem Team."

In the preliminary round in Beijing, LeBron James and Dwayne Wade were team leaders as the U.S. cruised through its group with an average winning margin of 32 points. In the quarterfinals the U.S. swept aside Australia by a score of 116–85, and defending Olympic champion Argentina edged Greece 80–78. China's bid ended in a 94–68 quarterfinal loss to Lithuania, while Spain, the reigning world champion, dispatched Croatia 72–59. In semifinal action the U.S. beat Argentina 101–81, avenging the Ameri-

cans' loss to the Argentines in the Olympic semifinals in 2004. Spain reached only its second Olympic final with a hard-fought 91–86 win over Lithuania.

Despite the fact that Spain had lost to the U.S. by 37 points in the preliminary round of the tournament, the final was majestic as the Spanish team pushed the Americans to their limit before succumbing by a score of 118–107. “We should be proud,” said Spanish centre Pau Gasol. “We never backed down.” Wade led the U.S. with 27 points in the gold-medal game. Argentina topped Lithuania 87–75 to take the bronze.

While the U.S. men were regaining the summit of international basketball, the U.S. women continued their dominance. With a resounding 92–65 win over Australia, the Americans earned their fourth consecutive Olympic gold medal. The victory brought redemption for U.S. coach Anne Donovan, whose team had settled for the bronze at the 2006 world championships. “That drove me every day from 2006,” she commented. “Now I can have a good night’s sleep.” The U.S. benefited from a well-balanced attack in the final, with four players—Kara Lawson, Candace Parker, Lisa Leslie, and Sylvia Fowles—each scoring in double figures. The bronze medal went to the Russian women, who downed China 94–81.

Great Britain was already looking forward to the 2012 Olympic Games in London. The Fédération Internationale de Basketball had warned Great Britain that it would be barred from competing as host unless it improved its international ranking by qualifying for the 2009 EuroBasket finals, to be held in Poland. In September, Sudanese-born Luol Deng, a star for the Chicago Bulls of the National Basketball Association and a British citizen since 2006, helped his adopted country cruise through the qualifying round of play to reach the EuroBasket finals for the first time since 1981. Although a final decision may wait until 2010, it seemed certain that Great Britain’s women would be watching from the sidelines after their failure to qualify for the European finals. (RICHARD TAYLOR)

BOBSLEIGH, SKELETON, AND LUGE

Bobsleigh. German bobsleigh pilot André Lange (*see* BIOGRAPHIES) claimed the 2007–08 World Cup overall titles in both two- and four-man racing, driving to the medals podium at each of the

venues on the circuit. Lange amassed a total of 11 medals en route to the world championships in Altenberg, Ger., where he took the gold in both events. In Altenberg, Russian Aleksandr Zubkov also earned podium finishes in both disciplines, winning silver in four-man and bronze in two-man. German driver Matthias Höpfner finished third in four-man, and teammate Thomas Florschütz claimed second in the two-man event.

Germany’s female bobsledders dominated the World Cup circuit, collecting 15 of the overall 24 possible medals. Sandra Kiriasis was clearly the dominant German pilot and won five gold, one silver, and two bronze medals. In addition, Kiriasis won her fifth straight overall World Cup title and her fourth consecutive world championship gold medal. Fellow German pilots Cathleen Martini and Claudia Schramm finished in second and third, respectively, at the world championships.

Skeleton. American Katie Uhlaender finished atop the World Cup overall rankings for the second consecutive season in 2007–08. Following up from her six-medal performance in 2006–07, Uhlaender again collected six World Cup medals—four gold, one silver, and one bronze. At the world championships in Altenberg, Uhlaender finished in second place; the gold medal went to Anja Huber of Germany. Fellow German Kerstin Jürgens took third

place at the event. Canadian Michelle Kelly was consistent throughout the season, earning a place on the podium five times and finishing second overall in the World Cup standings.

In men’s racing, Kristan Bromley of Great Britain took the top mark in the overall World Cup standings. He won the gold medal at the world championships, ahead of silver medalist Jon Montgomery of Canada, who also trailed behind Bromley in the overall standings. American Zach Lund finished third in the overall rankings.

(JULIE PARRY)

Luge. Germany’s dominance on the women’s singles circuit continued throughout the 2007–08 luge season. During the eight-race season, there were only two instances in which Germany did not sweep the medal podium. Germany’s Tatjana Hüfner showed her individual dominance as well. Following a disappointing 10th-place finish in the first race at Lake Placid, N.Y., Hüfner won every single World Cup race for the remainder of the season, finishing first in the overall World Cup standings and capturing gold at the world championships. Aiding in Germany’s dominance during the season were veteran Silke Kraushaar-Pielach and breakthrough slider Natalie Geisenberger.

In men’s doubles action, Germany’s dynamic duo of Patric Leitner and Alexander Resch finished the season on top of the overall World Cup rankings,

American Katie Uhlaender takes off on a run at the skeleton world championships in Altenberg, Ger., on February 23. Uhlaender claimed her second consecutive World Cup overall title in 2008 but had to settle for the silver medal in Altenberg.

Norbert Millauer—AFP/Getty Images

but the pair failed to medal at the world championships. They were beaten by German teammates André Florschütz and Torsten Wustlich, who won the gold, and Tobias Wendl and Tobias Arlt, who claimed the silver medal. Austrian cousins Tobias and Markus Schiegl took the bronze.

Italian Armin Zöggeler topped the World Cup circuit in men's singles, finishing first or second in every World Cup race except one—a third-place finish in Calgary, Alta.—but he also failed to medal at the world championships, where he placed fifth. Instead, it was the German team that completed a podium sweep; Felix Loch led the charge, followed by David Möller in second and Andi Langenhan in third.

(JANELE M. MAREK)

BOXING

The long, highly successful boxing career of Oscar De La Hoya (U.S.) appeared to be at an end following his technical knockout defeat at the hands of Manny Pacquiao (Philippines) in a nontitle welterweight bout held on Dec. 6, 2008, at the MGM Grand in Las Vegas. The 35-year-old De La Hoya took the worst beating of his career before the fight was stopped between the eighth and ninth rounds. De La Hoya went into the bout as the betting favourite, mainly owing to the fact that he was a naturally larger man, while Pacquiao, who began his career as a flyweight, had never before fought above the lightweight division. Once the fight began, however, the left-handed Pacquiao dominated with speed, precision punching, and nimble footwork. The match—the largest-grossing fight of the year—drew a live crowd of more than 15,000, paying a gate in excess of \$17 million, and sold pay-per-view television packages to approximately 1.25 million customers, which generated another \$70 million in revenue.

Pacquiao, widely considered the best boxer in the world, fought three times during the year, in three different weight classes. On March 15 he won a narrow 12-round decision over Juan Manuel Márquez (Mexico) to win *The Ring* junior lightweight championship and World Boxing Council (WBC) super featherweight title. In his next bout, on June 28, Pacquiao moved up to the lightweight division and knocked out David Diaz (U.S.) in the ninth round to capture the WBC belt. Both bouts were held in Las Vegas. His accomplishments earned him *The Ring* magazine's Fighter

of the Year award. Márquez rebounded from his close loss, annexing *The Ring* lightweight championship on September 13 with an 11th-round knockout of Joel Casamayor (Cuba) in Las Vegas.

The already confusing heavyweight picture became even more complicated when former WBC champion Vitaly Klitschko (Ukraine) returned to action for the first time since December 2004, after which he retired owing to a series of injuries. In his first comeback bout, on October 11, Klitschko took the WBC title with an eighth-round technical knockout of Samuel Peter (Nigeria) in Berlin. Peter had won the title on March 8 when he stopped Oleg Maskayev (Russia) in Cancun, Mex. The fact that Vitaly Klitschko and his younger brother, International Boxing Federation (IBF) titleholder Wladimir Klitschko (Ukraine), had refused to fight each other meant that a unification bout was unlikely. Wladimir Klitschko successfully defended the IBF title three times in 2008, winning a boring 12-round decision on February 23 over Sultan Ibragimov (Russia) at New York City's Madison Square Garden, scoring an 11th-round knockout of Tony Thompson (U.S.) on July 12 in Hamburg, and stopping former champion Hasim Rahman (U.S.) in the seventh round on December 15 in Mannheim.

Undefeated World Boxing Association (WBA) heavyweight titleholder Ruslan

Chagaev (Uzbekistan) successfully defended his belt on January 19, winning a 12-round decision over Matt Skelton (U.K.) in Düsseldorf, Ger. Injuries and illness, however, sidelined Chagaev for the remainder of the year, and Nicolay Valuyev (Russia) won the so-called interim WBA title on August 30 with a 12-round decision over John Ruiz (U.S.) in Berlin. In the final heavyweight title fight of the year, on December 20, Valuyev scored a controversial majority decision over 46-year-old former champion Evander Holyfield (U.S.) in Zürich.

In his first bout in the U.S., "unified" super middleweight champion Joe Calzaghe (U.K.) took *The Ring* and linear light heavyweight championship from Bernard Hopkins (U.S.) on April 19 via a 12-round split decision in Las Vegas. Calzaghe, undefeated in 46 professional bouts, returned to the U.S. and tallied a one-sided 12-round decision on November 8 over Roy Jones, Jr. (U.S.), at Madison Square Garden.

The 43-year-old Hopkins, considered close to retirement after losing to Calzaghe, returned on October 18 to score a stunning upset in a nontitle bout in Atlantic City, N.J., dominating reigning WBC middleweight champion Kelly Pavlik (U.S.) to win a 12-round decision and drawing rave reviews for his performance. Prior to his unexpected loss to Hopkins, Pavlik had won a 12-round decision on February 16 over former champion Jermain Taylor

Defending WBC lightweight champion David Diaz struggles to rise after being knocked out by Manny Pacquiao in the ninth round of their June 28 title bout. Pacquiao's knockout win earned him his fourth belt in four different weight divisions.

Eric Jamison/AP

(U.S.) in a nontitle bout in Las Vegas and knocked out Gary Lockett (U.K.) on June 7 in the third round of a title defense in Atlantic City.

The retirement of welterweight champion and crossover star Floyd Mayweather, Jr. (U.S.), was a serious setback for the sport. A number of quality fighters battled to fill the void at welterweight: Antonio Margarito (Mexico) knocked out Kermit Cintrón (Puerto Rico) on April 12 in the sixth round of their bout in Atlantic City to win the IBF welterweight title. Next, in one of the year's most thrilling fights, held on July 26 at the MGM Grand, Margarito came from behind to stop previously undefeated Miguel Cotto (Puerto Rico) in the 11th round to capture the WBA title; the bout generated approximately 450,000 pay-per-view sales. In order to fight Cotto, Margarito was forced to relinquish the IBF title, and that vacancy was filled on August 2 when Joshua Clottey (Ghana) won a ninth-round technical decision over Zab Judah (U.S.) in Las Vegas. Andre Berto (U.S.) won the vacant WBC welterweight title on June 21 by stopping Miguel Rodríguez (Mexico) in the seventh round in Memphis, Tenn. Berto made his first successful defense on September 27, winning a 12-round decision over Steve Forbes (U.S.) in Carson, Calif.

After having failed to take the welterweight championship from Mayweather in 2007, Ricky Hatton (U.K.) dropped back down in weight and on May 24 defended *The Ring* junior welterweight championship with a 12-round decision over Juan Lazcano (Mexico) at City of Manchester (Eng.) Stadium. Hatton retained the title again on November 22, stopping Paul Malignaggi (U.S.) in the 11th round in Las Vegas.

The best action fight of the year was the third bout of a junior featherweight trilogy between champion Israel Vázquez (Mexico) and former champion Rafael Márquez (Mexico), won on March 1 by Vázquez via a 12-round decision in Carson. The riveting blood-splattered slugfest was up for grabs going into the final round, when Vázquez knocked down Márquez in the closing moments of the bout to win the decision and retain *The Ring* and WBC super bantamweight titles. (NIGEL COLLINS)

CRICKET

International cricket reached a turning point in 2008 as the top cricketers saw wealth beyond belief flow into the game and into their pockets. The main

agent of change was the Indian Premier League (IPL), a city-based competition for 20/20 cricket (the shortened 20-overs-a-side version of the game). The new IPL attracted rich owners, massive television revenue, and the majority of the world's best players to the 45-day tournament held across India in April and May.

The year also witnessed the strange spectacle of Allen Stanford, a cricket-loving Antigua-based American billionaire, arriving at Lord's Cricket Ground by helicopter on June 12 to offer the England Cricket Board (ECB) a "winner take all" 20/20 match between England and a West Indian All Stars XI for prize money of £10 million (£1 = about \$2). For some, notably the players, the influx of big money was welcomed, but others were fearful of the impact of 20/20 on the future of Test cricket. The rest of the world rushed to tap into the new audiences and potential new markets opened up by the success of the IPL. A Champions League tournament for the 20/20 champions of England and Wales, India, South Africa, and Australia was launched, also with vast prize money. For the 2010 season England created its own version of the IPL, based on counties rather than cities, and there was even talk of 20/20 cricket's becoming an Olympic sport by 2020.

In a frenetic 10-hour bidding contest, held at the Hilton Towers Hotel in Mumbai (Bombay) on February 20, the world's top players were auctioned to bidders from the eight franchises. There were several surprises. The top price was the £770,095 paid by the Chennai (Madras) Super Kings (owned by India Cements) for the big-hitting Indian wicketkeeper Mahendra Singh Dhoni. In contrast, the Australian captain, Ricky Ponting, by common consent the best batsman in the world, commanded a fee of only £205,610. To add to the Hollywood-style glamour, owners, who paid between £34 million and £57 million for their franchises, included Bollywood star Shah Rukh Khan (the Kolkata [Calcutta] Knight Riders) and actress Preity Zinta (the Mohali Kings). Broadcast rights for the IPL commanded the highest fee of all: £500 million for 10 years. In the end, the tournament was won—in a three-wicket victory over Chennai on June 1—by the Rajasthan Royals (captained by Australian bowler Shane Warne), which was, at a mere £34 million, the least expensive of the eight franchises.

The IPL presented problems to the cricketing authorities elsewhere in the

world. England's players, all centrally contracted to the ECB, were not allowed to play in the inaugural IPL because of other international commitments. New Zealand banned fast bowler Shane Bond for having taken part in another 20/20 tournament in India. It soon became clear, however, that money would talk louder than national pride, and by year's end attempts were being made to regularize the international calendar to allow players to take part in the IPL in 2009. The long-term danger for the game was that the next generation of young cricketers, particularly in Asia, would grow up playing only 20/20 cricket and the subtle skills of Test cricket, which had survived for more than a century, would be lost.

The contrast between the IPL, with packed crowds and glitzy presentation, and some of the year's Test cricket was depressing for the purists. Australia and West Indies played out an enthralling Test series in front of empty stands, and even in India and Pakistan, the new financial powerhouses of the game, Test cricket was in danger of becoming an irrelevant sideshow. Australia completed a record-tying 16th consecutive Test victory, against India in Sydney in a four-match Test series marred by ill feeling. Indian spin bowler Harbhajan Singh was banned for three matches for allegedly having made a racist comment to Australian batsman Andrew Symonds; the ban was later overturned and the penalty reduced to a fine. The Indian players were so incensed by the punishment that they threatened to go home without finishing the tour. Common sense prevailed, however, and Australia won the series 2–1 to maintain its standing at the top of the game, even without Warne and Glenn McGrath, both of whom had retired from Test play in 2007. South Africa, strongly led by Graeme Smith and with two emerging pace bowlers in Dale Steyn and Morne Morkel, recorded its first victory in a Test series in England since 1965. After the defeat in the Third Test, Michael Vaughan, the England captain, resigned and was replaced by South African-born batsman Kevin Pietersen, who led England to victory in the final Test of the series and to a resounding 5–0 win in the one-day internationals.

High points during the 2007–08 season included the return of Test cricket to Galle, an area of southern Sri Lanka devastated by the December 2004 tsunami. Sri Lankan spin bowler Muttiah Muralitharan took a record 709th

Test wicket, and Anil Kumble of India passed 600 Test wickets. In a match for South Africa against Bangladesh, Smith and Neil McKenzie shared a world-record opening stand of 415. Kumar Sangakkara of Sri Lanka became the first batsman in Test history to record innings of more than 150 runs in four consecutive Tests. Meanwhile, two great international players, Adam Gilchrist of Australia and Shaun Pollock of South Africa, retired.

(ANDREW LONGMORE)

CURLING

In 2008 Canada won both the men's and women's world curling championships for the second straight year. Kevin Martin's team doubled Scotland's David Murdoch by a score of 6–3 in the men's final in Grand Forks, N.D. Norwegian skip Thomas Ulsrud defeated China's Fengchun Wang 8–3 for the bronze. The order of the rest of the men's field was France, Australia, the U.S., Germany, Denmark, Sweden, Switzerland, and the Czech Republic. At the women's world championship in Vernon, B.C., skip Jennifer Jones downed China's Bingyu Wang 7–4 for the gold. Switzerland's Mirjam Ott beat Moe Meguro of Japan 9–7 for the bronze medal. Denmark, Sweden, the U.S., Russia, Germany, Scotland, Italy, and the Czech Republic completed the women's standings.

In the first world mixed doubles event, held in Vierumäki, Fin., Irene Schori and Toni Müller of Switzerland edged Finland's Anne Malmi and Jussi Uusipaavalniemi 5–4 for the title. Sweden's Marie Persson and Göran Carlsson won the bronze in a field that included 24 countries.

Eve Muirhead's Scottish team scored a decisive 12–3 win over Sweden's Cecilia Östlund in the world junior women's final in Östersund, Swed. Canada's Kaitlyn Lawes settled for the bronze. The U.S. captured the world junior men's title, with Chris Plys scoring a 7–5 victory over Sweden's Oskar Eriksson. William Dion of Canada took the bronze medal. Canada swept the men's and women's world senior championships. Pat Ryan shut out Sweden's Per Linderman 8–0 in the men's final in Vierumäki. David Russell of the U.S. was third. Diane Foster took the women's title with a 10–2 win over Scotland's Kirsty Letton. Renate Nedkoff of Switzerland was the bronze medalist.

Rune Lorentsen skipped Norway to a second consecutive world wheelchair

championship. Norway won 5–3 over South Korea's Hak Sung Kim in the final in Sursee, Switz. Jim Pierce of the U.S. took the bronze medal.

(DONNA SPENCER)

CYCLING

The drive to eliminate drugs from cycling continued to gain momentum in 2008, with encouraging success. The premier event on the road-race calendar, the Tour de France, produced seven positive tests, including six for continuous erythropoiesis receptor activator (CERA), a slow-release blood-boosting drug developed to help people with kidney problems or anemia. The manufacturers of CERA, an advanced version of erythropoietin (EPO), had worked closely with the World Anti-Doping Agency (WADA) over a four-year development period before the drug was marketed in January 2008. There were three racers who tested positive during the Tour, notably Italian rider Riccardo Ricco, the winner of two mountain stages. Postrace testing of frozen blood samples, using a newly developed test, later produced three more positives: from stage winners Leonardo Piepoli of Italy and Stefan Schumacher of Germany, as well as Austrian Bernard Kohl, who had finished third overall and won the competition for the best climber.

The Tour de France, which began in Brest on July 5 and ended on the Champs-Élysées in Paris on July 27, was won by Carlos Sastre of Spain. Six different riders wore the leader's yellow jersey before Sastre took over at the end of the 17th stage. He reached Paris with a final margin of 58 seconds over Australian Cadel Evans after 21 stages and 3,559 km (2,210 mi) of racing. The Tour of Italy (Giro d'Italia) and Tour of Spain (Vuelta a España) were both won by Spanish rider Alberto Contador, who was unable to defend his 2007 Tour de France title after his new team was excluded for doping offenses committed at the 2007 race.

Host Great Britain dominated the Union Cycliste Internationale (UCI) world track championships, held in Manchester in March, winning 9 of the 18 events. By taking gold in the individual sprint, Chris Hoy (*see* BIOGRAPHIES) became the first rider to win all four men's world sprint-discipline titles, adding to previous victories in the keirin (which he retained in Manchester), 1-km time trial (known as the kilo), and team sprint. Marianne Vos of

The Netherlands won the women's 20-km points race to make her the first person to win senior world cycling titles in road racing, mountain biking, and track racing.

Hoy later secured three gold medals at the Olympic Games in Beijing, where Great Britain won 7 of the 10 track disciplines. Hoy, Jamie Staff, and Jason Kenny set an unofficial world record of 42.950 sec for the 750-m team sprint. The British 4,000-m pursuit quartet of Ed Clancy, Paul Manning, Geraint Thomas, and Bradley Wiggins twice broke the world record, lowering it to 3 min 53.314 sec in the final. In addition, Britain's Nicole Cooke won both the world and Olympic women's road race titles. (JOHN R. WILKINSON)

EQUESTRIAN SPORTS

Thoroughbred Racing. *United States.* A seemingly invincible three-year-old colt named Big Brown took American Thoroughbred racing by storm during the 2008 spring classic season. In the 134th Kentucky Derby on May 3, Big Brown, making only his fourth career start, teamed up with jockey Kent Desormeaux to score a dominating 4¼-length victory over Eight Belles before 157,770 spectators, the second largest crowd in the event's history. Tragedy marred the race when Eight Belles, the lone filly in the field of 20 three-year-olds, suffered catastrophic fractures in both front ankles while pulling up and had to be euthanized on the track.

Two weeks later Big Brown prevailed effortlessly in the 133rd Preakness Stakes, winning by 5¼ lengths over Macho Again and leading most observers to believe that his quest to become the 12th American Triple Crown winner and the first since Affirmed in 1978 was a forgone conclusion. When Big Brown was sent off as the heavy 3–10 favourite in the 140th Belmont Stakes on June 7, the only concern was the fact that he was racing with a patched quarter crack in his left front foot. In spite of running prominently in third position for a mile, however, the colt failed to exhibit the flair that he had shown in his previous tests and finished last after being eased during the stretch run by Desormeaux. Da'Tara, the longest shot in the field of nine at 38–1, led all the way under jockey Alan Garcia to prevail by 5¼ lengths over Denis of Cork.

Big Brown came back to win the \$1 million Haskell Invitational Stakes on August 3 and the ungraded \$500,000 Monmouth Stakes on the turf on Sep-

tember 13, both at Monmouth Park in Oceanport, N.J. The colt suffered a career-ending injury to his right front heel during an October 13 workout at Aqueduct in Queens, N.Y., while preparing for a start in the Breeders' Cup Classic. He was scheduled to begin stud duty in 2009 at Three Chimneys Farm in Midway, Ky.

The growing use of anabolic steroids in American Thoroughbred racing was thrust into the spotlight after Big Brown's trainer, Dick Dutrow, Jr., spoke about regularly administering doses of the drug to the colt during the lead-up to the Triple Crown races. Industry leaders began calling for anabolic steroid regulations, which all horse-racing states were expected to have in place in 2009. The trainers of horses entered in the 2008 Breeders' Cup World Championships were subject to a one-year suspension from the event for any tests that were returned positive for the drug.

The 25th anniversary running of the Breeders' Cup World Championships, held October 24–25 at Santa Anita Park in Arcadia, Calif., was dominated by European-based horses, which accounted for five victories and five second-place finishes. The impressive showing included long shots Raven's Pass and Henrythenavigator, which finished one-two in the \$4.58 million Classic. Odds-on favourite Curlin ran fourth, which damaged the colt's chances for a second straight Horse of the Year title. Four-year-old filly Zenyatta kept her record unblemished in seven starts while staking claim to Horse of the Year honours with a powerful come-from-behind victory in the Ladies' Classic. The addition of three new events (Marathon, Turf Sprint, and Juvenile Fillies Turf) expanded the two-day Breeders' Cup program to 14 races, which generated a worldwide handle of \$155,474,553. Garrett Gomez made history by winning four races, the first jockey to ride more than two winners on a Breeders' Cup program.

It was the first time that the Classic and the other main track Breeders' Cup races had been held on a synthetic racing surface rather than on dirt. The Cushion Track surface installed at Santa Anita in 2007 proved to have drainage problems, however, which forced the track to cancel 11 live racing dates during its winter-spring season. It was replaced with a Pro-Ride synthetic surface during the summer months. Santa Anita filed suit against the manufacturers of Cushion Track.

Curlin's September 27 victory in the

\$750,000 Jockey Club Gold Cup Stakes at Belmont Park made him the all-time leading money-winning American Thoroughbred. The \$450,000 winner's purse sent his career total to \$10,246,800, eclipsing Cigar, which was retired in 1996 after earning \$9,999,815.

The New York Racing Association emerged from bankruptcy in 2008 and on September 12 received a 25-year extension on its franchise to operate Belmont Park, Aqueduct, and Saratoga Race Course. Bay Meadows Race Course in San Mateo, Calif., which first opened in 1934, closed on August 17.

Jockey Earlie Fires, 61, announced his retirement on September 21 after a 44-year career. The Hall of Famer ranked ninth all-time among North American jockeys, with 6,470 victories. Legendary trainers D. Wayne Lukas, Nick Zito, and Bob Baffert joined forces in June to create the Thoroughbred Legends Racing Stable. Trainer Frank Whiteley, Jr., died on May 2 at the age of 93. (See OBITUARIES.) Genuine Risk, one of only three fillies to have won the Kentucky Derby, died on August 18 at age 31.

(JOHN G. BROKOPP)

International. In 2008 Aidan O'Brien was champion Thoroughbred horse trainer in Britain, as well as at home in Ireland. Hopes that he could beat Bobby Frankel's world record of 25 Group (or Grade) 1 victories in a season were disappointed, however, as his stable form declined in the autumn. He added only three more victories after September 14 and ended the year with 23. O'Brien's Duke of Marmalade won five times, and Henrythenavigator achieved four victories in Group 1 races, including the 2,000 Guineas in May. Both horses were retired to stud at season's end. Coolmore Stud, for which O'Brien trained, announced the retirement of its most influential stallion, Sadler's Wells, in May due to declining fertility.

Johnny Murtagh, who replaced Kieren Fallon as stable jockey in January, rode most of O'Brien's winners. Fallon was acquitted at a race-fixing trial in December 2007, but it was later announced that he had tested positive for a banned substance while riding in France the previous August. Fallon had already served a six-month ban for an earlier positive result there. In January 2008 the six-time British champion was banned until Aug. 7, 2009.

Godolphin was no match for Coolmore in 2008, but Sheikh Muhammad al-Maktoum did make several significant purchases. He bought Australia's Woodlands Stud, with some 1,000

horses, in March. In August he added the main yard at the Chantilly (France) stables of André Fabre and sent 35 two-year-olds and 70 yearlings there in the autumn. In September he purchased the Kentucky farm and 250 horses belonging to Stonerside. One of the Stonerside horses, Raven's Pass, defeated Henrythenavigator and the American defending champion, Curlin, in the Breeders' Cup Classic. The first English-trained winner of the Classic, Raven's Pass carried the colours of Sheikh Muhammad's wife, Princess Haya of Jordan, who was also successful with New Approach in the Epsom Derby.

Horses from the U.S. and South Africa divided the six races at Nad al Sheba on Dubai (U.A.E.) World Cup day in March. Curlin, already a winner at Nad al Sheba that month, beat the South African-trained Asiatic Boy in the World Cup. The South Africans had dominated the preceding International Festival, often, as in the case of Asiatic Boy, with horses bought in South America.

Alain de Royer-Dupre broke a sequence of 21 consecutive years in which Fabre had been champion trainer in France. The new champion owed his success to the Aga Khan's horse Zarkava, winner of the 2008 Prix de l'Arc de Triomphe, which was worth twice as much as in 2007 thanks to Qatar, which sponsored all 11 Group races on the Arc weekend. Zarkava retired unbeaten in seven races, five of them in 2008.

Bad weather in August and September disrupted several important meetings in England. York was washed out, but all of the most significant races were redistributed between Newmarket, Newbury, and Goodwood at the end of the same week. Haydock's Group 1 Sprint Cup was run at Doncaster. A strike halted both Thoroughbred and harness racing in Italy between October 7 and November 8. Many big races were lost, but the action achieved its objective of persuading the government to give more money to the sport.

Kerrin McEvoy, who had been second jockey for Godolphin, returned home to Australia as a consequence of the Woodlands sale. He rode Godolphin's England-based All the Good to victory in the Caulfield Cup in October. All the Good missed the Melbourne Cup in November because of an injury, but the race still attracted a record seven European runners. Bauer, already winner of the Geelong Cup, was the best of them. In the event, however, he failed by a

nose to catch 40-1 long shot Viewed, which gave his Australian trainer Bart Cummings, at almost 81 years old, a record 12th winner of the great race.

Not Bourbon was trainer Roger Attfield's eighth winner of the Queen's Plate, the first leg of the Canadian Triple Crown. The colt arrived for the second leg, the Prince of Wales Stakes, as the overwhelming favourite, but he finished sixth (behind winner Harlem Rocker), after which he required throat surgery. Marlang captured the third leg, the Breeders' Stakes, in August. Marsh Side was a surprise winner of the Canadian International in October. It was the first victory since December 2006 for the California-trained Marsh Side, which finished last in the same race in 2007. (ROBERT W. CARTER)

Harness Racing. Two three-year-old colts with long run-on names captivated harness racing fans in North America in 2008. The pacer Somebeachsomewhere and the trotter Deweycheatumnhowe dominated their divisions during the season, and by the end of the year, each had earned a future in the breeding ranks.

Somebeachsomewhere was truly a hero to many in harness racing because of his grassroots ties. He was foaled in Ohio at a small farm and then sold as a yearling to a group of enthusiasts from Nova Scotia. One of the Canadian owners, auto dealer Brent MacGrath, handled the training duties and turned the promising colt into a champion. After having been unbeaten in six starts as a two-year-old, Somebeachsomewhere won the first four starts of his sophomore season, including the \$1.5 million North America Cup in Ontario, before being upset by Art Official in the \$1.1 million Meadowlands Pace. In that race Somebeachsomewhere was beaten by a neck in a time of 1 min 47 sec for the mile. Later in the season, at the Red Mile track in Kentucky, Somebeachsomewhere paced a mile in 1 min 46.4 sec, the fastest ever by a three-year-old. He also paced the fastest mile ever by a three-year-old on a half-mile track with a 1-min 49.2-sec clocking. Somebeachsomewhere ended the season with 14 wins in 15 starts and earnings of \$2,448,003.

MacGrath created some controversy when he deliberately skipped racing Somebeachsomewhere in the Little Brown Jug, the traditional big prize for three-year-old pacers. The format of the Little Brown Jug, which could require a horse to race three heats in one afternoon, was deemed to be too gruel-

Three-year-old trotter Deweycheatumnhowe, driven by trainer and co-owner Ray Schmitt, charges to victory in the \$1.5 million Hambletonian on August 2.

ing by MacGrath, who was concerned about the toll that a demanding race in the Jug might take on his horse. With the expected star absent, the Little Brown Jug went to Shadow Play, driven to victory by Ohio native David Miller.

Deweycheatumnhowe was also unbeaten as a two-year-old in 2007, winning all 10 of his starts. He continued winning as a three-year-old, dominating his trotting foes and extending his streak to 15 straight wins in capturing the \$1.5 million Hambletonian at the Meadowlands. In early September "Dewey" tasted defeat for the first time when his rival Crazy trotted past to win in the stretch in an elimination for the Canadian Trotting Classic, but he rebounded to win the final. In early October Dewey was beaten by Celebrity Secret in a heat of the prestigious Kentucky Futurity but came back to win the event in a third-heat race-off. He also lost his final race and thus had 12 wins in 15 starts and earnings of \$2,218,987.

In Europe French trotter Offshore Dream captured the grueling Prix d'Amerique for the second consecutive year. The small six-year-old bay rallied in the stretch to win the 2.7-km (1.67-mi) race, held at the Vincennes racecourse near Paris in late January. He was driven by his trainer, Pierre Levesque. Four months later in Sweden, the Italian star Exploit Caf won the coveted Elitlopp for French driving ace Jean-Michel Bazire. Oiseau de Feu of France finished second, and American trotter Enough Talk was third.

In Australia, Blacks A Fake and trainer-driver Natalie Rasmussen won the Inter-Dominion Pacing Championship series, considered the greatest prize in Southern Hemisphere harness racing, for the third consecutive year. The eight-year-old pacer earned the trophy at the Moonee Valley track in Melbourne. (DEAN A. HOFFMAN)

Steeplechasing. High winds forced the abandonment of the second day of the Cheltenham Festival in March 2008, but the lost races were redistributed between the remaining two days. Paul Nicholls took the first three places in the Gold Cup Chase as Denman beat the 2007 winner, Kauto Star, and Neptune Collonges. All three horses were also big race winners in Ireland's steeplechase season. Nicholls, who was British champion trainer for the third season, also won Cheltenham's Champion Chase with Master Minded and the Triumph Hurdle with Celestial Halo.

Princesse d'Anjou won the Grand Steeple-Chase de Paris for the second time. Maruka Rascal, Japan's Steeplechase Horse of the Year in 2006, took that country's Nakayama Grand Jump. That race was supplanted as the world's richest over obstacles by the English Grand National, which was won by Comply or Die for trainer David Pipe. (ROBERT W. CARTER)

FOOTBALL

Association Football (Soccer). *Europe.* Euro 2008, the latest installment of the quadrennial European association foot-

ball (soccer) championship, was decided in favour of Spain, which defeated Germany 1–0 in the final, held on June 29 in Vienna. The Spanish team's free-flowing attack swarmed a rather static German defense. Despite the absence of injured David Villa—the tournament's top scorer, with four goals—Spain continued its offensive pressure and was rewarded in the 33rd minute by the sheer persistence of striker Fernando Torres. Fastening onto a shrewd pass by Spanish midfielder Xavi, Torres blew past hesitant German defender Philipp Lahm, skipped over the advancing goalkeeper, and clipped in the crucial goal. Spain, led by veteran coach Luis Aragonés, maintained this swift and effective style of play, though it produced no further goals. Xavi was named the Player of the Tournament.

The tournament was held jointly in Austria and Switzerland, but neither of the host countries managed to survive the group stage. Though there was exactly the same number of goals scored as in 2004, far more attacking enterprise was shown by many of the competing teams. Discipline was much improved too, with just three red cards shown in the 31 matches. Greece, the reigning Euro champion, lost all three group games. Portugal, The Netherlands, and Croatia were group winners, along with unbeaten Spain. Noticeably absent from the tournament was the nonqualifying contingent from the British Isles—England, Scotland, Ireland, Northern Ireland, and Wales. In addition, France—the World Cup runner-up in 2006—failed to win a match, while reigning World Cup champion Italy merely scraped into the knockout round by beating a French team suffering from injury and reduced to 10 players by a penalty.

The Netherlands showed form reminiscent of the flair that had characterized its 1988 Euro championship success. Its 3–0 win over Italy produced the finest goal of the tournament, as well as the most controversial. Ruud Van Nistelrooy, though seemingly offside, scored the opening goal; the referee allowed it despite the Dutch striker's apparently being played onside only by virtue of a defender lying injured outside the playing area. Other notable displays came from Croatia, which surprised Germany in a 2–1 win, and Turkey, which turned a 2–0 deficit into a 3–2 victory over the Czech Republic. Two of the quarterfinal ties were decided in shoot-outs. Spain won 4–2 after a goalless draw with Italy, and

Turkey emerged with a 3–1 victory over Croatia after a 1–1 draw. In the semifinals the Russians were given a lesson in relentless pressure by Spain, which achieved a convincing 3–0 win, while Germany just edged Turkey 3–2 with a dramatic winning goal in the 90th minute.

In the wake of the failure of any team from the British Isles to qualify for the Euro—and as attention switched to qualifying for the 2010 World Cup in South Africa—England axed its coach, Steve McClaren, replacing him with Fabio Capello of Italy, and Ireland appointed another Italian, Giovanni Trapattoni, to replace coach Steve Staunton. Scotland also accepted the resignation of its coach, Alex McLeish, and gave the position to fellow Scot George Burley.

There was consolation for English fans in the Union des Associations Européennes de Football (UEFA) Champions League. On May 21 in Moscow, Manchester United met Chelsea in an all-English final, with United securing a 6–5 victory on penalties after a 1–1 draw. United had taken the lead in the 26th minute as Portuguese international Cristiano Ronaldo headed a goal

Spanish midfielder Xabi Alonso jumps for the ball during the association football (soccer) Euro 2008 final in Vienna on June 29. Spain was undefeated in the tournament and beat Germany 1–0 in the final.

Alberto Pizzoli—AFP/Getty Images

past Chelsea's Czech goalkeeper, Petr Cech, but Chelsea tied the game just before halftime when Ghanaian midfielder Michael Essien's shot was deflected by two United defenders, putting Dutch goalkeeper Edwin Van der Sar on the wrong foot and allowing Frank Lampard an easy score. Chelsea was denied twice in the second half. Extra time arrived, and tempers frayed. Didier Drogba (of Côte d'Ivoire) was sent off for Chelsea, only the second player in Champions League history to have been dismissed in the final. In the shoot-out, Chelsea's John Terry slipped as he was about to take what could have been the winning kick and merely hit the post. Then Van der Sar saved French striker Nicolas Anelka's effort to clinch United's third Champions League crown.

In UEFA Cup competition, there had been high hopes for the Rangers, the Scottish Premier League runners-up, who on May 14 competed in the Cup final against Zenit St. Petersburg. The Glasgow club, however, entered the final having been forced to play 12 competitive matches in the previous six weeks, in contrast to its fresher opponent, which the Russian Premier League had given permission to postpone several games on its domestic schedule until after the final. A tired Rangers team nevertheless managed to hold Zenit St. Petersburg to a scoreless tie until the 72nd minute, when Igor Denisov, after exchanging passes with teammate Andrey Arshavin, netted the breakthrough goal. Konstantin Zyryanov added a second goal in the dying seconds of the match to give Zenit St. Petersburg a 2–0 victory.

Under its new president, Michel Platini, the UEFA—with support from the Fédération Internationale de Football Association (FIFA)—was eager to introduce a system of quotas restricting the use of foreign players, especially in the English Premier League. Attempts were made to persuade the European Union to allow the move in contravention of the free movement of labour within its membership. That did not prevent English Premier League clubs from continuing to spend freely on trades. By the end of the summer trade deadline, a record £500 million (about \$890 million) had been spent, with 12 clubs breaking their previous record deals. Sulaiman al-Fahim, the new co-owner of the Premier League football club Manchester City, was happy to pay a British record £32.5 million (more than \$58 million) to sign Robinho, a Brazilian striker from the Spanish team Real Madrid.

The UEFA took the unprecedented step of banning CSKA Sofia from participating in the Champions League for 2008–09 because of the Bulgarian club's financial debt. The move was all the more surprising since the club had just completed one of the most successful seasons in its 60-year history, winning its record 31st Bulgarian league title. Other European champions included Anorthosis, which took the title in Greek Cyprus en route to becoming the first Cypriot club to advance to the Champions League group stage; Partizan Belgrade, winners of the Serbian crown; and Dinamo Zagreb, the best of the Croatian league. In addition, Bayern Munich dominated the Bundesliga, Germany's top league, while Lyon, seemingly untouchable in France, racked up its seventh consecutive title. Despite having 6 points deducted for corruption dating back to the 2003–04 season, Porto still managed to win the Portuguese title by 14 points. Internazionale repeated in Italy's Serie A as former champion AC Milan slipped to fifth place, despite the presence of 2007 FIFA Player of the Year Kaká. (See BIOGRAPHIES.) In Scotland the fairy-tale rise of Gretna from the obscurity of English nonleague football to the Scottish Premier League ended in disaster after its owner and financial benefactor, Brookes Miles, fell ill, which plunged the team's finances into disarray. The club was eventually dissolved in August. (JACK ROLLIN)

The Americas. While Argentina and Brazil had most of South America's star association football (soccer) players, including Brazil's formidable playmaker Kaká (see BIOGRAPHIES), those countries had not performed well in their Fédération Internationale de Football Association (FIFA) World Cup qualifying group. While neither was in danger of failing to qualify for the 2010 finals, they were easily topped in the rankings by Paraguay. With the competition just past the halfway stage, unfancied Ecuador was also well placed to gain a spot. Ecuador's advantage was playing home games at Quito's high altitude. In World Cup qualifying matches farther north, the U.S. beat Cuba both at home (3–1) and away (1–0) in the first meetings between those countries' teams in Cuba in 61 years.

Quito's Liga Deportiva Universitaria (LDU) in 2008 became the first Ecuadoran club to win the Libertadores de América Cup. LDU also won the vice-championship of Ecuador's domestic league behind cross-town rival

Deportivo and qualified for the FIFA Club World Cup but lost to Manchester (Eng.) United 1–0 in the final on December 21. São Paulo FC secured the Brazilian national championship for the third straight year as the team's goalkeeper, Rogerio Ceni, reached a total of 83 career goals from penalties and free kicks. Meanwhile, Mexico's Pachuca retained the CONCACAF club championship, and Libertad took the Paraguayan title for the third straight year. Porto Alegre's Internacional became the first Brazilian club to win the South American Cup, but the country continued to put its top four teams only into the Libertadores competition.

In Argentina, River Plate won the 2007–08 season's closing championship but then unexpectedly finished at the bottom of the 2008–09 opening championship, which was tied by three clubs (Boca Juniors, San Lorenzo, and Tigre) for the first time since 1968. Boca Juniors gained the club's 23rd professional title by scoring one more goal in the play-offs. Another big event in Argentina was the naming of the controversial former star player Diego Maradona as the coach of the national team.

In the U.S. the Columbus Crew was a first-time winner of the Major League Soccer (MLS) Cup. The sport appeared to be gaining in popularity. The MLS intended to expand from 14 to 16 clubs by 2010, and requests had been received from seven other cities seeking franchises. (ERIC WEIL)

Africa and Asia. Egypt retained its African Nations Cup title with a 1–0 win over Cameroon in the final, held on Feb. 10, 2008, in Accra, Ghana. Muhammad Aboutrika scored the game's only goal in the 77th minute. The Egyptians were able to contain Cameroon's prolific goalkicker Samuel Eto'o, who ended the tournament as the competition's all-time leading scorer, with 16 goals.

In the East Asian championship, staged in Chongqing, China, three of the six games played in the group final ended in draws. Although the deciding match, between South Korea and Japan, was played to a 1–1 tie, the South Koreans were declared the champions, since they had scored more goals overall in the tournament. China placed third, and North Korea was fourth. (JACK ROLLIN)

U.S. Football. *College.* Florida won its second top college football ranking in three years by defeating Oklahoma 24–14 in the 2008–09 Bowl Championship Series (BCS) championship game on Jan. 8, 2009, in Miami Gar-

dens, Fla. Quarterback Tim Tebow was the game's Most Outstanding Player with 109 yd rushing and 231 yd and two touchdowns on passes for the Southeastern Conference (SEC) champion Gators. Florida's (13–1) defense held Big 12 champion Oklahoma (12–2) 40 points below its regular-season average of 54.0 (the Sooners had scored a record 702 points during the season and more than 60 in their last five games). It was fifth-ranked Oklahoma's fifth BCS bowl-game loss in six years and the fifth defeat in six years for the top-ranked team entering the BCS championship game.

Mountain West Conference winner Utah (13–0), Pacific-10 winner Southern California (12–1), and Texas (12–1) ranked second through fourth in the final reporters' Associated Press (AP) poll, with the coaches' *USA Today* poll placing Utah behind the others. Each school made a reasonable claim for the top ranking, however. Utah, the only undefeated team in the big-budget Football Bowl Subdivision (FBS), won the Sugar Bowl 31–17 over Alabama (12–2), which had been ranked first for five weeks before losing the SEC championship game to Florida. Southern California allowed FBS-low averages of 9.0 points and 134.4 yd passing per game and defeated Big Ten winner Penn State (11–2) by a score of 38–24 in the Rose Bowl. Texas won the Fiesta Bowl 24–21 over Ohio State (10–3) after having been denied a spot in the Big 12 championship game despite having beaten Oklahoma, ranking ahead of the Sooners in the AP poll, and having identical conference and overall records as Oklahoma and Texas Tech (11–2). Oklahoma played North Division winner Missouri (10–4) for the Big 12 title because it ranked higher in the BCS formula (which includes polls and computer rankings).

Atlantic Coast Conference champion Virginia Tech (10–4) won the Orange Bowl 20–7 over Big East champion Cincinnati (11–3), and Western Athletic Conference winner Boise State (12–1) lost 17–16 to Texas Christian (TCU; 11–2) in the Poinsettia Bowl. With Jerry Hughes's FBS-leading 15 sacks, TCU allowed per-game lows of 217.8 yd and 47.1 yd rushing over the season. Both polls ranked Alabama, TCU, and Penn State sixth, seventh, and eighth, respectively. The season had six different top-ranked teams, which was more than in 2007–08, although that year had fewer undefeated and one-loss teams, as well as bigger swings in the rankings.

Dave Martin/AP

Florida quarterback Tim Tebow prepares to pass against SEC rival Alabama on December 6. Florida's victory earned the Gators the conference title and a place in the BCS national championship game.

Quarterback Sam Bradford of Oklahoma became the only sophomore besides Tebow in 2007 to have won the Heisman Trophy for the best overall player. Bradford, who also won the Davey O'Brien Award as best quarterback, led the FBS with 50 touchdown passes and 180.8 rating points but threw two of his eight interceptions against Florida in the BCS final. Honours also went to Tebow, the second player with two consecutive Maxwell Awards, after Notre Dame's Johnny Lattner in 1952–53, and to Texas quarterback Colt McCoy, the Walter Camp Player of the Year. Tebow also received the Disney Spirit Award for being inspirational and the Danny Wuerffel Trophy for community service.

McCoy had the highest completion percentage, and Texas Tech's Graham Harrell had the most passing yards with 5,111, as his team led the FBS with 413.2 yd passing per game. Oklahoma, Texas Tech, and Texas ranked first, third, and fifth, respectively, in scoring, with top-10 passers in yards, touchdowns, and efficiency rating. Oklahoma State and Missouri gave the Big 12 Conference 5 teams among the top

10 in total offense and passing efficiency. The other leading offenses were Tulsa, with 569.9 yd per game behind quarterback David Johnson's FBS-high 10.15 yd per pass attempt, and Navy, with 292.4 yd rushing per game.

Rushing leader Donald Brown of Connecticut gained 2,083 yd, 18 per game more than runner-up Shonn Greene of Iowa, the Doak Walker Award winner as the best running back. The top receivers were North Texas's Casey Fitzgerald with 113 catches, Brigham Young's Austin Collie with 1,538 yd, and Texas Tech sophomore Michael Crabtree with 18 touchdowns and his second straight Fred Biletnikoff Award. Scoring leader Javon Ringer of Michigan State had 132 points on 22 rushing touchdowns. Honoured as the top defensive players were Southern California middle linebacker Rey Mauluga with the Chuck Bednarik Award and Texas defensive end Brian Orakpo with both the Bronko Nagurski Trophy and the Lombardi Award for best lineman or linebacker. Alabama's Nick Saban was named Coach of the Year. Alabama offensive tackle Andre Smith won the Outland Trophy for interior linemen.

Professional. The New York Giants of the National Football Conference (NFC) defeated the New England Patriots of the American Football Conference (AFC) 17–14 in Super Bowl XLII in Glendale, Ariz., on Feb. 3, 2008, winning the National Football League's (NFL's) 2007–08 championship and denying the Patriots the league's first 19–0 record. Quarterback Eli Manning (*see* BIOGRAPHIES) won the Super Bowl Most Valuable Player (MVP) award, which had gone to his older brother Peyton the previous year. Eli Manning completed 19 of 34 passes for 255 yd and two touchdowns, including the 13-yd game winner with 35 seconds to play, but he was best remembered for escaping three tacklers on a third-and-five completion 24 seconds earlier, a move that many called the greatest Super Bowl play ever. David Tyree made a jumping one-handed grab against his helmet while being tackled and gained 32 yd to the Patriots' 24-yard line.

The Patriots' disappointment continued in the 2008–09 season when they became the only 11–5 team to miss a 12-team play-off field and the seventh Super Bowl loser in eight years to miss the play-offs the next season. The NFC East champion Giants (12–4) were the only NFC play-off team to repeat from 2007, when they had qualified as a wild card. The Giants led the league with 157.4 yd

rushing behind the NFL's fourth pair of 1,000-yd runners, Brandon Jacobs and Derrick Ward; Ward also led the league with 5.6 yd per carry.

Only three of the eight 2007–08 division champions returned to the play-offs. Pittsburgh (12–4) and San Diego (8–8) repeated in the AFC North and AFC West, respectively, and Indianapolis (12–4) was a wild card. Four of the other six division champions had gone more than five years without a title: Tennessee (13–3; AFC South), Miami (11–5; AFC East), Minnesota (10–6; NFC North), and Arizona (9–7; NFC West), which had waited for 33 years. Carolina (12–4) won the NFC South. The other wild-card play-off teams were the NFC's Atlanta (11–5) and Philadelphia (9–6–1) and the AFC's Baltimore (11–5). Indianapolis quarterback Peyton Manning won the league MVP award after taking the Colts to victory in their last nine regular-season games.

Denver (8–8) became the first NFL team to miss the play-offs after leading its division by three games with three to play. Tampa Bay (9–7) lost its last four games when just tying one would have given it a play-off berth. Detroit experienced the most complete futility, however, as it finished with the NFL's first 0–16 record, eclipsing Tampa Bay's 1976 squad, which went winless in a 14-game season as a first-year expansion team.

Miami quarterback Chad Pennington, with the league's best pass completion rate, was Comeback Player of the Year for the second time in three years after a sequence of events that began in August when Brett Favre rescinded his March 4 retirement announcement. Green Bay, Favre's team in 1992–2007, had planned its roster without him and traded him for a fourth-round draft pick to the New York Jets, which then cut Pennington, who signed with Miami one day later. Favre's passer rating finished more than 12 points behind those of both Pennington and Favre's Packers replacement, Aaron Rodgers, although Green Bay fell to a 6–10 record.

The Arena Football League (AFL) championship went to the Philadelphia Soul, which had a league-best 13–3 record. Philadelphia defeated the defending champion San Jose SaberCats 59–56 in the July 27 title game in New Orleans. In December the AFL Board of Directors voted to suspend the 2009 season and reevaluate the league's future in light of the global financial crisis.

Canadian Football. The Calgary Stampeders won the 2008 Canadian Football League (CFL) championship with a

22–14 Grey Cup victory over the Montreal Alouettes on November 25 in Montreal. Sandro DeAngelis was the game's top Canadian with five field goals for Calgary after regular-season CFL highs of 217 points and 50 field goals. Henry Burris, the game's Most Valuable Player, threw for 328 yd, including a touchdown, and rushed for a game-high 79 yd.

Calgary (13–5) won the West Division with league yardage leaders in both rushing (Joffrey Reynolds with 1,310) and receiving (Ken-Yon Rambo with 1,473), while its defense allowed league lows of 23.3 points and 89.7 yd rushing per game. East Division winner Montreal (11–7) led CFL offenses with 33.9 points and 428.8 yd per game behind the CFL bests of Most Outstanding Player Anthony Calvillo's 43 touchdown passes and 107.2 passer rating, Ben Cahoon's 107 catches, and Jamel Richardson's 16 touchdowns, all on catches. The top-passing Edmonton Eskimos (10–8) gained 335.1 yd per game, as quarterback Ricky Ray led the CFL with 5,661 yd passing and 9.4 yd per attempt, and Most Outstanding Canadian Kamau Peterson ranked second in catches and third in yards.

The Saskatchewan Roughriders (12–6) allowed 354.1 yd per game, while the British Columbia Lions (11–7) had the Most Outstanding Defensive Player, defensive end Cameron Wake, with league bests of 23 sacks and five forced fumbles. Most Outstanding Special Teams Player Dominique Dorsey of the Toronto Argonauts (4–14) led in both punt and kickoff return averages with a league-high 2,892 combined yards on runs, catches, and returns. Other top-player awards went to Montreal guard Scott Flory for offensive linemen and Saskatchewan slot-back Weston Dressler for rookies.

(MELINDA C. SHEPHERD)

Australian Football. Hawthorn won the Australian Football League (AFL) Grand Final on Sept. 27, 2008, by upstaging solidly favoured Geelong in front of more than 100,000 spectators at the Melbourne Cricket Ground. It was Hawthorn's 10th premiership flag and its first since 1991. Geelong, the reigning champion, cruised into the Grand Final, having lost only one game all year, whereas Hawthorn had lost five games. At halftime Hawthorn held a slender 3-point lead, but the team turned on the power in the second half to win by 26 points, with a final score of 18.7 (115)–11.23 (89). The loss was a bitter blow for Geelong, which was

attempting to equal the club's feat of winning successive flags in 1951–52. Among the standouts for Hawthorn was Luke Hodge, who was awarded the Norm Smith Medal as best player in the Grand Final.

Hawthorn's ace goal kicker, Lance Franklin, received the Coleman Medal for most goals (102) during the AFL's 22-game home-and-away season. Two goals in the Grand Final brought his year's total to 113. The AFL's most prestigious individual award, the Brownlow Medal, which recognized the season's best and fairest player, went to Western Bulldog Adam Cooney. The Rising Star Award, for best young player, was given to Fremantle's Rhys Palmer, and Carlton's Chris Judd was named captain of the All-Australian team. (GREG HOBBS)

Rugby Football. New Zealand Rugby Union entered 2008 in disarray after having been knocked out of the 2007 Rugby World Cup in a stunning quarterfinal loss to France, but the All Blacks ended the year on top of the world again, on and off the field. The All Blacks kicked off 2008 with five straight wins against Ireland, England, and South Africa, and although they lost two times in the Tri-Nations championship tournament, they still finished on top of the standings table for the fourth successive year. The New Zealanders demonstrated their true brilliance in November, when they completed their second home nations Grand Slam in three years, recording successive victories over Scotland, Ireland, Wales, and England. In all four matches they failed to concede a try and conceded only three points in the second half in all four matches put together. With their success assured, New Zealand swept the honours board as Graham Henry was named Coach of the Year and the All Blacks were confirmed as Team of the Year.

Earlier in the year, Wales continued its ascendancy by gaining a Six Nations Grand Slam; Welshman Shane Williams's superb form in that tournament led to his being named International Rugby Board (IRB) Player of the Year. The development of a number of new IRB tournaments continued at a strong pace. An Emerging South Africa side beat Romania in the IRB Nations Cup; Canada West won the North America 4 title; Tonga's Tautahi Gold won the Pacific Rugby Cup; and a powerful New Zealand Maori side took home the Pacific Nations Cup. Japan was the champion in the inaugural Asian Five Nations event.

Bids went out in 2008 for the right to host the 2015 and 2019 Rugby Union World Cups. A record eight countries—England, Wales, Scotland, Ireland, Japan, Australia, Italy, and South Africa—made bids to hold the 2015 tournament, and Australia, Ireland, Italy, Russia, Japan, Scotland, South Africa, and Wales were looking ahead to the 2019 event. The 2011 World Cup draw was completed in December.

On the domestic scene, Munster was crowned champion of the Heineken Cup for the second time, beating Toulouse 16–13 in the final in Cardiff, Wales. Bath continued the English domination of the European Challenge Cup, beating Worcester 24–16. The London Wasps were crowned English champions—in Lawrence Dallaglio's last game for the club—after beating archrival Leicester 26–16 in the Guinness Premiership final, and Leinster ended the season five points clear of Cardiff at the top of the Magners League. In the Southern Hemisphere, the Canterbury (N.Z.) Crusaders gave coach Robbie Deans a fitting send-off—before he became Australia's coach—by winning another Super 14 title in a 20–12 victory over Australia's New South Wales Waratahs.

The 2008 Rugby League (RL) World Cup, the first RL World Cup to be staged since 2000, took place in Australia, with 10 national teams participating—Australia, England, Fiji, France, Ireland, New Zealand, Papua New Guinea, Samoa, Scotland, and Tonga. The Australia Kangaroos, who had not lost a match since 2006, topped the standings and then crushed Fiji 52–0 in one semifinal, and the New Zealand Kiwis defeated England 32–22 in the other. In the final, held in Brisbane on November 22, New Zealand “pulled off the biggest upset in World Cup history,” overturning Australia (winner of 9 of the previous 12 tournaments, including the last 6) by 34–20 to take New Zealand's first RL World Cup title. (PAUL MORGAN)

GOLF

The introduction of drug testing was one big change for golf during 2008, and another came when the world's number-one-ranked player, Eldrick (“Tiger”) Woods, was out of action for the last six months of the season following a knee operation. Between August 2007 and March 2008, the remarkable Woods had won eight out of nine events and was runner-up in the other. After another

second-place finish in the Masters Tournament at the Augusta (Ga.) National Golf Club in April 2008, however, the 32-year-old American underwent arthroscopic surgery on his left knee.

His one-tournament comeback in June was a truly memorable reappearance. In the U.S. Open at the Torrey Pines South golf course in San Diego (where he had triumphed in the last four stagings of the Buick Invitational), Woods, clearly in serious pain after many of his shots, holed a 4-m (13-ft) putt on the final green to tie 45-year-old Rocco Mediate of the U.S. with a one-under-par total of 283. Woods then birdied the same par-five hole again to stay alive in the 18-hole play-off the following day and won with a par at the first extra hole of sudden death. That gave him his 14th major title, only 4 short of fellow American Jack Nicklaus's record, but three days later it was announced that Woods would be undergoing reconstructive surgery on his anterior cruciate ligament and that he had played the tournament with a double stress fracture in his left leg. It made his victory—achieved after a 91-hole marathon—all the more staggering.

The first “Tiger-less” majors in more than a decade were the British Open at Royal Birkdale in Southport, Eng., and the Professional Golfers' Association (PGA) championship at Oakland Hills in Bloomfield, Mich. His absence created an opportunity for someone to seize the spotlight, and the player to do it was Ireland's Padraig Harrington.

Harrington won his first major at the 2007 British Open, but his defense in 2008 was in doubt because of a wrist injury. Nevertheless, a brilliant back-nine 32 on the final day—highlighted by a five-wood approach to the long 17th hole, which finished little more than a metre from the flag and led to an eagle three—swept him to a four-stroke victory over England's Ian Poulter with a three-over-par total of 283. He thus became the first European to retain the title since Britain's James Braid in 1906. The week was also memorable for the performance of 1986 and 1993 champion Greg Norman of Australia, who, less than a month after his marriage to former American tennis star Chris Evert, came out of semiretirement to hold the lead with one round to go. The 53-year-old Norman had the chance to become easily the oldest-ever winner of a major, but his closing round 77 dropped him into a tie for third place.

The PGA championship was only three weeks later, and Harrington, six

behind at the halfway point, stormed to another victory with two brilliant closing rounds of 66. He beat Spain's Sergio Garcia and American Ben Curtis by two strokes, with the three-under-par aggregate of 277, and became the first European to win the event since Scotland's Tommy Armour in 1930.

Although Harrington was the winner of three of golf's last six majors, he finished fifth in the Masters in April, where the star of the show was South Africa's Trevor Immelman. Less than four months after he had undergone surgery to remove a benign tumour on his diaphragm, Immelman held at least a share of the lead after each round and could afford a closing 75, which matched the highest last round by a champion in the event's history. With an eight-under total of 280, he finished three clear of Woods. It was a first major title for the 28-year-old Immelman, the first South African to win at Augusta since Gary Player in 1978, and he did it in the week when Player set a record of 51 appearances in the tournament.

Without Woods, the United States was underdog for the Ryder Cup at Valhalla in Louisville, Ky., but Europe under the captaincy of Nick Faldo failed to achieve an unprecedented fourth successive European victory. Harrington, Garcia, and England's Lee Westwood (three players of whom the most was expected) did not manage one win between them, whereas the six American newcomers, three of them chosen by captain Paul Azinger, all played their part in a stunning 16½–11½ success.

The PGA Tour again culminated in the FedEx Cup play-offs. Fiji's Vijay Singh won the first two events, and Colombian Camilo Villegas took the second two, but it was Singh who claimed the \$10 million bonus; the 45-year-old also finished as leading money winner on the circuit, with \$6,601,094. On the European Tour, Robert Karlsson became the first Swede to claim the Order of Merit, with £2,171,087 (about \$3,425,000), and then combined with Henrik Stenson to win the World Cup at Mission Hills, China.

Peter Morrison/AP

In the 2008 Curtis Cup, American Tiffany Joh tees off on the 18th hole of the Old Course at St. Andrews, Fife, Scot. The U.S. defeated Britain and Ireland in the biennial amateur women's golf tournament for the sixth straight time.

After three Ladies Professional Golf Association (LPGA) wins in her first eight events of the year, Sweden's Annika Sörenstam appeared to be mounting a challenge to women's world number one Lorena Ochoa of Mexico. In May, however, the 37-year-old Sörenstam announced that she was retiring from competitive golf at the end of the season.

Sörenstam hoped that she might bow out with an 11th major title, but it was not to be. The nearest she came was joint second place in the Kraft Nabisco Championship at Mission Hills Country Club in Rancho Mirage, Calif., five strokes behind Ochoa. It was the Mexican's second successive major win and came in the middle of a run of six victories in seven tournaments. The other three women's majors were all won by Asian players. The McDonald's LPGA Championship at Bulle Rock in Havre de Grace, Md., saw Yani Tseng beat Maria Hjorth of Sweden at the fourth play-off hole to become Taiwan's first major champion. Nineteen-year-old Park Inbee of South Korea beat yet another Swede, Helen Alfredsson, by four strokes in the U.S. Women's Open at Interlachen in Edina, Minn., and at the Ricoh Women's British Open at Sunningdale Old, Berkshire, Eng., her compatriot Shin Ji Yai defeated Tseng by three. Ochoa topped the LPGA Tour

money list for the third straight season, with earnings of \$2,763,193.

The LPGA Tour, with 121 non-Americans (including 45 South Koreans) in its ranks, caused a huge furor when it announced its intention to introduce a rule whereby anyone not reaching a certain standard of English could face suspension. In what was believed to be the first such move by a sports governing body, Deputy Commissioner Libba Galloway said, "For an athlete to be successful in the sports entertainment world we live in they need to be great performers on and off the course. Being able to communicate effectively with sponsors and fans is a big part of this." Under increasing criticism, claims of discrimination, and possible legal action, the LPGA Tour backed off from its proposed ban, and non-English-speaking players would continue to be offered tutors and translators.

In the amateur game, 18-year-old New Zealander Danny Lee eclipsed Woods as the youngest-ever winner of the men's U.S. Amateur, and Reinier Saxton of The Netherlands became British Amateur champion. Another Swede, Anna Nordqvist, won the Ladies British Amateur, and American Amanda Blumenherst took the U.S. version. In the men's and women's world team championships, held in Adelaide, Australia, in October, the victories went to Scotland and Sweden, respectively. The United States retained the Curtis Cup with a 13-7 triumph over Britain and Ireland's top women players at St. Andrews, Scot.

As well as implementing a drug-testing program in 2008, golf's governing bodies came together under the umbrella of the International Golf Federation to formulate a strategy that they hoped would result in the sport's inclusion in the 2016 Olympic Games. Golf had not been part of the Games since 1904. Spaniard Seve Ballesteros, who retired from competition in 2007 at the age of 50, was admitted to a Madrid hospital in October and after the discovery of a brain tumour needed four major operations. (MARK GARROD)

GYMNASTICS

At the 2008 Olympic Games in Beijing, the Chinese women gymnasts captured their first Olympic team gold medal with a score of 188.90 points. The team—Cheng Fei, He Kexin, Jiang Yuyuan, Li Shanshan, Yang Yilin, and Deng Linlin—defeated a strong U.S. squad that had bested the Chinese at

the world championships the previous year. The U.S. team, which included Nastia Liukin (see BIOGRAPHIES), Shawn Johnson, Chellsie Memmel, Samantha Peszek, Alicia Sacramone, and Bridget Sloan, ended with 186.525 points to take its second consecutive Olympic silver medal. Romania (181.525 points) finished third. Although questions regarding the ages of the Chinese gymnasts were raised both before and during the Olympics, the Fédération Internationale de Gymnastique eventually ruled that all six members of the Chinese women's team met the minimum age requirement (16 in the year of the competition), and the International Olympic Committee indicated that it considered the matter "closed."

Liukin and Johnson battled for the gold in the all-around finals. Liukin came out on top owing in part to her outstanding bar routine, finishing with a leading score of 63.325 points. Johnson, the defending world all-around champion, won the silver medal with 62.725 points, and Yang (62.650 points) took the bronze. North Korea's Hong Un Jong won the gold medal in the vault. Germany's Oksana Chusovitina, who at age 33 was competing in her fifth Olympics, won the silver, and Cheng placed third. On the uneven bars,

He and Liukin both scored a 16.725, but after the tie-breaking procedures, He was awarded the gold medal and Liukin the silver; Yang (16.650 points) claimed the bronze. Johnson secured the gold medal in balance beam; Liukin settled for the silver and Cheng the bronze. Romania's Sandra Izbasca took the gold medal in the floor exercise with a score of 15.650 points, followed by Johnson and Liukin with scores of 15.500 and 15.425, respectively.

On the men's side, reigning world champion China dominated the team competition with a score of 286.125, more than 7 points better than its closest competitor, Japan (278.875). The Chinese men's team included Xiao Qin, Chen Yibing, Li Xiaopeng, Yang Wei, Zou Kai, and Huang Xu. The U.S. team, despite the loss of two of its stars, brothers Paul and Morgan Hamm, to injuries prior to the competition, took the bronze medal.

China's Yang Wei defended his 2007 world all-around title by winning the Olympic all-around gold; he was followed by Japan's Kohei Uchimura in second place and France's Benoit Caron in third. Gymnasts from China won five of the six individual events for men as Zou claimed the gold in both the floor competition and the horizontal bar, Li won the parallel bars, Xiao

The eventual gold medalist, Nastia Liukin of the U.S., dazzles the judges in the floor exercise portion of the women's individual all-around competition at the Beijing Olympic Games on August 15.

Paul Kitagaki, Jr.—Sacramento Bee/Landov

defended his world title on pommel horse, and Chen repeated his world championship triumph on rings. Leszek Blanik of Poland, the defending world champion on vault, took home the gold medal, Thomas Bouhail of France the silver, and Anton Golotsutskov of Russia the bronze.

In the rhythmic gymnastics competition, Russia's Yevgeniya Kanayeva won the gold medal. She was followed by Inna Zhukova of Belarus in second place and Anna Bessonova of Ukraine in third. The reigning world champion Russian team won the group competition, with China and Belarus taking the silver and bronze, respectively.

(LUAN PESZEK)

ICE HOCKEY

North America. Unique European bookends framed an eventful, compelling 2007–08 season for the National Hockey League (NHL). The league opened the season with a pair of games in London between the Anaheim Ducks—the defending Stanley Cup champions—and the Los Angeles Kings. The games, both sold out, were the first regular-season NHL contests to be played in Europe. The season ended with league commissioner Gary Bettman presenting the Stanley Cup to superb Swedish defenseman Nicklas Lidstrom (*see BIOGRAPHIES*), whose Detroit Red Wings defeated the Pittsburgh Penguins four games to two in the best-of-seven final. It was the first time that a European captain had led his team to an NHL championship. The season belonged to Detroit, which romped in the regular season, winning the President's Trophy as the NHL's top team and the franchise's fourth Stanley Cup in 11 seasons. The Red Wings had a record seven Swedes in their lineup, including Lidstrom, who won his sixth Norris Trophy as the NHL's best defenseman.

Ice hockey fans throughout the league were treated to the emergence of several young stars, a wave of talent that suggested that the NHL would be able to serve up an entertaining product for the foreseeable future. Washington Capitals winger Alexander Ovechkin, arguably the NHL's most exciting player, turned the regular season into his own personal showcase and filled his trophy case as a result. The 22-year-old Russian topped the league in goals with 65 (well ahead of the Atlanta Thrashers' Ilya Kovalchuk, who had 52) and in points with 112, edging out fellow Russian Evgeni Malkin of the Pen-

Bruce Bennett/Getty Images

Nicklas Lidstrom of the Detroit Red Wings (left) battles for the puck with Sidney Crosby of the Pittsburgh Penguins in game six of the NHL Stanley Cup finals on June 4. Detroit won the game 3–2 to clinch the NHL title.

guins, who finished with 106. That earned Ovechkin the Maurice Richard Trophy for goal scoring and the Art Ross Trophy for points. He continued his hardware haul at the NHL awards gala, where he was presented with the Hart Trophy for being the best player in the league and the Lester B. Pearson Award for being the best player, as decided by fellow players.

Sidney Crosby, the phenomenal 20-year-old Canadian, had another strong season and helped Pittsburgh emerge as a Stanley Cup finalist two seasons after it had finished 29th in the 30-team league. When Crosby missed 28 games with an ankle sprain midway through the season, however, it was Malkin, only 21 years old himself, who stepped up to keep the Penguins surging. During the games Crosby missed, Malkin recorded 20 goals and 26 assists for 46 points.

Other clubs, such as Montreal, Washington, Philadelphia, and Chicago, made huge strides owing largely to the contributions of young talent. Montreal, with stellar play from rookie goaltender Carey Price, surprised many with a first-place finish in the Eastern Conference. Washington jumped to 3rd place in the East from 14th the previous season. Philadelphia moved from last in the entire league into a play-off spot. Chicago, in the play-offs only

once in the previous decade, moved toward respectability with two of the NHL's top freshmen in Patrick Kane and Jonathan Toews. Kane was named the league's Rookie of the Year.

While those teams climbed, one of the most dramatic falls belonged to the Ottawa Senators, who had been Stanley Cup finalists the previous season. The Senators started the season by winning 15 of their first 17 games and created expectations that they would win the East, but instead they fell apart, narrowly qualified for the play-offs, and were swept by Pittsburgh in the first round.

One of the highlights of the season was an outdoor New Year's Day game played at Buffalo's Ralph Wilson Stadium between the hometown Sabres and the Penguins. It was the NHL's second regular-season game to be played in the elements and the first in the U.S. The game, played in periodic snow and won by the Penguins 2–1 in a shootout, attracted a crowd of 71,217, setting an NHL attendance record for a single game. The league planned to stage another outdoor game at Wrigley Field in Chicago on Jan. 1, 2009, featuring the Red Wings and the Chicago Blackhawks.

A number of big-name players changed teams as free agents at season's end. Among the changes, Marian Hossa left Pittsburgh to sign with Detroit, Wade Redden jumped from Ot-

tawa to play for the New York Rangers, and Brian Campbell departed San Jose for Chicago. The NHL also said goodbye to some stars. Dominik Hasek, one of the greatest goaltenders of the modern era, retired from Detroit. Trevor Linden (Vancouver), Glen Wesley (Carolina), Dallas Drake (Detroit), and Sami Kapanen (Philadelphia) also hung up their skates. Jaromir Jagr, who led the NHL in scoring five times during a brilliant career, departed the Rangers to sign with Russian team Avangard Omsk. On a sad note, blossoming defensive prospect Luc Bourdon of the Vancouver Canucks died in an off-season motorcycle accident.

Despite an ownership controversy in Nashville and a guilty plea by Anaheim owner Henry Samueli to a felony charge of lying to the U.S. Securities and Exchange Commission, the NHL continued to see revenues rise. That meant the salary cap for teams rose to \$56.7 million from \$50.3 million. The league's board of governors also discussed potential expansion, but no plan was put in place.

International. Canada hosted the International Ice Hockey Federation (IIHF) world championship in men's hockey for the first time but could not take advantage of home ice to repeat as gold medalists. In a brilliantly played gold-medal match in Quebec City on May 18, 2008, Canada led historic rival Russia by two goals, 4–2, with just over 11 minutes remaining. The tremendously skilled Russians, however, came at their Canadian hosts in waves, and goals from Aleksey Tereshchenko and Ilya Kovalchuk pushed the game into overtime. In that extra time, Rick Nash, a hero in Canada for his scoring exploits at the previous year's tournament, received a delay-of-game penalty. During the subsequent power play, Kovalchuk rocketed a snapshot over Canadian goaltender Cam Ward to ignite an on-ice celebration.

Canadian winger Dany Heatley scored 12 goals in nine games in the tournament and was named Most Valuable Player. He played on a line with Nash and Ryan Getzlaf that scored 21 goals in nine games and was a force for Canada throughout the tournament. Russia's Yevgeny Nabokov was named the top goaltender. Finland defeated Sweden 4–0 to win the bronze medal.

It had been 15 years since the Russians last won a world championship. This tournament showed the depth of talent in Russia, as 14 of the gold medalists were players from Russian club teams rather than the NHL. Even

Canadian fans had difficulty being too upset at the outcome. They had just witnessed an exhibition of hockey at the highest level, unfolding at high speed with tremendous playmaking. "It was such a spectacular match," commented Russian coach Vyacheslav Bykov. "The whole world won."

At the women's world championship, held in Harbin, China, the U.S. beat Canada 4–3 in the final on April 12. It was the second world title for the Americans as the Canadians could not match the speed and skill of their North American rivals. When the teams met earlier in the tournament, the U.S. won 4–2, and the Americans carried that momentum into the final. U.S. captain Natalie Darwitz was the scoring hero for the gold medalists. She had a pair of goals in the final and was named the top forward at the championship. Jenny Potter and Angela Ruggerio scored the other goals for the U.S., and goalie Jessie Vetter was outstanding for the winners. Sarah Vaillancourt, Jennifer Botterill, and Katie Weatherston scored Canada's goals. Finland won the bronze medal, beating Switzerland 4–1.

At the IIHF under-20 tournament, staged in the Czech Republic, the Canadian teenagers did what the country's men's and women's teams could not: take home the gold medal, though they needed overtime to do it. Canada defeated Sweden 3–2 at the CEZ Arena in Pardubice when Matt Halischuk jammed in a goal in extra time. It was Canada's fourth consecutive championship at the junior level and its 14th in 26 years. Russia defeated the U.S. 4–2 to capture the bronze medal.

(PAUL HUNTER)

ICE SKATING

Figure Skating. Canada came away as the biggest winner at the 2008 International Skating Union (ISU) world figure skating championships, held in March in Göteborg, Swed., by capturing a gold, a silver, and a bronze medal. Jeff Buttle took the gold in the men's competition, giving Canada its first world figure skating title since Shae-Lynn Bourne and Victor Kraatz won top honours in ice dancing in 2003. It was also the first gold for a Canadian man since Elvis Stojko captured the world title in 1997. Canada's silver medal came from Tessa Virtue and Scott Moir in ice dancing, and Jessica Dube and Bryce Davison won the bronze in pairs.

At the European figure skating championship in Zagreb, Croatia, in January, pairs skaters Aliona Savchenko and Robin Szolkowy of Germany perform their winning free-skate routine.

France's Brian Joubert—the defending men's world champion and the bronze medal winner at the 2008 European championships in Zagreb, Croatia, in January—won the men's silver, and Johnny Weir helped the U.S. avoid going away without a medal for the first time since 1994 by taking the bronze. Weir went into the world championships on a high note after having finished with the exact same overall score as Evan Lysacek at the U.S. championships in St. Paul, Minn., in January. Lysacek took his second straight U.S. title on a tiebreaker, but his hopes of winning at the world championships were dashed the week before the event began after he hurt his left arm in a fall during practice and was forced to withdraw.

On the women's side in Göteborg, Mao Asada of Japan won her first world title after having finished second in 2007 to countrywoman Miki Ando, who withdrew from the 2008 competition during her free skate because of shoulder and leg injuries. Asada, a likely favourite for the gold medal at

the 2010 Vancouver Winter Olympics, announced in June that she would train under famed Russian coach Tatyana Tarasova. Italy's Carolina Kostner, who took gold at the European Figure Skating Championships, won the silver medal, and 17-year-old Kim Yu-Na of South Korea took the bronze for the second consecutive year.

The American pairs and women did not fare well at the world championships. Heavily favoured ice dancers Tanith Belbin and Benjamin Agosto failed to medal for the first time since 2004 after a rare fall in the compulsories. Belbin and Agosto, who won their record-tying fifth straight U.S. title in St. Paul, announced that they were leaving their longtime coaches after missing the podium in Sweden. Former world champion Kimmie Meissner finished seventh in the women's competition; she had also come in seventh at the U.S. championships.

France's Isabelle Delobel and Olivier Schoenfelder won the ice dance world crown two months after a second-place finish at the European championships. Aliona Savchenko and Robin Szolkowy gave Germany its first pairs world title since 1997; they also won a gold medal in Zagreb.

The sport of figure skating lost one of its greatest competitors in 2008 when champion skater Christopher Bowman died in January from a drug overdose and an enlarged heart. (See OBITUARIES.) Nicknamed "Bowman the Showman" for his theatrics on the ice, the two-time Olympian won two U.S. national titles and two medals at the world championships before retiring in 1992.

Speed Skating. American Shani Davis in 2008 once again showed the world why he was one of the best speed skaters ever to put his blades on the track. The 2006 Olympic 1,000-m champion had struggled to a sixth-place finish at the world allround speed-skating championships in Heerenveen, Neth., in 2007, but his return to Heerenveen in February 2008 for a World Cup race was a different story. He finished the 1,500 m in 1 min 45.25 sec to beat Denny Morrison of Canada and clinch the World Cup season title in the event. Davis then won his second speed-skating title in three days by finishing with a time of 1 min 8.63 sec in the 1,000 m (0.12 sec ahead of Morrison) for his seventh victory of the season in a World Cup race. A week before, in Inzell, Ger., Davis had broken the track record by winning a 1,000-m race in 1 min 9.65 sec. In the final event of the 2008 speed-skating season, Davis

won the 1,000 m in track-record time at the world single-distance championships, held in Nagano, Japan. He clocked 1 min 8.99 sec to finish 0.04 sec ahead of Yevgeny Lalenkov of Russia, while Morrison took the bronze in 1 min 9.42 sec. Morrison won the 1,500 m in Nagano, clocking a track-record time of 1 min 45.22 sec and finishing 0.10 sec ahead of Davis and Sven Kramer of The Netherlands.

Jeremy Wotherspoon of Canada (34.92 sec) edged Japan's Joji Kato (35.07 sec) at Heerenveen to clinch the World Cup speed-skating title in the 500 m. A sixth-place finish in the 5,000 m was enough for Havarð Bokko of Norway to win the season title in the event. South Korean Lee Kang Seok secured the 100-m World Cup title. In women's action, Kristina Groves of Canada finished third in the women's 1,500 m at Heerenveen to capture the season crown. Jenny Wolf of Germany won the season title in the 100 m and 500 m, and compatriot Anni Friesinger was the 1,000-m champion. In team pursuit, Kramer helped The Netherlands win the men's title, and Groves led Canada to the women's championship. (PAUL DIGIACOMO)

SAILING (YACHTING)

The Olympic Regatta was held in the Chinese port city of Qingdao during the 2008 Olympic Games. The sailing

venue, with its strong currents and light air, was a challenging one for competitors. The water itself had seemed polluted to most sailors in the early regattas held there in 2007, with a large brown pool in one location of the racecourse. All competitors were wary of any contact with the water, but by the opening ceremony of the Olympics, the water was somewhat cleaner, and the shore facilities drew high praise from all participants. Great Britain won the regatta, earning four gold, one silver, and one bronze in the 11 events, while Australia was second with two golds and one silver; 18 countries won at least one medal.

The America's Cup sputtered in court for much of the year as the Swiss defenders and the potential American challengers argued their dispute over the terms of the next competition, to be held in 2009. After a finding favourable to the challengers was issued in November 2007, the Swiss team Alinghi appealed. A 3-2 finding by a New York state appellate court the following July reversed the previous finding and reinstated Spain's Club Náutico Español de Vela as the challenger of record, thus giving the Spanish team the right to negotiate the terms of the next challenge. The American team Oracle appealed the decision to the New York Supreme Court.

The Newport-Bermuda Race, in which 201 boats participated in June, produced some unlikely results. Winning on

Britain's Ben Ainslie expertly maneuvers his vessel during the Finn sailing competition at the Beijing Olympic Games, where he captured his third consecutive Olympic gold medal.

Bernat Armangue/AP

corrected time in both the ORR (U.S.) and the IRC (British) handicapping systems was a boat from the 1960s—*Sinn Fein*, a Cal 40—and a skipper from the 1930s—septuagenarian Peter Rebovich, a retired elementary-school teacher sailing with a family crew. It was *Sinn Fein*'s second consecutive win of a St. David's Lighthouse Trophy. In second place in both systems was a 1986 11.6-m (38-ft) McCurdy sloop, *Selkie*, sailed by the designer's daughter, Sheila McCurdy. Conditions were light and upwind for the entire race.

In Britain the Commodore's Cup was resuscitated, attracting 15 three-boat teams from six countries to compete. Britain's Red Team (*Fair Do's VII*, a Ker 46, *Erivale III*, a Ker 39, and *Quokka 7*, a Corby 39) won the event after some close racing.

At the Acura Key West Race in January, *Barking Mad* was the winner in the marquee Farr 40 class, in which a total of 25 boats competed. In April, 33 boats from 10 countries participated in the Farr 40 world championship in Miami Beach, where Vincenzo Onorato's *Mascalzone Latino* took the title for the third consecutive year.

Box rule boats continued to gain popularity, led by the Transpac 52s (TP52s), which competed at each of the six venues on the Audi MedCup circuit. In smaller boats, the Moths continued to lead the world in the application of hydrofoil technology. At the Moth world championships, held at the Weymouth and Portland National Sailing Academy in Dorset, Eng., all 79 boats "flew" around the course at double-digit speeds. International 14s featured lifting foils on their rudders, and the foil technology was being backfitted into other dinghies, notably the RS600 class. In March a new sailboard speed record of 49.09 knots was set by Frenchman Antoine Albeau on a canal in France. At the other end of the spectrum, there was a new record for the smallest sailboat to complete a transatlantic passage: Frenchman Franck Andreatta, in a 172-cm (5.64-ft) sloop, made the voyage in 48 days.

Several other sailing records were achieved during the year. In January the record for a solo nonstop circumnavigation was set by François Joyon of France, who sailed his 29-m (95-ft) trimaran *IDEC* around the world in 57 days 13 hr 34 min, averaging 15.84 knots. In June *ICAP Leopard*, a 30.5-m (100-ft) supermaxi, set a transatlantic record for a monohull yacht with powered winches of 7 days 19 hr 21 min.

Frenchman Lionel Lemonchois and his 21.3-m (70-ft) maxi-catamaran *Gitana 13* set several passage records: New York City to San Francisco via Cape Horn (43 days 38 min); San Francisco to Yokohama, Japan (11 days 12 min 55 sec), and Hong Kong to London (41 days 21 hr 26 min). (JOHN B. BONDS)

SKIING

Alpine Skiing. The 2007–08 Alpine skiing season saw a changing of the guard as American skiers dominated the International Ski Federation (FIS) World Cup series, sweeping the overall titles and taking 5 of the 12 discipline crowns. Americans Bode Miller and Lindsey Vonn (see BIOGRAPHIES) each took overall honours, matching the feat of U.S. ski team stars Phil Mahre and Tamara McKinney in 1983. It was the second season title for Miller, who had claimed his first in 2005. Miller also won the super combined title and came within an eyelash of winning the downhill crown. He captured six World Cup races during the season to bring his career total to 31. American Ted Ligety, the 2006 Olympic combined champion, picked up his first season title, winning the giant slalom (GS).

Didier Cuche of Switzerland battled Miller all season long in the downhill, but despite winning just one event, Cuche defended his title by a mere five points after the final race was canceled owing to soft snow conditions in Bormio, Italy. The battle for the super G crown was even tighter, with Austrian Hannes Reichelt edging Cuche by a single point in the final race to win his first World Cup title. Cuche had the title in hand until one of his own teammates, running last, bumped the Swiss star one spot down the rankings and out of the points. Manfred Moelgg of Italy earned his first season crown, in slalom.

Vonn, meanwhile, completely dominated the women's downhill, clinching the title nearly a month before the end of the season with a second-place finish on the 2010 Olympic course in Whistler, B.C. She won six times to set a new U.S. women's career mark with 13. With 10 of those victories in downhill, Vonn also surpassed Daron Rahlves and Picabo Street as the most successful downhiller in American history.

Vonn was challenged for the overall title by defending champion Nicole Hosp of Austria, who finished second. Going into the World Cup finals in Bormio, however, it was Germany's Maria Riesch who appeared to be the

potential spoiler. Vonn clinched the title by winning the second run of slalom in the finals. Riesch went on to narrowly eclipse Vonn for the super combined crown and also took the super G title—the first two World Cup crystal globes of her career. Austrian Marlies Schild handily defended her slalom title over Hosp with five wins (down from seven a year earlier). Italian Denise Karbon won the opening GS in Soelden, Austria, and went on to win the title, dominating the event with five victories during the season.

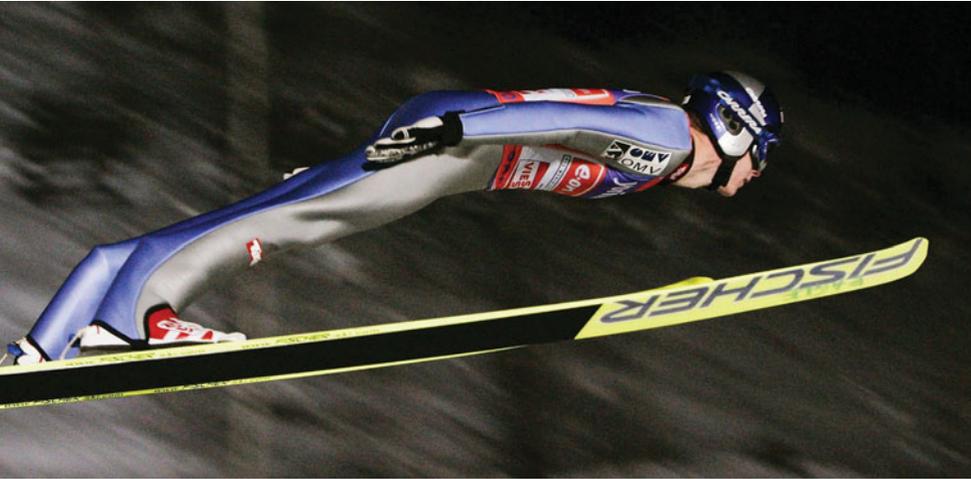

Nordic Skiing. Lukas Bauer of the Czech Republic ran away with the men's cross-country World Cup competition in 2007–08, claiming both the overall and distance titles with five wins to earn his first crystal globes. Ola Hattestad of Norway won the men's sprint title. In the women's field, Virpi Kuitunen of Finland defended her overall and distance titles with six wins during the season, and Petra Majdic of Slovenia took the sprint crown. With her sprint victory in Rybinsk, Russia, in December 2007, Kikkan Randall became the first American woman to win a World Cup cross-country race.

In Nordic combined, Ronny Ackermann of Germany captured his third overall title, posting three World Cup victories. Petter Tande of Norway finished the season in second place behind Ackermann, and Bill Demong of the U.S. placed third—the best finish ever by an American.

In ski jumping, Thomas Morgenstern of Austria amassed 10 victories, including 6 straight to open the season, en route to winning his first overall World Cup title. A victory at the Four Hills Tournament eluded Morgenstern, however, as he placed second to overall winner Janne Ahonen of Finland. Gregor Schlierenzauer of Austria soared 212 m (696 ft) to win the FIS ski flying world championships, held in Oberstdorf, Ger.

Freestyle Skiing. Australian Dale Begg-Smith, the 2006 Olympic moguls champion, continued to dominate moguls in 2007–08, winning his third straight World Cup title. Aiko Uemura of Japan set a torrid pace down the stretch, taking five consecutive wins at the end of the season to claim her first moguls crown. Steve Omischl of Canada defended his aerials World Cup title with six wins. Australian Jacqui Cooper landed five victories to defend her crown, the fifth of her career. Ophélie David of France was the runaway winner in women's ski cross.

Kyodo/Landov

Thomas Morgenstern of Austria soars down the large hill at the World Cup ski jumping event held in Sapporo, Japan, on February 2. Morgenstern's victory in Sapporo was one of six he amassed en route to his first overall World Cup title.

Tomas Kraus of the Czech Republic won the men's ski cross title. Ski half-pipe titles went to Canada's Matthew Hayward and Sarah Burke.

Snowboarding. With no snowboarding world championships held in 2008, eyes were on the X Games. Americans Shaun White and Gretchen Bleiler were on top again, each of them earning wins in the halfpipe, while Lindsey Jacobellis and Nate Holland, also of the U.S., won their fourth and third, respectively, X Games snowboardcross (SBX) titles. On the snowboarding World Cup circuit, the Swiss swept the halfpipe titles, with Iouri Podladtchikov coming out of nowhere to win his first men's crown and Manuela Laura Pesko taking her third straight women's title. Pierre Vaultier of France and Maelle Ricker of Canada won their first SBX World Cup titles. In Alpine snowboarding, the parallel and overall World Cup titles went to Austrian Benjamin Karl in the men's field and Nicolien Sauerbreij of The Netherlands on the women's side. (TOM KELLY)

SQUASH

Egypt was at the centre of the squash world in 2008, both as a venue and as the home of several top players. At the men's world open squash championship in Manchester, Eng., in October, the outcome was an inaugural title for Ramy Ashour, who defeated fellow Egyptian, and defending champion, Amr Shabana in the semifinal before holding off another countryman, Karim Darwish in the final. At the British Open in May, Darwish lost in the semifinals

to eventual champion David Palmer of Australia. Mohamed El Shorbagy of Egypt beat Pakistan's Aamir Atlas Khan at the junior men's world championship in Zürich in August, but Pakistan turned the tables as it took the team title with a win over Egypt in the final.

For the first time, the women's world open championship was held simultaneously with the men's and at the same venue. World number one Nicol David of Malaysia won the women's crown for the third time, beating surprising finalist Vicky Botwright of England. David went unbeaten in Women's International Squash Players Association Tour events in 2008, amassing 10 titles, including the British Open. During October 2007–November 2008 she won 53 consecutive matches, to which she added another 6 at the women's world team championship in Cairo, where Malaysia finished third. The title went to second seed Egypt, which beat top-seed England in a pulsating three-match final on December 6. The women's matches used "point-a-rally" scoring as women's international squash began to use the system already used in the men's game.

The backdrop to the competitive activity was the campaign to add squash to the 2016 Olympic Games program. International Olympic Committee (IOC) inspectors were in attendance at the world opens, and representatives of the sport presented its credentials at the IOC Program Commission meeting in November. The final vote on squash and six other candidate sports would take place at the IOC Congress in October 2009. (ANDREW SHELLEY)

SWIMMING

At the 2008 Olympic Games in Beijing, 23-year-old American swimming superstar Michael Phelps did nothing less than turn in the greatest Olympic performance ever, winning eight gold medals in eight events and setting seven world records (and one Olympic record) in the process. The challenge Phelps faced was physically exhausting, mentally daunting, and emotionally draining, requiring 17 separate swims in eight days of competition. Nevertheless, when the last race was finished, Phelps had surpassed swimmer Mark Spitz's record tally of seven gold medals set at the 1972 Games in Munich.

Phelps earned his victories in five individual events and three relays. He set world records in the 400-m individual medley (4 min 3.84 sec), the 200-m freestyle (1 min 42.96 sec), the 200-m butterfly (1 min 52.03 sec), and the 200-m individual medley (1 min 54.23 sec). He also posted an Olympic record in the 100-m butterfly (50.58 sec), coming from behind to edge out Milorad Cavic of Serbia by the slimmest of margins—one one-hundredth of a second. In addition, Phelps helped the U.S. team set global standards in the 4 × 100-m freestyle relay (3 min 8.24 sec), the 4 × 200-m freestyle relay (6 min 58.56 sec), and the 4 × 100-m medley relay (3 min 29.34 sec). The first of those relays, the 4 × 100-m freestyle, provided another moment of high drama as Phelps's teammate Jason Lezak swam an amazing 46.06-sec anchor leg—by far the fastest-ever 100-m split—to secure victory over the heavily favoured French team by a mere eight-hundredths of a second and keep Phelps's hopes alive for eight golds.

Another standout in the men's competition at Beijing was Japan's Kosuke Kitajima, who solidified his claim as the greatest breaststroke swimmer in history when he won both the 100-m and 200-m events for the second straight Olympics. He was the first swimmer to achieve such a feat. Kitajima stroked powerfully to capture the 100-m gold medal in the world-record time of 58.91 sec and then followed that performance with a victory in the 200-m breaststroke, posting a time (2 min 7.64 sec) that was just 13-hundredths of a second slower than the world record that he had set in June. Kitajima also picked up a bronze medal as a member of Japan's 4 × 100-m medley relay team.

In the 50-m freestyle, Brazilian speedster César Cielo upset world record

Jamie Squire/Getty Images

American swimming phenomenon Michael Phelps (bottom) edges past Milorad Cavic of Serbia in the 100-m butterfly final at the Beijing Olympics. Phelps defeated Cavic by only one one-hundredth of a second while setting an Olympic record.

holder Eamon Sullivan of Australia to take the gold with a time of 21.30 sec. Eighteen-year-old Park Tae Hwan of South Korea backed up his brash predictions of victory in the 400-m freestyle when he took command of the race at the 150-m mark and stroked home in a winning time of 3 min 41.86 sec—a mark that only Australian swimmer Ian Thorpe had bettered. Park thus became his country's first Olympic swimming gold medalist.

Ous Mellouli achieved the same breakthrough for Tunisia by beating Australia's Grant Hackett—arguably the greatest distance swimmer of all time—in Hackett's best event, the 1,500-m freestyle. Battling stroke-for-stroke with Hackett over the 30-lap distance, Mellouli gradually built a small lead and then held off the Australian at the end to win in 14 min 40.84 sec. American Aaron Peirsol reprised his 2004 Olympic triumph in the 100-m backstroke, overpowering the fastest field ever assembled and lowering his world record to 52.54 sec. In the 200-m backstroke, Peirsol and fellow American Ryan Lochte went into the Games sharing the world record, but it was Lochte who unleashed a withering kick in the final lap of the race to take the gold medal and set a new global standard of 1 min 53.94 sec.

Among the women, 20-year-old Australian Stephanie Rice, who had burst onto the world swimming scene in 2007, triumphed in both individual medley events, setting world records with each golden performance. In the 400-m medley, she held off Kirsty

Coventry of Zimbabwe as both women crashed through the 4-min 30-sec barrier, clocking 4 min 29.45 sec and 4 min 29.89 sec, respectively. In the 200-m medley, Rice overtook Coventry on the final lap to win in 2 min 8.45 sec. To top off her first Olympic Games, Rice swam the leadoff leg on Australia's winning 4 × 200-m freestyle relay team, which clocked 7 min 44.31 sec, smashing the world record by nearly six seconds. For her spectacular performances, Rice was named female World Swimmer of the Year by *Swimming World* magazine, joining Michael Phelps, the unanimous male winner. As for the tenacious Coventry, although she earned her second of three silvers of the Games when she lost to American Natalie Coughlin in the 100-m backstroke, she did strike gold in the 200-m backstroke, setting a new world standard with a time of 2 min 5.24 sec.

Germany's Britta Steffen sprinted to her country's only swimming gold medals in Beijing, nipping the U.S.'s ageless wonder, Dara Torres, in the 50-m freestyle by the tiniest of margins, 24.06 sec to 24.07 sec. Last at the 50-m turn in the 100-m freestyle event, Steffen came charging home to upset world record holder Libby Trickett of Australia with a winning time of 53.12 sec and claim her second gold. The 41-year-old Torres, who after emerging from retirement was competing in her fifth Olympic Games, went on to earn two more silver medals as the anchor on both the U.S.'s 4 × 100-m freestyle relay team and its 4 × 100-m medley relay squad. Torres—whose ini-

tial Olympic experience had come in 1984, before any of her American teammates were born—thus became the oldest person ever to win an Olympic medal in swimming.

When she stepped onto the blocks for the start of the 400-m freestyle, Britain's Rebecca Adlington was carrying a burden dating back nearly half a century. It had been 48 years since a British woman had won an Olympic swimming gold, but that fact did not seem to faze the 19-year-old distance ace. Though in fourth place at the 350-m mark, Adlington won the race in 4 min 3.22 sec, besting American Katie Hoff by seven-hundredths of a second. Adlington, it turned out, was only getting started. In the 800-m freestyle, she took command early and kept lengthening her lead with every stroke before touching in 8 min 14.10 sec, more than two seconds under the world record set by American Janet Evans in 1989.

In one of the major upsets in Beijing, Rebecca Soni of the U.S. outpaced Australian star "Lethal" Leisel Jones in the 200-m breaststroke, setting a world record of 2 min 20.22 sec in the process. Earlier in the swimming competition, Jones had destroyed the field in the 100-m breaststroke. She posted a time of 1 min 5.17 sec, just eight-hundredths of a second off her own world mark.

Beijing was the first Olympic Games to offer an open-water swimming competition, the 10-km event. In the women's race, heavily favoured Larisa Ilchenko of Russia wound up coming from behind to overtake the British duo of Keri-Anne Payne and Cassandra Patten for the gold in a time of 1 hr 59 min 27.7 sec. Payne and Patten took silver and bronze, respectively. On the men's side, Maarten van der Weijden of The Netherlands, a leukemia survivor who was considered the longest of long shots, came storming from a tightly bunched pack to touch first in 1 hr 51 min 51.6 sec—just 1.5 seconds ahead of Britain's David Davies and 2 seconds ahead of Germany's Thomas Lurz.

Diving. Just as it had at every other international diving competition in the past decade, China totally dominated at the 2008 Olympic Games, delighting an appreciative home crowd. Of the eight events contested in Beijing, China won seven and earned 11 of the 12 medals for which it competed. The incomparable Guo Jingjing (see BIOGRAPHIES) made short shrift of her challengers in the 3-m springboard, posting 415.35 points to defeat Russia's Yuliya

Pakhalina (398.60) and teammate Wu Minxia (389.85). Guo and Wu teamed up to take the 3-m synchronized event with 343.50 points, nearly 20 more than the silver medalists, Russia's Pakhalina and Anastasiya Pozdnyakova. In the 10-m platform event, veteran Chinese diver Chen Ruolin won a close decision over Canada's Emilie Heymans. Chen and teammate Wang Xin then breezed in the 10-m synchronized contest, posting a 28-point victory over the Australian duo of Briony Cole and Melissa Wu.

There were no surprises in the first two of the men's contests as the 2007 world champions won both of them. In the 10-m synchronized contest, Lin Yue and Huo Liang took the gold by a comfortable 18-point margin over the German duo of Patrick Hausding and Sascha Klein. In the 3-m synchronized event, Qin Kai teamed with Wang Feng to form an unbeatable tandem that finished more than 47 points ahead of silver medalists Dmitry Sautin and Yury Kunakov of Russia. He Chong took the 3-m springboard, dismissing former world champion Alexandre Despatie of Canada. The upset came in the final diving event—the 10-m platform—when unheralded Australian Matthew Mitcham, who had finished 16th in the 3-m springboard, uncorked a brilliant final dive that earned mostly 10s from the judges and gave him just enough points to overtake China's Zhou Luxin for the gold.

Synchronized Swimming. Led by the two Anastasiyas—Davydova and Yermakova—Russia maintained its perch atop the world of synchronized swimming by taking both gold medals on offer at the 2008 Olympics in Beijing. Perfectly attuned to each other in the water, Davydova and Yermakova became the first synchronized swimmers to repeat as Olympic champions. Scoring eight perfect 10s, the Russian duo tallied 99.251 points, holding off a determined challenge from Spain's Gemma Mengual and Andrea Fuentes (98.334 points). Japan's Saho Harada and Emiko Suzuki (97.167 points) placed third.

The Anastasiyas then joined their teammates—Maria Gromova, Natalya Ishchenko, Elvira Khasyanova, Olga Kuzhela, Yelena Ovchinnikova, Anna Shorina, and Svetlana Romashina—as Russia, with 99.500 points, stroked to its third straight Olympic title in the team competition. Spain was second (98.251 points), and China took the bronze—its first Olympic medal in the sport—with 97.334 points.

(PHILLIP WHITTEN)

TENNIS

The 2008 season in tennis was likely to be remembered as one of the sport's most captivating years. Spain's charismatic Rafael Nadal celebrated a spectacular campaign, becoming the first man since Sweden's Björn Borg in 1980 to capture the French Open and All-England (Wimbledon) titles in the same year and then adding an Olympic gold medal to his list of credits. Nadal supplanted Roger Federer as the world's number one ranked player for the season, ending the Swiss champion's four-year run at the top. Serbian Novak Djokovic secured his first major title with a triumph at the Australian Open. Federer—not to be denied—won the last major of the year at the U.S. Open, garnering his 13th Grand Slam championship in the process and closing in on American Pete Sampras's men's record of 14.

Among the women, four different champions emerged at the majors. Mariya Sharapova of Russia came through at the Australian Open; Serbian Ana Ivanovic ruled at Paris's Roland Garros; and the Williams sisters of the U.S. held their own, with Venus triumphing on the lawns of Wimbledon and Serena claiming the U.S. Open title. Yet after a turbulent year that included the surprising retirement in May of former world number one Justine Henin of Belgium, Jelena Jankovic—the perspicacious Serbian with perhaps the best ball control in the women's game—was rewarded for her consistency with the year-end number one ranking on the Women's Tennis Association (WTA) computer. Jankovic was a quarterfinalist or better in 20 of the 22 tournaments in which she played. Serena Williams was the highest-paid woman on the Sony Ericsson WTA Tour, with \$3,852,173. Nadal earned more than any other man, with \$6,773,773.

Australian Open. Djokovic arrived in Melbourne primed for the first major of the season. The 20-year-old did not drop a set in six matches on his way to the final, upending top-seeded Federer in straight sets in their semifinal match. In the final, Djokovic came from a set down to defeat

the free-wheeling Jo-Wilfried Tsonga of France. Tsonga performed brilliantly all through the fortnight, ousting British number nine seed Andy Murray in the opening round and taking apart Nadal 6-2, 6-3, 6-2 in a meticulous semifinal. In the championship match, Djokovic gradually found his bearings from the baseline and wore down the fast-charging Tsonga 4-6, 6-4, 6-3, 7-6 (2).

Sharapova swept through the event without losing a set in seven nearly perfect matches, crushing Henin 6-4, 6-0 in the quarterfinals, defeating Jankovic 6-3, 6-1 in the semifinals, and then besting Ivanovic 7-5, 6-3 in a well-played final. It was Sharapova's third Grand Slam championship title.

French Open. For the fourth straight year, Nadal was unstoppable on the red clay at Roland Garros. In a repeat of the 2006 and 2007 finals, the left-handed Spaniard took on Federer. While those battles both went to four sets before Nadal prevailed, in 2008 Nadal ruthlessly dismantled his subdued rival 6-1, 6-3, 6-0. It was the most decisive defeat Federer had suffered in 36 career appearances at Grand Slam events dating back to 1999. Nadal elevated his match record at the world's premier clay court event to an astounding 28-0, becoming the first man since Borg in 1980 to win the French Open without having lost a set and only the fifth man since "open" tennis commenced in 1968 to win a major tournament without having dropped a set—joining the ranks of

French Open winner Ana Ivanovic of Serbia sprints for the ball in her women's singles final against Dinara Safina of Russia on June 7.

Julian Finney/Getty Images

Borg, Australian Ken Rosewall, Ilie Nastase of Romania, and Federer in that elite category.

Ivanovic, an adventurous shotmaker who seemed more polished and confident after having lost two of the last four major finals, collected her first career Grand Slam championship. In the final at Roland Garros, the number 2 seed stopped number 13 Dinara Safina of Russia (the sister of 2000 U.S. Open and 2005 Australian Open champion Marat Safin) in two sets 6–4, 6–3. Safina—who finished the year ranked number three in the world—upset three Russians to reach her first major final: top-seeded Sharapova in the fourth round, number seven seed Yelena Dementyeva in the quarterfinals, and number four Svetlana Kuznetsova in the semifinals. Ivanovic rallied gamely from a service breakdown at 3–4 in the final set to beat Jankovic 6–4, 3–6, 6–4 in a gripping all-Serbian semifinal.

Wimbledon. In arguably the greatest tennis match ever played, Nadal and Federer faced off on Wimbledon's Centre Court in the final. Federer was determined to break Borg's record by winning the game's most prestigious event for a sixth consecutive year. In the end—after five tumultuous sets, two rain delays, and a long afternoon up to the edge of darkness—Federer rallied valiantly from two sets down to come within two points of victory. In the end, however, Nadal earned his 6–4, 6–4, 6–7 (5), 6–7 (8), 9–7 win after 4 hours and 48 minutes of sublime tennis. Nadal, who became the first Spaniard to win Wimbledon since Manuel Santana in 1966, lost his serve only once in the match.

In a remarkable stretch from the 2001 U.S. Open through Wimbledon in 2003, Venus and Serena Williams played against each other in six of the eight Grand Slam finals, with Serena victorious in all but one. In Wimbledon 2008 the sisters battled in a major championship match for the first time in five years. Many knowledgeable observers expected Serena to beat her older sister, but Venus was unshakable. Fighting back from 2–4 down in the opening set, seventh-seeded Venus handled the windy conditions well and earned a 7–5, 6–4 victory over Serena, the number six seed. Top-seeded Ivanovic lost in the third round to unseeded Jie Zheng of China, who eventually faced Serena in the semifinals. Number three seed Sharapova—hindered by a sore shoulder that compelled her to take the

rest of the year off after August, was beaten in the second round by Russia's Alla Kudryavtseva (ranked number 154 in the world). Number two seed Jankovic was toppled by unseeded Tamarine Tanasugarn of Thailand in the fourth round.

U.S. Open. Going into the U.S. Open, Federer had won only 2 of the 14 events he had played over the course of a frustrating year, and Nadal had taken away his number one ranking in August. The Swiss champion survived a harrowing five-set scare against number 23 seed Igor Andreyev of Russia in the fourth round, handled number three seed Djokovic in a four-set semifinal, and then masterfully cut down number six seed Murray 6–2, 7–5, 6–2 for his fifth straight U.S. Open title. Murray, who removed the top-seeded Nadal in the other semifinal to reach his first major final, ended the year ranked number four in the world. It was the first time in the Open era that a British man had concluded a year among the top five.

In probably the most absorbing match the Williams sisters had ever played against each other, Serena beat Venus 7–6 (6), 7–6 (7) under the lights in the U.S. Open quarterfinals. Serena was magnificent under duress, saving two set points in the opening set and eight more in the second. Buoyed by that triumph, she easily dismissed Safina in the semifinals and then halted Jankovic 6–4, 7–5 in the final. In the second set against the tenacious Serbian—appearing in her first Grand Slam final—Williams rescued herself commendably, saving four set points on her way back from a 3–5, 0–40 deficit and sweeping four games in a row to close out the match. It was Serena's third U.S. Open title and ninth major crown.

Other Events. At the Beijing Olympic Games, Nadal beat Fernando González of Chile in the final to earn the men's gold medal, and Dementyeva took the most important prize of her career with a gold-medal-round victory over Safina. The Spanish men unexpectedly won the Davis Cup. Facing Argentina in Mar del Plata, Arg., with an injured Nadal absent, Spain prevailed 3–1. A pair of left-handers—Feliciano López and Fernando Verdasco—contributed victories in singles and joined forces in the doubles to lead their country to an exhilarating win. In the Fed Cup final, which was held in Madrid, Russia—led by Kuznetsova and Vera Zvonareva—routed Spain 4–0. (STEVE FLINK)

TRACK AND FIELD SPORTS (ATHLETICS)

Jamaican sprinter Usain Bolt (*see BIOGRAPHIES*) stamped his name on the 2008 track and field season, breaking world records four times, three of them in spectacular fashion at the Olympic Games in Beijing. Bolt was far from alone in record breaking, though, as 17 Olympic records, including 5 world records, fell in Beijing.

World Indoor Championships. With many stars preparing for the Beijing Olympics, the International Association of Athletics Federations (IAAF) world indoor championships, held March 7–9 in Valencia, Spain, showcased a largely different group of athletes from those who later won in Beijing. Russian pole vaulter Yelena Isinbayeva and shot-putter Valerie Vili of New Zealand were the only champions in Valencia to add Olympic crowns in the same events. Isinbayeva cleared 4.75 m (15 ft 7 in), well below her world record, and triumphed over American Jenn Stuczynski (who cleared the same height) only on the countback.

Bryan Clay of the U.S. scored 6,371 points to win the heptathlon as a prelude to his eventual Olympic decathlon victory. Tia Hellebaut of Belgium won the women's pentathlon and went on to take Olympic gold in the high jump. Adding another chapter to a fabulous rivalry, 2004 shot-put champion Christian Cantwell threw 21.77-m (71 ft 5½ in) to defeat fellow American and 2006 titlist Reese Hoffa.

Russian Yelena Soboleva set an apparent world record of 3 min 57.71 sec in her 1,500-m victory over teammate Yuliya Fomenko, but at year's end it appeared that both would lose their medals. IAAF testing determined that during out-of-competition doping controls in 2007, Soboleva, Fomenko, and five other Russian women had submitted urine samples that belonged to other people. They faced a two-year competition ban, but the IAAF planned to challenge the Russian federation's decision to make the ban retroactive to the time of the tests, and the disposition of the world indoor medals remained unclear.

Olympic Games. Although Bolt, whose nickname was "Lightning," had lowered the 100-m world record to 9.72 sec in New York City in May, a close contest with countryman Asafa Powell was expected in the 100-m final at the Beijing Olympic Games in August. Instead, the long-legged Bolt overcame his slow reaction time—second slowest among the finalists—to pull away with an un-

matchable stride after 35 m. So thorough was his dominance that Bolt dropped his arms at 80 m, looked around, and thumped his chest but still cut 0.03 sec from the world record. The race was only the second in which six men finished in under 10 sec, yet Bolt defeated Trinidad and Tobago's Richard Thompson by an astounding 0.20 sec. Powell finished a disappointing fifth.

Bolt's approach to the 200-m final was different. Observers who had previously considered American Michael Johnson's 19.32-sec world record from the 1996 Olympics virtually unbreakable calculated that it was now in jeopardy. So did Bolt, and this time he sprinted full speed throughout the race to cut the record to 19.30 sec. Churandy Martina of the Netherlands Antilles finished second, in 19.82 sec, but Martina and third-place finisher Wallace Spearmon of the U.S. were subsequently disqualified for running on their inside lane lines. American Shawn Crawford (19.96 sec), the defending Olympic champion, was awarded the silver medal.

Bolt's third act was the 4 × 100-m relay. With the United States absent from the final owing to a botched baton exchange in the heats, Bolt ran for Jamaica on the third leg and passed to Powell, history's second fastest 100-m runner. Despite a merely serviceable pass, Powell powered to the finish in 37.10 sec, 0.30 sec faster than the old world record first run by an American relay team in 1992 and matched again in 1993 by another American squad.

Meanwhile, the Jamaican women held up their end. Unheralded Shelly-Ann Fraser led a Jamaican sweep of the women's 100-m medals; Veronica Campbell-Brown defended her title in the 200 m; and Melaine Walker took the 400-m hurdles in an Olympic record time of 52.64 sec.

The U.S. team was somewhat disappointed atop the track and field standings with 23 total medals, just 5 ahead of Russia. The American men's haul of four golds was a record low, but medal sweeps in the 400-m and 400-m hurdles led by LaShawn Merritt and Angelo Taylor saved face, along with Clay's decathlon win.

Two Ethiopians captured gold in the longest track races as Kenenisa Bekele became the sixth man to win a 5,000-m/10,000-m double and Tirunesh Dibaba became the first woman to win the same pairing. The 26-year-old Bekele set Olympic records (12 min 57.82 sec and 27 min 1.17 sec, respec-

Thomas Kienzle/AP

Usain Bolt of Jamaica triumphantly crosses the finish line in world-record time in the 200-m final at the Beijing Olympics.

tively) with both his victories. Bekele's title defense in the 10,000 m was so strong that two-time Olympic champion Haile Gebrselassie of Ethiopia ran his fastest time ever in an Olympics and placed just sixth. Dibaba's defense of her 5,000-m title was the slowest winning time in an Olympics or world championship, but her 10,000-m mark (29 min 54.66 sec) was the second fastest clocking in history.

The women's steeplechase debuted as an Olympic event, and Russian Gulnara Samitova-Galkina broke her own world record to win in 8 min 58.81 sec. The only other world record set by a woman at the Games went to Isinbayeva, who defended her pole vault title and added a centimetre to her own world record, soaring over 5.05 m (16 ft 6¾ in).

Two racewalkers set Olympic records: Italy's Alex Schwazer in the men's 50-km event (3 hr 37 min 9 sec) and Russian Olga Kaniskina in the women's 20 km (1 hr 26 min 31 sec). Besides Isinbayeva, two other field eventers also broke Olympic records. Australian Steve Hooker pole-vaulted 5.96 m (19 ft 6½ in), and Aksana Miankova of Belarus threw the women's hammer 76.34 m (250 ft 5 in).

International Competition. The 2008 Golden League series shed dramatic tension quickly but wound up as a rags-to-riches tale. After three of the six elite European invitational meets, just two contenders remained eligible to share

in the million-dollar jackpot at season's end: Kenyan 800-m runner Pamela Jelimo and Croatian high jumper Blanka Vlasic. Experienced internationalist Vlasic, who had won 34 consecutive meets since June 2007 before losing at the Olympics, seemed a better bet than 18-year-old Jelimo, an unknown internationally before she won the African title in May. Jelimo was undefeated all season, setting five world junior records with the fastest 800-m times in more than a decade and winning the Olympic gold. On a rain-slicked track in Brussels at the final Golden League meet in September, Vlasic lost while Jelimo won easily to bank the million dollars.

Two American male sprint stars hit bumpy roads in 2008. Tyson Gay, a triple gold medalist in the 100 m, 200 m, and 4 × 100-m relay at the 2007 world championships, hoped to duplicate that feat in the Olympics. At the U.S. Olympic Trials, he won the wind-aided 100-m final in 9.68 sec (the fastest time ever run in any conditions), but in the quarterfinals of the 200 m, he crashed to the track with a strained hamstring. Gay trained well in the six weeks before the Olympics to heal the injury, but he could not regain top form and was eliminated in the 100-m semifinals in Beijing. Jeremy Wariner, virtually unbeatable at 400 m during 2004–07, parted with his coach and lost four of seven races, including the Olympic Trials, the Olympics, and the

The Paralympic Games: A Forum for Disabled Athletes

On Sept. 6–17, 2008, nearly 4,000 athletes with disabilities representing 147 National Paralympic Committees (NPCs) competed in the Paralympic Games in Beijing shortly after the Olympic Games had concluded. (See Special Report on page 194.) The high profile accorded the 2008 Paralympics was judged by many to be a turning point in the drive for heightened respect for disabled athletes across the globe.

Paralympic athletes traditionally compete in six different disability groups—amputee, cerebral palsy, visual impairment, spinal cord injuries, intellectual disability, and “les autres” (athletes whose disability does not fit into one of the other categories, including dwarfism). Within each group, athletes are further divided into classes on the basis of the type and extent of their disabilities, though individual athletes may be reclassified at later competitions if their physical status changes.

The first major sports competition for athletes with disabilities was organized by Sir Ludwig Guttman for British World War II veterans with spinal cord injuries and was held in England in 1948. A follow-up competition took place in 1952, with athletes from The Netherlands joining the British competitors. In 1960 the first quadrennial Olympic-style Games for disabled athletes were held in Rome; the quadrennial Winter Games were added in 1976, in Sweden. Beginning with the 1988 Olympic Games, held in Seoul (and the 1992 Winter Olympics in Albertville, France), the Paralympics were held at the Olympic venues and used the same facilities. In 2001 the International Olympic Committee and the International Paralympic Committee (founded in 1989) agreed on the practice of “one bid, one city,” in which every city that bids to host the Olympics also bids to hold the related Paralympics.

The size and diversity of the Paralympic Games increased greatly over the years. At the 2004 Athens Paralympics, more than 3,800 athletes representing 136 NPCs participated in 19 sports: archery, athletics (track and field), boccia, cycling, equestrian, association football (both 7-a-side and 5-a-side), goalball, judo, powerlifting,

sailing, shooting, swimming, table tennis, volleyball (sitting), and wheelchair competition in basketball, fencing, rugby, and tennis. China captured the most medals, with a total of 141 (63 gold). At the most recent Winter Games, the 2006 Turin (Italy) Winter Paralympics, more than 470 athletes representing 39 NPCs competed in five sports: Alpine and cross-country skiing, ice sledge hockey, biathlon, and wheelchair curling.

The Beijing Paralympics, which added rowing to the schedule, handed out 1,431 medals (473 gold) in 20 sports to athletes from 76 NPCs, with China (211 medals), Great Britain (102), and the United States (99) topping the medals table. Top competitors included South African double amputee Oscar (“Blade Runner”) Pistorius, a world-record-setting T44 sprinter who had dominated much of the news prior to the opening ceremony. In May he was granted permission by the Court of Arbitration for Sport to try out for the Olympic Games. Critics had suggested that Pistorius’s high-tech prosthetic legs would actually give him an advantage over able-bodied runners. Although he ran a personal-best 400-m race of 46.25 sec, he failed by 0.70 sec to qualify for South Africa’s Olympic team. He rebounded at the Paralympics, where he won three gold medals (100-, 200-, and 400-m T44) and set one world record and two additional Paralympic records. Other significant Paralympians included swimmer Daniel Dias of Brazil, who topped the overall rankings with nine medals (four gold); Australian swimmers Matthew Cowdrey and Peter Leek, with eight medals each; and South African swimmer Natalie du Toit, who won all five of her events. Du Toit’s personal story was seen as an inspiration to other disabled athletes. She had hoped to qualify for the Olympics in Athens when in 2001 she lost the lower part of one leg in a motorcycle accident and switched to the Paralympics instead. In 2008 Du Toit made history as the first person with a partial leg to swim against able-bodied competitors at the Olympic Games, where she was 16th out of 24 finishers in the new 10-km open-water race.

(MELINDA C. SHEPHERD)

season-concluding IAAF World Athletics Final.

Cross Country and Marathon Running. Gebrselassie further rewrote the all-time marathon list in 2008, first with a 2-hr 4-min 53-sec race in Dubai, U.A.E., in January, at the time history’s second fastest marathon. In September at the Berlin Marathon, the event in which he had completed the fastest time on record in 2007, the 35-year-old Ethiopian ran history’s first sub-2-hr 4-min marathon. Gebrselassie passed the halfway mark in 1 hr 2 min 5 sec, 24 sec faster than in the 2007 race. He slowed noticeably at one point but summoned a finishing kick to lean across the line in 2 hr 3 min 59 sec.

Weather conditions for the Olympic marathons in Beijing were poor but better than expected. Romanian Con-

stantina Tomescu, age 38, pulled clear of the women’s field at the halfway point and held on to win in 2 hr 26 min 44 sec. It was the slowest Olympic-winning time since 1992 but 22 sec ahead of silver medalist Catherine Ndereba of Kenya. The men raced in higher temperatures but less humidity and eschewed caution. Kenyan winner Sammy Wanjiru’s 2-hr 6-min 32-sec time broke the Olympic record by almost 3 min; runner-up Jaouad Gharib of Morocco also ran under the old standard in 2 hr 7 min 16 sec.

At the world cross country championships, held in Edinburgh on March 30, Ethiopia swept the individual titles. Bekele earned a record sixth title in the senior men’s 12-km event; Dibaba prevailed in the senior women’s race; her sister Genzebe won the junior women’s

race; and Ibrahim Jeilan took the junior men’s event. (SIEG LINDSTROM)

VOLLEYBALL

The United States returned to the top of the volleyball world in 2008. The U.S. captured the men’s gold medal at the Olympic Games in Beijing, downing Brazil 20–25, 25–22, 25–21, 25–23 in the final match, while Russia swept Italy 25–22, 25–19, 25–23 to take the bronze medal. The Americans’ leading scorer, Clayton Stanley, was named the tournament’s Most Valuable Player (MVP) as the U.S. earned its first Olympic indoor volleyball gold since 1988. The U.S. men also claimed their first Fédération Internationale de Volleyball (FIVB) World League title, defeating Serbia 26–24, 23–25, 25–23,

25–22. The Americans were led by four-time Olympian Lloy Ball, who was chosen as tournament MVP.

In women's competition, Brazil spoiled the Americans' Olympic gold medal sweep by posting a 25–15, 18–25, 25–13, 25–21 victory over the U.S. MVP honours went to Brazil's Paula Pequeno. China secured the bronze with a 25–16, 21–25, 25–13, 25–20 victory over Cuba. Prior to the Olympics, Brazil notched its seventh FIVB Grand Prix championship. Cuba took the silver, and Italy collected the bronze.

In Olympic beach volleyball competition, Americans Todd Rogers and Phil Dalhausser claimed the men's gold medal, defeating Brazil's Marcio Araujo and Fabio Luiz Magalhães 23–21, 17–21, 15–4 in the final match. Dalhausser was tabbed the men's tournament's Most Outstanding Player. Fellow Americans Misty May-Treanor and Kerri Walsh (*see* BIOGRAPHIES) captured their second consecutive Olympic gold with a 21–18, 21–18 triumph over Tian Jia and Wang Jie of China. May-Treanor was selected as the women's Most Outstanding Player. This marked the first time that the same country claimed both beach volleyball gold medals at the same Olympics. (RICHARD S. WANNINGER)

WEIGHTLIFTING

The Games of the XXIX Olympiad, held in August 2008 in Beijing, displayed on the competition platform 255 weightlifters representing 84 countries. Athletes from 18 countries won the 45

medals that were awarded in the eight men's and seven women's body-weight categories. A total of 10 senior world records and 19 other Olympic records were broken.

In the women's division, China won four gold medals, followed in the rankings by South Korea (one gold and one silver), North Korea (one gold and one bronze), Thailand (one gold), Kazakhstan and Russia (two silver and one bronze each), and four other countries. Three-time world champion Jang Mi Ran of South Korea was the gold medalist in the superheavyweight category, with a 326-kg (718.7-lb) overall total, a new world record.

China also led the men's team rankings, with four gold and one silver, followed by Belarus (one gold and one silver). South Korea, Kazakhstan, and Germany earned one gold medal each. Russia took four medals, none of them gold, and seven other countries divided the remaining men's medals. Matthias Steiner from Germany won the superheavyweight category with an overall total of 461 kg (1,016.3 lb).

(DRAGOMIR CIOROSLAN)

WRESTLING

Freestyle and Greco-Roman. Wrestling medals were contested in three disciplines—men's Greco-Roman, men's freestyle, and women's freestyle—at the 2008 Olympic Games in Beijing. Russia once again won the medal count in men's freestyle competition, with a total of six medals (three gold, one silver,

and two bronze). Ukraine and Georgia completed the medal count with three each. The 74-kg class victory went to Russia's Buvayasa Saytiyev, who had also won gold at the 1996 Atlanta Olympics and the 2004 Games in Athens. His achievement equaled that of Aleksandr Medved of the Soviet Union, who won Olympic titles in 1964, 1968, and 1972; they were the only two freestyle wrestlers to claim three Olympic gold medals.

Japan repeated at the top of the women's freestyle competition, with four medals, including two gold. Olympic host country China and Canada both finished with two medals each. American Randi Miller captured the bronze medal in the 63-kg class, winning a one-point decision over Martine Degrenier of Canada.

In Greco-Roman competition Russia led the medal count with four (three gold and one silver). During the medal ceremony for the 84-kg class, Ara Abrahamian of Sweden took the bronze medal from around his neck and dropped it on the mat in protest as he walked away. The public display came after a disputed point in Abrahamian's semifinal contest against eventual gold medalist Andrea Minguzzi of Italy. The International Olympic Committee stripped Abrahamian of his medal, and the Fédération Internationale de Lutte Amateur, the sport's governing body, banned him from competition for two years. (ANDRÉ REDDINGTON)

Sumo. Just returning from his two-*basho* (grand tournament) suspension, *yokozuna* (grand champion) Asashoryu narrowly lost the January 2008 Hatsu (New Year's) Basho to fellow *yokozuna* Hakuho. Asashoryu won the Haru (spring) Basho in March. Bulgarian-born Kotooshu prevailed in the Natsu (summer) Basho in May, the first time a European fighter had won a *yusho* (championship). Hakuho took advantage of injuries to Asashoryu and swept the remaining three *basho* for 2008.

Outside the ring, scandal continued to plague the ancient sport. In mid-August Russian wrestler Wakanoho was arrested for marijuana use, and a week later he was expelled; his countrymen Roho and Hakurozan were arrested and expelled in early September. This forced the resignation of Japan Sumo Association (JSA) Chairman Kitanoumi. Reforms that the JSA adopted included drug testing, stricter guidelines for athlete conduct and training, and oversight by directors appointed from outside the sport. (KEN COLLIER)

The World in 2008

Thousands of displaced persons stream toward Goma in eastern Democratic Republic of the Congo in late October as government forces retreat from fighting with rebel militia.

Karel Prinsloo/AP

World Affairs

SKYROCKETING food and fuel prices and a global **FINANCIAL CRISIS** imperiled the world in 2008. **KOSOVO** proclaimed its **INDEPENDENCE**; a new president, an **AFRICAN AMERICAN**, was elected in the United States; the 239-year-old constitutional **MONARCHY** was **DISSOLVED** in Nepal; Bhutan completed its transition from an **ABSOLUTE** monarchy to a democracy; former **REBEL LEADERS** (in Kosovo and Nepal) became the prime ministers of their countries; and a coordinated **TERRORIST ATTACK** targeted **LANDMARKS** in the Indian city of **MUMBAI**.

UNITED NATIONS

The United Nations in 2008 celebrated both its 60th year of peacekeeping and the 60th anniversary of the Universal Declaration of Human Rights, as well as the 40th anniversary of the signing of the Treaty on the Non-proliferation of Nuclear Weapons. The year also witnessed the worst financial crisis since the Great Depression of the 1930s, a worsening global food crisis, and concerns that climate change could perhaps offer the greatest long-term challenge for international cooperation.

Financial Crisis. The global credit crisis, which began in 2007, threatened to destabilize many countries and bring financial devastation to countless millions of people. The IMF in October 2008 launched an emergency lending program to help large emerging market economies deal with the crisis. Under the program, countries with sustainable debt and a record of sound financial policy were allowed to borrow up to five times their financial contribution to the IMF with few conditions attached. At year's end the situation was still uncertain, with most major economies struggling to contain the fallout. (See Special Report on page 170.)

The already-severe world food crisis, spurred by a decline in agricultural production and an associated rise in food prices, was exacerbated by the financial crisis as many governments moved to protect their food supplies. The Food and Agriculture Organization

(FAO) reported that 36 countries were in need of emergency assistance and that a disaster was looming unless countries made food security a top priority. During 2008, 40 million additional persons were forced into hunger, bringing the total of the world's hungry to about one billion. In mid-December 2008 the FAO reported that it needed \$5.2 billion urgently to feed 100 million people in severe crisis. Secretary-General Ban Ki-moon reported to the General Assembly that the food crisis was expected to drive another 100 million persons into poverty. (See Special Report on page 182.)

Peacekeeping and Security. During 2008 the UN fielded 18 peacekeeping missions utilizing more than 112,000 troops, police, and civilians, with a total budget of more than \$7 billion. These operations ranged from providing support to political processes in places such as the Democratic Republic of the Congo (DRC), Haiti, and Lebanon to supplying comprehensive support to efforts to demilitarize conflict areas and reestablish judicial, police, security, and good governance capabilities in war-torn areas. There were 12 ongoing UN political peacebuilding operations, most notably the UN Assistance Mission in Afghanistan (UNAMA), with nearly 1,300 personnel, and the UN Assistance Mission for Iraq, with an authorized strength of 1,014. Troops and other personnel were contributed by 117 member countries. By far the largest contributors were Pak-

istan, Bangladesh, and India, followed by Nigeria.

The UN mission in the DRC was the largest, with 17,000 peacekeepers, but it proved insufficient in the face of growing violence along the border with Rwanda, where Tutsi and Hutu rebels battled each other. By mid-November 2008 the number of refugees in the DRC had grown to more than one million in the face of increased violence. Adding to the tense situation in the strife-ridden country, elements of Joseph Kony's Lord's Resistance Army (LRA), hiding in the huge Garamba National Park, launched raids on villages near there and in neighbouring Central African Republic (CAR) and The Sudan. A special summit, held in Nairobi in early November, was attended by the leaders of Burundi, the Republic of the Congo, the DRC, Kenya, Rwanda, South Africa, Tanzania, and Uganda, as well as Ban Ki-moon. The summit produced what was termed a multipronged agreement calling for a cease-fire and a commitment to send African Union (AU) peacekeepers to the front lines if UN peacekeepers could not protect civilians.

The Security Council in July 2007 approved UNAMID, a joint AU-UN operation in the Darfur region of The Sudan with the core mandate of protecting civilians. Although the mission began formal operation on Dec. 31, 2007, deployment was hampered by political problems with the Sudanese government and by shortfalls in contributions of troops, police, transport and aviation assets, and logistic support. When fully deployed, UNAMID would be the largest peacekeeping operation in history and would have nearly 20,000 troops, 6,000 police, and a significant civilian component.

Somalia remained high on the list of international security concerns, with increased piracy off the Somali coast adding to the deteriorating situation in the failed state. On Dec. 16, 2008, the UN Security Council passed a resolution urging countries and regional organizations with the capacity to deploy naval ships and aircraft to thwart further piracy. It authorized countries to "take all necessary measures that are appropriate in Somalia" to suppress acts of piracy. The secretary-general urged the Council to consider the problem in the context of building compre-

hensive peace and restoring stable governance to Somalia.

The UN Peacebuilding Commission expanded its work to include Guinea-Bissau and the CAR in addition to its ongoing efforts in Burundi and Sierra Leone. In the latter two cases, the commission assisted in electoral processes and facilitated multistakeholder dialogue. Forty-five member countries pledged \$267 million to the Peacebuilding Fund.

In regard to nuclear proliferation, the International Atomic Energy Agency (IAEA) reported in October that the theft of nuclear materials was disturbingly high, with nearly 250 cases reported in the year ended in June 2008. In September the IAEA revealed that Iran was failing to cooperate with its investigators and was continuing industrial uranium enrichment in defiance of Security Council resolutions.

Terrorism. The terrorist attack in Mumbai (Bombay) in late November reminded the world that terrorism remained a major global issue. (See Special Report on page 192.) This latest major attack came just months after the European Court of Justice had declared that the UN's blacklist of suspected financiers of al-Qaeda and other terrorist groups lacked accountability and due process and violated the fundamental human rights of the suspects, in part because suspects had no ability to challenge being included on the list. In the U.S. the bipartisan leadership of the Senate Armed Services Committee, including Republican presidential candidate John McCain (see BIOGRAPHIES), released a report that accused former U.S. secretary of defense Donald Rumsfeld of being responsible for war crimes and abuses committed by U.S. forces at Abu Ghraib prison in Iraq, the Guantánamo Detention Facility in Cuba, and other military detention centres. On October 7 a U.S. judge ordered the release from the Guantánamo Bay military prison of 17 Chinese Uighur Muslims who had been held for more than seven years without having been charged with a crime. In a sharp break with Pres. George W. Bush's administration, President-elect Barack Obama (see BIOGRAPHIES) pledged during his first major interview following the election to close the Guantánamo Bay facility and ban torture by the U.S. military.

Humanitarian Affairs. On the humanitarian front, the UN was engaged in a number of locations, Darfur, with nearly 15,000 aid workers assisting more than four million people, being the largest.

As 2008 dawned, there were 11.4 million refugees, and the number was rising. At the same time, there were 26 million internally displaced persons. In response to the massive destruction caused by the magnitude-7.9 earthquake in Sichuan, China, in May, UN agencies initiated the China Appeal for Early Recovery Support. This effort to raise \$33.5 million was the first step in providing aid to the earthquake victims. The earthquake killed at least 69,000 people, injured hundreds of thousands of others, and left millions of people homeless.

In Uganda's two-decade-long war with rebel forces, nearly two million persons were forced by the Ugandan army (UPDF) from their homes into what were in essence poorly defended concentration camps. The LRA was accused of having abducted more than 60,000 people, many if not most of them children, and forcing tens of thousands to join Kony's army. The list of crimes included rape, murder, mutilation, and sexual slavery. The Ugandan military forces, on the other hand, also had been accused by human rights organizations of murder, rape, torture, and, especially, forced displacement. The Ugandan government in 2003 asked the International Criminal Court (ICC) to conduct an investigation of alleged atrocities committed by the LRA (but not government forces). The ICC responded in 2005 by unsealing indictments against Kony and four other LRA leaders for crimes against humanity and war crimes, but the task of carrying out the arrest warrants proved futile. In mid-November 2008 the ICC announced that it was reviewing the LRA case in light of the Uganda government-LRA peace talks that began in 2006.

Human Rights. The UN Human Rights Council, still in its infancy in 2008, initiated a Universal Periodic Review of countries' performances in satisfying their human rights commitments. In doing so, the council examined the records of 48 member countries.

In July the chief ICC prosecutor charged Sudanese Pres. Omar al-Bashir

Bassem Tellawi/AP

Iraqi refugees in Damascus, Syria, register their names on June 25 to receive UN food aid.

(see BIOGRAPHIES) with genocide, crimes against humanity, and war crimes in Darfur and asked the court to issue an arrest warrant against him. In December the judges were still considering the case. The case was similar to the LRA case in Uganda, since a main issue in both cases was the impact that ICC indictments might have on ongoing peace negotiations. In the Bashir case there was also concern regarding the impact on the ability to continue UN peace missions in Darfur and southern Sudan.

Development. The financial crisis in 2008 posed a threat to the future of the Millennium Development Goal (MDG) process as donor governments scrambled to deal with domestic financial problems. The most progress was made toward achieving the target set for MDG 2: to ensure that by 2015, children everywhere (boys and girls alike) would be able to complete a full course of primary schooling. Improving maternal health, MDG 5, lagged the most behind schedule. More than 1.2 billion people still lived in extreme poverty, and their plight was worsening as a result of the food and financial crises. Nearly a billion people did not have access to safe drinking water, and 2.5 billion did not have adequate sanitation facilities. Urban poverty was on the rise, and UN Habitat announced in October that the number of urban slum dwellers had for the first time surpassed one billion.

Health. The World Health Organization (WHO) reported that polio infections had more than doubled in the four countries—Afghanistan, India, Nigeria, and Pakistan—where it was

endemic and had spread to 10 additional countries. Global progress in containing avian (H5N1) flu continued, although it was still pandemic in poultry in parts of Asia, and 36 human cases and 28 deaths were reported in Indonesia in 2008. In October the UN and the World Bank warned that a global avian flu pandemic was still a threat.

More than 3.3 billion people were considered at risk of contracting malaria, which was endemic in 109 countries; more than a million deaths annually, primarily of children under the age of five, were due to malaria. The Global Fund to Fight AIDS, Tuberculosis and Malaria announced a \$2.75 billion initiative of new funding over the next two years, with 90% of the funds to go to low-income countries. More than half would be spent on fighting malaria, with 38% and 11% devoted to AIDS and tuberculosis programs, respectively. In November the Global Fund froze its aid to Zimbabwe after discovering that the country's central bank had stolen £4.5 million (about \$7.3 million) that had been intended to train 50,000 people and purchase drugs for a national anti-malaria campaign.

UNAIDS decided not to publish a new "AIDS Epidemic Update" in 2008. Nonetheless, it reported that in 2008 the global AIDS pandemic had stabilized in terms of the percentage of people living with AIDS, even though the overall number continued to increase as a result of new infections and increased life expectancy resulting from broader availability of antiretroviral therapy. In 2007 an estimated 33 million people worldwide were HIV infected. Two-thirds of these individuals lived in sub-Saharan Africa, which also accounted for more than three-fourths of all AIDS deaths and nearly 90% of all children living with HIV. Globally, the number of children under the age of 15 living with HIV had increased since 2001, but the rate of new infections among children had declined, with an estimated 370,000 new infections in 2007. On a positive note, the AIDS epidemics in most sub-Saharan African countries had stabilized or were in decline. In October the new South African minister of health publicly pronounced that HIV causes AIDS and pledged that her country would now, after years of failed policies, do everything needed to deal effectively with the pandemic.

Environment. A UN Climate Change Conference was held in Poznan, Pol., during Dec. 1–12, 2008. The meeting,

which involved a ministerial-level session on a shared vision for long-term cooperative action, represented another step forward in the negotiations toward strengthening international action on climate change—the so-called Bali Road Map process. While agreement on most major issues remained elusive, progress was made in several technical areas, including adaptation, finance, technology, deforestation and forest degradation emission reduction, and disaster management. Conferees agreed to move into full negotiating mode in 2009, with four major international conferences planned for the year. The aim was to conclude a final agreement at the Copenhagen meeting in December 2009 for a new treaty on climate change that would replace the Kyoto Protocol, which was due to expire in 2012.

Administration and Reform. The secretary-general continued the restructuring initiative of the UN Department of Peacekeeping Operations (DPKO) that he began in 2007. The reform initiative included the establishment of a Department of Field Support, an Office of the Rule of Law and Security Institutions, and Integrated Operational Teams. The DPKO finalized a number of strategic doctrine documents, including the "capstone" doctrine of the "United Nations Peacekeeping Operations Principles and Guidelines." (ROGER A. COATE)

EUROPEAN UNION

When Slovenia assumed the rotating presidency of the European Union on Jan. 1, 2008, the symbolism was unmistakable. With a population of just over two million, Slovenia had become the first postcommunist country (of the eight that joined the EU in 2004) to take on the six-month chairmanship of what had long been an elite "Western" club. Slovenia's big moment underscored how the EU—representing 27 countries and almost 500 million citizens—had begun to embrace those postcommunist Eastern European members.

Slovenia, which had helped to trigger the collapse of the former Yugoslavia when it declared independence in 1991, took control of the EU presidency at a time when problems in the Balkans were threatening to reassert themselves. Kosovo, a province of Serbia with a population comprising a mix of ethnic Albanians (Kosovars) and Serbians, announced on February 17 that it was breaking away from Serbia. Serbia and its ally Russia were vehemently opposed, describing the split as illegal.

Amid the rising tension, Slovenian Foreign Minister Dimitrij Rupel saw an opportunity for his country to make a mark on history by using the lure of EU membership for Serbia as a way to resolve the crisis. Despite divisions between EU countries over how to approach the crisis, it was made increasingly clear to Serbia that if it accepted Kosovan independence, Serbia could soon become a candidate for EU membership. The approach worked, and in Serbia's parliamentary elections in May, the "For a European Serbia" alliance outperformed the Serbian nationalists. Then in July the arrest of Bosnian Serb wartime leader Radovan Karadzic—one of a group of men whose capture the EU had been demanding—also helped improve relations. Karadzic's capture was described by British Foreign Minister David Miliband as an "important step" toward Serbia's accession to the EU.

Ireland, historically one of the most enthusiastic EU member countries, caused the biggest short-term problem in the middle of the year. In June in a referendum, Irish voters rejected the EU's Lisbon Treaty—a set of proposals designed to modernize the bloc's institutions so that they could function with its increased membership of 27 countries. The treaty had started out in 2004 as the EU Constitutional Treaty, which was rejected in referenda in France and The Netherlands in 2005.

The renamed Lisbon Treaty was much the same in substance, although EU leaders—in the hope of making it more acceptable to citizens who feared the loss of powers from their own national governments to the EU's central power in Brussels—insisted that the new treaty was less far reaching in constitutional terms. According to the existing rules, every country in the EU must ratify a new treaty, either in its respective parliament or in a referendum, for that accord to be implemented anywhere in the community. With the Irish rejection, the Lisbon Treaty was unable to come into force as scheduled on Jan. 1, 2009. EU leaders said that the process of ratification in other countries had to continue, but there was no obvious way forward unless, sometime in the future, the Irish government held another vote and won approval. In the meantime, the EU would have to carry on with structures devised in the 1950s for its original six-country membership.

In August the EU's attention switched to the crisis in Georgia after Russia sent tanks into that country in a dis-

pute over the breakaway region of South Ossetia, whose population was primarily ethnically Russian. Moscow's actions were seen in part as a warning to Western countries not to back Georgia's efforts to join NATO—an idea that had been discussed by members of the Western alliance.

The question of how to deal with the situation in Georgia caused intense debate among the EU member countries. An emergency summit of EU leaders in Brussels on September 1 denounced the “disproportionate” Russian action and described as “unacceptable” the Kremlin's recognition of South Ossetia and Abkhazia, another breakaway province in Georgia. There was no agreement on a plan submitted by British Prime Minister Gordon Brown to freeze negotiations with Moscow on a new EU-Russia strategic partnership. France, which had assumed the EU presidency on July 1, urged caution, saying that it did not want “another Cold War.” As the United States led the condemnation of Russia, France was in the vanguard of those who urged caution, highlighting Europe's reliance on energy supplies from Russia.

By early autumn, as tensions over Georgia lessened, the global financial and banking crisis was posing fundamental questions of a very different sort for the European Union. Instability in the global financial markets was spreading fears of a severe worldwide economic slowdown. Food and commodity prices had been climbing all year, threatening a surge in inflation, and instability in the value of the U.S. dollar affected the euro. At the same time, there were also calls in member countries for cuts in euro-zone interest rates. The debate remained: whether the EU would establish a joint economic policy to combat the crisis or every country would be responsible for itself as the financial crisis hit home—an approach that would severely undermine the EU's central purpose.

In late September Ireland was criticized by its EU partners for suddenly and unexpectedly announcing plans to guarantee all bank savings, even corporate deposits, in six of its main banks. Other EU countries were furious that the Irish government had not consulted its European partners and that the plan might mean that people across the community would switch their banking to Ireland, which thus would distort the European system.

French Pres. Nicolas Sarkozy called an emergency summit of the “big four”

EU nations—France, Germany, Italy, and the U.K.—to discuss the crisis. At this meeting, held in Paris on October 4, the leaders demanded a global gathering to consider the formation of a new world financial system to replace the 1944 Bretton Woods agreement, which had formed the International Monetary Fund and the World Bank. “We need to literally rebuild the international financial system,” Sarkozy said. “We want to lay the foundations of entrepreneurial capitalism, not speculative capitalism.”

Within hours of that declaration, however, there was consternation in Paris, London, and Rome: Germany had itself established a plan to guarantee its savers' money in German banks that appeared to exceed the perimeters of accepted EU policy. After initially furious protests, tempers cooled as the German government explained that its plan was a far-more-limited measure than that authorized by Ireland, but the row exposed many of the tensions at the heart of the European project.

During October and early November, there was a greater sense of common purpose as the EU backed plans, pushed hard by Prime Minister Brown, to prop up and partially nationalize major banks. Several of the largest European countries—notably the U.K. and Germany—developed proposals for tax cuts to give their economies a fiscal stimulus to encourage people to start spending again. Even the U.K.—traditionally resistant to the idea of a coordinated European fiscal policy—admitted that cooperation within the EU was a vital component in reviving the global economy. In mid-November leaders of the larger EU states took part in a Group of 20 (G-20) summit of major advanced and emerging economies held in Washington, D.C., where it was agreed that the economic crisis required coordinated global action on fiscal policy, including, where possible, tax reductions to jump-start the world economy. The G-20 leaders also decided to try to restart the stalled Doha round of trade talks and to work toward reform of the IMF and the World Bank so that those two institutions could work effectively in the new world of global finance.

On November 5 the EU turned some of its attention to the next phase of EU expansion, declaring that Croatia—another Balkan state—was on course to become the 28th EU member country by the end of 2010 or early in 2011. Serbia was told that it might be able to

start membership talks in 2009. Turkey's path toward entry remained strewn with obstacles. In a report on the EU's expansion plans, Olli Rehn, the European commissioner with authority for enlargement, said that there had been “stagnation” in Turkey's efforts to meet the political and economic conditions for entry. At the same time, Sarkozy was subtly applying new pressure on Ireland to hold a second referendum, claiming that there could be no further admissions until all existing member countries had ratified the Lisbon Treaty.

As the year drew to a close, it was clear that despite diplomatic crises on its doorstep, a continuing constitutional wrangle involving its own rule book, and a global economic crisis that had raised questions about its plans for common economic policies, the EU was still a club that many ambitious countries wanted to join. Membership offered a sense of stability in an unstable world and a say in an international organization that was using the weight of its collective membership to argue for global solutions to many global problems.

(TOBY HELM)

MULTINATIONAL AND REGIONAL ORGANIZATIONS

In mid-November 2008, leaders of the Group of 20 (G-20) major advanced and emerging economies met in Washington, D.C., to discuss the growing global financial crisis. At this summit—and at a meeting of G-20 finance ministers held a week earlier in São Paulo—less-developed countries expressed the desire to have a greater voice, while developed countries were divided on their views of international financial market regulations. Among the decisions that were reached, emerging markets were to receive seats on the Financial Stability Forum for the first time as well as more seats in the IMF and the World Bank. A second summit was scheduled for April 2009. The annual Asia-Pacific Economic Cooperation (APEC) summit followed the G-20 meeting by one week and endorsed the latter's plan of action, adding a pledge to ban new protectionist actions for the next year and to revive the stalled Doha round of World Trade Organization (WTO) negotiations.

The economic crisis had a profound effect on members of the Organization of the Petroleum Exporting Countries, for which worldwide drops in oil consumption led to a drastic decrease in

the price of oil per barrel after it reached a record high of \$145.29 in July. With prices continuing to drop late in the year, many OPEC countries that used oil revenues to balance their national budgets faced hard economic times. OPEC leaders met twice in the autumn and agreed on a 1.5-million-bbl-per-day production cut, and in mid-December they cut production by 2.2 million bbl a day, a new record.

The Group of Eight (G-8) summit of major developed countries was held in Hokkaido, Japan, in July, before the financial crisis began to unfold. Climate change was a major topic, and the final declaration called for reducing carbon emissions 50% by 2050. Notable was the U.S.'s willingness to agree to this target, although the vague language did not create any binding agreement.

The African Union's (AU's) peacekeeping responsibilities grew with calls for more troops in the Darfur region of The Sudan. (See *The Sudan*: Sidebar, below.) The situation in Somalia also deteriorated, and with too few AU peacekeepers on the ground, it proved impossible to stabilize the region. Renewed violence in the Democratic Republic of the Congo (DRC) prompted speculation in late 2008 that AU peacekeepers would be needed if a cease-fire could not be reached. Meanwhile, the Southern African Development Community (SADC) agreed to assist the DRC government's armed forces with military aid. The SADC attempted to mediate a power-sharing agreement in Zimbabwe between longtime Pres. Robert Mugabe and opposition leader Morgan Tsvangirai but failed to secure a satisfactory outcome. A coup in Mauritania led AU leaders to suspend Mauritania's membership and aid while they dispatched an envoy to meet with coup leaders.

Several prominent Arab countries—notably Saudi Arabia and Egypt—failed to send their heads of state to the Arab League summit in March in Damascus. The snub by 11 of the 22 member countries was to protest the Syrian role in Lebanon's continuing political crisis. On July 19 the league met in a special session to denounce the indictments by the International Criminal Court (ICC) against Sudanese Pres. Omar al-Bashir (see BIOGRAPHIES) on charges of war crimes and genocide in Darfur. The league called upon the UN Security Council to block the issuance of an arrest warrant for fear of further violence between the government, rebel forces, and the AU/UN peacekeepers.

Following the cyclone that devastated Myanmar (Burma) in May and the military junta's ban on international relief aid, the Association of Southeast Asian Nations (ASEAN) took the initiative to get an agreement to admit relief supplies and workers from other ASEAN countries. In late October Indonesia became the last member to ratify the ASEAN Charter that would turn the organization into a legal entity. The agreement also set in motion a process to create by 2015 an ASEAN Community that would include the ASEAN Economic Community, Security Community, and Socio-Cultural Community. The charter incorporated human rights for the first time but did not allow ASEAN to apply sanctions or expel a member country for human rights violations. ASEAN also concluded free-trade agreements with India, Japan, Australia, and New Zealand.

Following the August conflict in Georgia, Russia turned to the Shanghai Cooperation Organization (SCO) for recognition of the independence of the breakaway provinces of South Ossetia and Abkhazia. Instead, nervous about the precedent that this might establish for future interventions, the five other SCO members condemned the use of force and called on Russia and Georgia to "solve existing problems peacefully, through dialogue, and to make efforts facilitating reconciliation and talks." In October, with the global financial crisis unfolding, Chinese Premier Wen Jiabao called on the SCO to develop coordinated monetary policy and financial regulations.

In Latin America, efforts by the South American Common Market (Mercosur) and the Andean Community to create a new Union of South American Nations (UNASUR) on the model of the European Union moved a step closer to reality in May with the signing of a constitutive treaty. UNASUR—which would include the Banco del Sur (Bank of the South), launched in 2007—would create a single market by 2019 and establish free movement of people, continental infrastructure development, and a South American Defense Council.

(MARGARET P. KARNIS)

DEPENDENT STATES

Europe and the Atlantic. In May 2008 Ilulissat, Greenland, was the site of an international summit on Arctic sovereignty attended by official representatives from the five countries that border the Arctic Ocean: Canada, Denmark, Norway, Russia, and the U.S. The two-page Ilulissat Declaration, released at the end of the summit, provided a legal framework for Arctic development. In November the electorate in Greenland voted resoundingly in favour of greater autonomy from Denmark.

In October *New Scientist* magazine reported the results of a yearlong study of Greenland's Jakobshavn glacier. Time-lapse photographs taken at least every six hours between May 2007 and May 2008 revealed that two rivers of ice on the glacier were draining Greenland's ice sheet and contributing to a rise in sea level. A report from Ohio State University's Byrd Polar Research Center confirmed that a massive 29-sq-km (11-sq-mi) chunk of Greenland's Petermann glacier broke loose in July.

On January 19 the Faroe Islands held its first election to the new 33-seat Løgting (legislature) since the 2007 reforms that replaced proportional representation with a single constituency. Although the pro-independence Republican Party won the most seats (eight), the Unionist Party, with seven seats, remained at the head of a coalition led by Prime Minister Jóannes Eidesgaard. On September 26 Kaj Leo Johannesen was sworn in as prime minister in a realigned three-party coalition, with Eidesgaard as finance minister.

A planned cull in April of up to 25 monkeys in Gibraltar triggered international protests. Some of the territory's famed Barbary macaques had invaded tourist areas, and the government ex-

Barbary macaques play at the top of the Rock of Gibraltar in April; a planned cull of some 25 of the famous monkeys sparked international protests.

Anton Meres—Reuters/Landov

pressed concern that the wild monkeys (which had been known to damage property, bite, and carry communicable diseases) were a threat to public safety.

Sark's 600 residents voted in a referendum to endorse a new constitution to replace the Channel Island's feudal system of government (created in 1565) with a 28-member elected legislature. The U.K.'s Queen Elizabeth II approved the change, but several wealthy landowners and the neighbouring island of Guernsey, which claimed sovereignty over Sark, questioned the validity of the new constitution.

(MELINDA C. SHEPHERD)

Caribbean and Bermuda. Puerto Rico's government-owned power company, PREPA, indicated in January 2008 that it wanted to reduce dependence on oil-fired electricity generation to 52% by 2010 and 33% by 2018. In 2008 oil accounted for 73% of generation fuel, with natural gas and coal making up the other 27%. A wind farm was planned for the island's southwest coast.

Puerto Rican Gov. Aníbal Acevedo Vilá was formally charged in March with 19 counts of campaign finance fraud, along with 12 associates in Puerto Rico, Washington, D.C., and the Philadelphia area. The charges included collecting illegal donations to pay off political campaign debts, spending more than reported to U.S. federal election regulators, and using campaign money for personal expenses. Alric Simmonds, onetime deputy chief of staff for former U.S. Virgin Islands governor Charles Turnbull, was jailed for eight years in June for having stolen more than \$1.2 million in government funds.

The Dutch parliament in April was told by the minister responsible for kingdom affairs that the December 15 target for the dismantling of the Netherlands Antilles could not be met and that a more realistic timetable was January 2010. Under the disintegration plan, St. Maarten and Curaçao would become autonomous states within the Dutch kingdom, while St. Eustatius and Saba would revert to the status of kingdom municipalities. In November Aruban authorities announced that they had new evidence in the 2005 disappearance of American teenager Natalee Holloway; the highly publicized case remained unsolved after more than three years.

Ramon Tonito Zayas—El Nuevo Dia/AP

Puerto Rico's governor-elect, Luis Fortuño, is mobbed by jubilant supporters after delivering his victory speech on November 4 in San Juan; Fortuño decisively defeated the incumbent governor, Aníbal Acevedo Vilá, who had been indicted for campaign finance violations.

Concern over corruption in the Turks and Caicos government was heightened in March when the UK's House of Commons Foreign Affairs Committee reported that it had received "the largest number of submissions" on the subject from any overseas territory. The British government appointed a commission of inquiry, which late in the year summoned Premier Michael Misick to testify and to produce vital documents. In September Hurricane Ike caused tremendous damage to Grand Turk. Cayman Islands Gov. Stuart Jack in September assured the public that the territory's judicial system would continue to function normally, despite the arrest of a senior judge, Alexander Henderson, for "misconduct in public life." Another judge, Priya Levers, had been suspended from the bench earlier, pending investigation.

In early 2008 Bermuda's Ministry of Finance estimated that GDP would be in the range of 2.5–3% in fiscal 2008–09, with projected revenue of \$985 million, but soaring food and oil prices caused the estimate to be downgraded in July to 2–2.5%. The economic downturn in the U.S., Bermuda's leading source of trade and tourism income, pushed the government in November to defer a planned pay hike for MPs.

The Montserrat government switched coalition partners in February, striking

up an alliance with the Movement for Change and Prosperity (MCAP) after having been partnered by the New People's Liberation Movement (NPLM) since June 2006. Lowell Lewis remained chief minister, and the new coalition had a majority of 6–3 in the legislative council.

On April 17 Aimé Césaire—poet, politician, and cofounder of the Negritude movement—died in Martinique. (See OBITUARIES.) In 2007 the airport there was renamed in his honour.

(DAVID RENWICK)

Pacific Ocean. Niue hosted the 39th Pacific Islands Forum's Leaders' Summit on Aug. 19–21, 2008. Niue's new premier, Toke Talagi, welcomed some 350–400 delegates and others representing the 16 member states, including French Polynesia Pres. Gaston Tong Sang, who was attending his first forum summit. The influx increased the size of Niue's population by some 30% and placed huge pressures on the island's limited accommodations. The Niue meeting was said to be "more intimate and shorter" than previous annual forum meetings.

In French Polynesia, Tong Sang, who had served as president in 2006–07, regained the post in April 2008 after his To Tatou Ai'a coalition won a majority in the January general election and forced a no-confidence vote against Pres. Gaston Flosse just 53 days after Flosse defeated Tong Sang for the presidency. The new French high commissioner, Adolphe Colrat, arrived in Tahiti in July. One of the first challenges he faced was a claim by President Tong Sang for financial compensation from France for planned reductions in the French Pacific Marine Infantry Regiment garrison and air base, both of which were important sources of territorial income. Meanwhile, yet another political party was formed by a member of the ruling coalition, Hiro Tefaarere.

New Caledonia's first national anthem was performed in June to mark the 20th anniversary of the signing of the Matignon-Oudinot Accords, which provided for the territory's progressive movement toward greater autonomy from France and an eventual referendum on self-determination. The UNESCO World Heritage Committee in July named the Lagoons of New Caledonia, some 15,000 sq km (almost

6,000 sq mi) encompassing six lagoons in the world's second largest continuous coral reef, a World Heritage site.

Guam spent 2008 preparing for the most profound transformation in its history. The island's population was expected to increase from 175,000 to some 225,000 between 2010 and 2014 as 8,000 U.S. Marines and 9,000 of their dependents were relocated from Okinawa. Preparations began for a \$10.3 billion investment in military bases, housing, and utilities on Guam. The expenditure of the first \$200 million in 2008 led to an increase in economic activity, but the planned infrastructure expansion would require significant inflows of skilled labour from beyond Guam.

The highlight of American Samoa's year occurred in late July, when the territory hosted the quadrennial Festival of Pacific Arts. The festival saw some 2,100 artists and performers from 27 Pacific nations gather in Pago Pago for two weeks to demonstrate traditional arts and performances.

The Cook Islands Council of Traditional Chiefs, or House of Ariki, in June strayed from its traditional role, announcing the dismissal of the elected

government and asserting its control over the territory's land and sea. The chiefs were forced to renounce their claims several days later, however, after both the government and the public criticized the traditional leaders for jeopardizing the Cook Islands' international reputation for stability. The council reportedly had asserted its power to assume control over potentially lucrative mineral-exploration rights within the Cook Islands' huge exclusive economic zone and the potentially larger continental shelf.

(CLUNY MACPHERSON)

Indian Ocean. Relations between France and the Comoros island group remained strained in 2008. At the UN General Assembly on September 25, Comoros Pres. Ahmed Mohammed Abdallah Sambi raised the issue of Mayotte's constitutional position. France planned to hold a referendum in 2009 on Mayotte's status. Sambi claimed that such a referendum would disrupt the harmony needed between the Comoros' four constituent islands.

The dispute followed a crisis on the island of Anjouan, where Pres. Col. Mohamed Bacar refused to relinquish his presidency when his term of office expired in April. Instead, he held an illegal election, printed his own ballot papers, and in June declared himself the winner. After Comoran and African Union troops toppled his regime, Bacar and five members of his former government fled to Mayotte and thence to Réunion, where they were put under house arrest. (See *Comoros*, below.)

After a 10-year legal fight, families evicted from their homes on Chagos Archipelago lost their battle to return when in October the U.K. House of Lords ruled in favour of the Foreign Office's appeal against a prior court decision that supported their return. The islanders, some of whom traveled to London from their current home on Mauritius for the ruling, were removed from Chagos in the 1970s to accommodate a U.S. military base on Diego Garcia. The disappointed Chagossians' leader, Olivier Bancoult, said that they were considering taking the case to the European Court of Human Rights.

The Australian government in 2008 used the increased capacity of a newly built detention centre on Christmas Island to process asylum seekers. The facility on Christmas Island was Australia's last remaining offshore detention site in the country's Pacific Solution for unauthorized boat arrivals.

(A.R.G. GRIFFITHS)

ANTARCTICA

Ice averaging roughly 2,160 m (7,085 ft) in thickness covers more than 98% of the continent of Antarctica, which has an area of 14 million sq km (5.4 million sq mi). There is no indigenous human population, and there is no land-based industry. Human activity consists mainly of scientific research. The 47-nation Antarctic Treaty is the managerial mechanism for the region south of latitude 60° S, which includes all of Antarctica. The treaty reserves the area for peaceful purposes, encourages cooperation in science, prescribes environmental protection, allows inspections to verify adherence, and defers the issue of territorial sovereignty.

At the 31st Antarctic Treaty Consultative Meeting (ATCM) held in June 2008, representatives from more than 50 governments and international organizations focused on the environmental stewardship of Antarctica. The delegates designated southwestern Anvers Island and the adjacent Palmer Basin off the western coast of the Antarctica Peninsula as an Antarctic Specially Managed Area (an area where all activities were planned and coordinated to avoid possible conflicts, improve cooperation between parties, and minimize environmental impacts). They also designated Mt. Harding, Amanda Bay, and Marion Nunataks (mountains) as Antarctic Specially Protected Areas (ASPAs) and adopted revised management plans for 10 existing ASPAs. An environmental geographic framework that classified the continent into 21 different environments was adopted to help identify areas that could be designated as ASPAs. Delegates also considered tourism policy and maritime traffic-management issues, including new guidelines for landing at sites frequently visited by tourists.

As part of the ATCM, the Committee for Environmental Protection held its 11th meeting. The committee's most significant discussions focused on the draft environmental evaluation that was prepared by China for the construction and operation of its new station, Dome A, in East Antarctica. Using information provided by the committee, the Chinese government released a final environmental evaluation in August. The committee also discussed and supported a recommendation by the Scientific Committee on Antarctic Research not to add the southern giant petrel to the list of specially protected species.

During the 2007–08 austral summer, about 44,500 tourists traveled to Antarctica by ship, with about three-

fourths of them landing in the Antarctic Treaty area. About 260 visitors participated in multiday land-based expeditions to the continental interior, and 270 passengers made overflights of Antarctica from South America. On Dec. 4, 2008, the MV *Ushuaia*, operated by the Argentine tour company Antarpplly Expeditions, ran aground at the entrance of Wilhelmina Bay near Cape Anna with 82 passengers and 40 crew onboard. Although the passengers were not in immediate danger, they were evacuated the next day by the Chilean naval vessel *Aguiles*. The ship was freed on December 8, and after an inspection of its hull by Chilean navy divers showed that the ship was seaworthy, it sailed to the Shetland Islands.

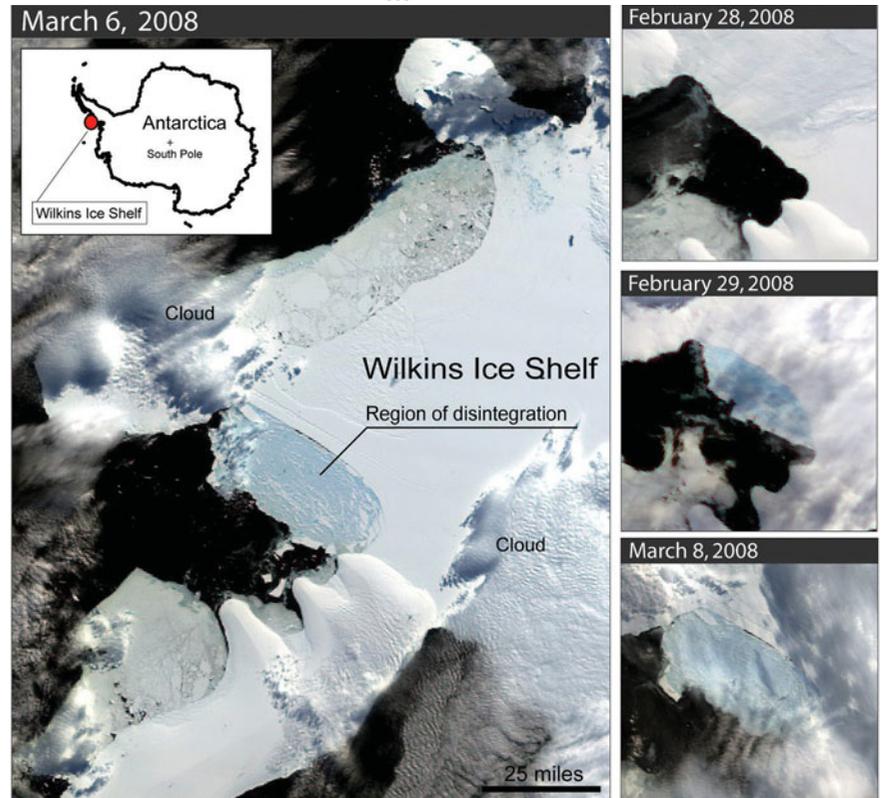

In December 2007 the Australian National Antarctic program landed a passenger jet for the first time on a runway that it had constructed on the surface of a glacier about 70 km (43 mi) from Casey Station. The runway, which could support the landing of large wheeled airplanes or smaller ski-equipped planes every 7 to 10 days, established an air link between Australia and Antarctica.

In 2008 Japan made the environmental cleanup of its Antarctic facilities a priority. After having removed 2,000 tons of garbage over the previous three years, expedition members discovered a landfill full of discarded vehicles, building materials, and old furniture. The entire cleanup was expected to take several years to complete.

In October 2008 the Belgium Antarctic Research Expedition began the final phase of construction of its new station, Princess Elisabeth Antarctica. The first zero-emission research station, it was designed to minimize heating requirements, to make use of recycled water, and to operate on a combination of wind power and solar power.

A biological survey conducted by British and German scientists revealed that the South Orkney Islands near the tip of the Antarctic Peninsula had greater biodiversity than even the Galapagos Islands. After combing land, sea, and shore, they cataloged more than 1,200 known and 5 new species, including sea urchins, free-swimming worms, crustaceans and mollusks, mites, and birds. British Antarctic Survey scientists used a camera-equipped remotely operated vehicle in the deep waters around the Antarctic Peninsula to obtain images of krill—the shrimp-like crustacean that is a key element of the Antarctic food web—at depths

National Snow and Ice Data Center, Boulder, CO—Maxppp/Landov

A series of satellite images illustrates the disintegration of the Wilkins Ice Shelf, on the west coast of the Antarctic Peninsula, in February and March.

down to 3,500 m (11,500 ft). Scientists had previously believed that the crustacean lived only in the top 150 m (490 ft) of the Southern Ocean. American researchers discovered freeze-dried fossils of moss as well as fossils of insects, diatoms, and tiny freshwater crustaceans in 14-million-year-old sediment in the McMurdo Dry Valleys. The fossils disappeared from the record at about 13.8 million years, and the researchers believed that this was an indication that Antarctica cooled at least 7.9 °C (14.2 °F) in about 200,000 years.

In February 2008 a 400-sq-km (155-sq-mi) section of ice broke away from the Wilkins Ice Shelf on the west coast of the Antarctic Peninsula in a sudden collapse. As the 2008–09 austral summer began, satellite images showed that new rifts had formed in the ice shelf and that the disintegration had continued. Images from late November 2008 suggested that an ice bridge that had been preventing the remaining ice shelf from breaking away from the peninsula was threatening to collapse.

American, British, Australian, German, and Japanese scientists began an extensive study of the Gamburtsev Sub-

glacial Mountains in the interior of East Antarctica in October. Although the peaks of the mountains rose about 4,300 m (14,100 ft) above their surrounding terrain, they were buried under 4,000 m (13,100 ft) of ice. The region, which was the likely birthplace of the East Antarctic Ice Sheet, was believed to contain some of the oldest ice remaining on the continent. In an attempt to map these ancient mountains, the researchers used survey aircraft equipped with radar to record ice thickness and ice-sheet structure and other instruments to measure gravity and magnetism.

An expedition of American and Australian scientists found evidence in the Transantarctic Mountains that supported the geologic theory that East Antarctica was connected to the western edge of North America 600 million to 800 million years ago as part of the supercontinent Rodinia. Their find consisted of a small boulder of coarse-grained granite that had a chemical composition similar to that of a unique belt of igneous rocks that extended across a part of Rodinia that includes present-day California.

(WINIFRED REUNING)

ARCTIC REGIONS

The Arctic regions may be defined in physical terms (astronomical [north of the Arctic Circle, latitude 66° 30' N], climatic [above the 10 °C (50 °F) July isotherm], or vegetational [above the northern limit of the tree line]) or in human terms (the territory inhabited by the circumpolar cultures—Inuit [Eskimo] and Aleut in North America and Russia, Sami [Lapp] in northern Scandinavia and Russia, and 29 other peoples of the Russian North, Siberia, and East Asia). No single national sovereignty or treaty regime governs the region, which includes portions of eight countries: Canada, the United States, Russia, Finland, Sweden, Norway, Iceland, and Greenland (part of Denmark). The Arctic Ocean, 14.09 million sq km (5.44 million sq mi) in area, constitutes about two-thirds of the region. The land area consists of permanent ice cap, tundra, or taiga. The population (2008 est.) of peoples belonging to the circumpolar cultures is about 535,000 (Aleuts [in Russia and Alaska], more than 4,000; Athabascans [North America], 40,000; Inuits [or Eskimos, in Russian Chukotka, North America, and Greenland], 155,000; Sami [Northern Europe], 85,000; and 41 indigenous peoples of the Russian North, totaling about 250,000). International organizations concerned with the Arctic include the Arctic Council, the Barents Euro-Arctic Council, the Inuit Circumpolar Council, and the Indigenous Peoples' Secretariat. International scientific cooperation in the Arctic is the focus of the International Arctic Research Center of the University of Alaska at Fairbanks and the University of the Arctic, a circumpolar network of member institutions.

With the rapid onset of climate change—and its related summer sea-ice melt and the prospects of future oil and natural gas development and shorter shipping routes—the Arctic remained a region of political interest throughout 2008. Summer sea ice hit its annual minimum on September 14. It was the second lowest ice extent on record, 34% below the long-term average from 1979 to 2000. Measurements of ice thickness showed that it was continuing to thin. Scientists estimated that the overall volume of Arctic sea ice might be at an absolute minimum. Several ice shelves in the Canadian Arctic Archipelago broke away in 2008, setting adrift approximately 194 sq km (75 sq mi) of shelf. Land-based ice also continued to melt. The Greenland Ice Sheet, the largest ice mass in the Northern Hemisphere, lost 222 cu km (53 cu mi), an increase of 70% in melt over previous years.

In response to the ongoing ice loss, polar bears (which depend on sea ice for their hunting of seals for food) were

listed in May 2008 as threatened under the U.S. Endangered Species Act. Alaska challenged the listing, citing a lack of evidence to support the threatened status and noting that some polar bear populations were not in decline. Offshore oil and gas interests coincided with regions that were being considered for designation as critical polar bear habitat.

The U.S. Geological Survey completed a four-year in-depth study on Arctic oil and gas reserves in May. The USGS report, released in July, stated that the “extensive Arctic continental shelves may constitute the geographically largest unexplored prospective area for petroleum remaining on Earth.” Overall, the Arctic was estimated to hold 22–23% of the world's oil and gas, about 13% of global oil reserves, and 30% of global gas reserves. Most of the reserves were identified as being on the coastal continental shelves, as opposed to the deep ocean basins, and most of the reserves were as yet unproven.

Early in the year the Arctic Monitoring and Assessment Program (a branch of the Arctic Council) issued the report of its four-year study on the state of oil and natural gas development in the Arctic. Later the report's executive summary, which included policy recommendations on Arctic drilling practices, was released.

In May representatives of the five countries that border the Arctic Ocean met to discuss how overlapping claims to the Arctic Ocean would be resolved. Denmark hosted Russia, Norway, Canada, and the U.S. at the meeting, which was held in Ilulissat, Greenland. Senior political officials agreed to work cooperatively under the UN Convention on the Law of the Sea. In addition, the coastal states agreed that they shared a stewardship role in protecting and preserving the fragile marine environment of the Arctic Ocean. Canada and Denmark continued work in 2008 toward their submissions under the convention, while Russia had submitted its territorial claim in 2007. The U.S., which as of 2008 still had not ratified the convention, did carry out further seabed mapping north of the Beaufort Sea, which was required for any future claim. Circumpolar Inuit leaders met in November to comment on sovereignty and development.

Onshore, the ongoing development of Arctic pipelines showed mixed results. Work on the Far East oil pipeline from Siberia to the Pacific Ocean continued. In August the Alaska Senate approved

a state license for TransCanada Corp. to proceed with the planning and permit stages of the 2,700-km (1,700-mi) natural gas pipeline. In the meantime, the Mackenzie Valley gas pipeline in Canada was again delayed, with regulatory approval awaiting a report delineating the environmental and socioeconomic impacts of the pipeline. The report was due in 2009.

World oil prices rose in 2008 from \$90 per barrel at the beginning of the year to a high of \$145.29 per barrel in July and back down by year's end to \$44.60 per barrel as a result of the global credit crisis that originated in the U.S. Circumpolar economies remained largely resource based and fossil-fuel dependent. As a result, regional activity was heavily affected by this volatility and by the downturn in commodity prices.

Arctic marine traffic was up in 2008, including commercial shipping, research vessels taking part in the International Polar Year, search and rescue missions, and Arctic tourism. For the first time, both the Northwest Passage in North America and the Northeast Passage in Eurasia opened concurrently, and it was thus possible to circumnavigate the Arctic Ocean. New icebreakers were being planned in Russia and were under discussion in Canada and the U.S. There were plans for a major Arctic Ocean shipping-lane oil-spill rehearsal to take place in the Barents Sea in 2009.

Nearly 20 years after the worst oil spill in U.S. history, a final compensation settlement was reached. On March 24, 1989, the tanker *Exxon Valdez* ran aground on Bligh Reef in Prince William Sound, Alaska, releasing more than 200,000 bbl of crude oil. The resulting slick contaminated about 1,770 km (1,100 mi) of coastline, killed thousands of animals, and seriously disrupted the Alaska fishing industry. The original settlement of \$5.2 billion awarded by an Alaska jury in 1994 was reduced on repeated appeals to \$2.5 billion. In June 2008 the U.S. Supreme Court slashed that amount to \$507.5 million. Alaska Gov. Sarah Palin (*see* BIOGRAPHIES) expressed disappointment in the ruling, and lawyers for the plaintiffs claimed that ExxonMobil Corp. owed an additional \$488 million in interest, owing to the two-decade delay. The settlement was scheduled to be divided among more than 32,000 plaintiffs, predominantly Alaska fishermen, but further legal delays were likely.

(JOHN STREICKER)

AFGHANISTAN

Area: 645,807 sq km (249,347 sq mi)
Population (2008 est.): 28,266,000 (including about 2,000,000 Afghan refugees in Pakistan and about 900,000 Afghan refugees in Iran)
Capital: Kabul
Chief of state and head of government: President Hamid Karzai

Afghanistan in 2008 saw a surge of violence from militants using relentless and brutal attacks against the U.S.-backed Kabul government. This drew increased attention to tribal areas in northwestern Pakistan that were being used as a base and sanctuary for Taliban operations in Afghanistan.

By the end of 2007, NATO forces had driven Taliban militants from their base in Helmand province following months of combat. Guerrilla ambushes and massed attacks continued, and Taliban influence remained strong in rural areas. In March 2008 the U.S. sent 3,600 Marines to assist in the fighting in the south.

The number of roadside bombs in Afghanistan increased to some 2,000 in 2008, double the number from a year earlier. Increased use of suicide attacks and roadside bombs suggested that the Taliban was adopting strategies from fighting in Iraq, and bold operations in Afghanistan reflected more aggressive Taliban and al-Qaeda activity inside

An Afghan policeman consoles a relative of the provincial governor who was killed along with three others in a roadside bombing carried out by the Taliban in Paghman, west of Kabul, in September.

Rafiq Maqbool/AP

Pakistan. Isolated attacks were opportunities for Taliban hostage taking, and reprisals by foreign troops, especially air strikes, often resulted in civilian casualties. Planned assaults in cities discredited the government of Pres. Hamid Karzai.

In January eight people were killed by suicide bombers in a luxury hotel in Kabul. A suicide bomber in February killed up to 80 people at an outdoor dog fight in Kandahar. To make communications between foreign forces more difficult, the Taliban demanded that mobile phone companies shut down at night, and by the end of February it had begun destroying signal towers to force compliance. An assassination attempt on President Karzai at a large public ceremony in Kabul on April 27 failed, but several people, including a parliamentarian and a young boy, were killed during the ensuing gun battle.

In June suicide bombers blew open a prison in Kandahar, freeing more than 800 prisoners, including almost 400 Taliban fighters who escaped in waiting minibuses. A bomb at the Indian embassy in Kabul left more than 40 dead in July. Both the Taliban and Pakistani authorities denied involvement, but in the face of intelligence presented by Afghanistan, India, and the U.S., Pakistan's government agreed to investigate possible involvement by its own officers.

Calls by President Karzai grew stronger for U.S. and NATO forces to tackle the al-Qaeda and Taliban threat at its roots in northwestern Pakistan. Afghans who had sided with the resistance, it was argued, were not so grave a danger to the country and could be overcome and reconciled if only support and encouragement from outside Afghanistan were stopped. The U.S. was reluctant to push the issue to an outright break with one of its important allies, even as coalition ground forces pushed the front ever closer to the Pakistani border. Pakistan several times protested officially that its territory had been violated, and U.S. officials admitted that artillery and unmanned aircraft were used inside Pakistan, but only in cooperation with Pakistan's military. In September, U.S. forces adopted a more aggressive strategy, including the

launch of commando raids that targeted Taliban and al-Qaeda leaders inside Pakistan's tribal areas. In October the UN reported that 20,000 refugees had fled into Afghanistan's Kunar province from Pakistan to escape fighting between Pakistani and Taliban forces.

Strained relations between Karzai and his Western allies appeared early in the year when Karzai blocked the appointment of a UN envoy to Afghanistan because he felt that his government was being excluded from key decisions, including diplomatic contacts with Taliban elements. Karzai's loudest complaint, however, was on the numbers of civilian casualties resulting from foreign military operations. Official Afghan investigations concluded that the 47 people killed in a coalition air strike were civilians belonging to a wedding party. According to Afghan and UN reports, another strike in August claimed up to 90 civilians. U.S. authorities initially asserted that only seven civilians died but invited a joint investigation. Public outrage at numerous such incidents caused some government figures to fear that these tactics would become counterproductive in confronting Taliban influence.

The UN reported that land planted in opium dropped by 19% from 2007, although yield per hectare was up. Areas of greatest Taliban penetration accounted for 98% of the production. Global and local conditions driving up food prices made wheat an increasingly attractive alternative, and the income ratio of opium to wheat per hectare fell from 10:1 to 3:1.

Except for certain problems with Pakistan, Afghanistan was on good terms with its neighbours. Indian development assistance included completion of a road in southwestern Afghanistan linking Kabul with the Iranian port of Chah Bahar, which would enable India to reach Afghanistan and Central Asia by land. (STEPHEN SEGO)

ALBANIA

Area: 28,703 sq km (11,082 sq mi)
Population (2008 est.): 3,194,000
Capital: Tirana
Chief of state: President Bamir Topi
Head of government: Prime Minister Sali Berisha

APTN, Top Channel TV/AP

Fire rages after an explosion at an arms-conversion plant in the village of Gerdec, near the Albanian capital of Tirana, on March 15.

On April 3, 2008, Albania reached a key goal in its efforts to achieve Euro-Atlantic integration when it was invited (along with Croatia) to join NATO; the overture was made at the alliance's summit meeting in Bucharest, Rom. The NATO Council and the foreign ministers of both countries signed the accession protocols on July 9. The invitation reflected both Albania's progress in developing stable democratic institutions and rule of law and its achievements in transforming the military into a small professional force able to contribute to NATO's collective defense. The government pledged to contribute 2% of its GDP for defense spending by 2009. Albania also increased its contributions to international peacekeeping operations. On July 16 Defense Minister Gazmend Oketa announced that the number of troops serving in Mosul, Iraq, would be raised from 120 to 215. Albania also continued its involvement with small army units in Bosnia and Herzegovina and Afghanistan and pledged to send troops to Chad and the Central African Republic as part of an EU mission to protect refugees streaming in from Darfur, a region in The Sudan. (See *The Sudan*: Sidebar, below.)

The NATO invitation was overshadowed, however, by a series of explosions on March 15 in an arms-conversion plant in the village of Gerdec; 26 people were killed, more than 300 were injured, and more than 5,500 homes were destroyed or damaged. Defense Minister Fatmir Mediu, who took personal responsibility for the blast, resigned two days later. Media reports claimed that unqualified personnel, including children, were employed to dispose of ammunition that dated back several decades. The investigation was supported by FBI experts from the United

States, but had not concluded by the end of the year.

The Albanian government continued to pursue EU integration, and during an interview on September 11, Prime Minister Sali Berisha said that the country could apply for membership as early as 2009. Four days later, however, EU Enlargement Commissioner Olli Rehn stressed that more needed to be done in Albania to foster democratic culture, the independence of institutions, rule of law, and the fight against organized crime and corruption. Nevertheless, Rehn acknowledged improved cross-party cooperation on judicial and electoral reform as well as the country's steady economic growth. On November 20 the governing Democrats and the rival Socialists joined forces to pass a new electoral law based on regional proportional representation. Cooperation between the two main parties was short-lived, however. On December 22 the Democrats passed a law banning from public office any persons linked to the communist-era secret service. The Socialists opposed this law, arguing that it would remove attorneys investigating the Gerdec tragedy and an ongoing corruption case against Foreign Minister Lulezim Basha. During 2008, unemployment stood at 13%, down slightly from 2007; real GDP growth remained at 5%. In relation to Kosovo, the government perceived its ongoing diplomatic efforts as successful following the widespread recognition of the region as a sovereign state by Western countries. Albania recognized Kosovo's sovereignty on February 18, one day after its declaration of independence. In other news, on September 4 Albania introduced a visa-free travel regime with neighbouring Macedonia.

(FABIAN SCHMIDT)

ALGERIA

Area: 2,381,741 sq km (919,595 sq mi)

Population (2008 est.): 34,574,000

Capital: Algiers

Chief of state: President Abdelaziz Bouteflika

Head of government: Prime Ministers Abdelaziz Belkhadem and, from June 23, Ahmed Ouyahia

Throughout 2008, Algerians awaited news of Pres. Abdelaziz Bouteflika's plan to amend the constitution by removing the bar on more than two presidential terms for an incumbent, lengthening the presidential term to seven years, appointing a vice president, and making the government answerable to the president rather than to the parliament. Normally, approval for constitutional amendments was secured through a referendum, but this time the parliament, which was given a salary increase of 300% (presumably to ensure passage), was dealt the task; as expected, the parliament approved the proposed amendments by a wide margin, a vote of 500 in favour to 21 opposed, in November. In June, Abdelaziz Belkhadem was replaced as prime minister by his predecessor, Ahmed Ouyahia, and the government was restructured.

The change in government was precipitated partly by the worsening security situation. Although there was relative calm following the devastating bombings in Algiers in December 2007, the summer of 2008 was violent, with several serious bomb attacks in June and August and at least 68 deaths. Calm during Ramadan was shattered at the end of September by another bomb blast at Dellys. The violence also spread into Skikda, Jijel, and Ain Defla provinces.

The government took action against evangelical churches in Algeria, partly because of fears of proselytizing but also, according to the religious affairs minister, because of their alleged involvement in terrorism. In addition, there were riots over food and energy price rises in Oran, Chlef, and Berriane. Prices overall rose by 6%, and food prices jumped by 9.7% year-on-year in May; government expenditure increased by 10% to cover subsidy costs. Food imports climbed 64% by value to more than \$5 billion and were expected

to reach \$9 billion in 2009. Algeria's foreign reserves surged to \$125.9 billion, the equivalent of 67.5 months of imports. Foreign investment in Algeria faced additional constraints as the government complained of inadequate technology transfer and employment creation.

Despite expansions in electricity provision, unseasonably hot weather in September led to supply failures, which also affected water supply to urban areas. A four-year drought in the M'zab valley suddenly broke in early October with torrential rains that led to 30 deaths in Ghardaia.

In April, President Bouteflika visited Kuwait and Qatar, and in July he attended the opening summit of France's Union for the Mediterranean, despite Algerian skepticism over the project. The French premier arrived in Algiers in June to tie up details of the contracts agreed during French Pres. Nicolas Sarkozy's state visit in December 2007. An arms deal with Russia was renegotiated during Bouteflika's February visit to Moscow; Algeria had rejected the aircraft supplied as defective. Despite overtures from Morocco, Algeria's border with that country remained closed owing to the dispute over the Western Sahara. Algeria's corruption rating improved slightly as Transparency International rated Algeria 92nd of 180 countries (it had been rated 99th in 2007). (GEORGE JOFFÉ)

ANDORRA

Area: 464 sq km (179 sq mi)
Population (2008 est.): 84,100
Capital: Andorra la Vella
Chiefs of state: Co-princes of Andorra, the president of France and the bishop of Urgell, Spain
Head of government: Chief Executive Albert Pintat Santolària

Andorra in 2008 worked to enhance closer ties with other European countries. A principal goal of Chief Executive Albert Pintat Santolària's government was to institute the reforms needed to remove the country from the Organisation for Economic Co-operation and Development's list of tax havens. In 2008 Andorra signed on to

the Proliferation Security Initiative to prevent trafficking in weapons of mass destruction. Pintat announced that the Future of Europe Summit would take place in Andorra on November 27–28. The summit was designed to provide a forum in which to brainstorm ideas to maximize Europe's role as a world leader in economic sustainability.

Only 36% of the country's residents in 2008 were Andorran citizens. The literacy rate was 100%, and the skills level was high. In contrast to the problem of brain drain in some parts of Europe—losing students to other countries, especially to the United States—Andorra had gained expertise. The large number of foreign residents, however, was an ongoing concern, especially since Andorran citizenship required 25 years of residency. Noncitizens were limited to holding a 33% share of a local company for 20 years, but a bill pending in the legislature would reduce that number to 10 years. (ANNE ROBY)

ANGOLA

Area: 1,246,700 sq km (481,354 sq mi)
Population (2008 est.): 12,531,000
Capital: Luanda

Chief of state and head of government:
 President José Eduardo dos Santos, assisted by Prime Ministers Fernando da Piedade Dias dos Santos and, from September 30, António Paulo Kassoma

Angola's general election, which was held on Sept. 5–6, 2008, was the first since 1992 and secured the position of the ruling Popular Movement for the Liberation of Angola (MPLA), which claimed victory in a landslide, with over 80% of the vote; the second-place finisher, the opposition National Union for the Total Independence of Angola (UNITA), won a meagre 10%. Although UNITA initially called for a rerun of the balloting following administration confusion in Luanda, its leader eventually conceded victory to the MPLA and declared the vote a victory for democracy.

Earlier in the year, in January, heavy rains caused severe flooding in the south, where 10,000 people were affected and forced to seek temporary accommodation. This tragedy was accompanied by better news that same month—the discovery of another extensive offshore oil field, which boosted Angola's prospects of remaining among the world's top 10 fastest-growing economies, a status that was reflected in the efforts of a number of countries to establish closer relations. In April alone leading government figures from Vietnam, Singapore, South Africa, Benin, Spain, and the Czech Republic visited Luanda intent upon promoting cooperation with Angola in the fields of science, technology, education, and economics.

In March the UN High Commissioner for Human Rights commended the government's efforts to consolidate democracy but was forced to close its office in Luanda in May owing to a lack of cooperation from the govern-

Angolan Education Minister Antonio Burity da Silva (centre) attends a ceremony in February marking the handover of the Chinese-funded Huambo (Angola) Agricultural Institute to the control of the Angolan government.

Xinhua/Landov

ment. As an earnest of the government's efforts to assist recovery from the civil war, the social welfare minister claimed in April that 410,000 of the 465,000 Angolan nationals who had been driven out of the country by the conflict had now returned home, while nearly 4 million of the 4.2 million internally displaced persons had also been reinstated. These figures were challenged by the growing disquiet in Luanda, where thousands of displaced persons—most of them agriculturalists who were unable to find employment in an urban setting—remained in shantytowns bordering the capital. There was also considerable success in clearing the countryside of land mines.

The wealth accrued from sales of oil remained in the hands of a small number of people and had not brought noticeable benefit to the population as a whole. Countrywide, unemployment remained extremely high, and the foreign minister felt it necessary in April to attempt to justify the heavy involvement of Chinese construction companies and Chinese labour in the reconstruction made necessary by the civil war. China, he said, was Angola's biggest trading partner and offered the cheapest high-level technology available. Nevertheless, in July the government decided that foreign workers would be employed in the oil industry only when no qualified Angolan was available. In the same month, a countrywide campaign was also launched—the third of the year—to vaccinate children against poliomyelitis; the infant mortality rate from all causes remained high, at more than 18%. ANTIGUA AND BARBUDA

Area: 442 sq km (171 sq mi)
Population (2008 est.): 87,500
Capital: Saint John's
Chief of state: Queen Elizabeth II, represented by Governor-General Louise Lake-Tack
Head of government: Prime Minister Baldwin Spencer

The announcement in January 2008 that an extensive examination of Antigua and Barbuda's Internet gambling regu-

lations had failed to earn the country a place on the U.K.'s "white list" meant that the country's Internet gambling companies were effectively excluded from advertising their wares in Britain. Antigua and Barbuda Finance Minister Errol Cort described the designation as "premature," however, and expressed confidence that the country would qualify for the list in the "very near future."

Meanwhile, Antigua and Barbuda persisted throughout the year in trying to solve its long-standing Internet gambling dispute with the U.S. The World Trade Organization's (WTO's) dispute settlement body in December 2007 had awarded Antigua and Barbuda \$21 million annually in compensation from the U.S., which had passed a law in 2006 that banned American banks and credit-card companies from processing payments to online gambling businesses outside the country. The WTO-mandated compensation took the form of trade sanctions against the U.S.

Antigua and Barbuda was rocked by the murder in July of a British couple on their honeymoon, and it was feared that the incident could severely damage the tourist trade. The IMF predicted that Antigua and Barbuda's economy would grow by only 2.1% in 2008, compared with 6.1% in 2007.

(DAVID RENWICK)

ARGENTINA

Area: 2,780,403 sq km (1,073,520 sq mi)
Population (2008 est.): 39,737,000
Capital: Buenos Aires
Head of state: President Cristina Fernández de Kirchner

Argentine Pres. Cristina Fernández de Kirchner began her second month in office in January 2008 with high public-opinion approval ratings (in the low 50th percentile), a large and disciplined majority in the Senate (48 of 72 seats) and Chamber of Deputies (155 of 257 seats), the support of 20 of the country's 24 governors, and an iron control (in concert with her political partner and husband, former president Néstor Kirchner [2003–07]) of the governing Justicialist Party (also referred to as the Peronist party). Her political honeymoon was to be short-lived, however.

On March 11 Minister of Economy Martín Lousteau introduced administrative Resolution 125/2008, which modified tax rates and regulations governing Argentina's principal export crop, soybeans and soy-related products. Participants in the country's agricultural sector—increasingly resentful of what they viewed as the national government's excessive taxation, price controls, and arbitrary interference in the sector's business practices—banded together to protest the modifications, particularly the imposition of a dramatic tax increase and a virtual ceiling placed on future profits. Never before had Argentina's disparate agricultural producers, which ranged from large landowners and multinational corporations to small-scale farmers, joined in such a unified manner to oppose national government policy.

The four-month conflict between the government and the agricultural sector included roadblocks by the agricultural producers and resulted in food shortages in the urban centres; government negotiations with the agricultural organizations eventually reached an impasse. Meanwhile, a bill that was drafted by the government in June to pass into law Resolution 125/2008 came to a formal vote on July 17 in the Senate, where 36 senators approved the measure and 36 senators, including many Peronists, rejected it. The tie was broken by Argentine Vice Pres. Julio Cobos, who voted against the bill.

This crushing defeat in the Senate represented the first important political setback for Kirchner and Fernández de Kirchner in their five years in power. The government that emerged on July 17 at the end of this political conflict with the agricultural sector was much weaker than the one that existed prior to March 11. Between March and July, President Fernández de Kirchner saw her public-approval ratings plummet to less than half of their January values, her (and her husband's) control over Peronism weaken (with numerous prominent Peronists now actively challenging her administration), and her relationship with Cobos become irrevocably damaged.

In addition to difficulties in the political realm, Argentina also faced serious economic challenges. These included an annual inflation rate of about 25% (an estimate by independent sources; the national and international community no longer considered the government-calculated inflation rate credible) and a decelerating economic growth

Alejandro Pagni—AFP/Getty Images

Agricultural producers and their supporters stage a demonstration against Argentine Pres. Cristina Fernández de Kirchner in the city of Córdoba on March 26.

rate of 7% (with a 5% growth rate projected for 2009). In an effort to spur foreign investment, President Fernández de Kirchner announced in September that Argentina would begin paying back the country's overdue loans from the Paris Club of creditor nations.

ARMENIA

Area: 29,743 sq km (11,484 sq mi). About 16% of neighbouring Azerbaijan (including the 4,400-sq-km [1,700-sq-mi] disputed region of Nagorno-Karabakh [Armenian: Artsakh]) has been under Armenian control since 1993.

Population (2008 est.): 2,996,000 (plus 138,000 in Nagorno-Karabakh)

Capital: Yerevan

Chief of state: Presidents Robert Kocharyan and, from April 9, Serzh Sarkisyan

Head of government: Prime Ministers Serzh Sarkisyan and, from April 9, Tigran Sarkisyan

Nine candidates, including former president Levon Ter-Petrosyan, registered to participate in the Feb. 19, 2008, Armenian presidential ballot; the constitution barred incumbent Robert Kocharyan from seeking a third term.

Official returns gave outgoing prime minister Serzh Sarkisyan 52.82% of the vote, compared with 21.51% for Ter-Petrosyan; the former parliament speaker Artur Baghdasaryan polled third with 16.69%, and Vahan Hovannisyan of the Armenian Revolutionary Federation (HHD; also known as Dashnak) secured 6.18% of the vote. International observers described the balloting as valid despite detecting some serious irregularities.

Claiming the results were rigged, thousands of Ter-Petrosyan's supporters convened daily protests in Yerevan to demand repeat elections. Police intervened on March 1 to disperse the demonstrators, and eight people were

killed in violent clashes that evening; two others died later of their injuries. Dozens of Ter-Petrosyan supporters, including former foreign minister Alexander Arzumanyan, were arrested; some were charged with plotting to overthrow the government. Kocharyan declared a 20-day state of emergency.

On March 21 the ruling Republican Party of Armenia (HHK) signed an agreement with the Prosperous Armenia party to form a coalition government with the HHD and the Rule of Law Party. Sarkisyan was inaugurated on April 9 and immediately named Central Bank Chairman Tigran Sarkisyan (no relation) prime minister.

In response to international pressure, President Sarkisyan also created an ad-hoc parliamentary commission to probe the causes of the March 1 violence. Sarkisyan and Ter-Petrosyan were never able to establish a dialogue, however, and the latter declined to nominate a representative to the commission. Instead, Ter-Petrosyan supporters staged more antigovernment protests in Yerevan on June 20, July 4, August 1, and September 15. Sixteen small political groups that backed Ter-Petrosyan aligned in a new Armenian National Congress. Meanwhile, on September 16, Tigran Torosyan announced that he would step down as parliament speaker. Hovik Abrahamyan was named to succeed him.

Prime Minister Sarkisyan took decisive measures to eradicate corruption

and tax evasion and to curb inflation. GDP grew by 10.3% during the first six months of 2008, but the August war between Russia and Georgia disrupted transportation and inflicted serious short-term economic damage. In the realm of foreign affairs, Turkish Pres. Abdullah Gul accepted an invitation from President Sarkisyan to attend a September 6 soccer match in Yerevan between the Armenian and Turkish national teams. (ELIZABETH FULLER)

AUSTRALIA

Area: 7,692,208 sq km (2,969,978 sq mi)

Population (2008 est.): 21,338,000

Capital: Canberra

Chief of state: Queen Elizabeth II, represented by Governors-General Michael Jeffery and, from September 5, Quentin Bryce

Head of government: Prime Minister Kevin Rudd

Domestic Affairs. Kevin Rudd, the newly elected Australian prime minister, faced difficult problems in almost every area of his responsibility in 2008. The electorate, which had rejected the conservative Liberal-National Party coalition at the 2007 general election and replaced it with Rudd's Australian Labor Party (ALP) team, expected changes and improvement to follow their voting choice. The new government began well, and the country celebrated in February as never before when Prime Minister Rudd said "sorry" to the country's indigenous citizens. Rudd declared that "business as usual" was not working and set benchmarks, which pledged that within five years every Aborigine living in a remote community would attend an early childhood centre and that Aboriginal mortality would be halved to close the massive 17-year gap in life expectancy between Aboriginal and non-Aboriginal Australians.

Public opinion was deeply concerned about Aboriginal living conditions and the injustices Aborigines had suffered and approved Rudd's actions, but Australians were divided on his second major challenge: how to deal with climate change and global warming. Rudd chose Ross Garnaut to shed expert light on the issue, and Garnaut issued a report in which he proposed that the gov-

ernment set limits on the level of carbon emission that companies could generate. Garnaut recommended the introduction of a “carbon tax,” which Rudd’s opponents argued would injure emissions-intensive industries, including liquefied natural gas, minerals processing, steel, cement, and paper production, as well as damaging such major employers as the coal-producing electricity generators on which Australia largely relied. Although the resulting anticipated higher prices for food and transport were likely to be passed on to the consumers, Garnaut threatened that if Rudd failed to act, the country’s food bowl would collapse, along with the Murray-Darling River system. In addition, farming and wine regions would be destroyed, and natural treasures such as the Great Barrier Reef would be lost.

Rudd followed Garnaut’s report with a Green Paper and accepted Garnaut’s recommendation that Australia act as soon as possible rather than wait for a global response. The prime minister set a time limit for detailed decisions to be taken, and action to begin the political process of combating global warming was expected before the end of 2008. The ultimate aim was to reduce emissions by 60% by 2050.

The Economy. The global financial turmoil presented a challenge to the new ALP economic managers. Treasurer Wayne Swan began his first budget with an ambitious reform program involving taxation changes, improvements to the health system, infrastructure development, better management of water resources, and improvements in state-commonwealth relations. Swan’s approach was approved by the IMF, which assessed Australia as having “a strong position, an enviable situation by international standards.” The IMF supported Swan’s budget strategy of saving windfall revenue from the commodities boom to stabilize the economy in future years.

Unemployment fell to its lowest level since the mid-1970s. The Australian dollar’s flexible exchange rate initially saw the currency increase in value, driven by better terms of trade and interest rate differentials, only to fall as the year progressed. Despite early positive trends, general economic activity was reduced, and pessimism grew steadily as the share market collapsed and gasoline prices rose. By July optimism about the future of Australian business conditions had reached its lowest level since the terrorist attacks in the U.S. in 2001. Despite tax cuts of \$A 7 billion (\$A 1 =

Outside the Japanese consulate in Melbourne, a protester covered in fake blood sits on a Japanese flag as part of a demonstration in January against Japan’s decision to resume its whale kill.

about U.S.\$0.97) and a bonus payment to senior citizens, in the face of interest rates at a 13-year high, consumer confidence tumbled. The Australian Fair Pay Commission tried to address higher costs for food, fuel, and housing by awarding Australia’s 1.3 million low-paid workers a boost in their minimum weekly wage from \$A 522 to \$A 544. On the other hand, the Reserve Bank of Australia (RBA) in response raised interest rates to deflate the Australian economy and fight inflation, only to be compelled to reduce rates in September. The RBA announced the first interest rate reduction in seven years with its cut of 25 basis points, lowering interest rates to 7% on September 2.

Foreign Affairs. By signing the Kyoto Protocol and withdrawing Australian troops from Iraq, Prime Minister Rudd distanced himself from the policies of his predecessor, John Howard. ALP MPs celebrated the withdrawal as a milestone fulfilling an election commitment. Iraq’s ambassador to Australia confirmed that relations between the two countries would not be damaged when the last Australian soldier left Iraq. Defense Minister Joel Fitzgibbon welcomed the troops home in June.

In this new strategic situation, the ALP trod carefully overall, stressing its pivotal relationship with the U.S. Maintaining the crucial alliance with the U.S. was such a priority that the prime minister visited Washington, D.C., at the beginning of a 17-day overseas tour aimed at explaining Australian foreign policy under the new administration.

During Rudd’s talks with U.S. Pres. George W. Bush in March, Bush said that he understood that Australia was withdrawing troops from Iraq as part of an election promise. Both leaders agreed that their meeting had reinforced the close bilateral relationship between the U.S. and Australia. They also observed that they were agreed on the situation in Afghanistan. Rudd went farther and supported U.S. policy toward Iran “of keeping the military option on the table.”

China’s treatment of the Tibetan question proved ticklish when Rudd joined with Bush to urge China to agree to talks with representatives of the Dalai Lama. While Rudd was well aware that Australia’s resources boom and balance-of-payments surplus were due in no small way to exports to China, he was concerned also that national interests would be damaged if major foreign customers acquired mining companies or controlled their assets. Swan signaled that China would not be allowed to buy controlling shares in Australian resources companies.

At a time when Japan was concerned that the new ALP government was becoming too dependent on trade with China, anti-Japanese sentiment surfaced in Australia when Japan resumed its whale kill. Although Rudd and Japanese Prime Minister Yasuo Fukuda “agreed to disagree” on whaling, Australia called on Japan to suspend its scientific whaling program and refused to rule out taking Japan to the International Court. (A.R.G. GRIFFITHS)

AUSTRIA

Area: 83,871 sq km (32,383 sq mi)

Population (2008 est.): 8,338,000

Capital: Vienna

Chief of state: President Heinz Fischer

Head of government: Chancellors Alfred Gusenbauer and, from December 2, Werner Faymann

In the first half of 2008, Austrian politics were characterized by deep distrust between the two governing coalition partners, the Social Democratic Party (SPÖ) and the centre-right Austrian People's Party (ÖVP), which resulted in the collapse of the federal government in July. Relations between the SPÖ and the ÖVP had been strained from the government's inception in January 2007, largely as a result of the ÖVP's refusal to acknowledge its role as the "junior" partner in the coalition. The government fell when the two coalition partners failed to agree on health care reforms and on EU policy, with the SPÖ insisting that all future EU treaties be subject to a referendum. An early election was held on September 28, with the SPÖ emerging as the largest party (29.3% of the vote) and the ÖVP (26%) as the second largest. The Freedom Party (FPÖ) and the Alliance for the Future of Austria (BZÖ) performed well, winning 17.5% and 10.7% of the vote, respectively, while the Green party received only 10.4% of the vote. On October 11 the BZÖ's charismatic leader, Jörg Haider (*see* OBITUARIES), died in a car crash; the party's future without Haider remained uncertain.

Following nearly two months of negotiations, on November 23 a "grand" coalition was revived between the SPÖ and the ÖVP. The distribution of ministries between the two parties remained largely unchanged, but the new grand coalition was likely to be characterized by more cooperation than the previous one. Both parties made significant concessions in the coalition negotiations, and the new chancellor, Werner Faymann of the SPÖ, and vice-chancellor, Josef Proll of the ÖVP, had a good working relationship. Several new ministers had previously represented social partners, which indicated a return to the traditional consensual approach that dominated Austrian politics until 2000.

Dieter Nagl—AFP/Getty Images

After leading the Social Democratic Party to victory in Austria's parliamentary elections on September 28, Werner Faymann (left) appears at a press conference in Vienna with Austrian Pres. Heinz Fischer, who invited Feymann to form a new government.

Despite the political turmoil in 2008, the old and new coalition governments both reached agreement on a number of reforms. On March 5 the Ministry for Transport, Innovation and Technology earmarked €10.7 billion (€1 = about \$1.50) for railway improvements and €8.1 billion for motorway expansion and renovation by 2013. The largest infrastructure project was the creation of a tunnel under the Brenner Pass, linking Italy with southern Tyrol. The completion of this tunnel would help to shift some of the transport between Germany and Italy from roads to railways. This would reduce Austria's carbon dioxide emissions, a significant concern since Austria was on track to miss its Kyoto Protocol targets. The ÖVP-SPÖ coalition also developed a package of measures aimed at boosting consumer purchasing power in the face of high inflation. This package reduced price hikes for apartment rents (many of which were still regulated), as well as for some services such as railway tickets. In October the new coalition agreed on a set of measures to shore up liquidity in the banking sector, offering up to €100 billion in aid to commercial banks, of which €85 billion would be in deposit guarantees and the remaining €15 billion in the form of new equity to boost banks' capital levels. On November 6 the SPÖ and the ÖVP agreed on a new medium-term fiscal framework that aimed to stimulate the economy while keeping the general government budget deficit below 3% of GDP through 2013. The new government also agreed on the main points of income tax reform, to be implemented

in 2009 instead of 2010 as originally agreed by the previous government.

The economy slowed significantly in 2008 as household spending and investment demand declined in the face of high inflation and tight credit-lending conditions. After years of robust business investment in Austria's booming manufacturing sector, there was a slowdown in manufacturing in 2008. Demand for Austrian exports slowed as well but nevertheless remained strong, particularly from neighbouring Germany. Employment growth increased in 2008, while unemployment fell.

(MEGAN GREENE)

AZERBAIJAN

Area: 86,530 sq km (33,409 sq mi), including the 5,500-sq-km (2,100-sq-mi) exclave of Nakhichevan and the 4,400-sq-km (1,700-sq-mi) disputed region (with Armenia) of Nagorno-Karabakh

Population (2008 est.): 8,178,000

Capital: Baku

Head of state and government: President Ilham Aliyev, assisted by Prime Minister Artur Rasizade

In 2008 the Council of Europe's Venice Commission continued discussions begun in 2006 with the Azerbaijani authorities to amend the country's election law prior to the presidential

balloting scheduled for October 15. The amended legislation that was passed by the parliament on June 2, however, not only failed to meet opposition demands for parity representation on election commissions but also shortened the election campaign from four months to 75 days. Even before the amendments were passed, the opposition Freedom bloc declared that it would boycott the election in light of restrictions on the independent media and on public meetings. The opposition New Equality Party and Eldar Namazov (of the movement In the Name of Azerbaijan) said in August that they would not participate in the elections. In early September, Freedom, the New Equality Party, and In the Name of Azerbaijan formed a Center for Opposition Cooperation.

Only 7 of 21 would-be presidential candidates succeeded in registering for the ballot. Incumbent Pres. Ilham Aliyev was duly reelected for a second term, with 88.7% of the vote; Hope Party Chairman Iqbal Agazade placed second with 2.86%; and Great Creation Party chairman Fazil Gazanfaroglu came in third with 2.47%. Voter turnout was 75%. International observers registered some violations in the vote count and deplored the opposition boycott. On October 28 President Aliyev asked incumbent Prime Minister Artur Rasizade to head the new government. A factor cited in Aliyev's reelection was the booming economy. Despite falling world oil prices and Azerbaijani annual inflation that exceeded 20% for the second consecutive year, economic growth increased by 15% during the first nine months.

The parliament failed to enact anticipated new legislation on freedom of assembly and free speech. Bowing to international pressure, however, President Aliyev pardoned five of eight jailed journalists in the last days of 2007. In October a human rights group asked him to free the three remaining journalists and release ill prisoners.

On August 17 three people were killed in Baku following an explosion at the Abu-Bakr mosque, whose congregation included suspected Muslim radicals. On October 2 Azerbaijan's prosecutor general announced the arrest of 25 suspects who were identified as belonging to a group of militants with links to neighbouring Dagestan, a republic in southern Russia.

Russian Pres. Dmitry Medvedev and Turkish Pres. Abdullah Gul visited Baku in July and September, respectively. Following visits in January and June to Ar-

menia and Azerbaijan by Minsk Group mediators of the Organization for Security and Co-operation in Europe, Aliyev and his Armenian counterpart, Serzh Sarkisyan, on November 2 signed a declaration in Moscow, together with President Medvedev, affirming their shared commitment to a peaceful solution to the Nagorno-Karabakh conflict.

(ELIZABETH FULLER)

BAHAMAS, THE

Area: 13,939 sq km (5,382 sq mi)

Population (2008 est.): 335,000

Capital: Nassau

Chief of state: Queen Elizabeth II, represented by Governor-General Arthur Dion Hanna

Head of government: Prime Minister Hubert Ingraham

Bahamian Prime Minister Hubert Ingraham announced in January 2008 that the government was drawing up a new energy strategy to reduce the country's dependence on fossil fuels; the measure was designed to make it easier and far more economical for consumers to access alternative energy sources and more energy-efficient technologies generally. That same month the U.S. rating agency Standard and Poor's lowered its outlook on The Bahamas from positive to stable following a reassessment of the country's growth and investment prospects, given its close tourism, financial, and trade links with the U.S.

Agreement was reached in February for the Venezuelan-owned BORCO (Bahamas Oil Refining Co.) oil-storage terminal in Grand Bahama to be taken over by a partnership of private equity company First Reserve Corp. and Dutch firm Royal Vopak, holding 80% and 20%, respectively. The long-term plan was to spend \$550 million to make the terminal a key oil-transshipment hub in the Americas. The Bahamas seemed ambivalent, however, about having liquid natural gas regasification plants located in the country; a government spokesman insisted in July that LNG was "not a priority."

Amnesty International in May criticized The Bahamas for its treatment of Haitian immigrants. AI pointed out

that Haitians arriving in the country were "ill-treated" and were being "deported in large numbers."

(DAVID RENWICK)

BAHRAIN

Area: 728 sq km (281 sq mi)

Population (2008 est.): 1,084,000

Capital: Manama

Chief of state: King Hamad ibn Isa al-Khalifah

Head of government: Prime Minister Khalifah ibn Sulman al-Khalifah

Sectarian tension between the Shi'ite majority (some 65% of the population) and the Sunni minority surfaced in Bahrain during 2008. Denunciations and exchanges of grievances between the two sects dominated discourse in the parliament, in the press, and among mosque preachers; the conflict spilled into the streets in political agitation, which was brutally suppressed by the police. The Shi'ites asked for greater participation in running the country—specifically less control over the cabinet by the Sunni ruling family, al-Khalifah, and increased numbers of Shi'ite ministers. On more than one occasion, King Hamad ibn Isa al-Khalifah called for national unity, harmony, and tolerance among Bahrainis regardless of sect or religion. He declared a general amnesty on July 31 that affected most prisoners, political and nonpolitical. To demonstrate tolerance, on July 3 the king appointed Huda Nonoo, a Bahrain Jew, as ambassador to the U.S.—the first Jewish person ever appointed as ambassador by any Arab country.

Security dominated Bahraini discussions when the heads of two powerful states, which were both jockeying for position in the Gulf region, visited Bahrain. U.S. Pres. George W. Bush arrived in January 2008, some two months after Iranian Pres. Mahmoud Ahmadinejad's visit. Bahrain, wary of increased Iranian influence in the Gulf region, remained a staunch ally of the United States.

Bahrain's economy benefited from the oil boom early in 2008, but by the end of the year its banking and real estate sectors had been affected by the global recession.

(LOUAY BAHRY)

BANGLADESH

Area: 147,570 sq km (56,977 sq mi)

Population (2008 est.): 142,547,000

Capital: Dhaka

Chief of state: President Iajuddin Ahmed

Head of government: Chief Adviser
Fakhruddin Ahmed

If the year 2007 was a period of doing, the year 2008 was one of undoing for Bangladeshi politics. The steam with which the 2007 military-backed interim caretaker government had started its antigraft and political-reform program—by accelerating the widespread arrest of politicians and businessmen suspected of corruption involvement—suddenly ran out in 2008. One by one, politicians who had been behind bars for months were released on bail.

The height of the new direction occurred when former prime ministers Sheikh Hasina Wazed and Khaleda Zia, the topmost leaders of the two main political parties—Awami League and Bangladesh Nationalist Party (BNP), respectively—were released from jail. Hasina was discharged on parole in June, and Khaleda was released on bail in September. Both leaders were freed in the expectation that their parties would take part in elections slated for December.

The trials of the politicians that did occur were quick, and the verdicts were

Former Bangladeshi prime minister Khaleda Zia waves to supporters after her release from jail in Dhaka in September.

Pavel Rahman/AP

almost predictable and identical; for all but a few, jail terms of 13 years were handed down, and spouses were sentenced to 3 years. Some defendants were sentenced for having possessed liquor; in a Muslim society alcohol consumption was deemed a crime.

The caretaker government, which had initially embarked on a “Minus Two” policy to rid Bangladesh’s political arena of Hasina and Khaleda, changed course and encouraged the two battling begums to establish a dialogue on peaceful co-existence; the government also continued to purge politicians who had earned a public perception of corruption. Much of the credibility of the caretaker government was dented, however, when Khaleda’s son, Tarique Rahman, who was imprisoned on corruption charges, was released on bail in September.

In July the authorities established new electoral rules, which, among other reforms, mandated that political parties register to take part in elections and that voters could reject all proposed candidates and select a “no vote” option. That same month the Election Commission undertook an \$80 million overhaul of the country’s voter list, which was purged of 13 million names. More than 80 million voters were fingerprinted, photographed, and later issued identity cards. The election took place on December 29 and resulted in a lopsided victory for the Awami League, which took 230 of the 299 contested seats; the BNP won only 32.

On the economic front, it was a year of slight recovery from the previous year’s torpor. Imports grew by 26% during the 2007–08 fiscal year, and exports climbed by 16%, although much of the rise resulted from high international commodity prices. Revenue earnings grew by a robust 27%, mainly owing to income-tax collection. Nevertheless, high commodity prices prompted a rise in inflation, which peaked to double digits despite a good agricultural output. A number of food riots occurred throughout the country, putting fresh wage pressure on industries.

A huge blow was dealt to the \$8 billion “manpower” export as Bangladeshi workers in a number of key Middle Eastern countries staged violent

protests against low wages and exploitation. Several of these countries, including Saudi Arabia and Kuwait, decided to stop taking in any more workers from selective sectors in Bangladesh. Thousands were also deported.

(INAM AHMED)

BARBADOS

Area: 430 sq km (166 sq mi)

Population (2008 est.): 282,000

Capital: Bridgetown

Chief of state: Queen Elizabeth II,
represented by Governor-General
Sir Clifford Hubbards

Head of government: Prime Ministers
Owen Arthur and, from January 16,
David Thompson

The opposition Democratic Labour Party (DLP), led by attorney David Thompson, achieved a decisive return to power in January 2008 when it defeated the incumbent Barbados Labour Party (BLP) in the Barbados general election; the DLP captured 20 seats in the House of Assembly to the BLP’s 10. Nine BLP ministers lost their seats, though party leader Owen Arthur retained his.

Barbados reaffirmed in February its decision not to join Venezuelan Pres. Hugo Chávez’s PetroCaribe initiative, under which Caracas provided petroleum products and crude oil to Caricom countries on a deferred-payment basis for a portion of supplies. Prime Minister Thompson called on his Caricom colleagues in June to draw up a common energy policy.

That same month Barbados asked the United Nations to agree to a further extension of its 200-nautical-mile exclusive economic zone (EEZ) by another 150 miles, as provided under the UN Convention on the Law of the Sea. It was only two years earlier that the UNCLOS arbitration panel had defined the EEZ limits between Barbados and Trinidad and Tobago.

In July, Venezuelan Energy Minister Rafael Ramírez publicly declared that 2 of the 24 blocks in Barbados’s first offshore block auction were partly in Venezuelan waters. Officials said that this revelation could have implications for the success of the auction.

(DAVID RENWICK)

BELARUS

Area: 207,595 sq km (80,153 sq mi)

Population (2008 est.): 9,675,000

Capital: Minsk

Head of state and government: President Alyaksandr H. Lukashenka, assisted by Prime Minister Syarhey Sidorski

The year 2008 in Belarus was dominated by turbulent foreign relations between Belarus and Russia, the EU, and the U.S. and by parliamentary elections that were held on September 28. In addition, the U.S. sanctions imposed (Nov. 13, 2007) on the oil-processing firm Belnaftkhim were expanded in the spring owing to the refusal of Belarus to release all designated political prisoners. On March 12, U.S. Ambassador Karen Stewart left the country, and at Belarus's behest the respective embassies in Minsk and Washington, D.C., were reduced to a skeleton staff of five people.

The departure of diplomatic personnel coincided with the violent dispersal of the traditional opposition rally held on March 25, which in 2008 marked the 90th anniversary of the Belarusian National Republic. The authorities offered some recognition of that occasion by publishing in the newspaper *Sovetskaya Belorussiya* a debate among historians as to its significance. The political row with the U.S. was partially resolved when Belarus released former

presidential candidate Alyaksandr Kazulin from Vitsebsk penal colony on August 16 and four days later freed the last two political prisoners, Syarhey Parsyukevich and Andrei Kim.

The political opposition was divided over how to approach the parliamentary elections. In contrast to the 2006 presidential elections, it split into four distinct groupings: the United Democratic Forces (comprising the Popular Front, the United Civic Party, the Party of Communists, and one wing of the Social Democrats); the movement "For Freedom" under former presidential candidate Alyaksandr Milinkevich, which remained unregistered by the state; the Euro-alliance led by Mikola Statkevich and including Charter 97 led by Andrei Sannikau; and the rival branch of the Social Democrats under Stanislau Shushkevich, a former chairman of the parliament. Of the 448 candidates who ran for office, however, 334 had no party affiliation.

The Organization for Security and Co-operation in Europe (OSCE), which sent 450 monitors to Belarus, was denied access to about one-third of polling stations and reported several cases in which results were falsified. The OSCE declared that overall the election could not be considered "free and fair." According to the Central Election Commission, the turnout was 75.3%, but the opposition delegates—some of whom had proposed boycotting the election—did not win any seats. On the evening of September 28, Kazulin, Milinkevich, and other leaders held a protest in Kastrichnitskaya Square in central Minsk.

Despite the controversial nature of the election, the EU subsequently, on October 13, lifted a travel ban (for a trial six-month period) on Lukashenka and 35 members of his government. The move followed Lukashenka's refusal to assist Russia in its conflict with Georgia and Belarus's lack of recognition for an independent Abkhazia and South Ossetia, two breakaway regions in Georgia.

The Belarusian economy performed well. In the period January–September 2008, GDP rose by 10.7% (the annual projected rate was 8–9%), industrial output increased by 30.2%, and agriculture improved 8.6% compared with 2007. Nonetheless, during a period of international economic uncertainty, Belarus was forced to negotiate a new \$2 billion loan from Russia, and Moscow continued to demand that Belarus begin using the Russian ruble as a common currency. (DAVID R. MARPLES)

BELGIUM

Area: 30,528 sq km (11,787 sq mi)

Population (2008 est.): 10,697,000

Capital: Brussels

Chief of state: King Albert II

Head of government: Prime Ministers

Guy Verhofstadt, from March 20, Yves Leterme, and from December 30, Herman Van Rompuy

The longest-running political crisis in Belgium's history formally ended in March 2008 when Flemish Christian Democrat Yves Leterme's five-party coalition government was sworn in—nine months after the country's general election in June 2007. Leterme took over from former prime minister Guy Verhofstadt, who since before Christmas had led an interim government.

The partnership between the French- and Dutch-speaking Christian Democrats and Liberals and the French-speaking Socialists was far from smooth, however, as the parties negotiated possible constitutional reforms that would affect the future status of the bilingual Brussels-Halle-Vilvoorde (BHV) constituency, and devolve more power to the country's three regions. In mid-July, Leterme submitted his resignation for a third time when he failed to meet a deadline set by his

Demonstrators march in Minsk on September 28 to protest Belarus's parliamentary elections, which opposition leaders insisted were rigged.

Sergei Grits/AP

own party, the Flemish Christian Democrats (CD&V), for issuing a proposal to resolve the constitutional deadlock. King Albert II refused to accept the prime minister's resignation, but he did on December 22 when Leterme offered to resign a fourth time after accusations that aides had tried to influence a ruling by the country's appeals court.

The court case had been brought by shareholders in Fortis NV, which, with operations in Belgium, Luxembourg, and The Netherlands, in late September became the first European bank to fail amid the global credit crisis. Each of the three governments had agreed to take a 49% share in its respective country of the operations of the bank, whose origins predated the creation of the Belgian state in 1830. Within days, however, the Dutch government nationalized the bank's holdings in The Netherlands and the Belgian government sold three-quarters of its 51% stake in Fortis Belgium to France's BNP Paribas—a decision which the shareholders had decided to challenge through the courts. Soon after the initial Fortis rescue package, the Belgian and Luxembourg governments—this time working with France—stepped in again to prop up another of Belgium's leading banks, Dexia. After an initial cash injection by the three countries of €6,376,000,000 (€1 = about \$1.40) had failed to prevent the bank's shares from plummeting, they announced that between them they would guarantee all new issues of obligations by the bank, interbank deposits, and institutional investments until the end of October 2009.

Two other Belgian companies were involved in major international deals during the year. InBev, which was formed in 2004 when Belgian company Interbrew merged with Brazil's AmBev, continued on the acquisition trail. In July it paid \$52 billion for Anheuser-Busch, which accounted for almost half of all U.S. beer sales. The new company, called Anheuser-Busch InBev, was looking to produce 460 million hectolitres (about 12 billion gal) of beer a year—about a quarter of global beer consumption. Brussels Airlines—which was created in 2006 after a merger between SN Brussels Airlines (the successor to the bankrupt national carrier SABENA) and Virgin Express—formed an alliance with Germany's Lufthansa, Europe's second largest airline. Under the deal, signed on September 15, the German carrier agreed

to buy 45% of the Belgian airline for €65 million, with the option of acquiring the whole company in 2011 for a maximum price of €250 million.

Hugo Claus, a colossus on the Belgian literary landscape, died on March 19. (See OBITUARIES.) Claus, who suffered from Alzheimer disease, chose to die by euthanasia, taking advantage of liberal legalization that had been introduced six years earlier. (RORY WATSON)

BELIZE

Area: 22,965 sq km (8,867 sq mi)

Population (2008 est.): 323,000

Capital: Belmopan

Chief of state: Queen Elizabeth II, represented by Governor-General Sir Colville Young

Head of government: Prime Ministers Said Musa and, from February 8, Dean Barrow

On Feb. 7, 2008, the opposition United Democratic Party (UDP) claimed victory in the Belize general elections, bringing to an end the 10-year administration of the People's United Party (PUP). With an overwhelming majority in the National Assembly, the UDP legislated constitutional amendments to curb what it referred to as the excesses of the PUP. In the realm of foreign policy, however, the new government continued to retain close ties with friendly states, notably Taiwan, which continued to provide much-needed financial and technical assistance. Although petroleum exports to the U.S. outpaced tourism and agriculture as the primary source of foreign exchange, Belize's vulnerability to world economic shocks led during the first half of 2008 to a record increase (6.9%) in the consumer price index. Prices for staples increased substantially: wheat flour (51.5%), gasoline (7.8%), and diesel fuel (35.4%). In June Tropical Depression Arthur brought historic flooding to the mid-south of the country, with estimated damages of at least \$60 million, excluding the cost of road infrastructure.

Belizeans converged in the thousands in January for the state funeral of 47-year-old musician Andy Palacio (see OBITUARIES). His meteoric rise to the pinnacle of world music had catapulted Belize to international prominence.

(JOSEPH O. PALACIO)

BENIN

Area: 112,622 sq km (43,484 sq mi)

Population (2008 est.): 8,295,000

Capital: Porto-Novo (executive and ministerial offices remain in Cotonou)

Head of state and government: President Thomas Yayi Boni

On March 7, 2008, ministers from Benin and Burkina Faso reached agreement on lowering tensions in a 68-sq-km (26-sq-mi) border area claimed by both. Meeting at Porga in northern Benin, the delegations agreed that neither would attempt to establish sovereignty over the disputed region and that joint border patrols would operate to maintain security.

On February 16, U.S. Pres. George W. Bush began his five-nation tour of Africa in Cotonou, where he received the Grand Cross of the National Order of Benin from Pres. Thomas Yayi Boni. Local elections held on April 20 gave the presidential party, Cowry Forces for an Emerging Benin, control of 66% of municipal councils. Former president Nicéphore Soglo's Benin Renaissance Party retained control in the capital.

On March 5 a joint study conducted by the UN in conjunction with the Ministry of the Family and Children revealed that more than 40,000 children, 93% of whom were Beninese, were trafficked in 2006. The government vowed to stop the trade and give aid to its victims.

Throughout the year, prices of basic foodstuffs rose sharply, more than doubling in the case of some commodities. Despite the government's May 1 removal of the value-added tax on food, consumers saw little improvement. Consequently, trade unions planned protest marches calling for higher wages. On July 15 President Yayi responded by calling for "economic patriotism" and wage restraint to help resolve the crisis. Violent crime against small businesses increased alarmingly as small-arms weaponry was readily available through local manufacturers or smugglers. Although the production of cotton, Benin's major export crop, rose by 12% and GDP was expected to achieve a growth rate of 7%, the explosion of global food and energy prices had offset economic progress.

(NANCY ELLEN LAWLER)

BHUTAN

Area: 38,394 sq km (14,824 sq mi)
Population (2008 est.): 682,000 (excluding more than 100,000 refugees in Nepal)
Capital: Thimphu
Head of state: Druk Gyalpo (King) Jigme Khesar Namgyal Wangchuk
Head of government: Prime Ministers Lyonpo Kinzang Dorji and, from April 9, Lyonchen Jigmi Thinley

The year 2008 was a historic one for Bhutan, which on March 24 held its first democratic elections for the lower house of the parliament and thereby transformed from an absolute monarchy to a constitutional democracy. In the election more than 250,000 voters cast their ballots, and the Bhutan Peace and Prosperity Party (DPT), led by Lyonchen Jigmi Thinley, won 45 seats, while the People’s Democratic Party (PDP) captured 2 seats. Thinley was sworn in as prime minister on April 9. On July 18 Bhutan promulgated a new

Bhutan’s 28-year-old king, Jigme Khesar Wangchuk (centre, in yellow robe) interacts with members of the audience during celebrations that followed his coronation ceremony in Thimphu on November 7.

Gurinder Osan/AP

constitution. The transition to democracy was initiated by former king Jigme Singye Wangchuk. In 2006 he abdicated in favour of his Oxford-educated eldest son, Jigme Khesar Wangchuk, who would remain king in a largely ceremonial role.

Meanwhile, more than 100,000 Bhutanese, who had been forced to leave the country in the early 1990s when strict citizenship rules were enforced, were living in refugee camps in Nepal and were barred from voting. According to the International Organization for Migration, more than 3,000 refugees had been resettled in the U.S., New Zealand, Denmark, Australia, and The Netherlands.

Thanks to a boom in tourism and hydropower, Bhutan’s economic growth rate stood at 8%. Living standards were among the region’s highest, with an average per capita income of more than \$1,400. Hydropower exports to India drove GDP growth to above 20% in 2007, and total exports to India in 2006–07 amounted to about \$200 million. Indian Prime Minister Manmohan Singh visited Bhutan in May and addressed a joint session of the parliament. (KESHAB POUDEL)

BOLIVIA

Area: 1,098,581 sq km (424,164 sq mi)
Population (2008 est.): 9,694,000
Capitals: La Paz (administrative) and Sucre (judicial)
Head of state and government: President Evo Morales Ayma

Violent clashes over constitutional reform erupted in September 2008 as ethnic and regional divisions hardened to the point where some observers believed that they were threatening Bolivia’s survival as a country. The conflict began after Pres. Evo Morales easily survived a recall referendum in August. Morales, one of a new generation of Latin American leaders seeking to remold political institutions and curb the power of traditional elites, won 67% of the vote—substantially higher than the 53.7% he obtained in the 2005 presidential election. Then, declaring that the vote had confirmed support for his nationalization policies, he said that he

Dado Galdieri/AP

Antigovernment protesters take to the streets in Santa Cruz, Bol., in September following Pres. Evo Morales’s proposal for a new constitution and land-reform measures.

would submit a new constitution and land-reform measures to a popular vote early in 2009.

This announcement outraged most of Morales’s opponents in the ranching and natural-gas-producing eastern lowlands. They were led by provincial governors who demanded a greater share of gas-export profits for their provinces and opposed Morales’s determination to spend gas tax revenue on financial assistance for the elderly. The governors’ mandates had been reconfirmed by wide margins in the referendum, and voters in four provinces had approved proposals for greater provincial autonomy.

On September 10, anti-Morales protesters seized a gas field and caused a leak and explosion in a key export pipeline. The next day at least 18 people died in clashes between pro- and antigovernment groups in Cobija, the capital of Pando. Government officials and witnesses said that most of the victims were pro-Morales farmers who were attacked by opposition gunmen as they sought to reclaim national government offices that had been ransacked by the president’s opponents. Morales accused the U.S. of conspiring with the eastern governors in an effort to destabilize Bolivia, an allegation that the U.S. denied. In September, after violent protests broke out at gas facilities in the eastern provinces, Morales ordered U.S. Ambassador Philip Goldberg to leave the country. In return, the U.S.

declared Bolivian Ambassador Gustavo Guzman persona non grata.

Morales had nationalized most of the petroleum industry in 2006 and, at a time of high world energy prices, remained determined to distribute export revenues widely among Bolivians. The resulting stimulus led Bolivia's GDP in the first quarter of 2008 to grow by 6% over the same period in 2007. Strong domestic demand for energy coupled with investment shortfalls led Bolivia to warn early in the year that it would not be able to meet export commitments to its South American neighbours. In July the government launched an exploration effort to increase gas reserves by 20% with the help of a drilling rig and \$888 million in investment from Venezuela. The economic horizon clouded when the U.S. hinted strongly that it would suspend Bolivia's access to the trade privileges given to Andean countries.

There was further discord in the battle against the illegal cocaine trade. In November Morales ordered the suspension of activities by the U.S. Drug Enforcement Administration. The government announced that it would take over the distribution of U.S. antinarcotics funds. Vice Minister of Social Defense Felipe Cáceres, who like Morales owned a coca plot, said that Bolivia remained committed to fighting cocaine production and trafficking but also to maintaining the traditional market for coca leaf, which was used to relieve hunger pangs and altitude sickness. Despite the tensions, Bolivia continued to rely on U.S. military aid for its antidrug army units. (PAUL KNOX)

BOSNIA AND HERZEGOVINA

Area: 51,209 sq km (19,772 sq mi)

Population (2008 est.): 3,858,000

Capital: Sarajevo

Heads of state: Nominally a tripartite (Serb, Croat, Muslim) presidency with a chair that rotates every eight months; members in 2008 were Nebojsa Radmanovic (Serb), Zeljko Komsic (Croat; chairman), and Haris Silajdzic (Muslim; chairman from March 6). Final authority resides in the Office of the High Representative and EU Special Representative, Miroslav Lajcak (Slovakia)

Head of government: Prime Minister Nikola Spiric

Bosnia and Herzegovina continued in 2008 to face a multitude of economic, political, and social problems that were exacerbated by the persistent lack of cooperation between the republic's Bosniaks (Muslims), Serbs, and Croats. Paddy Ashdown, the former high representative and EU special representative for Bosnia and Herzegovina, warned that the country was on the edge of "disintegration," blaming spiraling ethnic tensions, the lack of EU interest in the area, and the Bosnian Serb pressure toward secession following Kosovo's declaration of independence from Serbia in February. Miroslav Lajcak, the current high representative, also warned that despite "significant progress" over the first six months of the year, "nationalist forces remain strong." The U.S. Department of State's annual report on global terrorism characterized Bosnia and Herzegovina as a "weak, decentralized state" where "ethnically based political confrontations continued to undermine national government." The report also warned that the country's vulnerability could serve as a potential staging ground for terrorist operations in Europe. An initiative by regional non-governmental organizations to hold Bosnia and Herzegovina's first truth commission on war crimes failed to materialize, largely owing to government indifference and lack of public interest; the Dayton accords had been signed 13 years earlier, and the establishment of a truth commission was seen as a step toward reconciliation.

Nationalist sentiment was confirmed by results of local elections held on October 5; Serbs, Muslims, and Croats voted mostly along ethnic party lines. More than 29,000 candidates, representing 72 political parties and dozens of coalitions and independent lists, competed for 140 mayoral offices in 78 municipalities in the Muslim-Croatian federation and 62 municipalities in the Republika Srpska (RS). Overall turnout was about 55% in the two entities, but the response in major cities was relatively low, which local media reports attributed to the disdain held toward nationalist rhetoric and the absence of political programs not based on ethnic lines.

Labour leaders expressed concern over growing public unrest and the government's inability to deal with the country's problems amid a worsening global economic situation and soaring prices on goods and services. Sharp criticism was leveled against the governments of both entities for blocking

privatization efforts and reforms, and both were accused of corruption. Transparency International, a Berlin-based corruption watchdog group, closed its offices in Bosnia and Herzegovina owing to what it called "concerns for the safety of its staff" after RS Prime Minister Milorad Dodik accused the agency of fraud. The Bosnia and Herzegovina central bank governor, Kemal Kozaric, leveled criticism on leaders of both entities for "not being adequately engaged" in keeping the country's economy in line with EU membership requirements.

Bosnia and Herzegovina's signing in June of the Stabilization and Association Agreement (SAA) signaled the first concrete step in the country's path toward EU membership. Both entities approved laws for police reform, a requirement that needed to occur prior to the SAA signing. Constitutional reform was another key requirement that had to be addressed before the country could achieve EU integration.

(MILAN ANDREJEVICH)

BOTSWANA

Area: 582,356 sq km (224,848 sq mi)

Population (2008 est.): 1,842,000

Capital: Gaborone

Head of state and government: Presidents Festus Mogae and, from April 1, Ian Khama

After completing two five-year terms in office, Pres. Festus Mogae turned over power on April 1, 2008, to Vice Pres. Ian Khama. Though the new president promised to uphold the traditions of his predecessor, he showed a spirit of independence in the puritan and teetotal tradition of his famous great-grandfather Khama III (c. 1835–1923). President Khama appointed as vice president Mompoti Merafhe, a military colleague and former foreign minister; adopted dignity and discipline as his slogan; and courted widespread popularity by touring remote villages and upbraiding government employees. He prompted widespread opposition, however, when, in an effort to combat alcoholism, he announced a 30% levy on alcoholic beverages. Though beer manufacturers obtained an injunction in the High Court at Lobatse against im-

Per Anders Pettersson/Getty Images

Workers sort diamonds at Botswana's new rough-diamond sorting centre in Gaborone in March.

plementation of the hike, the legal challenge was later dropped, and the levy went into effect on November 1.

Relations with Zimbabwe were soured by Botswana's refusal to accept the presidential election in that country as free and fair and by Gaborone's withdrawal in June of recognition that Robert Mugabe was the legal president of Zimbabwe. Nevertheless, the tide of Zimbabwean refugees and visiting shoppers continued. Botswana's boycott of the Zimbabwe regime ended on September 15 when President Khama attended the reconciliation ceremony between Zimbabwe's three main political parties.

Botswana's new rough-diamond sorting centre was opened in March, though operations were limited by delays in the construction of a new suburb near the Gaborone airport. The Botswana government continued to narrowly interpret the High Court judgment permitting Bushmen to return to live in the Central Kalahari Game Reserve as applying only to named litigants and their immediate relatives.

(NEIL PARSONS)

BRAZIL

Area: 8,514,877 sq km (3,287,612 sq mi)

Population (2008 est.): 187,163,000

Capital: Brasília

Head of state and government: President Luiz Inácio Lula da Silva

Having suffered in December 2007 his first major policy defeat in five years—the termination of the Provisional Contribution on Financial Transactions (CPMF) tax—Brazilian Pres. Luiz Inácio Lula da Silva began 2008 by raising the Financial Operations tax as well as the Social Contribution on Net Profits tax in order to compensate for the loss in revenues from the CPMF. Throughout the year Brazil benefited from a wave of high commodity prices, new infrastructure investment programs, a burgeoning domestic market, and record state and federal revenues. On April 30 Standard & Poor's became the first rating agency to upgrade Brazil to investment-grade status; Fitch Ratings followed suit on May 29. After riding the commodity boom to its peak in July, Brazil later witnessed declining liquidity and tighter credit markets as the global economy began its downturn. Nonetheless, the Lula administration forged ahead with its ambitious Growth Acceleration Program (PAC), which aimed to accelerate Brazil's economic growth to 5% annually; the PAC was spearheaded by Lula's chief of staff, Dilma Rousseff, who was viewed as a leading candidate to succeed Lula as the standard-bearer of the Workers' Party (PT) in the presidential elections scheduled for 2010.

In 2008 there were few but significant changes in the composition of Lula's cabinet. On January 21, in a move to satisfy the Lula administration's coalition ally, the Brazilian Democratic Movement, Sen. Edison Lobão of Maranhão state was sworn in as the new minister of mines and energy, in which post he would preside over one of Brazil's largest ministerial budgets. On May 13 Minister of Environment Marina Silva resigned and returned to her seat as senator representing the state of Acre. Silva had seen her conservation agenda weakened following the 2007 split of the Brazilian Environmental Institute (IBAMA) into two units, one responsible for conservation and the other responsible for environmental-impact assessments, authorizations, and licenses. Her replacement, Carlos Minc, formerly the secretary of environment for the state of Rio de Janeiro, was sworn in on May 27. Minc would have as his major challenge shepherding Brazil's numerous infrastructure-development projects through the country's stringent environmental-licensing processes.

More than 110 million voters went to the polls on October 5 to elect mayors

and town councils in Brazil's 5,563 municipalities. The most important mayoral race—in Brazil's most populous city, São Paulo—featured Lula's preferred candidate, former tourism minister Marta Suplicy of the PT, incumbent Mayor Gilberto Kassab of the Democratas (formerly the Liberal Front Party), and 2006 presidential runner-up Geraldo Alckmin of the Brazilian Party of Social Democracy. In a hotly contested first round, Kassab narrowly defeated Suplicy, winning 33.61% of the valid vote to Suplicy's 32.79%, while Alckmin trailed in third with 22.48%. With no candidate reaching an absolute majority, a runoff election between Kassab and Suplicy was held on October 26. This time Kassab—with the support of Alckmin and José Serra, the governor of São Paulo state and the 2002 presidential runner-up—soundly defeated Suplicy, garnering 60.7% of the valid vote to Suplicy's 39.3%. The election result was seen by many observers as strengthening Serra as he positioned himself to run in the 2010 presidential elections.

Throughout the year Brazil's Supreme Court heard the case for demarcation of the Raposa Serra do Sol Indian Reserve, located in the northern state of Roraima near the Venezuelan and Guyanese borders. Lula had signed a decree in 2005 that delimited the reserve as "continuous"—all non-Indian communities within the reserve would have to be abandoned—but many non-Indians, including rice growers, miners, and ranchers, resisted withdrawal. Although 8 of the 11 Supreme Court judges were in favour of continuous demarcation of the reserve and for the removal of non-Indians, the president of the court, Gilmar Mendes, on December 10 granted a request by one of the judges, Marco Aurelio Mello, for more time to deliberate; final judgment on the matter would be rendered in February 2009, when the Supreme Court returned from its holiday recess.

Notwithstanding the global financial crisis, the Brazilian economy showed continued signs of growth. For the 12-month period ended in September, GDP grew an estimated 6.3%. With the central bank's Open Market Committee maintaining high benchmark discount interest rates (13.75% at year's end), accumulated inflation through November as measured by the National Consumer Price Index reached only 5.61%. Global volatility, however, did affect the Brazilian stock market, which fell nearly 60% from its highest close of

2008—73,517 points on May 20—to its lowest of the year, 29,435 on October 27. By December 30, the last day of 2008 trading, the stock market had recovered slightly, closing that day at 37,550.

To prepare for further economic turbulence, the Brazilian government took steps to give the central bank as well as state banks more interventionary powers. On October 7 and October 22, Lula issued Provisional Decrees 442 and 443, respectively. Provisional Decree 442 gave the central bank the power to sell international reserves, buy banks, and extend credit lines, and Provisional Decree 443 empowered the two principal state banks (Bank of Brazil and Caixa Economica) to buy banks, insurance companies, and pension funds, if necessary. Despite the market turmoil, Lula finished the year with the highest approval ratings of his administration—80.3% in the Sensus Institute's December opinion polling, which was commissioned by the National Confederation of Transportation.

Severe flooding wreaked havoc in the southern state of Santa Catarina in late November. (See DISASTERS.) The flooding resulted in the deaths of more than 130 people and left tens of thousands homeless and more than one million without power.

(JOHN CHARLES CUTTINO)

BRUNEI

Area: 5,765 sq km (2,226 sq mi)

Population (2008 est.): 400,000

Capital: Bandar Seri Begawan

Head of state and government: Sultan and Prime Minister Sir Haji Hassanal Bolkiah Mu'izzaddin Waddaulah

In a bid to promote industrial investment in nonenergy sectors, Brunei signed an agreement in January 2008 with the American company Alcoa to study the feasibility of building an aluminum-smelting plant. Similarly, in August the Brunei National Petroleum Co. (through its subsidiary PB Logistics) initialed joint-venture agreements with two Japanese firms, Kokuka Sangyo and ITOCHU Corp., to form a company for the Methanol Tanker Project. Brunei also inaugurated Wawasan

Brunei 2035, a strategic economic development plan that by 2035 would vault the sultanate to rank in the top 10 countries in the world in terms of GDP per capita.

The royal imbroglio continued regarding the mismanaged state coffers; the High Court of London issued an arrest warrant for Prince Jefri, the youngest brother of the sultan and former minister of finance. Jefri had absconded and violated a London court order to turn over £3 billion (about \$5.4 billion) to the Brunei government.

The International Olympic Committee disqualified Brunei from participating in the 2008 Beijing Olympics owing to the alleged failure of the Ministry of Sports to register the team on time. This oversight apparently resulted in a minor cabinet reshuffle involving the minister of sports, who became the new minister for energy.

In August Malaysian Prime Minister Abdullah Ahmad Badawi and the sultan held their 12th annual bilateral talks in Johor, Malay. The two pledged closer cooperation and discussed issues pertaining to global food and energy security.

In January the sultan and his second wife, Azrinaz Mazhar, welcomed their second child, Princess Ameerah Wardatul Bolkiah. The couple's firstborn was a son.

(B.A. HUSSAINMIYA)

BULGARIA

Area: 111,002 sq km (42,858 sq mi)

Population (2008 est.): 7,569,000

Capital: Sofia

Chief of state: President Georgi Parvanov

Head of government: Prime Minister Sergey Stanishev

In 2008 Bulgaria's economic and political outlook were mixed. GDP rose 7% for the second quarter of the year, largely fueled by the services and construction sectors; tourism boomed by 12.1%, and real-estate prices were valued more than 30% higher than in the same period of 2007. Nevertheless, experts pointed to the slowdown in health care reform as one of the biggest risk factors for Bulgaria's long-term economic development. Moreover, the country continued to face a large trade

deficit and a persisting pattern of emigration among Bulgaria's young qualified professionals.

After six attempts by Bulgaria's National Assembly to remove Prime Minister Sergey Stanishev's cabinet from power, midyear structural changes were triggered by scandals involving connections of top Interior Ministry officials to organized crime figures. Bulgaria's governing institutions received a poor evaluation from the European Commission, which released its second report on Bulgaria's progress as an EU member. The report concluded that Bulgaria had failed to make reasonable strides in reforming the judiciary, combating corruption, and fighting organized crime.

Bulgaria's energy sector made some long-term investments, which include participation in the South Stream project, a gas pipeline proposed by Russia's Gazprom and Italy's Eni that was projected to supply 30 billion cu m (1.1 trillion cu ft) of natural gas annually to Romania, Hungary, the Czech Republic, Italy, Austria, and Serbia, starting in 2013. In addition, the construction of the nuclear energy plant Belene was entrusted on Jan. 18, 2008, to the Russian firm Atomstroieexport. Bulgaria and Russia also signed agreements on the construction of the Burgas-Alexandroupolis oil pipeline.

Hundreds of millions of dollars in funding under the European Commission programs Phare, ISPA (Instrument for Structural Policies for Pre-Accession), and SAPARD (Special Accession Programme for Agriculture and Rural Development) were frozen by the EC owing to suspicions of Bulgarian misappropriation and involvement in corrupt deals. Two Bulgarian government agencies were barred from involvement in contracts for EU funds. The funding, originally meant to stimulate infrastructure, was partially substituted by similar amounts drawn from the Bulgarian budget surplus.

Bulgarian sports results were also mixed. Although rower Rumyana Neykova won a gold medal for Bulgaria at the Beijing Olympics, 11 other Olympic athletes from the Bulgarian weightlifting team were caught with forbidden substances and banned from the Games. Their dismissal set the stage for an overall Olympic disappointment for Bulgaria, which finished with five medals: one gold, one silver in women's wrestling, and three bronze medals in men's wrestling.

(IVA IOVTCHEVA; BORIS YOVCHEV)

BURKINA FASO

Area: 267,950 sq km (103,456 sq mi)
Population (2008 est.): 14,391,000
Capital: Ouagadougou
Chief of state: President Blaise Compaoré
Head of government: Prime Minister Tertius Zongo

In late February 2008 popular discontent over rapidly increasing food prices erupted into serious riots in the Burkina Faso capital and in the cities of Ouagadougou, Bobo-Dioulasso, Banfora, and Ouahigouya. Security forces arrested at least 180 people for organizing the protests. The government called for calm, blaming the situation on the global escalation of oil prices. Import taxes on basic necessities were suspended on February 27, and on March 9 the government announced that food prices were to be cut by 5–15%. Despite these actions, new protests against hyperinflation took place later in March.

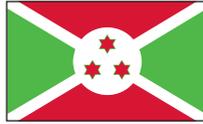

Cabinet ministers from Burkina Faso and Benin met on March 7 to discuss a plan to reduce tensions in a 68-sq-km (26-sq-mi) border area claimed by both countries. They agreed to activate a joint border commission to ensure that neither country undertook any overt display of sovereignty in the disputed region, such as building police stations or displaying flags.

In two southwestern provinces in late May and early June, violent clashes occurred when nomads allowed their cattle to graze on the lands of farmers. At least 15 people lost their lives in the confrontations.

Following an outbreak of meningitis in southern Burkina, the government on February 21 reached agreement with Côte d'Ivoire to coordinate a cross-border vaccination campaign. After a polio case was confirmed in Niger, the World Health Organization began a mass vaccination program on June 13 to cover the border areas of Niger, Burkina Faso, and Mali. On July 11, Muslim leaders agreed to participate in a program promoting family planning. On August 10, 31 miners perished in a mud slide at an illegal gold mine in Boussou Koula, 500 km (310 mi) southwest of the capital.

BURUNDI

Area: 27,816 sq km (10,740 sq mi)
Population (2008 est.): 8,691,000
Capital: Bujumbura
Head of state and government: President Pierre Nkurunziza

Burundi's ongoing peace process progressed in fits and starts during much of 2008. As the country struggled to restore peace after a 14-year civil war, hostilities between government forces and the last active rebel group, the National Liberation Forces (FNL), were reignited in April. FNL forces launched several attacks in the hills and suburbs surrounding the capital of Bujumbura. The flare-up left more than 100 people dead, displaced close to 40,000 others, and led to the detention of more than 300 rebels. The untenable situation prompted the return in May of FNL leader Agathon Rwasa, who had lived in exile for nearly 20 years; he signed a peace agreement between the FNL and the Burundi government on June 11. The June cease-fire agreement established assembly areas for FNL soldiers to congregate and called for them to be integrated into the national security forces. Another meeting between Pres. Pierre Nkurunziza and Rwasa was held in August in an effort to finalize peace negotiations and to prepare for the 2010 elections. The release from government custody of suspected FNL fighters, a major impediment to the cease-fire accord, was agreed upon at the negotiations. Implementation of the September 2006 cease-fire pact had been stalled since the FNL pulled out of negotiations less than a year later.

The UN High Commissioner for Refugees (UNHCR) repatriated 300,000 Burundians living in camps in Tanzania by early April. Nearly 800,000 Burundians had fled the country between 1972 and 2003, with more than 500,000 refugees flowing into Tanzania during the early 1990s when war broke out. Repatriation efforts had begun in 2002 following the end of hostilities. Nearly 369,000 Burundians, some without UN support, returned home from Tanzania; another 102,000 refugees remained in camps. UNHCR also worked with Tanzania to address the situation of the 218,000 refugees who had fled Burundi

during the 1972 genocide. Some returnees from the 1972 exile, however, faced serious resettlement issues, since most no longer had claims to land or property that they owned prior to 1972.

CAMBODIA

Area: 181,035 sq km (69,898 sq mi)
Population (2008 est.): 14,242,000
Capital: Phnom Penh
Chief of state: King Norodom Sihamoni
Head of government: Prime Minister Hun Sen

The major crisis in Cambodia in 2008 was a standoff between Thai and Cambodian troops over a border dispute in the area in which the ancient temple of Preah Vihear stood. A 1962 World Court decision that had declared the temple site Cambodian territory was never popularly accepted among Thais, and Preah Vihear carried great symbolic weight in both countries. Cambodia's campaign, begun in 2006, to designate the temple a UNESCO World Heritage site became highly politicized within Thailand and was used as a rallying cry by movements opposing the current Thai government. Protests took place near the temple, and in June Cambodia closed the entrance from the Thai side. On July 8 UNESCO declared Preah Vihear a World Heritage site; soon afterward the Thai foreign minister was forced to resign over the issue. Thai troop buildup began after July 15, when Cambodian authorities briefly detained three Thai protesters who had jumped a fence to enter the temple site and at least 40 Thai soldiers entered territory claimed by Cambodia. When the numbers of Thai troops steadily increased, Cambodia sent its own forces, and by July 21, when initial talks between the two countries broke down, there were reportedly thousands of troops from both countries near the temple and along the entire disputed border. After Cambodia withdrew its July 23 appeal to the UN Security Council, sensing that international opinion leaned toward a localized resolution, the two countries returned to bilateral negotiations. August reductions of troop levels provided tempo-
